Now, then, gentlemen, as to what this is, what it was made for and intended for, quoting the language of the act, "a substance or mixture of substances intended to be used", etc., the Government contends that these tablets were never intended to be used as a drug or a medicine or for the prevention or the cure of disease; that if they had been they would have been listed in this book that you have seen here. But they are not; they were put on a separate little paper, which has not been produced. And then the Government says that Mr. Mulford, the vice president, I think it was, wrote this letter—the vice president of the company, who was there managing it—that he wrote and said, referring to these wintergreens: "Trusting that this information will enable you to bring the matter of shipment of these various confections up to the proper classification bureau", etc., and that that is an admission on his part, made November 14, 1912, that these wintergreens which he specially mentions are confections; that they had been thinking about the law and knew of it; and that when he made that admission he spoke advisedly. It is for you to say. I submit it to you, as part of the evidence in this case, what they were manufactured for. What was that mixture made for and intended to be used for and put on the market for? Was it something to be used for the cure, mitigation, or prevention of disease or for common consumption, to take in your pocket and have one in your mouth because pleasing to the taste and sweet, just as you would have a licorice drop or a piece of candy, or something of that sort, or a gumdrop on your sideboard. These I have mentioned last are confections, it is true.

Then, here, again, gentlemen, the Government calls attention to these shipping bills, etc., made out as you have heard described, and the Government contends that here was a straight admission on the

part of this defendant company February 8, 1913, February 5, 1913, February 28, 1913, and February 7, 1913, when they made shipments of these wintergreens; they had stamped on there "Confectionery in tin, invoice value not exceeding 15 cents a pound." I think the stamp on there is the same; it reads the same in every case, so I do not need to go over that again. That after these dates and prior to April 15, 1913, when these tablets were shipped, that some of these were seized in a cigar store by the Government, and that gave them notice, and they went right on shipping them, but they changed their shipping bill and left off that designation "confectionery in tin", etc., and that accounts for this one shipping bill.

Now, gentlemen, it is for you to say was that an admission? Were those stamps characterizations? Did they speak the truth at the time they were made, and did they show the purpose for which those tablets were actually made, and put upon the market—that is, whether it was a mixture of substances made and intended to be used and put on the market to be used and sold as a confection or as a drug or a medicine?

That is about all there is in this case for you to decide. If you find that it was a confection, then you find for the Government for the condemnation of this property. If you find, on the other hand, it was made and put on the market, manufactured, and sent out and intended to be for the cure or mitigation or prevention of disease of either man or other animals, then, of course, it will be your duty here to find a verdict for this defendant.

Your requests to charge there I have covered, and I give you an exception where I refused to charge as requested.

Mr. HEPBURN. Will Your Honor give me an exception to such requests as you have not charged?

The COURT. Neither of you claim that these tablets were ever put out or intended to be put out or intended to be used as an article of food, do you?

Mr. HEPBURN. Unless you class confectionery under the head of food, as is done in the act.

The COURT. Oh, no; confectionery is not an article of food within the meaning of this law.

Mr. HEPBURN. I think the law says it is an article of food.

The COURT. It does?

Mr. HEPBURN. Yes.

The COURT. It says that it is?

Mr. HEPBURN. Yes.

The COURT. Where?

Mr. HEPBURN. "The term 'food' as used herein, shall include all articles used for food, drink, confectionery, or condiment by man." You see it is mixed up there.

The COURT. That isn't it. This tells when these things are adulterated. In the case of drugs. In the case of confectionery. In the case of food. That is where it makes a distinction.

Mr. HEPBURN. I mean the definition of food covered confectionery.

The COURT. As excluded from that you don't claim that it is a food? You claim it is either a drug within that provision or a confectionery.

Mr. HEPBURN. My claim is that it is a drug, and their claim is that it is confectionery.

The COURT. You don't want me to talk about this question of food. You know what a food is, don't you? Beefsteak would be a food; crackers would be food; chickens would be a food in that sense of food, because there are provisions here: "In the case of food." There is no contention here that any substance has been mixed or packed with it so as to reduce or lower or injuriously affect its quality or strength?

Mr. HEPBURN. No.

The COURT. Because if you want me to come to that and hold it a food I shall direct a verdict against you on the instant.

Mr. HEPBURN. We don't claim it is a food.

The COURT. If you do, then I say that this talc, which is 5 parts to 100, would be just the same as though you had put 5 parts of sand into your sugar. If you want me to I will do it.

Mr. HEPBURN. No; I am speaking of the proposition that this is used for the purpose of——

The COURT (interrupting). I have given my charge on the proposition just as you two gentlemen have tried the case. If the jury find it is a drug, then, of course, their verdict will be for the defendant. If they find it is a confection, then, of course, they have got to find under my charge and instructions for the Government and condemnation. Any further requests?

Mr. DOWD. Nothing; only that the jury be permitted to take these exhibits.

The COURT. Of course.

Mr. HEPBURN. I withdraw the fourth request. I want to ask for an exception to that portion of Your Honor's charge in which you charged the jury to the effect that if they find it to be a confectionery that it was adulterated in the meaning of the act.

The COURT. Yes; I have told them that as a matter of law, that that adulteration was sufficient and brings it within the law and subjects it to condemnation regardless of whether the talc was injurious to health or not. Congress had the right to say that.

Mr. HEPBURN. I don't want to seem fractious [captious?], but will Your Honor give me a general exception?

The COURT. It wouldn't do you any good.

Mr. HEPBURN. Then I would like an exception to that portion of Your Honor's charge in which you charge that the adulteration of 5 parts talc was a material adulteration.

The COURT. Yes; I charged it was sufficient and that it subjected these tablets to condemnation if found to be a confection. I will give you an exception to that.

Mr. HEPBURN. I would like an exception also to that part of Your Honor's charge in which you charge in regard to a dose amounting to 16 minims or 16 drops of wintergreen. You said that to make a dose of wintergreen they would have to take 16 drops.

The COURT. No; I said there was evidence here of that, that the book said that.

Mr. HEPBURN. It was merely a comment on the testimony?

The COURT. It was merely a comment on the testimony. Mr. Dowd called attention to that on the proposition and he claimed that taking that book to show what a dose is that is what he contends here, and I called the jury's attention to that, that in order to get a dose to help your indigestion you would have to eat five boxes of these tablets. Of course they contend on their side that if a man had a little attack of indigestion and he wanted to cure it he would have to eat five boxes of these tablets with the sugar and talc, if he took a dose, and instead of helping his digestion it would be likely to give him indigestion; that is, if he didn't have it before.

Mr. HEPBURN. Will Your Honor grant me an exception to that?

The COURT. I will give you an exception to that.

Mr. HEPBURN. Can the jury take some of the boxes out with them; both with and without the talc?

The COURT. Why do you want them without the talc?

Mr. HEPBURN. So they can see them and examine them?

Mr. DOWD. Are they in evidence? They are not in evidence.

Mr. HEPBURN. We will take those that you put in evidence.

Mr. DOWD. If you will concede that ours have been manufactured for 6 years without talc they may take them. We have produced some of Park & Tilford's tablets without talc.

Mr. HEPBURN. I want to give them tablets both ways, with and without the talc, so that they can see the difference, just how these things are. It gives the jury a clearer idea of what the thing is.

Mr. DOWD. We don't care. They can take all these if they want to.

The COURT. Well, gentlemen, all I can say to you on that is you can take them; some have talc and some don't; I don't know as you can tell which is which.

Mr. HEPBURN. The ones with the word "Mulford" on have talc in and the ones without "Mulford" on have no talc in.

The COURT. Why don't you print your name on those [indicating]?

Mr. HEPBURN. We can't print it on those without the talc. We haven't discovered as yet how to do it.

The COURT. You make them both ways?

Mr. HEPBURN. This is our new construction since the time these were seized. Those without talc have no "Mulford" on the tablet.

The COURT. Well, gentlemen, they want you to see the one they have made since this seizure was made and which don't have any talc in. There [indicating] it is. You will find it in there. It don't have the word "Mulford" on. It has "Mulford" on the box, but not on the tablets; that is the point.

In the condition of my voice, gentlemen, I have made myself plain and clear to you in my charge? If there is any obscurity about any of it tell me, because it has been with an effort that I speak and in a sort of broken way, but I have tried to make it intelligible to you. If I have not, call my attention to it. Anything further?

Mr. HEPBURN. No; that is all.

The COURT. You may retire, gentlemen, and you can simply say here by your verdict: We find for the Government, which will be adequate, and you can add to it.

Mr. HEPBURN. Yes; the necessary condemnation.

The COURT. Or for the defendant. You may retire.

UNITED STATES v. GLASER, KOHN & CO.

(District Court, N.D. Illinois, Apr. 28, 1914)

N.J. No. 3400

Information in six counts alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict directed for defendant on four counts. Of two remaining counts, verdict of guilty on one, verdict of not guilty on other.[80]

The United States attorney filed an information, in six counts, against Glaser, Kohn & Co., a corporation, Chicago, Ill., alleging the sale by said defendant on September 15, 1910, under a written guaranty in the words and figures in substance as follows, to wit:

1/15/07.

STEELE-WEDELES CO., *City.*

GENTLEMEN: Replying to your favor 10th inst., would say we hereby guarantee that all goods as furnished you hereafter will comply with the Food and Drugs Act of June 30, 1906, with the understanding, however, that if we at any time use labels or packages furnished by you, or gotten up as per your instructions, we shall not be responsible for the form or wording of same, but only guarantee that goods covered by same are not adulterated. It is expressly understood that the above shall hold good until notice of revocation be given in writing.

Truly, yours,

GLASER, KOHN & CO.,
(Signed) G. D. GLASER, *Pres.*

Dict. G.D.C.
ML

of a quantity of fruit preserves which was adulterated in violation of said act; which said article was shipped by said purchaser from the State of Illinois into the State of Wyoming. The product was labeled: "Herald Brand Fruit Preserves Blackberry Flavor Apple Preserves 74% Blackberry Preserves 26%."

Adulteration was alleged in the first count of the information for the reason that the article of food consisted wholly of a filthy vegetable substance. Adulteration was alleged in the second count of the information for the reason that the article of food aforesaid consisted in part of a filthy vegetable substance. Adulteration was alleged in the third count of the information for the reason that the article of food aforesaid consisted wholly of a decomposed vegetable substance. Adulteration was alleged in the fourth count of the information for the reason that the article of food aforesaid consisted in part of a decomposed vegetable substance. Adulteration was alleged in the fifth count of the information for the reason that the article of food aforesaid consisted wholly of a putrid vegetable substance. Adulteration was alleged in the sixth count of the information for the reason that the article of food aforesaid consisted in part of a putrid vegetable substance.

The case having come on for trial before the court and a jury, and at the outset of the trial the sufficiency of the guaranty under which the goods were sold having been raised, the question was disposed of as shown by the following ruling by the court:

---

[80]Affirmed, *Glaser, Kohn & Co.* v. *United States,* p. 651, *post.*

LANDIS, *District Judge.* Now, in the first place, all that Congress intended by the enactment of this law is to create a situation which as between the parties was a civil liability between the seller and the manufacturer. Congress intended that the man who is selling stuff to the trade, who has not the means of finding out the constituent elements of the things he is putting over his counter, which is in a solid package in nine cases out of ten, that that man, in order to make the pure food law a reliable thing, was to be relieved in some way of finding out the elementary constituents of the thing he sold. Now, what is the way to do it? Not being a manufacturer himself, but being a middleman, why, of course, it readily appeared to Congress that the way to do this thing is to put the onus on the man who puts it up—the man that puts the bad thing up is the man who ought to be punished, anyway—in order to locate the responsibility where it belongs we will let the middleman out if he has got a good-faith guaranty. Now, Congress put it in the law, if he has a guaranty, to let him out. Now, ever since I have heard anything about guaranties, a guaranty may run until canceled. The banking business of Chicago is now being done on the theory that a guaranty given by Jones on the obligations of Brown is good against Jones' estate 20 years from now, if it is not recalled or canceled, anything done in the future between these powers falling within the liability incurred. Now, the idea that each time the retailer buys from the manufacturer a little dab of stuff that he is going to put out over his counter expressely undertakes with respect to that stuff to identify it in a guaranty, all of which, step by step, would have to be proved by legal evidence when your prosecution comes, the idea that Congress ever had that in mind is perfect nonsense, in my judgment.

Whereupon the trial proceeded, and after the submission of evidence and argument by counsel, the following charge was delivered to the jury by the court:

LANDIS, *District Judge.* Gentlemen of the jury: The charges in this case against the defendant originally were in six counts. I have taken out of the case all counts except the third and fourth. The third count charges that the substance in question—the article in question here—consisted wholly of a decomposed vegetable substance. The fourth count differs from the third count in this, that the fourth count charges that the article consisted in part of a decomposed vegetable substance.

The statutes provide that an article is to be considered as adulterated if it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance.

Now, this is a criminal case, and we start out with the proposition that the defendant is presumed to be innocent of the charge. By that, as I have already had occasion to say, is meant that the making of this charge against the defendant, the bringing of the accusation, the arraignment of the defendant here on the charge, does not operate to cast any suspicion of guilt against the defendant, and that presumption of innocence continues to abide as a real sub-

stantial thing until a time comes in the case when a situation is created which destroys the assumption—a situation of a character that you no longer indulge the presumption. What is that situation? It is a situation where the guilt of the offense charged has been established beyond all reasonable doubt.

Now, by reasonable doubt is not meant a captious doubt, or the frame of mind that a man may find himself in in an endeavor to invent a way out for somebody accused of an offense. It is a real doubt; the frame of mind that a juror is in, because of something in the proof, or something omitted from the proof, the presence or absence of which puts the juror in a frame of mind where, were he dealing with something of importance to himself personally, [it would] be very hard to act—he would pause and hesitate. If you are in that frame of mind, you have got a reasonable doubt, and your verdict should be "not guilty." On the contrary, if you have no such reasonable doubt—if the defendant's guilt of the offense charged in either counts third or fourth has been established by that degree of proof which I have indicated to you, your verdict should be "guilty."

Now, the term "decomposed", as used, means in a state of decomposition, rotten or decayed, and in this case the charge is against this defendant, which was not the jobber but the manufacturer, that the article was in that condition at the time the defendant turned the article over to Steele-Wedeles & Co., and the thing which the accusation sets out is that when the defendant did turn it over to Steele-Wedeles & Co. it was adulterated within the meaning of the adulteration as I have just given it to you.

Of course, if the evidence, if you find this article to be adulterated, or to have become adulterated, and the evidence fails to show that it was adulterated when the defendant turned it over to Steele-Wedeles & Co., the defendant is entitled to a verdict of "not guilty."

Now, in determining the question—if you find adulteration, that is decomposition—in determining the question when it took place, consider the evidence of the witnesses here, the analysists, who have told you about their analysis, their microscopical examinations; bring to bear in your consideration of that evidence your common-sense judgment. You have heard from them what they found; you have heard from them an expression of their opinion and judgment as to what was meant, what was indicated by what they found, including evidence as to when the thing happened, as indicated by what they found; and so, if you believe on that evidence, within the requirements, as I have indicated them to you, that it has been shown here as a fact, assuming you find decomposition to have been found when the examinations were made, the bad condition existed when the defendant turned the product over to Steele-Wedeles & Co., the case is made out. As I say, bring to bear your common-sense judgment upon the evidence of these witnesses. You will recall what each said as to the extent to which in the product they found the molds and yeast cells, and what that indicated, what it meant.

Now, in this case, as I stated to you, the shipper is not on trial; the manufacturer is on trial. That is because of a provision in the

law which is to the effect that the shipper, that is to say, the dealer, the man that sells things, that people who want to buy things may protect themselves against possible prosecution for violating a pure-food law by exacting from the manufacturer from whom he buys what he sells a guarantee that the product is not adulterated.

In this case there has been offered in evidence a guaranty, what the Government offers as a guaranty, what the defendant contests, alleging it is not a guaranty, but what the court charges you is a guaranty, holding, as I do, that it is a question of law for the court to determine whether the thing offered by the Government as a guaranty, in fact is. That document is in these words, to Steele-Wedeles & Co.:

Gentlemen: Replying to your favor of the 10th inst., would say we hereafter guarantee that all goods we furnish you hereafter will comply with the Food and Drugs Act of June 30, 1906, with the understanding, however, that if we at any time use labels or packages furnished by you or gotten up as per your instructions we shall not be responsible for the form or wording of the same, but only guarantee the goods covering the same are not adulterated. It is expressly understood the above shall hold good until notice of revocation be given in writing. Truly, yours, Glasser, Kohn & Co. (Signed) G. D. Glasser, president.

I charge you that the legal effect of that document handed to the jobber by the defendant in this case, the manufacturer, was to guarantee the product in controversy in this case against being adulterated, and you have no—you have nothing to do with the question of whether or not there has been given a guaranty. The only question before you is whether or not, as charged in the information, at the time the defendant in this case turned the article over to Steele-Wedeles & Co. it was adulterated within the meaning of that term as I have given it to you.

Any exceptions, Mr. Lannen?

Mr LANNEN. I desire to except to that part of the court's instruction instructing the jury that the guaranty in question is a legal guaranty on the grounds heretofore argued.

The COURT. Save your point. Any suggestion on behalf of the Government?

Mr. DICKINSON. None, except that Your Honor suggest to the jury that it is not necessary to find an intent here.

The COURT. I omitted to tell you gentlemen the question of intent or knowledge is not involved here. I should specifically have directed your attention to that point. It is not necessary to make out this case against this defendant, to show that the defendant intentionally put up an adulterated article, or that the defendant knew at the time it turned this article over to Steele-Wedeles & Co. that the article was adulterated in order to make out this case. The only question is whether at that time it was adulterated. The law casts upon the defendant the burden of showing that it was not adulterated. If you find that the article was adulterated wholly, the form of your verdict will be "We, the jury, find the defendant Glaser, Kohn & Co., guilty as charged in the third count of the information." If you find against the defendant on the theory that the article was decomposed only in part, the form of your verdict will be "We, the jury, find the defendant, Glasser, Kohn & Co., guilty as charged in the fourth count of the information", writing in the word "third" or "fourth", whatever you find.

If you find for the defendant, the form of your verdict will be, "We, the jury, find the defendant not guilty."

I send the information with you to the jury room in order that you may refresh your memory as to which count contains the charge.

Mr. DICKINSON. The stipulation is to be offered.

The COURT. All right.

The jury thereupon retired, and after due deliberation returned into court with a verdict of guilty as to the fourth count of the information, and a verdict of not guilty as to the third count of the information, a verdict of not guilty upon the remaining four counts of the information having therefore been directed by the court.

UNITED STATES v. 13 CRATES OF FROZEN EGGS

(Circuit Court of Appeals, Second Circuit, June 3, 1914)

215 Fed. 584; N.J. No. 3411

Appeal from and in error to the District Court for the Southern District of New York. Judgment affirmed; writ of error dismissed.[81]

Before COXE and ROGERS, Circuit Judges, and MAYER, District Judge.

COXE, *Circuit Judge.* The question involved in this controversy is simply this—whether decayed frozen eggs taken from the shell and mixed together are within the prohibition of the act of Congress which prohibits the transportation from one State to another of any adulterated article of food.

We are clearly of the opinion that they are, and that the question of intent of either the shipper or the consignee has nothing to do with the question. The law could not be enforced if the Government is compelled, in the case of articles clearly prohibited from interstate commerce, to establish the wrongful intent of the parties. It is enough that such articles are prohibited. All that is it is necessary for the Government to show is that an adulterated article of food has been transported in interstate commerce, and it has amply shown this in the present case. Judge Ray has found the facts and correctly stated the principles of law applicable.

The judgment is affirmed.

COXE, *Circuit Judge* (dismissing writ of error). In view of our decision in the case of the *United States* v. *13 Crates of Frozen Eggs*, decided at this term, it is hardly to be expected that a conclusion in favor of the plaintiff in error would be reached herein, even if we were permitted to review the questions presented at the argument and in the briefs. But we are not permitted to review these questions, because there is no bill of exceptions. None of the questions discussed is properly before us.

The writ of error is dismissed.

UNITED STATES v. 40 BARRELS AND 20 KEGS OF COCA COLA

(Circuit Court of Appeals, Sixth Circuit, June 13, 1914)

215 Fed. 535; N.J. No. 4032

Error to the District Court of the United States for the Eastern District of Tennessee. Judgment affirmed.[82]

Before WARRINGTON, KNAPPEN, and DENISON, Circuit Judges.

DENISON, *Circuit Judge.* This proceeding was brought by the United States to condemn a quantity of syrup called Coca Cola. Forfeiture was claimed under the Pure Food Law (34 Stat. 768), because the syrup was said to be adulterated and misbranded. The case was tried at great length before a jury; at the conclusion of the trial, the Government withdrew certain issues, and upon the two remaining matters the court instructed a verdict for the Coca Cola Company, the claimant of the property. The sole question presented by this writ of error is whether there was any evidence tending to show that the article was either adulterated or misbranded within the prohibition of the act. The facts presented and the questions involved are so well set out by the district judge in his carefully prepared opinion (191 Fed., 431) that we refrain from further preliminary statement. The sections and clauses of the act which it seeems may have some bearing on the question before us are given in the margin.[83]

In applying a statute to particular facts and where it becomes necessary to construe language to which opposing sides give different

[82] Affirming *United States* v. *40 Barrels and 20 Kegs of Coca-Cola,* p. 239, *ante.* Judgment of Circuit Court of Appeals reversed by Supreme Court, *United States* v. *Coca Cola Co.,* p. 741, *post.*

[83] SEC. 6. * * * the term "food," as used herein, shall include all articles used for food, drink, confectionery, or condiments, by man or other animals, whether simple, mixed, or compound.

SEC. 7. That, for the purposes of this act, an article shall be deemed to be adulterated * * * in the case of food * * * third, if any valuable constituent of the article has been wholly or in part abstracted * * * fifth, if it contain any added poisonous or other added deleterious ingredient which may render such article injurious to health.

SEC. 8. That the term "misbranded," as used herein, shall apply to all drugs or articles of food or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular * * * that for the purposes of this act an article shall also be deemed to be misbranded * * * in the case of food: First, if it be an imitation of or offered for sale under the distinctive name of another article. Second, if it be labeled or branded so as to deceive or mislead the purchaser * * * or if it fail to bear a statement on the label of the quantity or proportion of any morphine, opium, heroin, alpha or beta eucaine, chloroform, cannabis indica, chloral hydrate, or acetanilid, or any derivative or preparation of any such substances contained therein * * * Fourth, if the package containing it or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein, which statement, design, or device shall be false or misleading in any particular: *Provided,* That an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be adulterated or misbranded in the following case: First, in the case of mixtures or compounds which may be now or from time to time hereafter known as articles of food, under their own distinctive names, and not an imitation of or offered for sale under the distinctive name of another article, if the name be accompanied on the same label or brand with a statement of the place where said article has been manufactureed or produced. Second, * * * *And provided further,* That nothing in this act shall be construed as requiring or compelling proprietors or manufacturers of proprietary foods which contain no unwholesome added ingredient to disclose their trade formulas, except insofar as the provisions of this act may require to secure freedom from adulteration or misbranding."

meanings, it is vital to have in mind the essential scope and purpose of the act. The present case well illustrates the importance of this consideration. Much of the Government's contention as to the extent of the prohibitions here found rests upon the theory that Congress intended to protect the public health by preventing (to the extent of the constitutional power resting in the commerce clause) the sale or transportation of deleterious foods. The opposing contention denies this broad purpose and concedes only the intent to prevent any fraud or deception in the sale of foods. The title to the act is broad enough to support the Government's utmost claim as to general purpose. It is " An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods ", etc. If there was nothing in the body of the act expressly prohibiting the sale of deleterious food, *qua* deleterious, this title would furnish some reason for expanding in that direction any terms of prohibition there might be ambiguous enough to permit the implication (*Goodlet* v. *L & N. R.R.*, 122 U.S. 391, 408) ; but we find in section 11, which relates solely to importations from foreign countries, an express direction that such importation shall be wholly forbidden if the food is adulterated or misbranded " or is otherwise dangerous to the health of the people of the United States." We have therefore a provision which responds to the call of the title in this particular and makes it unnecessary to resort to any otherwise unjustifiable construction for the mere purpose of giving some effect to all parts of the title. With the exception of this clause of section 11, every other directly or indirectly prohibitory clause of the act relates to articles which carry the taint of deception and fraud by being adulterated or misbranded. Section 2 prohibits interstate commerce in any article " which is adulterated or misbranded within the meaning of this act ", and subsequent clauses of the same section refer to " any such articles so adulterated or misbranded within the meaning of this act ", and to " any such adulterated or misbranded foods." The expert examination provided for by section 4 is to determine " whether such articles are adulterated or misbranded." Section 7 defines when, for the purposes of the act, an article shall be deemed to be adulterated, and section 8 defines the term " misbranded " as used in the act, and specifies when, for the purposes of the act, an article shall be deemed to be misbranded. Section 9 prescribes a certain immunity from prosecution when there is a guaranty to the effect that the article is not adulterated or misbranded within the meaning of the act. Section 10 provides for the seizure and forfeiture of the offending articles, but its effect is limited to an article which is adulterated or misbranded within the meaning of the act. A subsequent clause of section 10 furnishes some superficial support for the broader theory of the purpose of the act by providing for the disposition of the offending article, if it " is condemned as being adulterated or misbranded or of a poisonous or deleterious character within the meaning of this act "; but this support is only superficial, because the power to condemn, given by the first part of section 10, rests on the finding that the article is " adulterated or misbranded." This general reference to a poisonous or deleterious character as ground of condemnation must be to

instances where that character, by incorporation into the article, causes the fatal adulteration or misbranding. Considering all these parts of the act, together with its title, we cannot doubt that, so far as its general purpose and intent furnish any aid for interpretation, that general purpose and intent must be deemed to be the prevention of fraud and deception, so that the purchaser can get the thing he has a right to suppose he is getting, rather than the protection of the public health to the extent of prevening the purchaser from deliberately and intentionally buying a particular food which is what it purports to be, even though a jury might think it "deleterious." If argument were needed to sustain this conclusion, it could be found in the provisions as to drugs. Foods and drugs are put on the same basis throughout, save as to matters of definition and some detailed requirements. There can be no room to suppose that the act was intended to prohibit broadly the sale of all deleterious foods and not to prohibit with equal breadth the sale of all poisonous drugs. The latter supposition is impossible; and so the former cannot be accepted. Further support will be found in the provisions which, by necessary implication, permit the sale of foods containing cocaine, morphine, and the like, provided the purchaser is properly advised of the contents. These views of the general purpose of this act have been accepted by the decisions, so far as they go *Savage* v. *Jones*, 225 U.S. 501, 533, 535; *McDermott* v. *Wisconsin*, 228 U.S. 115, 131; *United States* v. *Lexington Co.*, 232 U.S. 399, 409.

The general language of the court in the last-cited case that "the statute was intended to protect the public health from possible injury" is not at all inconsistent with the view we have expressed, because that language is used with reference to adulterations and the addition to known foods of injurious elements. The very last word "adulterated" imports fraud and deception; it implies that the article is not what it purports to be.

Under the statement of facts it is clear that the only question arising under section 7 is whether the caffeine in the Coca Cola is an "added poisonous or other added deleterious ingredient which may render such article injurious to health"; and, under the assumption made by the district judge, of which the Government cannot complain, and which we here adopt, but only for the purposes of this opinion—i.e., that there was evidence requiring submission to the jury to the effect that caffeine is a poisonous or deleterious ingredient which may render the Coca Cola injurious to health—it is equally clear that the turning point is whether it can be said or whether a jury could be permitted to say that the caffeine was "added" within the meaning of this clause.

It is impossible intelligently to conceive the meaning of "added", unless we suppose a base upon which the addition is placed, and we at once meet the question: If caffeine is the addition, what is the base? For 15 years before the passage of the act, Coca Cola has been an existing article of food (within the statutory definition of "food") and in the latter 10 years of that period it had been one of the most widely known and used articles of its general class. It was a compound; it had no distinctive base (unless water, by reason of its larger proportions); it was made up of water, sugar, caffeine, phosphoric acid, glycerine, lime juice, coloring matter, flavoring matter, and

"merchandise No. 5." Each of these elements is more or less important; there seems to be no method of determining their relative importance; but if any one may be rejected as comparatively negligible or secondary or noncharacteristic, that one is not caffeine. In the manufacturing process, water and sugar are boiled to make a sirup; this boiling is repeated; then caffeine is "added" and then the sirup is boiled once or twice more; the sirup is then put into a cooling tank and then into a mixing tank in which the remainder of the process is carried on and in which the other elements become part of the ultimate combination. It is plain as may be that without caffeine the mixture would not be Coca Cola, and the purchaser who had been using it in its standard form 15 years when the act was passed and who might then buy an article of the same name which did not contain any caffeine would rightfully think that he was deceived; and yet it is said that the act intended to prevent misleading the public is violated unless the public is thus misled.

It is another form of the same thought to say that the mere use of the word "adulterate" or "added" implies the existence of a standard, and it is a contradiction in terms to say that the use of an element necessary to constitute the standard is an adulteration of or addition to the standard; but, to this contradiction, the argument for the Government necessarily leads. So, further, we find that clause 3 of that division of section 7 relating to foods declares adulteration if any valuable constituent has been abstracted. Caffeine is a valuable constituent. If it is omitted, the article is adulterated and if it is included the article is adulterated. We must break clause 3 to keep clause 5.

It is urged that in case of a compound article each element is, in a proper sense, "added", and so, if any element is deleterious, it is an "added deleterious ingredient." This position not only depends in part upon what we have thought an erroneous view of the general purpose of the statute, but it destroys all force in the word "added" and gives clause 5 of that part of section 7 relating to food precisely the same meaning as if it read "if it contain any poisonous or other deleterious ingredient", etc. The deliberate and careful insertion of the word "added" before the word "poisonous", and again before the word "deleterious", while the word is omitted in the preceding almost identical clause relating to confectionery, cannot be treated as accidental or meaningless. So to do would violate the settled rule of construction which requires us to "give full effect to all the words in their ordinary sense." (*Bend* v. *Hoyt*, 13 Pet. 263) and requires that "signification and effect shall, if possible, be carried to every word" (*Washington Co.* v. *Hoffman*, 101 U.S. 112, 115), and declares it the "duty of the court to give effect, if possible, to every clause and word of a statute, avoiding, if it may be, any construction which implies that the legislature was ignorant of the meaning of the language it employed" (*Montclair* v. *Ramsdell*, 107 U.S. 147, 152).

Again, it is urged that the true test whether the deleterious ingredient is "added" is whether this ingredient is in its natural or in an artificial form. This criterion is supposed to find support in statements made during the congressional debates and in the well-known fact that many natural articles of food, like fruits, contain elements

which in the combination formed by the complete fruit are not materially harmful, but which, when extracted and administered separately, may be injurious. This criterion may often be a useful aid in applying and interpreting the statute, but to apply it as a hard and fast rule where artificially compounded foods are under consideration comes to saying, in the case before us, that if coffee berries or tea leaves, or, we take it, the complete extract of coffee berries or tea leaves, containing the amount of caffeine now in question, were put into the compound in its manufacture, there would be no violation of the law; but that if the caffeine, and that only, which was in these same coffee berries or tea leaves, or in some other natural product, is put into the sirup, the law is broken. Alcohol surely might be considered a "deleterious ingredient" if caffeine may be; but can we suppose that a compound food would be obnoxious to this law if it contained 5 percent of alcohol purchased in the market ready distilled, and yet that a compound otherwise the same would be within the approval of the law, though it contained 25 percent of alcohol distilled from grain during the process of making the compound? There has been much controversy whether "blended whisky" could be sold under that name, but it has never been thought to be forbidden merely because its alcohol was an "added" ingredient. Many wines are "fortified" by adding alcohol, and these may be obnoxious to the law for other reasons; but if the theory now under consideration is correct, they could not be sold at all, no matter how labeled. This theory must even lead us to say that if a ground or pulverized coffee or a coffee extract is so deficient in caffeine as to be below standard the law is violated by adding from another source caffeine enough to make the coffee of full normal strength, or to say that it is a vital distinction whether the citric acid contained in any familiar and popular acid beverage is at the time of compounding squeezed from a lemon or poured from a bottle. We cannot follow the argument which brings us to those results. Not only is it without basis in the statute, but it lacks inherent cogency.

We get from section 8 some help on the proper meaning of the phrase "added poisonous or deleterious ingredient", because unquestionably the two sections must be construed together and the same phrase should have the same construction in each. The proviso of the fourth paragraph of that part of section 8 relating to food seems to be drawn with express reference to situations like the present. Congress must have known that many proprietary articles of food and drugs were upon the market under proprietary or trade names, and Congress thought fit to provide that these things should not be deemed to be adulterated unless any deleterious ingredient contained therein was "added." This recognizes somewhat more expressly than is done by section 7 the thought that the necessity of a standard before there can be any adulteration applies as well to compounds as to simple foods, and then avoids future difficulties in application by providing that the compound article in its distinctive and known form should be the standard.

We do not overlook the argument that the act makes no distinction between compounds known at its date and those thereafter devised, and so that the construction which prevents an inherent element from being considered as "added" leaves the manufacturer at liberty to

use any poison he pleases in making up his compound "food", provided only he gives to it and sells it under a distinctive name. This conclusion must, to some extent, be granted; yet it loses most of its apparent force when we remember the real purpose of the act and observe the express direction of the law that the maker of a proprietary food need not disclose its contents if he states the place of manufacture. It would seem a proper provision that if a proprietary food contains any ingredient fairly subject to be called deleterious, the maker should disclose on the label its presence and its extent, just as is required in numerous specific instances; but we cannot make such a law. On the other hand, it is difficult to suppose that Congress intended absolutely to forbid the use in any compound of any element that a jury might later call "deleterious"; but it must be one thing or the other. The prohibition is either absolute or nonexistent. The best known habit-forming drugs are selected, and implied permission is given to allow their use in compounding products for sale, provided they are named on the label; but as to the great mass of other food and drug elements which are undoubtedly deleterious if used to excess, there is no provision for naming them on the label. If they are within the definition of "added deleterious ingredient", they may never be used under any conditions or in any quantity that may be injurious to health, even though they are described in the largest of letters on the outside of the package. This way of reading the statute would practically greatly impede the progress of synthetic chemistry in foods, and we think it distinctly more unreasonable than it is to suppose that Congress, having selected and regulated the use of those things known to be particularly dangerous, thought best not wholly to forbid at that time other things from which no serious danger need be anticipated.

There is a middle view which is sufficient for the purposes of this case and which will recognize the composite meaning of "added deleterious" rather than the separate meaning of each word. This view is that in using the word "added" with reference to a possibly deleterious food ingredient, Congress had in mind an addition above and beyond the quantity in which such ingredient was normally found in usual and customary articles of food, and that no such ingredient should be considered as "added" if it was present only in the quantity in which it existed in these common articles of food with which every Member of Congress was familiar, and which had generally been thought wholesome. For example, creosote and other products of destructive wood distillation are, independently considered, injurious, but they have always been present in smoked hams. Can the addition of the same preservatives to the same extent to the same meat be something that Congress intended to prohibit? The boric acid found in apples is a preservative. If certain apples which are to be preserved are not up to the maximum in this element, did Congress intend to forbid supplying the deficiency by the same element from another source? Acetic acid may, of course, be injurious, but if, by its use, an artificial vinegar is made which is chemically and in every way equivalent to the natural vinegar familiar to the Members of Congress in many compounds, would they have thought of it as a deleterious addition? No example is so clear as the very one here involved. Every Member of Congress had been familiar

from childhood with tea and coffee; perhaps most of them drank it. The average cup of coffee contains more than 2 grains of caffeine; the average cup of tea 1½ grains. A glass of Coca Cola, as consumed, contains 1⅕ grains of caffeine. The chemical qualities and the physiological effects of the caffeine which is in the tea or coffee and of the caffeine which is in the Coca Cola are precisely the same. We are quite convinced that the use in an artificial beverage of a certain element which had been one of its characteristic elements for many years, and when such use was in a less proportion than the same element was known to make up in different natural beverages then in universal use and generally thought wholesome—that such an element so employed could not have been within the meaning of Congress when it chose the words "added deleterious ingredient."

The question arising under section 8—the misbranding section—is to be determined by the proviso under the fourth clause relating to food. Separate reference to the first clause which forbids sale "under the distinctive name of another article", is unnecessary, because the same prohibition is repeated in the proviso under clause four. We have reached the conclusion that Coca Cola does not contain any "added poisonous or deleterious ingredients", and it is undisputed that the labels carry a statement of the place of manufacture. Hence this proviso declares that Coca Cola shall not be deemed to be adulterated or misbranded if it was or is known as an article of food under its own distinctive name and if it is not in imitation of or offered for sale under the distinctive name of another article. It is an article of food under the definition of the statute. That it was, at the time of the passage of the law and ever since has been, known under its own distinctive name is too clear for question, except as it is said that the adopted name cannot be its distinctive name because it is the distinctive name of another article. Neither is it said to be an imitation of another article, except as these words also raise the same question whether it is sold under the distinctive name of another article. Coming to that question, and just as on the subject of adulteration we must first find the standard, we here first meet the inquiry: What is the "distinctive name of another article" under which name Coca Cola is sold? The record makes it very clear to us that there is no such other article. No article except plaintiff's compound is or ever has been sold "under the distinctive name," Coca Cola. These words constitute and are the distinctive name of plaintiff's product, and they are the distinctive name of nothing else. "Coca" is indicative of one article; "cola" is indicative of another, very distinct; but "Coca Cola" was not, in 1892, and (save for the general knowledge of plaintiff's article) is not now, intelligently descriptive of any combination of the two. It might be medicine, food, or drink; it might be to swallow, smoke, or chew. These associated words as the distinctive name of any substance or combination of substances were unknown until adopted by plaintiff; that "distinctive name" is still unknown as an appellation for any other substance on the market.

The burden put upon the Government to show that Coca Cola is masquerading under the distinctive name of another article is surely more exacting than the burden on one attacking the trade mark to show that the name is sufficiently misleading as indicating the make-

up of the product so that it is an improper trade-mark. We consider the latter question in our opinion, this day filed, in *Nashville Syrup Co.* v. *Coca Cola Co.*, and conclude that the name carried no forbidden deception. We need not here repeat that discussion. If that conclusion is correct, it is even more certain that Coca Cola is not guilty of posing "under the distinctive name of another article."

It follows that the judgment below must be affirmed.

WEEKS v. UNITED STATES

(Circuit Court of Appeals, Second Circuit, June 18, 1914)

216 Fed. 292; N.J. No. 3497

In error to the District Court for the Southern District of New York. Judgment affirmed.[84]

Before COXE, WARD, and ROGERS, Circuit Judges.

ROGERS, *Circuit Judge.* The defendant has been convicted of a crime committed in violation of the Pure Food and Drugs Act, approved June 30, 1906. The information charged the defendant with having shipped from New York City to St. Louis, Mo., a certain article of food, labeled in part as follows:

> Cream thick—Serial No. 2049—Manufactured by O. J. Weeks & Co., New York, New York. It is guaranteed to contain no gelatine, gum arabic, egg albumen or similar article.

This label, it was charged, was false and misleading and calculated to mislead and deceive purchasers in that the article of food contained as one of its ingredients an article similar to gum arabic, to wit, Indian gum. The information was signed by the United States attorney, but was not verified, nor were any affidavits filed or submitted to the court. The defendant appeared and demurred to the information, and in specification of points under his demurrer alleged "that the said information is not supported by a verification or oath showing personal knowledge or probable cause." His demurrer was overruled, and being required to plead he pleaded not guilty. At the close of the trial his counsel renewed his motion that the information be dismissed for reasons before stated, but his motion was denied and the case was submitted to the jury and a verdict of guilty was rendered.

The question we have to decide, therefore, is whether an attorney for the United States can proceed in the courts of the United States by information to prosecute one who is alleged to have committed a misdemeanor, where the information is not verified or supported by an affidavit showing personal knowledge or probable cause.

There can be no conviction or punishment for a crime without a formal and sufficient accusation. A court can acquire no jurisdiction to try a person for a criminal offense unless he has been charged with the commission of the particular offense and charged in the particular form and mode required by law. If that is wanting his

---

[84] Affirming *United States* v. *Weeks*, p. 485, *ante*.

trial and conviction is a nullity, for no person can be deprived of either life, liberty, or property without due process of law. The forms or modes of accusation which the law recognizes are: Indictment or presentment by a grand jury; and information by the public prosecutor.

The colonists who came to this country from England brought with them the common and statute laws of England as they existed at the time of their emigration and insofar as they were applicable to the local circumstances of the colonies which they established. Among the principles of the common law which they brought were those which regulated the mode of proceeding in criminal cases—the law relating to indictments and informations and the right to trial by jury—although in the Colonies as well as in England various statutes had abolished, prior to the Declaration of Independence, a number of the oppressive provisions of English law relating to criminal trials. Among the principles which had thus been abrogated, for example, was that which denied to a person accused of a capital crime the right to have compulsory process for his witnesses and that which withheld from him the right to examine on oath those witnesses who voluntarily appeared for him, as well as that which forbade him the aid of counsel in his defense, except only as regarded questions of law. See *United States* v. *Reid*, 12 How. 360, 363 (1851).

The proceeding by information is said to have been unpopular in England and to some extent in the colonies. But it has never been abolished in England, although in some of our States it has been abolished. At the time of the Declaration of Independence it was a familiar mode of criminal procedure in all the colonies.

When the statute of 3 Henry VII extended the jurisdiction of the Court of Star Chamber and informations became restricted in practice to that court, the members of which were the sole judges of the law, the fact, and the penalty, a very oppressive use was made of them for something more than a century, " so as continually to harass the subject and shamefully enrich the Crown." 4 Blackstone Comm. p. 310. And when the Court of Star Chamber was abolished in the time of Charles I, and proceedings by information were again used in the Court of King's Bench, the prejudice which had arisen from the long abuse of this process was so strong that it was strenuously contended that all proceedings by information were illegal as being contrary to the nature of English laws and to Magna Charta. But the objections were overruled, Sir Matthew Hale saying:

> That although in all criminal cases the most regular and safe way, and most consonant to the statute of Magna Charta, is by presentation or indictment of 12 sworn men, yet, for crimes inferior to capital ones, proceedings might be by information, and this, from long and frequent practice, was certainly established as the law of the land. 5 Mod. 463; Show. 106; Bacon's Ab., Information, A; 2 Hawk. P.C. 260; 4 Black. Com. 310; 1 Ersk. Speeches, 275; *State* v. *Dover*, 9 N.H. 468 (1838).

And the unpopularity of informations were not restricted to the mother country, but, as we have already said, existed to some extent in this country. Mr. Justice Wilson, of the Supreme Court of the United States, and who was also a member of the Constitutional Convention of 1787, in the lectures which he delivered as professor of law in the University of Pennsylvania in 1790–92, after calling

attention to the two kinds of informations—those filed ex officio by the public prosecutor and those carried on in the name of the Commonwealth or Crown, but in fact at the instance of some private person or common informer—said:

> The first have been the source of much; the second have been the source of intolerable, vexation; both were the ready tools, by using which Empson and Dudley and an arbitrary star chamber fashioned the proceedings of the law into a thousand tyrannical forms. Neither, indeed, extended to capital crimes; but ingenious tyranny can torture in a thousand shapes without depriving the person tortured of his life.

After calling attention to the fact that in England restraints had been imposed upon informations at the instance of private persons but not upon those filed ex officio by the public prosecutor, he went on to say:

> By the constitution of Pennsylvania, both kinds are effectually removed. By that constitution, however, information are still suffered to live; but they are bound and gagged. They are confined to official misdemeanors; and even against those they cannot be slipt but by leave of the court. By that constitution, "no person shall, for any indictable offense, be proceeded against criminally by information," "unless by leave of the court, for oppression and misdemeanor in office." 2 Wilson's Works (Andrews ed.), p. 450.

There seems to be no doubt that prosecution by information is as ancient as the common law itself. The subject had no reason to complain because this method of prosecution was adopted, for, as Blackstone (4 Commentaries, p. 310) states:

> The same notice was given, the same process was issued, the same pleas were allowed, the same trial by jury was had, the same judgment was given by the same judges, as if the prosecution had been by indictment.

Moreover, it seems to have always been the rule that the substantial parts of the information had to be drawn with as much exactitude as the corresponding parts of an indictment for the same offense.

In the early days of the Federal Government informations were principally used, if not exclusively used, for the recovery of fines and forfeitures. And Mr. Justice Story, in his Commentaries on the Constitution, section 1780, published in 1833, said, in speaking of informations:

> This process is rarely recurred to in America; and it has never yet been formally put into operation by any positive authority of Congress under the National Government, in mere cases of misdemeanors, though common enough in civil prosecutions for penalties and forfeitures.

But within the last 50 years prosecutions by informations have increased greatly in the Federal courts. (See *Ex parte Wilson*, 114 U.S. 417, 425.)

It appears, as Stephens states in his History of the Criminal Law, volume 1, page 295, that from the earliest times the law officers of the king accused persons of offenses not capital in his own court without the intervention of a grand jury. But the right to prefer a criminal information is at common law restricted to misdemeanors.

> At common law an information will lie for any misdemeanor, but not for a felony. 22 Cyc. 187, and cases there cited.

The offense charged in the information now under consideration was plainly a misdemeanor, and for more than 200 years the right has been established in England to prosecute by information, and,

without the sanction of a grand jury, a person charged with having committed a misdemeanor.

Bacon in his Abridgment, volume 3, page 635, after stating that an information differs principally from an indictment in that "an indictment is an accusation founded by the oath of 12 men, whereas an information is only the allegation of the officer who exhibits it", goes on to explain that there were two kinds of criminal informations in use in England under the common-law procedure. The first, which was for offenses more immediately against the king, was filed, he says, by the attorney general ex officio and without leave of court. The second, which was for offenses against private individuals, was exhibited by masters of the crown, and, as matter of course, prior to the statute of 4 and 5 William and Mary, ch. 18. But after that statute was enacted informations of the second class, he declares, could not be filed except upon leave of court, and all such informations had to be supported by the affidavit of the person at whose suit it was filed.

In the United States it has been suggested that informations brought by the prosecuting officers answer to the informations filed by the masters of the crown, and which, as said, had to be supported by affidavit, and not to the informations of the first class or those which related more immediately to the king and which could be filed without affidavit. Those who make this suggestion rely upon the statement found in Blackstone's Commentaries, volume 4, page 309, where that distinguished commentator says:

> The objects of the King's own prosecutions, filed ex officio by his own Attorney General, are properly such enormous misdemeanors as peculiarly tend to disturb or endanger his Government, or to molest or affront him in the regular discharge of his royal functions. For offenses so high and dangerous, in the punishment or prevention of which a moment's delay would be fatal, the law has given to the Crown the power of an immediate prosecution, without waiting for any previous application to any other tribunal; which power, thus necessary not only to the ease and safety, but even to the very existence of the executive magistrate, was originally reserved in the great plan of the English constitution, wherein provision is wisely made for the due preservation of all its parts. The objects of the other species of informations filed by the master of the Crown office upon the complaint or relation of a private subject, are any gross and notorious misdemeanors, riots, batteries, libels, and other immoralities of an atrocious kind, not peculiarly tending to disturb the Government (for those are left to the care of the Attorney General), but which, on account of their magnitude or pernicious example, deserve the most public animadversion.

Now this statement may seem to imply that the Attorney General's right to file information for misdemeanors was not unlimited, but was restricted to misdemeanors which tended to disturb or endanger the Government. But, if this was his meaning, it is evident that he was mistaken in his understanding of the law.

Chitty, in his great work on the Criminal Law, page 384, says:

> Informations may be filed by the Attorney General for any offense below the dignity of felony, which tends, in his opinion, to disturb the Government or immediately interfere with the interests of the public or the safety of the Crown. He most frequently exercises this power in cases of libels on Government or high officers of the Crown, etc. He seems, indeed, at his option to exact it when any offense occurs which may thus be prosecuted in the Crown office. He may file an information against anyone whom he thinks proper to select, without oath, without motion or opportunity for the defendant to show cause against the proceeding.

And Cole, in his work on Criminal Informations, page 9, says that—

> The Attorney General may exhibit an ex officio information for any misdemeanor whatever.

And Hawkins, in his Pleas of the Crown, volume 2, page 369, says:

> As to the first of these particulars, viz: In what cases such informations lie, it hath been holden that the King shall put no one to answer for a wrong done principally to another without an indictment or presentment, but that he may do it for a wrong done principally to himself. But I do not find this distinction confirmed by experience; for it is everyday's practice, agreeable to numberless precedents, to proceed by way of information, either in the name of the Attorney General or of the master of the Crown office, for offenses of the former kind, as for batteries, cheats, seducing a young man or woman from their parents in order to marry them against their consent, or for any other wicked purpose, spiriting away a child to the plantations, rescuing persons from legal arrests, perjuries and subornations thereof, forgeries, conspiracies, whether to accuse an innocent person or to impoverish a certain set of lawful traders * * * and other such like crimes done principally to a private person, as well as for offenses done principally to the King.

In Clark on Criminal Procedure, pages 128 and 129, it is said:

> By an early English statute (4 and 5 William and Mary, ch. 18), however, which is old enough to have become a part of our common law, if applicable to our conditions, it was provided that information by masters of the Crown office could only be filed by leave of court and that they should be supported by the affidavit of the person at whose suit they were preferred. The law remained that informations filed by the Attorney General (and, as already stated, he could file them for any misdemeanor) need not be verified, and that he was the sole judge of the necessity or propriety of filing them. * * * There is some authority for the proposition that the kind of information to be used at common law in this country is that which in England was filed by the masters of the Crown office. * * * But, by the better opinion, the other kind of information is the one in use with us.

In Bishop's Criminal Procedure, section 144, it is said:

> In our States the criminal information should be deemed to be such, and such only, as in England is presented by the attorney or solicitor general. This part of the English common law has plainly become common law with us. As with us the powers which in England were exercised by the attorney or solicitor general are largely distributed among our district attorneys, whose office does not exist in England, the latter officers would seem to be entitled, under our common law, to prosecute by information, as a right adhering to their office and without leave of court.

If it is true, and it seems to be, that the district attorneys exercise the powers which in England were exercised by the attorney or solicitor general, then they are entitled to proceed upon information and that without leave of the court and without affidavit.

It is necessary to keep in mind what Mr. Stephen in his General View of the Criminal Law of England, page 156, calls the "most characteristic principle of the law of England" on the subject of criminal procedure, namely, that in that country "everyone, without exception, has the right to use the Queen's (King's) name for the purpose of prosecuting any person for any crime." The statute (4 and 5 William and Mary, ch. 18) was intended to restrict the right of prosecution by private and not public prosecutors. Prior to that act it had been within the power of any individual to file an information without disclosing to the court the grounds upon which it was exhibited (4 T.R. 290). And the meaning of the

statute was that the clerk of the Crown should thereafter file no information of a private prosecutor without leave of the court, and that the fact that there was probable cause for filing it should be disclosed in order that the court might know whether to grant leave; and it was further intended to preclude the issuance of process on such informations without recognizance. Comyn's Digest, vol. 4, p. 558, note " d." But there was no intention to limit the right of the Attorney General to prosecute by information, as he always has done. It was not necessary in England either before or after the statute that he should obtain leave of the court before filing his information, and there was, therefore, not the same reason why he should verify any information which he filed. Moreover, he was acting throughout under his oath of office, and it was not assumed that he would proceed upon information without probable cause.

We think that the weight of authority is that in this country, as the text writers assert, the informations used by the prosecuting officers are the informations used by the Attorney General in England and not those exhibited by masters of the Crown and which were governed by 4 and 5 William and Mary, ch. 18. And as at common law an information could be filed by the Attorney General simply on his oath of office and without verification, it has been held in this country that verification of an information by a prosecuting attorney is unnecessary unless required by some constitutional or statutory provision. *Long* v. *People*, 135 Ill. 435; *People* v. *Graney*, 91 Mich. 646; *State* v. *Pohl*, 170 Mo. 422, 22 Cyc. 281.

We pass, therefore, to inquire whether there is anything in the Constitution of the United States or in the acts of Congress which in any way alters the common law respecting the right of the prosecuting officers of the Government of the United States to proceed by information in criminal cases in the Federal courts.

The Constitution of the United States leaves all offenses against the United States open to prosecution by information except those which are capital or infamous. The restriction as to those offenses is contained in the fifth amendment:

> No persons shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces or in the militia, when in actual service in time of war or public danger.

The Supreme Court in *Ex parte Wilson*, 144 U.S. 417 (1885), authoritatively decided what meaning is to be attached to the word " infamous " in this connection. The court held that a crime punishable by imprisonment for a term of years with hard labor is an infamous crime. In the constitutional sense it is not the character of the crime but the nature of the punishment which renders the crime infamous. The offense with which the defendant in this case is charged is not an infamous one but one upon which he might be tried upon information.

The acts of Congress not only have not prohibited the use of informations but have, on the contrary, expressly authorized their use in certain cases. See section 1022 of the Revised Statutes.

The fourth amendment to the Constitution of the United States provides as follows:

> The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures, shall not be violated; no

warrant shall issue but upon probable cause supported by oath or affirmation and particularly describing the place to be searched and the persons or things to be seized.

Mr. Justice Story, in his Commentaries on the Constitution, volume 2, section 1902, in speaking of this amendment, states that:

It is little more than the affirmance of a great constitutional doctrine of the common law.

If that be true, and if it also be true that at common law the Attorney General could file an information without verification or affidavit of probable cause, his oath of office being regarded as sufficient, then this particular amendment should not be regarded as altering the rule upon that subject. In *United States* v. *Maxwell*, 3 Dill. 275 (1875), in an opinion written by Judge Dillon, it is said:

We are of the opinion, therefore, that offenses not capital or infamous may, in the discretion of the court, be prosecuted by information. We cannot recognize the right of the district attorney to proceed on his own motion and shall require probable cause of guilt to appear by the oath of some credible person before we will allow an information to be filed and a warrant of arrest to issue. But with these safeguards there is no more reason to fear an oppressive use of information than there is reason to fear an abuse of the powers of a grand jury.

The facts in that case were that prior to the term complaint on oath had been made before a United States commissioner charging the defendant with several violations of the internal revenue laws, and the defendant was arrested upon a warrant issued by the commissioner and held to answer to the district court. At the term, the district attorney, upon the said complaint, warrant, and recognizance, moved the court for leave to file criminal information against the defendant charging him with said offenses, which leave was granted and the information accordingly filed. The defendant appeared and pleaded guilty. Afterwards his counsel made a motion in arrest of judgment upon the ground that the defendant could only be punished criminally upon an indictment and not upon an information. The motion in arrest of judgment was overruled, the court using, in the course of its opinion, the language already quoted. The case cannot be regarded as holding that an information must be verified. The court, in a dictum, announced that it would not permit an information to be filed and a warrant of arrest to issue without some evidence being presented under oath that probable cause of guilt existed.

In *United States* v. *Smith*, 40 Fed. 755 (1889), in a case which arose in the Circuit Court for the Eastern District of Virginia, Judge Hughes said:

A preliminary question raised in the argument was whether the district attorney may, of right, by virtue of his official prerogative, file informations charging citizens with offenses brought officially to his knowledge. This cannot be done, under the rules and practice of this court, except upon previous complaint under oath, after opportunity has been given the accused to appear before the examining officer, and to confront the witnesses testifying in support of the complaint. This requisite makes it necessary that the district attorney shall have leave from the court to file an information; and, if it is within the discretion of the court whether to grant the leave or not, then the right to file is not a prerogative of the prosecutor's office, and the court may require him, before granting leave, to bring the accused, by rule or other proceeding, before the court, to show cause, if cause there be, against the filing of the information.

The decision does not hold that an information must be verified.

The case most frequently cited in the Federal courts on this subject is that of *United States* v. *Tureaud* (C.C.), 20 Fed. 621, decided in

1884 in the Fifth Circuit by Judge Billings, of the Eastern District of Louisiana. It was decided in that case that informations must be based upon affidavits which show probable cause arising from facts within the knowledge of the parties making them. And the court quashed an information which was based on an affidavit which read:

George A. Dice, being duly sworn, says: All the statements and averments in the foregoing information are true, as he verily believes.

It was conceded—

that under the usages of the Government of Great Britain this information belongs to the class of formal accusations which could be made by the King in his courts without any evidence and against all evidence.

The opinion then continued:

But the adoption of the fourth amendment affected all kinds and modes of prosecution for crimes or offenses, for there can be no legal pursuit of accused persons without apprehension. All prosecutions require warrants. An information, a suggestion of a criminal charge to a court, is a vain thing unless it is followed by a capias. The procedure by information, therefore, after it was acted upon by this amendment, lost its prerogative function or quality. It could not thereafter be the vehicle of preferring any arbitrary accusation—not by kings—because we have in the department of criminal law no successor to him, so far as he represented a right to institute, if it pleased him, unsupported incriminations, nor by the district attorney, nor any other officer of the United States, for the Constitution has said, in effect, that in no way nor manner shall magistrates or courts issue warrants, except upon proofs, which are to be upon oath and make probable excuse.

What is said as to the necessity for a verification of the information we think is correct in any case where the application for the issuance of a warrant of arrest is based on the information. In the *United States* v. *Polite*, 35 Fed. 58 (1888), in the District Court for the District of South Carolina, it is said that—

Informations must be based upon affidavits which show probable cause arising from facts within the knowledge of the parties making them, and that mere belief is not sufficient.

In this case the information was not sworn to, but accompanying it were the papers of the commissioner who held the preliminary examination, including the sworn testimony of the witnesses taken in the presence of the accused. It was held that this was sufficient and a motion to quash was refused.

In *Johnston* v. *United States*, 87 Fed. 187 (1898), in the Circuit Court of Appeals for the Fifth Circuit, the two preceding cases are referred to and approved. The information was not sworn to, but was accompanied by an affidavit. The court said:

The affidavit on which the information was based was wholly insufficient *to warrant the arrest and trial* of the plaintiff in error, and is altogether too general in terms as to the offense against the United States said to have been committed; and it shows no knowledge, information, nor even belief on the part of the affiant as to the guilt of the party charged, beyond the bare statement that "there is probable cause to believe that the said offense has been committed by P. T. Johnston." However false the affidavit may be, it would be next to impossible to assign and prove perjury upon it.

In the *United States* v. *Baumert*, 179 Fed. 735, 742 (1910), District Judge Ray in a carefully prepared opinion said:

Under the common law the information was not necessarily verified; but, as stated, this led to abuses and the adoption of the fourth amendment to the Constitution, which in legal effect demands that no warrant shall issue upon

an information filed by the United States attorney, unless it states facts, a crime, etc., and is supported by the oath of the officer filing it, who must speak from personal knowledge or by the oaths or affirmations of others who speak from personal knowledge.

There is nothing in the opinion rendered which holds that an information must in all cases be verified or supported by an affidavit showing probable cause. But only that an information must be so verified or supported when an application for the issuance of a warrant is based on it. The sole question before the court was as to the issuance of a warrant and the court declined to direct its issuance on an information made on the information and belief of the district attorney alone.

In *United States* v. *Morgan*, 222 U.S. 274, 282 (1911), the Supreme Court, in the case of one prosecuted for a violation of the Pure Food and Drugs Act, said:

A further answer is that as to this and every other offense the fourth amendment furnishes the citizen the nearest practicable safeguard against malicious accusation. He can not be tried on an information unless it is supported by the oath of some one having knowledge of facts showing the existence of probable cause. Nor can any indictment be found until after an examination of witnesses, under oath, by grand jurors, the chosen instruments of the law to protect the citizen against unfounded prosecutions, whether they be instituted by the Government or prompted by private malice.

This statement as to the necessity of the information being supported by the oath of some one having knowledge of facts showing the existence of probable cause is obiter dictum. The court has certainly never decided that under such circumstances as exist in the case now before us no trial could be had.

In Foster's Federal Practice, fifth edition, section 494, page 1659, this usually accurate writer states the rule as follows:

An information can not be filed without leave of the court. * * * An information must be supported by an affidavit showing probable cause for the prosecution arising from facts within the knowledge of the affiant, or by the depositions of witnesses taken upon a preliminary examination or affidavits upon which a warrant of arrest against the accused was previously issued, which may be sufficient.

The limitation imposed by this amendment is a limitation solely upon the powers of the Federal Government and not upon the powers of the State governments. This principle of construction was settled as early as 1833 by a decision written by Chief Justice Marshall in the leading case of *Barron* v. *Baltimore*, 7 Pet. 243, and has been adhered to by the Supreme Court in numerous cases which have subsequently arisen. But in the constitutions of some of the States a provision exists similar to that embodied in the fourth amendment. And we may briefly inquire as to the effect given to it, as respects informations, by the decisions of the State courts. They have held in a number of cases that a constitutional provision similar in terms to that embodied in the fourth amendment to the Constitution of the United States is violated if proceedings are had under an information which is not supported by the oath or affirmation of any person. (*Lustig* v. *People*, 18 Colo. 217 (1893); *State* v. *Gleason*, 32 Kans. 245 (1884); *Myers* v. *People*, 67 Ill. 503 (1873); *Eichenlaub* v. *State*, 36 Ohio St. 140 (1880); *DeGraff* v. *State*, 2 Okl. Cr. 519 (1909); *Thornberry* v. *State*, 3 Tex. App. 36 (1877); *State* v. *Boulter*, 5 Wyo. 236 (1894).) But the State courts are not agreed in this view, some

of them having reached a contrary conclusion. (See *State* v. *Smith*, 114 La. 322 (1905); *State* v. *Guglielmo*, 46 Oreg. 250 (1905); *Territory* v. *Cutinola*, 4 N.Mex. 160 (1887).

In the case at bar the information was not verified, neither was it supported by any affidavit. The information begins:

> Now comes Henry A. Wise, United States attorney for the Southern District of New York, leave having been first had and obtained, and respectfully informs this court that, etc.

It does not appear, however, that, in obtaining leave of the court to file the information, there was ever presented to the court any complaint under oath or any affidavit showing probable cause to believe that the person accused in the information had ever committed the offense charged against him.

If the fourth amendment makes it necessary that under all circumstances an information must be verified or supported by an affidavit showing probable cause, then proceedings had in the prosecution of the defendant cannot be sustained. But the right secured to the individual by the fourth amendment, as we understand it, is not a right to have the information by which he is accused of crime verified by the oath of the prosecuting officer of the Government or to have it supported by the affidavit of some third person. His right is to be protected against the issuance of a warrant for his arrest, except "upon probable cause supported by oath or affirmation", and naming the person against whom it is to issue. If the application for the warrant is made to the court upon the strength of the information, then the information should be verified or supported by an affidavit showing probable cause to believe that the party against whom it is issued has committed the crime with which he is charged. But, if no warrant has issued, no arrest been made, and the person has voluntarily appeared, pleaded to the information, been tried, convicted, and fined, we fail to discover wherein any right secured to him by the fourth amendment has been infringed. The fact that in the case at bar the defendant demurred to the information because it was not verified, and then pleaded not guilty only after his objection to the demurrer was overruled, does not affect the matter. There was nothing in the ruling of the court that deprived him of his constitutional right to have no warrant issued for his arrest "but upon probable cause supported by oath or affirmation." No such warrant has been at any time issued and no application for its issuance has ever been so much as requested.

The Pure Food and Drugs Act makes it a crime against the United States if any part of the label on goods sent in interstate commerce is false and misleading. The label used on the goods shipped by the defendant guaranteed that the goods contained "no gelatine, gum arabic, egg albumen, or similar article." The claim of the Government is that while the goods contained no gum arabic they did contain India gum, and that India gum was "similar" to gum arabic. The jury found that this was so after being instructed that, if they had a reasonable doubt on the subject, they must find for the defendant. There was sufficient evidence to warrant the submission of the case to the jury, and we find no error in the rulings of the court.

Judgment affirmed.

UNITED STATES v. SCHALLINGER PRODUCE CO.

(District Court, E.D. Washington, Oct. 5, 1914)

N.J. No. 4061

Information alleging violation of section 2 of the Food and Drugs Act. Motion to quash. Motion sustained.

RUDKIN, *District Judge.* Section 2 of the act of Congress of June 30, 1906, declares:

That the introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded, within the meaning of this act, is hereby prohibited; and any person who shall ship or deliver for shipment from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, or to a foreign country, or who shall receive in any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or foreign country, and having so received, shall deliver, in original unbroken packages, for pay or otherwise, or offer to deliver to any other person, any such article so adulterated or misbranded within the meaning of this act, or any person who shall sell or offer for sale in the District of Columbia or the Territories of the United States any such adulterated or misbranded foods or drugs, or export or offer to export the same to any foreign country, shall be guilty of a misdemeanor, and for such offense be fined not exceeding two hundred dollars for the first offense, and upon conviction for each subsequent offense not exceeding three hundred dollars or be imprisoned not exceeding one year, or both, in the discretion of the court. * * *.

Section 3 declares:

That the Secretary of the Treasury, the Secretary of Agriculture, and the Secretary of Commerce and Labor shall make uniform rules and regulations for carrying out the provisions of this act, including the collection and examination of specimens of foods and drugs manufactured or offered for sale in the District of Columbia, or in any Territory of the United States, or which shall be offered for sale in unbroken packages in any State other than that in which they shall have been respectively manufactured or produced, or which shall be received from any foreign country, or intended for shipment to any foreign country, or which may be submitted for examination by the chief health, food, or drug officer of any State, Territory, or the District of Columbia, or at any domestic or foreign port through which such product is offered for interstate commerce, or for export or import between the United States and any foreign port or country.

Section 4 declares:

That the examinations of specimens of foods and drugs shall be made in the Bureau of Chemistry of the Department of Agriculture, or under the direction and supervision of such bureau, for the purpose of determining from such examinations whether such articles are adulterated or misbranded within the meaning of this Act; and if it shall appear from any such examination that any of such specimens is adulterated or misbranded within the meaning of this Act, the Secretary of Agriculture shall cause notice thereof to be given to the party from whom such sample was obtained. Any part so notified shall be given an opportunity to be heard, under such rules and regulations as may be prescribed as aforesaid, and if it appears that any of the provisions of this Act has been violated by such party, then the Secretary of Agriculture shall at once certify the facts to the proper United States district attorney, with a copy of the results of the analysis or the examination of such article duly authenticated by the analyst or officer making such examination, under the oath of such officer. After judgment of the Court, notice shall be given

by publication in such manner as may be prescribed by the rules and regulations aforesaid.

Section 5 declares:

That it shall be the duty of each district attorney to whom the Secretary of Agriculture shall report any violation of this act, or to whom any health or food or drug officer or agent of any State, Territory, or the District of Columbia shall present satisfactory evidence of any such violation, to cause appropriate proceedings to be commenced and prosecuted in the proper courts of the United States, without delay, for the enforcement of the penalties as in such case herein provided.

Section 12 declares, among other things, that—

The word "person" as used in the act shall be construed to import both the plural and the singular, as the case demands, and shall include corporations, companies, societies, and associations.

The information filed in this case by the United States attorney under the foregoing provisions recites that the information is filed with leave of court first had and obtained, and

gives the court here to understand and be informed, upon the oath of Abraham L. Knisely and Duncan A. McIntyre, of Fred Nelson, and of Daniel N. Walsh, whose affidavits are hereto attached and made a part hereof as follows, to wit: * * *.

The information then charges that the defendant, a corporation organized under the laws of the State of Washington, with its principal office and place of business in the city of Spokane, did, on or about the 22d day of November 1912, contrary to the provisions of the foregoing act, ship and deliver for shipment in interstate commerce from the city of Spokane, State of Washington, to the city of Coeur d'Alene, in the State of Idaho, consigned to Nelson Bros. at Coeur d'Alene, in the State of Idaho, certain cases containing eggs, and that the article of food so shipped was misbranded.

To the information are attached the four affidavits therein referred to. The first two were taken before a notary public in the State of Oregon; the third before a notary public in the State of Idaho, and last, before the clerk of the District Court of the United States for the Northern District of West Virginia. The defendant has appeared specially and moved to quash the information on the grounds, first, that the affidavits thereto attached fail to show probable cause for the prosecution and are insufficient to support the information, and second, because the information does not charge a crime under the act of Congress in question.

At common law an information might be filed by the Attorney General simply on his oath of office and without verification; and it has generally been held in this country, following the common-law rule, that verification of an information by the prosecuting officer is unnecessary unless required by some statutory or constitutional provision. There is no law of the United States requiring verification of informations by the prosecuting officer, but a verification of some kind is no doubt indispensable under the fourth amendment to the Constitution where a warrant of arrest is sought or applied for. See *Weeks* v. *United States*, decided by the Circuit Court of Appeals for the Second Circuit June 18, 1914, where this question is fully considered. Inasmuch as this prosecution is against a corporation where no warrant of arrest is applied for or can be issued,

I am of opinion that an information filed by the United States attorney under the sanction of his official oath, and without verification, would be sufficient. But the information under consideration was not so filed, for it expressly states upon its face that it is upon the oath of the several parties named in the annexed affidavits. Unless I am at liberty to consider these affidavits, therefore, the information has no sanction whatever. As already stated, the three principal affidavits were taken before notaries public in other States, and the fourth, standing alone, is of no avail. The question, therefore, arises, can these affidavits, taken before notaries, be considered by the court? I am of the opinion that they cannot.

In *United States* v. *Curtis*, 107 U.S., 671, 673, the court said:

> So that the underlying question is whether the notary public, whose commission is from the State, was, at the respective dates of the oaths taken by Curtis, authorized by the laws of the United States to administer such oaths.
>
> This question we are constrained to answer in the negative. We are not aware of any act of Congress which gave such authority to notaries public in the different States at the several dates given in the indictment. The Assistant Attorney General insists that such authority may be found in section 1778 of the Revised Statutes, which declares: "In all cases in which, under the laws of the United States, oaths or acknowledgments may now be taken or made before any justice of the peace of any State or Territory, or in the District of Columbia, they may hereafter be also taken or made by or before any notary public duly appointed in any State, district, or Territory, or any of the commissioners of the circuit courts, and, when certified under the hand and official seal of such notary or commissioner, shall have the same force and effect as if taken or made by or before such justice of the peace."
>
> The authority of the notary to administer these oaths to Curtis cannot be derived from that section, unless, at the dates in question, they could, under the laws of the United States, have been taken before justices of the peace in Missouri. But the latter officers had no such authority by any Federal statute to which our attention has been called, or which we are able to find. Section 1778, so far as notaries public are concerned, embodies the substance of similar provisions in the acts of September 16, 1850, chapter 52, and July 29, 1854, chapter 159, and section 20 of the act of June 22, 1874, chapter 390. But nothing in these acts, even if they remained in force after the adoption of the Revised Statutes, supports the authority exercised by the notary public who administered these oaths to defendant.
>
> Counsel for the United States further insists that a proper construction of section 1778 will authorize a notary public in *any* State to administer oaths to officers of national banking associations, when making reports to the Comptroller of the Currency, if justices of the peace may lawfully do so in this District. But in our judgment no such interpretation of that provision is admissible. What Congress intended by that section was to give notaries public in their respective States the same authority, in the administration of oaths, as is given, under the laws of the United States, to justices of the peace in the same States; and to notaries public in this District the same authority, in administering oaths, which, under the laws of the United States, might be exercised by justices of the peace in this District. We have seen, however, that to justices of the peace, in the several States, such authority had not been given by any provision in the Revised Statutes or by any act of Congress prior to their adoption.
>
> Nor can any support for the indictment be derived from the act of August 15, 1876, chapter 304, which declares "that notaries public of the several States, Territories, and the District of Columbia, be, and they are hereby, authorized to take depositions, and do all other acts in relation to taking testimony to be used in the courts of the United States, take acknowledgments and affidavits in the same manner and with the same effect as commissioners of the United States Circuit Court may now lawfully take or do."
>
> The power of commissioners of the Circuit Court did not, at the passage of that act, extend to the taking of oaths to reports by officers of national banks. They could take affidavits when required, or allowed in any civil cause in a circuit or district court (Rev. Stat. sec. 945; act of February 20, 1812, ch. 25;

act of March 1, 1817, ch. 30); or administer oaths where, in the same State, under the laws of the United States, oaths, in like cases, could be administered by justices of the peace (Rev. Stat. sec. 1778); or they could take evidence, affidavits, and proof of debts in proceedings in bankruptcy (Rev. Stat. secs. 5003, 5076; act of March 2, 1867, ch. 176; sec. 3 of the act of July 27, 1868, ch. 258; sec. 20 of the act of June 22, 1874, ch. 390). But the authority of commissioners did not extend to such oaths as were administered to Curtis.

It follows from this decision that a notary public has no authority under the laws of the United States to administer any oaths in connection with criminal prosecutions. The United States attorney frankly conceded this on the argument, but contended that inasmuch as this is a prosecution against a corporation, commenced by summons, it must be deemed to be a civil action. To this proposition I cannot yield assent. All persons, whether natural or artificial, stand upon an equal footing before the criminal laws of the country. True a corporation, by reason of its inherent nature, cannot commit certain crimes, and may not be arrested or imprisoned; but a proceeding against it for the violation of a criminal statute is, and must be, in its very nature, a criminal proceeding with all the incidents of such a proceeding until the legislature has declared otherwise. Believing, therefore, that the information in itself is insufficient because not under the sanction of the official oath of the United States district attorney, and that I may not consider the affidavits of notaries thereto attached, the motion to quash must be granted, and it is so ordered.

Thereafter, on October 7, 1914, a judgment was entered dismissing the case in accordance with the foregoing decision.

UNITED STATES v. LOWENTHAL

(District Court, S.D. New York, Oct. 29, 1914)

N.J. No. 3573

Three informations charging violations of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The following charge was delivered to the jury:

Van Fleet, *District Judge.* Gentlemen of the jury: Give me your attention for a few moments.

There are three informations against this defendant on trial, which have been consolidated, for your determination, and they are based upon the provisions of the so-called Food and Drugs Act of June 30, 1906. That act makes it a misdemeanor for one to ship in interstate commerce, that is, transport from one State to another, any article of food or drugs which is adulterated or misbranded. An article under that act is adulterated if any substance is substituted wholly or in part for the genuine article in its make-up. It is misbranded if it be labeled or branded so as to deceive or mislead the purchaser as to its real character.

Now, the informations are couched in four separate counts, and one charges, in three several counts, the defendant with shipping from the city of New Rochelle in the State of New York to the city of Union Hill in the State of New Jersey, to one Joseph Deschner, an article designed and intended to be used as an article of food

which was invoiced by the defendant as vanilla and it charges it was not in fact vanilla, but it was an adulteration of an aqueous solution of coumarin artificially colored with caramel. The second count is substantially the same, charging that the aqueous solution was artificially colored with caramel. The third count, substantially the same, charging that it was adulterated and colored with caramel. The fourth count charges that the shipment was misbranded. The second information charges the defendant with shipping a like article from the city of New Rochelle in the State of New York to the Yonkers Bakery in the city of Keyport in the State of New Jersey, and the first three counts are precisely similar as to their legal import and intent as the first three counts I have just explained to you, and the fourth count is of like import, relating of course to the shipment to the Yonkers Bakery. The third information charges the defendant on the date in question with shipping from the city of New Rochelle in the State of New York to the city of Perth Amboy in the State of New Jersey, consigned to the Eagle Candy Kitchen, two barrels of an article substantially and precisely the same as charged in the first information, the first three counts being charges that it was adulterated and the last count, that it was misbranded.

Now, under the course that the evidence in this case has taken and in view of the admissions that have been made by the defendant, there really is but one material question for you gentlemen to determine in order to reach a verdict in this case. It is conceded that these shipments were made; it is conceded that the article shipped was not vanilla but a substitute for it, an article made to represent vanilla extract, but which was not vanilla. Now, the defense made by the defendant in each instance is that he did not violate the act because, while the article was not genuine vanilla but was a substitute for vanilla, he not only sold, but distinctly labeled it, in making each shipment, as being precisely what it was.

Now, under this act, which I have sufficiently defined to you, if you believe the evidence in favor of the defendant in that regard, or if you have no reasonable doubt as to the truth of it, the defendant cannot be convicted. The informations constitute in their nature criminal charges, and under the law, in order to convict one of a criminal offense it is essential, under a plea of not guilty such as has been interposed to each one of these charges, for the Government to establish the truth of these facts to your satisfaction beyond a reasonable doubt for you to return a verdict of guilty. It is not sufficient to show mere probability of guilt. The facts must establish the guilt of the defendant to a moral certainty beyond what is termed in the law a reasonable doubt. That term means substantially what its language implies. It must be a reasonable doubt, it must be a doubt resting in reason and arising upon the evidence and no mere fanciful conjecture on your part that possibly he may not be guilty. It is a statement of the case, which after a fair and impartial consideration of all the evidence in the case leaves your mind in a state in which you are unable to say you feel an abiding conviction of the defendant's guilt and any proof that does not go to this extent is not proof beyond a reasonable doubt. This does not mean that the Government is bound to prove the facts that would indicate the guilt of the defendant beyond demonstration, that is, where there

would be no doubt. Such proof is never required. But it must satisfy you to that degree of moral certainty which would induce you to act in the important affairs of life. If it satisfies you to that extent, then the Government is entitled to a conviction. If it does not satisfy you to that extent and there is left in your minds such a reasonable doubt as I have defined, the only thing for you to do is to give the defendant an acquittal.

The facts in a criminal case are solely for the consideration of the jury. The court has neither the province nor disposition to interfere with the determination of the facts. Its duty rests and concludes with conducting the trial and endeavoring to see that nothing but proper evidence finds its way to the jury, and when it has done that then the case rests with the jury to determine what facts have been established by the evidence. In order to determine what the facts are in a case necessarily the jury are made under the law the arbiters of the credibility of the witnesses. They are to say what evidence they will believe that has been produced on the witness stand and what they will not believe. Now the law presumes that every witness will go upon the witness stand when he is put under oath and tell the truth, but this does not mean that he will tell the truth necessarily, nor does it mean that because that presumption exists the jury is bound to believe he is telling the truth. It simply means that, other things being equal, and there being nothing in the character of his testimony or his relations to the case or the other evidence in the case to cast suspicion on his testimony, the jury are not arbitrarily to say they won't believe him. That is what that presumption means, but it does not deter you from using your reason and common sense in determining how far you may believe a witness. If a witness goes on the stand and testifies to facts which do not accord with your reason and observation in the ordinary experiences and affairs of life you are not bound to believe that witness. If his testimony does not accord with your own observation and reason in the light of all the evidence in the case, then you are not required to believe the witness's statements that do not measure up to that standard.

Now, during the progress of the trial I have taken occasion to ask questions of witnesses in various instances. As I say, it is your province to pass upon the facts, and I do not want you to get any idea from any question that I have asked a witness as to my views of the truth or falsity of the statements of the witness. It is my duty, equally with that of counsel, to endeavor to elicit the truth to lay before the jury, but it is only for that purpose. When I have thought that some statement from a witness required elucidation or should be cleared up I have frequently asked him questions, but that is not to be taken as casting discredit upon his statements because no matter what I may think of the witness's credibility the obligation rests nevertheless upon you to pass upon it in reaching your verdict and you would be abdicating your function if you were to base your judgment upon what you believed to be my view as to a witness's credibility, or any fact in the case, rather than your own. You can not escape the responsibility. The facts are to be determined by you.

Now in this case if you find beyond the reasonable doubt that I have defined to you that this defendant committed the act which

is charged in these various counts and under each one of these informations it will be your imperative duty, no matter what your inclinations may be, to find him guilty. On the other hand, if there rests in the minds of the jury such a reasonable doubt as I have defined, under any of these counts of these informations, it is equally your duty to find the defendant not guilty. There being three separate informations here they constitute three separate cases and there must be a verdict upon each one of these informations. The Government and the defendant are entitled under the law to have them consolidated for trial but that merely means that they are to be tried before one jury, but they constitute separate offenses. Each one of these acts, if it was unlawful, constituted a separate offense and there must be a separate verdict under each count. When you retire to your jury room you will take with you these several informations and you will prepare a verdict in the light of the law as I have given it to you as you may find the facts to be as to each one of these informations and return it accordingly.

Mr. CONTENT. I call the attention of the court to the fact that the fourth count charges that it was sold under another name from that which it really was.

The COURT. That is true substantially.

Mr. BERGER. I ask the court to charge that the witnesses—Marshall, Shaw, and Boos—are disinterested witnesses.

The COURT. I would be invading the province of the jury to do that. They are to determine whether they are disinterested. In passing upon the credibility of the witnesses, in view of the suggestion of counsel, gentlemen, you will bear in mind that you are the sole judges as to the disinterested character of any testimony given before you here. You are to say how the witnesses happened to come here and what actuated their testimony if it was actuated by anything but the truth. That is part of your duty in passing upon the evidence.

Gentlemen of the jury: Let me suggest to you that I think it would be a convenient way in framing your verdicts to say "We find in case number 2686"—you see these are all numbered at the top—"we find in the case of the United States against David Loewenthal in case number 2686, so and so; we find in case 2685, so and so." Just designate them by the numbers and that will distinguish them.

The jury thereupon retired and after due deliberation returned into court with a verdict of guilty, and the court imposed a fine of $100 on each information, or $300. In passing sentence the court spoke in part as follows:

I am entirely satisfied that while there is a conflict in the evidence, the jury were quite justified in finding the facts as they did. Had I been called upon to find the facts myself I would have been compelled to find the facts the same way. I do not think the evidence adduced on behalf of the defendant did away with that of the prosecution showing that it was a fraudulent manipulation. The cases involved seem to me to show a fraudulent transaction of a most contemptible character. Yet they are distinctly a violation of the act and must be punished. It is an act of very essential value to the public health, and it cannot be permitted that it be

violated. The violations were so contemptible in their character, I mean in the amount, that it seems a despicable thing for a man to be engaged in that sort of business. At the same time there was nothing against him heretofore, and I will take that into consideration. Let the judgment in each one of these instances be that the defendant pay a fine in the sum of $100.

UNITED STATES v. 267 BOXES OF MACARONI

(District Court, W.D. Pennsylvania. Feb. 17, 1915)

225 Fed. 79; N.J. No. 3799

Libel by the United States for the seizure and condemnation of 267 boxes of macaroni, because misbranded, in which claimants filed answer. Judgment for the United States.

On December 11, 1914, the United States attorney for the Western District of Pennsylvania, acting upon a report by the Secretary of Agriculture, filed in the District Court of the United States for said district a libel for the seizure and condemnation of 267 boxes of macaroni, remaining unsold in the original, unbroken packages at Pittsburgh, Pa., alleging that the product had been shipped on or about November 7 and 14, 1914, and transported from the State of New York into the State of Pennsylvania, and charging misbranding in violation of the Food and Drugs Act. The product was labeled: "Gusto Igiene Nettezza Pastificio Moderno Elletrico Con Prosciugazione Artificiale Vitello Brand Torre Annunziata (Italy Method) Mfg. U.S.A." In addition, the label bore pictorial representations of three persons, a dining scene, etc. Boxes were also branded by means of rubber stamp "20 lb. net artificially colored." Misbranding of the product was alleged in the libel, for the reason that it was labeled and branded so as to deceive and mislead the purchaser; that is to say, the appearance and construction of the label conveyed the impression that the goods were of foreign manufacture, and this effect was not cured by the statement in minute type on the bottom of the label, "Mfg. U.S.A."

On December 28, 1914, Thomas Monico and August E. Alles, partners, doing business as Monico-Alles Company, New Castle, Pa., claimants, filed their answer, denying the material allegations in the libel. On February 17, 1915, the case having come on for trial before the court, after the submission of evidence and argument by counsel, the court found the product misbranded and ordered its condemnation, but provided that the same might be released to said claimants upon filing of bond, in conformity with section 10 of the act, and the payment of costs.

THOMSON, *District Judge*. The libel in this case was for the seizure and condemnation of 267 boxes of macaroni, remaining unsold in the original, unbroken packages at Pittsburgh, Pa. The libel alleges that the product was shipped by the Dunkirk Macaroni & Supply Company of Dunkirk, N.Y., and transported from the State of New York, and charges that the same was misbranded, in violation of section 10 of the Pure Food and Drugs Act, as defined in subsection 2, which defines what usually may be considered as misbranding of foods under the act of Congress. The said food product was seized by the United States marshal in the possession of certain parties in Pittsburgh, Pa., and was claimed by Thomas Monico and August E. Alles, partners, doing business as Monico-Alles Company, who answered, and were made parties to the proceedings by the execution of bond in accordance with section 26 of the admiralty rules of this

court. The libel sets forth a copy of the label on each of the boxes of macaroni so seized, as follows:

> Gusto Igiene Nettezza Pastificio Moderno Elettrico Con Prosciugazione Artificiale Vitello Brand Torre Annunziata (Italy Method) Mfg. U.S.A.

In addition the label bears pictorial representations of three persons, a dining-room scene, etc.; and boxes are branded by means of a rubber stamp, "20 lb. net artificially colored." The libel also points out specifically the respect in which the product was misbranded as follows:

> That said product, so designated as aforesaid, as analyzed by the Bureau of Chemistry, Department of Agriculture, United States of America, is shown to be misbranded in violation of said act of Congress, commonly known as the Food and Drugs Act, in that it is labeled and branded so as to deceive and mislead the purchaser; that is to say, the appearance and construction of the label conveys the impression that goods are of foreign manufacture, and this effect is not cured by statement in minute type on bottom of label, "Mfg. U.S.A."

The answer filed admits the material facts and allegations contained in the libel, except that it is denied that the macaroni is misbranded. The question thus raised is whether the product was misbranded; i.e., labeled so as to mislead the purchaser by conveying the impression that the goods are of foreign manufacture. The language of section 8, subsection 2 [in case of food (?)], of the act of Congress, is: "If it be labeled or branded so as to deceive or mislead the purchaser, or purport to be a foreign product when not so." Some testimony was offered on behalf of the Government, by persons familiar with the trade, to the effect that the label would mislead the average purchaser by conveying the impression that it was a foreign product. Some evidence was also offered by the respondents that it would not convey that impression.

The court must determine the issue mainly by an inspection of the label itself. It has been held that it is not important whether the manufacturer did or did not intend to deceive. The purpose of the act is to protect the people from deception by selling him one thing when the purchaser desires to purchase another. The intention of the maker is therefore not an element in the case. *United States* v. *36 Barrels of London Dry Gin*, 210 Fed. 271, 127 C.C.A. 119; *McDermott* v. *Wisconsin*, 228 U.S. 115, 33 Sup. Ct. 431, 57 L.Ed. 754, 47 L.R.A. (N.S.) 984, Ann. Cas. 1915A, 39.

Turning to the label itself, we find from its appearance that it is very distinctly Ialian. The label proper is of the dimensions of 8½ inches by 6¼ inches, bearing pictorial representations of three persons, a dining scene, etc., with a very narrow white margin, from one eighth to one sixteenth of an inch in width. The name of the manufacturer and the place where the macaroni is made do not appear. Nearly all of the wording on the label proper is in the Italian language. The exceptions are in the use of the words "Vitello Brand" and "Italy Method." Between the words "Vitello" and "Brand" is the picture of a cow or calf. The testimony shows that the words "Vitello" is the Italian word for calf. The words "Torre Annunziata" are the name of a city in Italy where it appears macaroni is extensively manufactured. There is no doubt that the general purchaser, looking at that label, with its distinctly Italian cast and written in

the Italian language, with nothing whatever thereon to indicate that it was of American manufacture, would at once conclude that it represented a foreign, and, in this case, an Italian product.

It is claimed that the letters "Mfg. U.S.A." in small type within less than an inch of space, on the very narrow white margin on the lower edge of the label, would be notice to the purchaser of the fact that the product was manufactured in America. It seems clear to the court that the makers did not intend bona fide to convey such notice to the purchaser by the use of these letters, but rather that they were endeavoring to protect themselves from the charge of violating the act of Congress. If it was intended that the purchaser should be informed as to where the food product was manufactured, certainly some words sufficiently conspicuous would be placed upon the label to strike the eye of the purchaser and convey the desired information.

I do not think that the letters on the margin which I have quoted save the label or brand from the charge that it deceives and misleads the purchaser and purports to be a foreign product when not so.

In accordance with the foregoing opinion, the product was thereafter released to said claimants.

UNITED STATES v. RIGNEY & CO.

(District Court, E.D. New York, Feb. 20, 1915)

220 Fed. 734; N.J. No. 4057

Information for violation of the Food and Drugs Act. On motion to quash or dismiss the information. Motion denied.

Chatfield, *District Judge.* This information was filed against the defendant corporation for shipping by interstate commerce a quantity of syrup in a package labeled "24 quarts com.," and also another quantity of syrup in a package bearing a label "12 half gallons com."

The shipments were alleged to have been an offense against the provisions of the Food and Drugs Act of June 30, 1906 (34 Stat. 771), as contained in section 8, which prohibits a false or misleading statement upon a package or label regarding the article contained therein, and under subdivision 3 of the portion of that section relating particularly to food, which provides (as amended March 3, 1913):

Third. If in package form, the quantity of the contents be not plainly and conspicuously marked on the outside of the package in terms of weight, measure, or numerical count, etc.

The defendants subsequently withdrew their plea and sought to raise a question of fact as to the meaning of their label, and to contend that, under the law, this meaning was neither misleading to the public or their customers, nor false in statement when considered from the point of view of those who should be held responsible for knowledge as to ordinary trade practices.

The defendants therefore interposed a motion to dismiss or quash the indictment, based upon affidavits showing that the packages in

question contained, in the one case bottles, substantially of the size in exterior dimensions of the ordinary quart bottle, and in the other case cans, again in general external size and appearance of a half-gallon or 2-quart size, but the *labels* upon the bottles and cans themselves contained no statement of quantity. The price for which the articles were sold depended (of course) upon the wholesale price charged therefor, as the ordinary downward limit under competition.

These bottles and cans were, as shown by the affidavits, packed in wooden boxes, upon which a stencil was used to mark in black letters the sirup label and also the words complained of in the information, in one case "24 quarts 17 com.", and in the other case "12 half gallons 19 com." The affidavits also show, and these matters are not disputed by the Government, that the shipments were to wholesalers, and not to retail customers, and were all made upon prices quoted for the quantity shown in the circulars, and were billed to the wholesalers by the same description, as, for instance:

No. 1 com'l half pts. (7 oz.)
No. 4 square qts. (5 to gal.)
No. 19 half gallons commercial measure 1 dozen to case gross wt. 70 lbs.
No. 21 gallons, commercial measure, ½ dozen to case 63 lbs.
No. 23 5 gallons, cased full measure gross weight 60 lbs.

The only points contested by the Government upon this motion are the meaning of the words and the allegation that the trade understood the meaning of the words "quarts", "one half gallon", etc., when used under what is alleged by the defendants to be a well-known practice of selling packages containing smaller quantities, but labeled in a so-called descriptive way to state approximately the quantity in liquid or solid measure nearest the general size of the package. The Government produced certain affidavits in which wholesalers deny that such meaning of the words, "commercial quart", or "commercial half gallon", was well known and commonly used in this descriptive sense in the trade.

It is unnecessary to consider whether the practice of attracting trade by apparent intimation of cheap prices, but in reality by a saving of the actual quantity sold, and by holding out to the public or advertising misleading statements, by which the customer may be deceived, but which the wholesaler and retailer, or those initiated into the trade secrets, understand are false, should be treated as reprehensible, nor need we consider whether Congress has the power to pass a statute prohibiting such practices, in interstate commerce, when the injury to the public demands. The mere queries answer themselves.

In the present case we have only to do with the question whether the labels (interpreted from the price lists or from custom, by the persons to whom the goods were shipped) were false and misleading in their statements of the quantity contained in the package, and whether the contents were plainly and correctly stated on the outside thereof.

If the label used would allow the deception of the public and unfair methods of advertising, through the complicity of the retail dealer, it becomes evident that this is one of the evils which the statute was intended to prevent, and that Congress did not pass this law for the protection of the retailer alone.

There is nothing before the court, and no authority in dictionary, textbook, or statute, to vindicate or uphold the establishment of a different system of liquid and weight measures than those sanctioned by law and general use, even though a lax and vicious reduction in quantity, as a matter of trade practice, is frequently found when no legal prohibition exists.

It has appeared upon the argument of the motion that the defendant ceased the use of these labels and has made its measures and literature correspond to the requirements of the Department, under the Pure Food Law, since its attention has been called thereto, and now disclaims any desire to be a party to violations of the statute or acts tending to deceive the public. This is what would be expected from any person or house in reputable business, and goes only to the question of mitigation, for an act which at the time, even though not appreciated, was a violation of the Pure Food Law.

The motion to dismiss or quash will be denied, and the defendants will be directed to plead over.

SLIGH v. KIRKWOOD [85]

(United States Supreme Court, Apr. 5, 1915)

237 U.S. 52

In error to the Supreme Court of the State of Florida. Affirmed.

The facts, which involve the constitutionality under the commerce clause of the Federal Constitution of a statute of Florida prohibiting the sale or shipment of citrus fruits which are immature or otherwise unfit for consumption, are stated in the opinion.

Mr. Justice DAY delivered the opinion of the court.

A statute of the State of Florida undertakes to make it unlawful for anyone to sell, offer for sale, ship, or deliver for shipment, any citrus fruits which are immature or otherwise unfit for consumption.

Plaintiff in error, S. J. Sligh, was charged by information containing three counts in the Criminal Court of Record in Orange County, Florida, with violation of this statute. One of the counts charged that Sligh delivered to an agent of the Seaboard Air Line Railway Company, a common carrier, for shipment to Winecoff & Adams, Birmingham, Alabama, one car of oranges, which were citrus fruits, then and there immature and unfit for consumption. Upon petition for writ of *habeas corpus* in the Circuit Court of Florida for Orange County, the court refused to order the release of Sligh, and remanded him to the custody of the sheriff. Upon writ of error to the Supreme Court of Florida that judgment was affirmed (65 Florida, 123), and the case is brought here.

The single question is: Was it within the authority of the State of Florida to make it a criminal offense to deliver for shipment in interstate commerce citrus fruits—oranges in this case—then and there immature and unfit for consumption?

---

[85] Not arising under Food and Drugs Act of June 30, 1906.

It will be observed that the oranges must not only be immature, but they must be in such condition as renders them unfit for consumption; that is, giving the words their ordinary signification, unfit to be used for food. Of course, fruits of this character, in that condition, may be deleterious to the public health, and, in the public interest, it may be highly desirable to prevent their shipment and sale. Not disputing this, the contention of the plaintiff in error is that the statute contravenes the Federal Constitution in that the legislature has undertaken to pass a law beyond the power of the State, because of the exclusive control of Congress over commerce among the States, under the Federal Constitution.

That Congress has the exclusive power to regulate interstate commerce is beyond question, and when that authority is exerted by the State, even in the just exercise of the police power, it may not interfere with the supreme authority of Congress over the subject; while this is true, this court from the beginning has recognized that there may be legitimate action by the State in the matter of local regulation, which the State may take until Congress exercises its authority upon the subject. This subject has been so frequently dealt with in decisions of this court that an extended review of the authorities is unnecessary. See the *Minnesota Rate Cases*, 230 U.S. 352.

While this proposition seems to be conceded, and the competency of the State to provide local measures in the interest of the safety and welfare of the people is not doubted, although such regulations incidentally and indirectly involve interstate commerce, the contention is that this statute is not a legitimate exercise of the police power, as it has the effect to protect the health of people in other States who may receive the fruits from Florida in a condition unfit for consumption; and however commendable it may be to protect the health of such foreign peoples, such purpose is not within the police power of the State.

The limitations upon the police power are hard to define, and its far-reaching scope has been recognized in many decisions of this court. At an early day it was held to embrace every law or statute which concerns the whole or any part of the people, whether it related to their rights or duties, whether it respected them as men or citizens of the State, whether in their public or private relations, whether it related to the rights of persons or property of the public or any individual within the State. *New York* v. *Miln*, 11 Pet. 102, 139. The police power, in its broadest sense, includes all legislation and almost every function of civil government. *Barbier* v. *Connolly*, 113 U.S. 27. It is not subject to definite limitations, but is coextensive with the necessities of the case and the safeguards of public interest. *Camfield* v. *United States*, 167 U.S. 518, 524. It embraces regulations designed to promote public convenience or the general prosperity or welfare, as well as those specifically intended to promote the public safety or the public health. *Chicago &c. Railway* v. *Drainage Commissioners*, 200 U.S. 561, 592. In one of the latest utterances of this court upon the subject, it was said:

> Whether it is a valid exercise of the police power is a question in the case, and that power we have defined, as far as it is capable of being defined by general words, a number of times. It is not susceptible of circumstantial precision. It extends, we have said, not only to regulations which promote the public health, morals, and safety, but to those which promote the public

convenience or the general prosperity * * * And further, "It is the most essential of powers, at times the most insistent, and always one of the least limitable of the powers of government." *Eubank* v. *Richmond*, 226 U.S. 137, 142.

The power of the State to prescribe regulations which shall prevent the production within its borders of impure foods, unfit for use, and such articles as would spread disease and pestilence, is well established. Such articles, it has been declared by this court, are not the legitimate subject of trade or commerce, nor within the protection of the commerce clause of the Constitution.

Such articles are not merchantable; they are not legitimate subjects of trade and commerce. They may be rightly outlawed as intrinsically and directly the immediate sources and causes of destruction to human health and life. The self-protecting power of each State, therefore, may be rightfully exerted against their introduction, and such exercises of power cannot be considered regulations of commerce prohibited by the Constitution. *Bowman* v. *Railway Company*, 125 U.S. 465, 489.

Nor does it make any difference that such regulations incidentally affect interstate commerce, when the object of the regulation is not to that end, but is a legitimate attempt to protect the people of the State. In *Geer* v. *Connecticut*, 161 U.S. 519, a conviction was sustained of one who was charged with having in his possession game birds, killed within the State, with the intention of procuring transportation of the same beyond State limits. This law was attacked upon the ground that it was a direct attempt to regulate commerce among the States. After discussing the peculiar nature of such property, and the power of the State over it, this court said (p. 534):

Aside from the authority of the State, derived from the common ownership of game and the trust for the benefit of its people which the State exercises in relation thereto, there is another view of the power of the State in regard to the property in game, which is equally conclusive. The right to preserve game flows from the undoubted existence in the State of a police power to that end, which may be none the less efficiently called into play, because by doing so interstate commerce may be remotely and indirectly affected. *Kidd* v. *Pearson*, 128 U.S. 1; *Hall* v. *De Cuir*, 95 U.S. 485; *Sherlock* v. *Alling*, 93 U.S. 99, 103; *Gibbons* v. *Ogden*, 9 Wheat 1.

In *New York, ex rel. Dilz* v. *Hesterberg*, 211 U.S. 31, it was held that the State might punish the sale of imported game during the closed season in New York notwithstanding such game was imported from abroad, and was thus beyond the control of the State, the law being sustained upon the ground that, while foreign commerce was incidentally affected, the State might prohibit the sale of such game in order to protect local game during the closed season; and to make such regulations effective required the prohibition of the sale of all game of that kind.

So it may be taken as established that the mere fact that interstate commerce is indirectly affected will not prevent the State from exercising its police power, at least until Congress, in the exercise of its supreme authority, regulates the subject. Furthermore, this regulation cannot be declared invalid if within the range of the police power, unless it can be said that it has no reasonable relation to a legitimate purpose to be accomplished in its enactment; and whether such regulation is necessary in the public interest is primarily within the determination of the legislature, assuming the subject to be a proper matter of State regulation.

We may take judicial notice of the fact that the raising of citrus fruits is one of the great industries of the State of Florida. It was

competent for the legislature to find that it was essential for the success of that industry that its reputation be preserved in other States wherein such fruits find their most extensive market. The shipment of fruits, so immature as to be unfit for consumption, and consequently injurious to the health of the purchaser, would not be otherwise than a serious injury to the local trade, and would certainly affect the successful conduct of such business within the State. The protection of the State's reputation in foreign markets, with the consequent beneficial effect upon a great home industry, may have been within the legislative intent, and it certainly could not be said that this legislation has no reasonable relation to the accomplishment of that purpose.

As to the suggestion that the shipment of such fruit may be legitimately made for commercial purposes, for the purpose of making wine, citric acid, and possibly other articles, it is sufficient to say that this case does not present any such state of facts, and of course the constitutional objection must be considered in view of the case made before the court, which was a delivery for shipment of oranges so immature as to be unfit for consumption. Whether such a case, as supposed, of shipment for commercial purposes, would be within the statute, would be primarily for the State court to determine, and it is not for us to say, as no such case is here presented.

It is pointed out in the opinion of the Supreme Court of Florida, and we repeat here, that no act of Congress has been called to our attention undertaking to regulate shipments of this character, which would be contravened by the act in question. As the Florida court says, the sixth subdivision of the Food and Drugs Act, if citrus fruits should be held to be within the prohibitions against vegetable substances, includes only such as are in whole or in part filthy, decomposed, or putrid. Green or immature fruit, equally deleterious to health, does not seem to be within the Federal act. Therefore until Congress does legislate upon the subject, the State is free to enter the field. *Savage* v. *Jones*, 225 U.S. 501.

In the *Vermont Case*, referred to by counsel for plaintiff in error, *State of Vermont* v. *Peet*, 80 Vermont, 449, the act made it unlawful to ship without the State veal less than 4 weeks old when killed, and it was held to run counter to the Federal act and regulation upon the same subject.

We find no error in the judgment of the Supreme Court of Florida, and it is affirmed.

UNITED STATES v. R. C. BOECKEL & CO. ET AL.

(Circuit Court of Appeals, First Circuit, Apr. 6, 1915)

221 Fed. 885; N.J. No. 3871

In error to the District Court for the District of Massachusetts. Judgment reversed.[86]

Before PUTNAM, BINGHAM, and ALDRICH, Circuit Judges.

BINGHAM, *Circuit Judge.* This is an information by the United States against 131 boxes of confectionery, a part of which had been

[86] Reversing *United States* v. *307 Cases of Confectionery*, p. 353, *ante*.

transported into Massachusetts from New York and a part from Pennsylvania. The proceeding is under section 10 of the Food and Drugs Act of June 30, 1906 (34 Stat.L., p. 768, ch. 3915), for the purpose of seizing and condemning the confectionery on the ground that it contained talc and was therefore adulterated within the meaning of section 7 of the act. A warrant having been issued, the marshal seized 104 boxes of the confectionery, that being all that could be found. R. C. Boeckel & Co. appeared as claimants of 30 boxes and Henry Heide as claimant of 73 boxes of the property seized.

There was a trial by jury and a verdict that the confectionery was not adulterated.

It is conceded by the claimants that the confectionery was shipped in interstate commerce; that it was in the original and unbroken packages when seized; that it was treated with talc during the process of rolling in order to impart a polish and to prevent adhering; that minute quantities of talc may have adhered, but, if so, the quantity was so small as to be almost incapable of measurement. They deny that the talc was used as an adulterant or that the confectionery was adulterated within the meaning of the act. Talc is a mineral compound, not an article of food, and is known as hydrated silicate of magnesia. There was no evidence that it exists naturally in any form of confectionery.

Evidence was introduced which tended to prove that a little less than a pound of the confectionery taken as a sample from the boxes claimed by Heide contained talc to the amount of one tenth of 1 percent, or about one-half as much as you could heap on a 10-cent piece; that a like sample of that claimed by Boeckel & Co. contained a little more than 1 one-hundredth of 1 percent of talc; and that, if all the mineral matter found in the outer portion of the confectionery tested was talc it would be a mere trace, which would be detected only by chemical examination.

The court refused to charge the jury that, if they found the confectionery contained talc, it was adulterated within the meaning of the statute; and instructed them, in substance, that it would not be adulterated if it contained a mere chemical trace of talc, and only if it contained a quantity of talc large enough to be significant or important for some possible practical purpose; that a mere chemical trace, only to be detected by a skillful chemist, would not be sufficient; that there must be enough to show some purpose of deception on the manufacturer's part; enough to show a want of that extreme care exhibited by the manufacturer in guarding the purity of his product. The errors assigned are to the refusal to give the requested instruction and to the instructions given.

The provisions of the statute material for our consideration in passing upon the questions raised by the assignments of error are as follows:

> An Act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes.
>
> * * * * * * *
>
> SEC. 2. That the introduction into any State * * * from any other State * * * of any article of food or drugs which is adulterated or misbranded,

within the meaning of this Act, is hereby prohibited; and any person who shall ship or deliver for shipment from any State * * * to any other State * * * any such article so adulterated or misbranded within the meaning of this Act * * * shall be guilty of a misdemeanor, etc.

SEC. 6. * * * The term "food," as used herein, shall include all articles used for food, drink, confectionery, or condiment by man or other animals, whether simple, mixed, or compound.

SEC. 7. That for the purpose of this Act an article shall be deemed to be adulterated * * *.

In the case of confectionery:

If it contain terra alba, barytes, talc, chrome yellow, or other mineral substance or poisonous color or flavor, or other ingredients deleterious or detrimental to health, or any vinous, malt or spirituous liquor or compound or narcotic drug.

* * * * * * *

SEC. 10. That any article of food * * * that is adulterated * * * within the meaning of this Act, and is being transported from one State, * * * to another for sale, or, having been transported, remains unloaded, unsold, or in original unbroken packages, * * * shall be liable to be proceeded against in any district court of the United States within the district where the same is found, and seized for confiscation by a process of libel for condemnation.

It is apparent from the language of section 7 that confectionery which contains any one of certain things there specified, to wit, terra alba, barytes, talc, chrome yellow, or any vinous, malt, or spirituous liquor or narcotic drug, is deemed to be adulterated, and that, under section 2, its transportation in interstate commerce is prohibited. If the language of the statute is ambiguous in regard to what the standard is for determining adulteration on account of the use of the general terms—"or other mineral substance or poisonous color or flavor, or other ingredient deleterious or detrimental to health"—there is none where the specific terms above mentioned are employed. Congress, knowing that terra alba, barytes, and talc were commonly used as adulterants in confectionery, to increase its weight and cheapen its quality, in its wisdom provided that confectionery containing any of these substances should be deemed adulterated and be excluded from transportation in commerce without regard to whether the quantity contained in a given article of confectionery was such as to increase its weight or cheapen its quality so as to deceive and mislead.

Chrome yellow is a metal which is widely used as a yellow pigment, and is an active poison. The consumption of vinous, malt, and spirituous liquors leads to pauperism and crime. In declaring that confectionery containing this pigment or any of the liquors named should be deemed adulterated, Congress likewise refrained from making the question of adulteration depend upon the quantity which the confectionery contained, and plainy manifested an intention that confectionery containing any of these things should be deemed to be adulterated. The language of the statute being unambiguous, so far as it relates to the particular adulterants mentioned, its words must be given their ordinary meaning. When so construed, confectionery which contains any of the specific substances or liquors named is adulterated, without regard to the question whether in the particular case the amount of added adulterant indicates an intention to deceive, or is liable to injure health or morals.

167546—34——41

This construction of the statute is recognized in the case of *French Silver Dragee Co.* v. *United States*, 179 Fed. 824, 828, where the court said:

> We think that the history of the act, the object to be accomplished by it, and the language of all its provisions require that it should be so interpreted that in the case of confectionery, as in the cases of food and drugs, the Government should establish, with respect to articles not specifically named, that they either deceive, or are calculated to deceive, the public or are detrimental to health.

In that case the confectionery in question was coated with pure silver, which was not one of the substances specifically named in section 7, and in order to render it an adulterant within the meaning of the general provisions—"other mineral substance," or "other ingredient deleterious or detrimental to health"—it was held that it must be shown that the silver coating was either deceptive or injurious to health, and that, as there was no proof of those facts, the confectionery could not be found to be adulterated within the meaning of the statute.

In many of the States laws have been passed prohibiting the sale of adulterated milk, and standards for determining adulteration have been fixed, such as that milk shall be regarded as adulterated "to which water or any foreign substance has been added," or when it is "shown upon analysis to contain more than 87 percent of watery fluid, or less than 13 percent of milk solids." And it has been uniformly held that milk to which water has been added, or milk to which water has not been added, but which contains more than 87 percent of watery fluid or less than 13 percent of milk solids, is adulterated, without regard to the quantity of water added or the extent to which an analysis showed the milk contained more of watery fluid or less of milk solids than the standard required; and these laws have been upheld as constitutional. *State* v. *Schlenker*, 112 Iowa, 645; *Commonwealth* v. *Waite*, 11 Allen (Mass.), 264; *Commonwealth* v. *Gordon*, 159 Mass. 8; *Commonwealth* v. *Schaffner*, 146 Mass. 512; *Commonwealth* v. *Wetherbee*, 153 Mass. 159; *State* v. *Campbell*, 64 N.H. 402; *State* v. *Smythe*, 14 R.I. 100; *People* v. *West*, 106 N.Y. 294. See also *State* v. *Griffin*, 69 N.H. 1; *State* v. *York*, 74 N.H. 125; and *Reyfelt* v. *State*, 73 Miss. 415.

It is also to be noted that in section 7 the word "contain", taken in connection with the words "terra alba, barytes, talc, chrome yellow", "color", flavor", "vinous, malt, and spirituous liquors", is used in a general and not in a restricted sense, and that confectionery may be found to contain any of the prohibited substances if they are used as a compound, a filler, a flavor, a pigment to color it internally or externally, a coating, or other similar purpose, and especially if they are purposely used, even in minute quantities, for these or other similar purposes.

As the confectionery here in question was adulterated within the meaning of the act, if it contained any talc, and as there was evidence from which it could have been found that it contained talc, we are of the opinion that the court erred in declining to give the instruction requested, and in those that were given.

The judgment of the district court is reversed, the verdict set aside, and the case is remanded to that court for further proceedings not inconsistent with this opinion.

UNITED STATES v. AMERICAN LABORATORIES

(District Court, E.D. Pennsylvania, Apr. 27, 1915)

222 Fed. 104; N.J. No. 2962

Conviction of violation of the Food and Drugs Act. On motions in arrest and for new trial. Denied.

DICKINSON, *District Judge.* The prosecution in this case began with an information filed under the Food and Drugs Act and the amendment thereto. The first three counts of the indictment are under the original act, and charge different acts of misbranding, or false and misleading statements respecting the composition of a medicine put out by the defendant under the trade-name of "Bad-Em Salz." The fourth count is under the Sherley amendment to the original act, and charges the offense of making false and fraudulent statements as to the curative properties of the salts manufactured by the defendant.

The case was fully and exhaustively tried and defended, resulting on April 7, 1915, in a verdict of guilty. The motions may be treated as one, and are planted upon four propositions:

The first is an attack upon the constitutionality of the Sherley Amendment. The position is taken that it is beyond the power of Congress to make a crime of the act of a defendant in proclaiming his belief in the curative properties of a medicine. The argument upon which this is based is so fully met by the opinions accompanying the ruling in *United States* v. *Johnson*, 221 U.S. 488, 31 Sup.Ct. 627, 55 L.Ed. 823, that we do not feel called upon to give it further discussion.

The second ground of complaint is that the defendant has not received the notice required by the fourth section of the Food and Drugs Act. This complaint is disposed of by the case of *United States* v. *Morgan et al.*, 222 U.S. 274, 32 Sup. Ct. 81, 56 L.Ed. 198.

The third complaint is that the indictment was found and tried, and a conviction thereunder had, without other authority for the institution of the prosecution than an information emanating from from the office of the United States district attorney, without affidavits in support of it appearing. The facts are that an information, with suporting affidavits, was filed September 3, 1914. This involved two counts. Another information was filed March 17, 1915. This was the basis of the four counts involved in the indictment upon which the defendant was convicted. The information was based upon the affidavits previously on file. No affidavits were physically attached to the second information. The discussion of the legal consequences flowing from this is for the moment reserved.

The fourth complaint is that the whole trend of the charge was toward conviction, in that it kept the attention of the jury faced in the direction of the guilt, and not the innocence, of defendant. It must be conceded that a reading of the charge affords some ground for this complaint. It is, however, more seeming than real. The circumstances which gave the framing to the charge brought this about. Before the charge was delivered the attention of the court was called to the fact of certain newspaper publications and dis-

cussion of the case. The best method of dealing with the situation was made the subject of a conference between counsel and the trial judge. It was not known whether any of the jury had seen the publication referred to. If they had not seen it, a direct reference to it might do more harm than good. It was thought that the condition could be best met by instructing the jury as to the presumption of innocence, and bringing before their minds the responsibility resting upon them to find the facts from the evidence in the case, and to acquit unless the proofs brought home to them a conviction of defendant's guilt beyond all reasonable doubt. The trial judge complied with the suggestion made, and charged the jury at length, and, if anything, at undue length, in emphasizing the defendant's rights of trial. This was done with such fullness at the commencement of the charge that we cannot find that the effect of it was lost upon the jury by anything subsequently said, nor that the defendant was prejudiced by the later features of the charge.

Over and beyond these specific grounds of complaint lies the broader one that there was no evidence in the case to justify the defendant's conviction of a crime. The situation in this view of it may be voiced in the phrase that the defendant, if punished, will have been punished for the crime of medical heterodoxy, and not for any offense against the law. In other words, the president of the defendant company, who is himself a physician, advanced a theory, advocated by others as well as by himself, for the treatment of cases commonly known as "gall-stone cases." In opposition are eminent physicians and surgeons, and, as the argument might concede, the weight of scientific medical opinion is against him. Inasmuch, however, as the treatment is the subject of controversy, and its efficacy within the domain of opinion, the minority cannot be convicted of crime merely because they are outnumbered.

It is certainly true that a man should not be convicted of fraud merely because he advocates a theory of medicine which at the time had not received the sanction of the endorsement of the medical profession. It is equally true that a fraud or a fakir cannot escape the consequences of his fraud by the mere fact that some one may honestly believe in the theory which he fraudulently and dishonestly exploits. The broad distinction between things which are frauds and things which are not frauds is clear. It would be difficult, and indeed seems to be impossible, to give a definition of such frauds in words. Suppositious cases illustrating the distinction could be multiplied beyond number. The essential difference is a fact, and in the administration of the criminal law is a fact to be found by a jury. As applied to the evidence in this case, the statement is easily credible that a man believes in and honestly advocates a course of taking the waters of certain springs as a specific for the prevention of gallstones, in the sense of ameliorating the conditions to which the formation of gallstones are due; it is conceivable that a man may give a like advocacy to the theory that gall stones, when once formed, may be dissolved, and there may be other persons of like opinions with himself.

The views thus expressed and the treatment advocated may be groundless in fact and unsupported by respectable professional opinion, and yet the holder of them would not be the proper subject of

criminal prosecution. By the very same token, however, another man might advocate a remedy and put out a medicine to be purchased by the sufferers from ailments or diseases, real or imaginary, and the act itself be so clearly false and fraudulent that the mind would not hesitate to reach a conviction of his criminal guilt. The fact that there was a widely spread disposition among people to give credence to the statement because of a superstitious belief in its efficacy, or indeed such a reputation for the remedy itself as to make people prejudiced in its favor, would not diminish, but would increase, the guilt of him who sought to make money by false statements and fraudulent devices. It is difficult, and indeed practically impossible, to draw a line in the abstract other than a broad line between these two things. There would seem to be no other way of dealing with the subject than to submit to the common-sense judgment of a jury to find whether in a given case the acts of a defendant have been honest, however mistaken, or whether they have been false and fraudulent.

The present case may well be considered a test case. There is a widespread belief, whether well or ill founded, in the curative properties of the waters of many of the springs which issue out of the earth. The predisposition to believe in their efficacy may have its foundation in the search for the fountain of youth. Certain words have become polarized with this meaning, and excite a feeling of hope or expectation in the minds of sufferers, particularly those who suffer from certain ailments. The word "Spa" and the word "Bad" are of this kind. The result of the use of such words is very much akin to the thoughts which, from the principle of the association of ideas, are called up by the use of certain widely advertised proprietary words.

In order to determine what basis of merit lies at the bottom of the fame of certain springs, the knowledge and skill of the chemist have been called into exercise, and the waters have been analyzed, and the ingredients which are believed to have contributed chiefly to their efficacy have been determined. It is a short step from this knowledge to the expedient of artificially reproducing the waters, or to the more direct method of bottling and transporting the waters themselves, or to facilitate the transportation by the process of evaporation and then reproducing a water from the residuum salts. Starting with this widely spread belief in the efficacy of certain natural waters, and following this with the thought of reproduction, either in fact or in equivalents, the defendant put on the market the medicine which it widely sells. Indeed, the president of the company in his testimony gave this history of the evolution of the idea of putting these salts upon the market. The idea began with the recommendation of patients suffering from certain ailments to go to Carlsbad, or to Ems, or to certain other springs, and there take the waters.

The next development of the idea was that a treatment would be given which is the medicinal equivalent of what could be had at the springs themselves. The standard formula for effervescent artificial Carlsbad salts given in the National Formulary was not believed to be the best combination of salts for the purpose. To vary from this, and yet put out the substitute as artificial Carlsbad salts, was thought to be inimical to the provision of the statute. The fully developed

thought was to put out another combination of salts, believed to be a reproduction, and in that sense a representation, and in another sense an equivalent, of the medicinal properties of the Carlsbad waters. The embodied thought was therefore put into this product under the name of "Bad-Em Salz." This put behind this proprietary medicine the widespread belief of people in the efficacy of these natural spring waters, and the thought that they could get the same benefit from a treatment in their own homes which they would receive directly from the Carlsbad or Bad-Em waters. The further thought was to give the sale of these salts the additional boost of a statement of their curative or therapeutical properties. Had this been fairly done, it could not be said that there was involved in it any infraction of any criminal statute.

The charge against this defendant, however, was that the medicine was misbranded in the respect that it was put out under certain false and misleading statements, the essence of which were that the impression was conveyed to the users of the medicine that they were getting the benefit of the very salts which are contained in the natural waters of the springs which had acquired a world-wide fame, and that false and fraudulent statements were made as to the curative effects or results which would flow from the use of this medicine. Right here is the fulcrum on which the lever for the argument on behalf of the defendant is sought to be placed.

As to the misbranding features of the indictment, the defensive position is taken upon the fact that the statements put out by the defendant were neither false nor misleading, and, with respect to the curative features, that, inasmuch as the result claimed to follow from the use of the medicine was a matter of opinion, there was no basis for a finding of guilt.

The answer made to these propositions by counsel for the United States is the only answer to which they are open, and that is that the statement of fact upon which the first proposition turns is one to be determined by a jury. It is not a necessary condition of a finding of guilt that the statement of what the drug is should be a statement flatly and baldly false, but that the word "misleading", in the act, has its function, which is to bring the statement within the inhibition of the statute if it is such as to create or lead to a false impression in the mind of the reader as to what the ingredients or the composition of the drug are. This is the charge made in the first three counts of the indictment, and this is the fact which the jury has found against the defendant.

With respect to the charge under the Sherley amendment, the answer of the United States is that a man who has in fact made false and fraudulent statements as to the curative properties of the drug which he is selling cannot, when pursued by justice, take refuge in the statement that he was expressing his opinion, or in being able to find others who honestly believe in the statements made. Here again the question of guilt or innocence turns upon the fact, and here again the fact is one which must be determined by the jury, and here again the jury has determined the fact against the defendant.

The charge of the court in this feature or aspect of the case was heard by the jury, and therefore must be read in the light of the argument which had been addressed to them. The president of the

company, when upon the witness stand, testified to the honesty of the statements made and to the truth of the claims made for the results of the treatment advocated. This was impressively supported by counsel for the defendant in his argument that the defendant was not to be convicted because the statements made were not believed in by the witnesses called for the United States and that a defendant could not be convicted because he entertained an opinion, even if that opinion was a mistaken one, and that the fact that the claims made were within the domain of opinion entitled the defendant to a verdict of acquittal.

These propositions were all affirmed by the court, unless the jury had been convinced by the evidence in the case that the statements as to what the drug was were in fact false and misleading, and unless the statements of what it would do were both false in fact and were fraudulently made.

The feature of the charge complained of, that the illustrations "were all illustrations of guilt, and none of innocence", could not have prejudiced the defendant, for the reason that, following the course of the argument made by counsel for the defendant, they enforced his argument and reinforced his position by impressing upon the jury that there could be no conviction unless the defendant had been guilty of an arrant fraud, such as those embodied in the illustrations given.

This brings us back to the only undiscussed complaint now made. That no one can be called upon to defend to a criminal charge which is not based upon reasonable grounds appearing from statements of fact authoritatively made and sanctioned by the oath of someone who has a knowledge of the facts, or its legal equivalent in solemnity and responsibility, is a proposition having behind it the highest sanction of the law. The forms of practice in making criminal accusations which have grown out of this are the outer protections which are thrown around every citizen, and there can be no departure from them.

We have not had the opportunity to examine the record in this case with respect to the fulfillment of these conditions preliminary to a trial. We understand the fact to be, however, and it is stated without denial, that the action of counsel for the United States in bringing this prosecution was based upon affidavits made by those having a knowledge of the facts and upon the probable cause which was disclosed by the affidavits. These affidavits are of record. The first information brought home to the defendant charges which would have taken the form of two counts in an indictment. Counsel for the United States subsequently amplified the form of the charges by putting them into the shape of the four counts of the present indictment. The information in the present prosecution was based upon the affidavits which were of record. The complaint now made, as we further understand it, is merely to the feature that the affidavits upon which the information was based are not physically attached to the information itself. We do not think this to afford any legal reason for interfering with the verdict, although we have no wish to lessen the protection thrown around defendant. *United States* v. *Gruver* (D.C.) 35 Fed. 59, and *United States* v. *Baumert* (D.C.) 179 Fed. 735, dispose of this phase of the case.

The motive and policy of the law which lies behind legislation of this general kind is highly promotive of public good. The evils sought to be removed and prevented spring out of conditions requiring tactful, and even delicate, treatment. Such laws, if arbitrarily enforced, may easily take the form of an unwise dictatorial interference with the pursuits of others. There is a natural temptation to overdo by trenching upon the domain which properly belongs to the ethics of the medical profession. There is danger, also, that the public will come to rely upon the protection promised by such laws, and therefore relax individual watchfulness. Such laws, therefore, should be administered in such a way as that honest and well-intentioned business may not be hampered, but the detection of frauds and cheats will be made sure, and their conviction and punishment rendered certain. The temptation even to those who cannot fairly be termed unscrupulous is to yield to the suggestions of greed and come as close to the forbidden line as they safely can. The only sure course in the administration of laws of this kind is to leave the determination of guilt or innocence in a given case to the sound judgment of a jury, supervised by the wisest scrutiny which the trial judge can give to make sure that no one is convicted without guilt. As has already been stated, this case discloses acts that are not far over the line of what the defendant might lawfully have done. The jury found, however, that it has transgressed that line, and we are not able to convict the jury of having misjudged the real facts in the case.

The motion in arrest of judgment, and that for a new trial, are therefore both denied.

WEEKS v. UNITED STATES

(Circuit Court of Appeals, Second Circuit, May 13, 1915)

224 Fed. 64; N.J. No. 4047

In error to the District Court for the Southern District of New York. Judgment affirmed in part, reversed in part.[87]

Before Lacombe, Ward, and Rogers, Circuit Judges.

Lacombe, *Circuit Judge.* This cause comes here upon writ of error to review a judgment convicting plaintiff in error, who was defendant below, of violation of the Food and Drugs Act of June 30, 1906. There were three informations, and two counts under each. The first information dealt with an article of food called "Fruit Wild Cherry Compound." The first count on this information was quashed before trial. The second count charged shipment of such an article, which was misbranded, because it was labeled "Fruit Wild Cherry Compound", whereas it consisted chiefly of imitation wild cherry essence artificially colored.

The second information, in its first count, charged the shipping of the article which "was adulterated in that it was artificially colored with a coal-tar dye in such manner as to simulate a fruit wild cherry

[87]Affirming in part, reversing in part, *United States* v. *Weeks,* p. 519, *ante.* Affirmed, *Weeks* v. *United States,* p. 867, *post.*

and in a manner whereby its inferiority was concealed." The second count charged the selling and offering for sale of the article under the distinctive name of another article. The article and the label in all these counts were the same.

The third information in its fruit [first] count charged the shipment of an article of food labeled "Special Lemon. Lemon Terpene and Citral." This label was charged to be false and misleading because the statement in it would indicate that the article was a product derived from lemon, whereas it was in fact not a product derived from lemon, but was a mixture containing alcohol and citral derived from lemon grass and was an imitation of lemon oil. The second count charged the offering of such article for sale under the distinctive name of another article—to wit, a product derived from lemon.

Defendant was convicted under all five counts.

The case calls for the construction of sections 7 and 8 of the Pure Food and Drugs Act. Prior sections forbid in general terms the manufacture and shipment in interstate commerce of any article of food or drugs which is adulterated or misbranded. Those two sections (7 and 8) undertake to define the words "adulterated" and "misbranded" as used in the statute. Had they been phrased in general terms it might not be difficult to construe and apply them to the concrete facts of each case as they are developed on a trial. But the draftsman apparently thought that the more words he used the more plainly would he express the meaning intended. Not unnaturally an opposite result has been accomplished. The sections are most difficult of construction; possibly the phrasing of some of their provisions may operate to defeat the object probably intended. But we can not rewrite the sections; if amendment be needed to make the act effective that will be a matter for the consideration of Congress.

Considering now the charges as to the "Fruit Wild Cherry Compound", the labeling of which it is contended violates the provisions of section 8, subhead "In the case of food." The label indicates, we should suppose, to any intelligent mind that the article is a compound into which "Fruit Wild Cherry" has entered at least in sufficient quantity fairly to warrant the use of these quoted words. The testimony of defendant's own witness shows that the article contains absolutely no "Fruit Wild Cherry." It is therefore clearly within section 8, "Food" subdivision, paragraph second, because it is "so labeled as to mislead the purchaser", and also within paragraph fourth, because its label bears "a statement regarding the ingredients or the substances contained therein, which statement [is] false or misleading in [the particular] that the compound contains Fruit Wild Cherry." If this were all, one might leave the subject with a conviction that the statute, in its application to this case, had accomplished its apparent object. But the act contains an important proviso, apparently tacked on to the bill to protect various combinations on the market at the time. In order to appreciate the full force of this proviso, which concludes section 8, it is here quoted:

Provided, That an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be adulterated or misbranded in the following cases:

First. In the case of mixtures or compounds which may be now or from time to time hereafter known as articles of food, under their own distinctive names, and not an imitation of or offered for sale under the distinctive name of another article, if the name be accompanied on the same label or brand with a statement of the place where said article has been manufactured or produced.

Second. In the case of articles labeled, branded, or tagged so as to plainly indicate that they are compounds, imitations, or blends, and the word "compound," "imitation," or "blend," as the case may be, is plainly stated on the package in which it is offered for sale: *Provided*, That the term blend as used herein shall be construed to mean a mixture of like substances, not excluding harmless coloring or flavoring ingredients used for the purpose of coloring and flavoring only: *And provided further*, That nothing in this act shall be construed as requiring or compelling proprietors or manufacturers of proprietary foods which contain no unwholesome added ingredient to disclose their trade formulas, except in so far as the provisions of this act may require to secure freedom from adulteration or misbranding.

Now there is not a scintilla of evidence in the case to show that defendant's article contains "any added poisonous or deleterious ingredients"; therefore it is covered by the proviso (second clause), because it is "labeled to plainly indicate that it is a compound", and the word "compound" is plainly stated on the package. In consequence it cannot, under the proviso, "be deemed to be misbranded."

In the second information the charge is brought under section 7 of the act, which enumerates the conditions which will constitute adulteration of an article for the purposes of the act. The charge is that "Fruit Wild Cherry Compound" was adulterated, in that it was "artificially colored with a coal-tar dye in such a manner as to simulate a true fruit wild cherry and in a manner whereby its inferiority was concealed." Section 7 contains this clause:

Fourth. If it be mixed, colored, powdered, coated, or stained in a manner whereby damage or inferiority is concealed.

The shipment is the same as that covered by the first information. The label is the same "Fruit Wild Cherry Compound." Manifestly the label does not state that the article is "Fruit Wild Cherry", but only that it is a *compound* which contains fruit wild cherry. Defendant's witness, who was familiar with the manufacture of the compound, testified that they soak wild cherry bark in water, filter the infusion, dilute it with alcohol, add benzaldehyde or oil of bitter almonds, fruit juice of raspberries, and some extract of orris and oil of rose. No fruit wild cherry enters into the compound. There was testimony from which the jury might find that the compound also contained a coal-tar color known as amaranth; that genuine fruit wild cherry has a red color; that the compound described by defendant containing fluid extract of wild cherry bark would not have this color; and that the amaranth gave to the mixture the genuine color of wild cherry juice. The testimony seems to indicate that the bark infusion of wild cherry is inferior to the fruit juice, and we should be inclined to sustain the verdict were it not for the proviso as to "compounds" above quoted.

That proviso is found at the close of section 8, which section undertakes exhaustively to define "misbranding." Under ordinary rules of construction the operation of the proviso might be restricted to the section in which it appears, and it might be held not to qualify section 7, which defines "adulterations." But the draftsman of the

act has been careful not thus to restrict it, because the proviso begins:

> That an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be *adulterated or misbranded* in the following cases.

Then follows the enumeration above set forth. The article in question is an article of food, and the information does not charge, nor does the testimony show, that there have been added to the compound "poisonous or deleterious ingredients." The proviso therefore requires a reversal of the conviction under this count.

The second information deals with a different article, labeled "Special Lemon. Lemon Terpene and Citral." The first count charged that the article was misbranded; that the label was misleading, in that the statement would indicate that the article was a product derived from lemon, whereas the product was not a product derived from lemon, but was a mixture containing alcohol and citral derived from lemon grass and an imitation of lemon oil. The article seems not to be covered by the proviso, because the *word* "compound" is not "plainly stated on the package in which it is offered for sale."

The question is: Was the label false and misleading? It obviously indicated that the so-called "Special Lemon" was a compound of which lemon terpene and citral were components. The words "Special Lemon" do not, of course, import that the article was "lemon," a word which in ordinary speech denotes the fruit of a well-known citrus tree. There is no testimony that this word, standing by itself, has any distinctive trade meaning; there are lemon oils, lemon extracts, lemon juice, lemon essence, etc. The use of the words "special lemon" does not import any representation that the article is a variety of lemon oil. The testimony shows that lemon terpenes are the oily part—the hydrocarbon oils of the lemon, of the lemon peels; they are a by-product from the manufacture of lemon flavor. Citral is derived from lemon grass, a grass that grows in the East Indies. Where we have a label which indicates that the contents of the package consists of a compound of lemon terpene and citral, which compound the manufacturer designates as "Special Lemon," and the contents agree with the designation, we do not see how it can be held that there has been a misbranding within the meaning of the act.

The second count charges that the same article was offered for sale as a product derived from lemon. A witness called by the Government, who was engaged in the manufacture of crackers at Atlanta, Ga., testified that he was visited there by a salesman of defendant; that the salesman showed him a sample in a bottle and told him it was pure lemon oil, which he was able to sell at a low price because it was "second pressing." The witness ordered some of it, which was sent to him by defendant. The salesman, called by defendant, denied the making of any statements as to the article being lemon oil. Upon this conflict of evidence the finding of the jury that the representations were made is controlling here, and it must be held that there was a misbranding under the statute, because section 8 defines misbranding as, inter alia, "offering an article for sale" under the distinctive name of another article, even though no label describing it as such other article be actually affixed to it.

Since intent is not an element of the offense, defendant must be held liable for the act of his sales agent, although he had told him not to misdescribe the article.

The judgment under this count is affirmed.

WEEKS v. UNITED STATES

(Circuit Court of Appeals, Second Circuit, May 13, 1915)

224 Fed. 69; N.J. No. 4055

In error to the District Court for the Southern District of New York. Judgment affirmed.[88]

Before LACOMBE, WARD, and ROGERS, Circuit Judges.

LACOMBE, *Circuit Judge.* A much simpler case is here presented than that considered in action No. 1, opinion in which is filed herewith. There is but one information in a single count. Concededly defendant shipped an article of food labeled "Grain Alcohol Varnish"; it was shellac dissolved in alcohol and was used for a glazing on cheap candies. Shellac is a resinous material derived from a secretion caused by an insect biting the bark of certain trees in India and southern Asia. This resinous material is separated from the twigs and other refuse material by being warmed in bags. Arsenic is added to it for the purpose of brightening its natural orange color, making it, in the opinion of the trade, more desirable. All shellac imported into this country during the year in question contains this added article, defendant so concedes. The shellac is dissolved in alcohol to produce the varnish; no arsenic is added here.

The act provides (sec. 7) that an article of food is adulterated if it "contain any added poisonous or other added deleterious ingredients, which may render such article injurious to health." The amount of this arsenic which could possibly be consumed by a person eating the candy glazed with the varnish would be minute. The only question is: Was there sufficient arsenic in the varnish to make it an article which "may be injurious to health?"

Upon this point there was conflicting testimony. In accordance with the holding of the Supreme Court in *United States* v. *Lexington Mill Co.*, 232 U.S. 399, the question whether the added ingredient would "reasonably have a tendency to injure health" was left to the jury. We see no reason to disturb their finding; it makes no difference whether the arsenic was added to the shellac or to the varnish, nor whether it was added by the defendant or by some one else. He testified with commendable frankness that he understood at the time that one "could not buy shellac commercially, I mean outside of a laboratory, that was arsenic free." He supposed undoubtedly that the amount consumed with varnished candy would be too minute to injure any one. Of course he could sell this varnish, with its added arsenic for use in the arts, but he admitted, with entire frankness, that he sold it to be used in glazing confectionery. We regret to have to sustain a conviction, where the defendant has been

---

[88] Affirming *United States* v. *Weeks*, p. 528, *ante*.

so entirely frank and honest in giving his testimony and had no reason to suppose he was likely to injure anyone's health by selling his varnish for the indicated purpose; but intent so to do is not an element of the offense charged, and the evidence as to what effect the added arsenic may have was such that this question had to go to the jury for decision. Had they decided that question contrary to the contention of the Government experts we certainly could not set their decision aside, nor can we do so when they find such contention persuasive. We are not the triers of the facts.

It seems unnecessary to discuss various technical points which have been argued. We cannot see that it makes any difference whether the package shipped was labeled "Grain Alcohol Varnish" or "White Shellac Varnish Grain Alcohol." It is proved that shellac varnish was sent by defendant to the candy manufacturer in Providence, R.I., and that what the Government experts tested was a sample from the can. We do not understand that defendant disputes the fact that he sent the can.

Judgment affirmed.

GLASER, KOHN & CO. v. UNITED STATES

(Circuit Court of Appeals, Seventh Circuit, May 20, 1915)

224 Fed. 84; N.J. No. 4036

In error to the District Court for the Northern District of Illinois. Judgment affirmed.[89]

On or about January 15, 1907, plaintiff in error executed and delivered to Steele-Wedeles Company, of Chicago, Ill., a guaranty in writing signed by it, which guaranty reads:

STEELE-WEDELES Co., City.

GENTLEMEN:

Replying to your favor 10th inst., would say we hereby guarantee that all goods as furnished you hereafter will comply with the Food and Drugs Act of June 30, 1906, with the understanding, however, that if we at any time use labels or packages furnished by you or gotten up as per your instructions, we shall not be responsible for the form or wording of the same but only guarantee that goods covered by same are not adulterated. It is expressly understood that the above shall hold good until notice of revocation be given in writing.

Truly yours,

GLASER, KOHN & Co.,
G. D. GLASER, *Pres.*

Afterwards, and on or about September 15, 1910, and while said guaranty, by its terms, was in full force, plaintiff in error sold and delivered to said Steele-Wedeles Company two dozen jars of preserves, described as "Herald Brand Fruit Preserves Blackberry Flavor Apple Preserves 74%, Blackberry Preserves 26%," which jars of preserves Steele-Wedeles Company shipped in interstate commerce from Chicago to Rock Springs, in the State of Wyoming, on or about October 14, 1910. On or about October 20, 1910, an inspector of the United States Bureau of Chemistry purchased a sample of these preserves and sent the same, properly sealed, to the Bureau of Chemistry of the Department of Agriculture, where it was duly examined by experts on or about December 8, 1910, who pronounced the sample analyzed to contain mold, and to be

[89] Affirming *United States* v. *Glaser, Kohn & Co.*, p. 601, *ante*.

partly decomposed and made from partly decomposed fruit. Thereafter the United States filed its information, containing six counts, against plaintiff in error, of which only the fourth count is here involved, which charges plaintiff in error with unlawfully knowingly selling and delivering to Steele-Wedeles Company the said jars of preserves, contrary to the provisions of the so-called Pure Food Law of the United States, approved June 30, 1906, entitled "An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes," in that said jars of preserves, when and where they were so sold and delivered, were an adulterated article of food within the meaning of the act, and consisted in part of decomposed vegetable substance, and further charging that Steele-Wedeles Company shipped said jars contrary to law, by way of a common carrier in interstate commerce to Rock Springs, Wyoming, as aforesaid, basing said information upon said guaranty as having been given and received under the terms of section 9 of said act of June 30, 1906.

On the trial the formal facts were stipulated into the record and evidence of the condition of the preserves when delivered to Steele-Wedeles Company was introduced. This evidence consisted of the opinions of experts, based on the conditions found at the time of the Washington analysis, that the fruit was partly decomposed not only at that time, but also at the time of the sale and delivery by defendants to Steele-Wedeles Company. Plaintiff in error offered no evidence, but saved exceptions to the introduction of the said letter of guaranty and to the sufficiency of the expert testimony. At the close of the evidence plaintiff in error moved the court to direct the jury to find plaintiff in error not guilty, which motion the court denied, and an exception was taken. Exception was also taken to that part of the court's instruction which charged the jury that the said guaranty was a legal guaranty. The jury found plaintiff in error guilty, and the court assessed a fine of $200 and costs, to reverse which sentence this writ of error was sued out.

The errors relied on are: (1) the court held that the alleged guaranty was legal and sufficient to hold plaintiff in error under said section 9; (2) the evidence was insufficient to show that the preserves were adulterated at the time they were delivered to Steele-Wedeles Company.

Before Baker, Kohlsaat, and Mack, Circuit Judges.

Kohlsatt, *Circuit Judge*. Section 9 of the act approved June 30, 1906, reads as follows, viz:

Sec. 9. That no dealer shall be prosecuted under the provisions of this act when he can establish a guaranty signed by the wholesaler, jobber, manufacturer, or other party residing in the United States, from whom he purchases such articles, to the effect that the same is not adulterated or misbranded within the meaning of this act, designating it. Said guaranty, to afford protection, shall contain the name and address of the party or parties making the sale of such articles to such dealer, and in such case said party or parties shall be amenable to the prosecutions, fines, and other penalties which would attach, in due course, to the dealer under the provisions of this act.

It will be seen that this section does not, in terms, seem to comprehend a general continuing guaranty, but seems to apply to the specified articles contemplated at the time. Such, indeed, is plaintiff in error's contention. That construction, however, is narrow and not in accord with the spirit of the act, which should be construed in the light of its purpose, as said by the Supreme Court in *McDermott* v. *Wisconsin*, 228 U.S. 115–128, "and of the power exerted in its passage." This purpose the court, in *United States* v. *Antikamnia Co.*, 231 U.S. 654–665, declares "is to secure the purity of food and drugs and to inform purchasers of what they are buying. Its provisions are directed to that purpose and must be construed to effect it." As between a dealer to whom the purity of the goods

is guaranteed and the manufacturer who has the better opportunity of ascertaining the facts, the act aims to throw the ultimate responsibility on the latter and it should therefore be interpreted, if reasonably possible, so as to carry out this purpose to the fullest extent. In our judgment it is, therefore, not only a fair, but the most reasonable, construction of the act to include within the scope of section 9 continuing guaranties, as well as those given at the time of the sale in reference to specific goods. The belated position of plaintiff in error as to the meaning of the statute with regard to a continuing guaranty comes to us undermined with its earlier construction contained in the letter wherein it says, "We hereby guarantee that all goods as furnished you hereafter will comply", etc., and "It is expressly understood that the above shall hold good until notice of revocation be given in writing." There is no reason in law for the claim that a continuing guaranty is invalid.

When by the terms of a written guaranty it appears that the parties look to a future course of dealing for an indefinite time, or a succession of credits to be given, it is to be deemed a continuing guaranty. Am. & Eng. Ency. of Law (2d Ed.), vol. 14, p. 1139. Letters of guaranty should receive a liberal, fair, and reasonable interpretation, so as to attain the object for which the instrument is designed and the purpose to which it is applied. *Lawrence* v. *McCalmont*, 2 How. 425–449.

We are clearly of the opinion that the letter of January 15, 1907, constituted a good, valid, and sufficient guaranty under the provisions of said section 9, and that said guaranty attached to every item of sale made by plaintiff in error to Steele-Wedeles Company, after the sale thereof until revoked in accordance with the terms thereof, and that it furnished a basis for the filing of the information against plaintiff in error herein.

With regard to the sufficiency of the proof to sustain the verdict of the jury to the effect that the preserves in question were adulterated at the time they were delivered to Steele-Wedeles Company, and not prepared in accordance with said act of June 30, 1906, we find no such situation as would warrant us in substituting our opinion for that of the jury. While expert opinion evidence should be received with caution, it is solely within the province of the jury to determine its weight. They saw and heard the witnesses. In cases such as this much of the evidence must necessarily be opinion evidence. In the present case there is nothing in the evidence inherently impossible or even improbable. The error is not well assigned.

With regard to the objection that the transaction does not, so far as plaintiff in error is concerned, come within interstate commerce, plaintiff in error does not in its brief include it among the errors relied on. We are, however, satisfied that the point is not well taken. Steele-Wedeles Company was a wholesale grocer engaged in interstate commerce, as plaintiff in error well knew. By selling and delivering the preserves to that corporation upon the terms of the guaranty, it deliberately placed them in interstate commerce channels.

The judgment of the district court is affirmed.

F. B. WASHBURN & CO. v. UNITED STATES

(Circuit Court of Appeals, First Circuit, July 16, 1915)

224 Fed. 395; N.J. No. 4034

In error to the District Court for the District of Massachusetts. Decree reversed in part, affirmed in part.[90]

Before PUTNAM, BINGHAM, and ALDRICH, District Judges.

BINGHAM, *Circuit Judge.* This is an information brought by the United States under sections 2, 7, and 8 of the Food and Drugs Act of January 30, 1906 (34 Stat. at Large, p. 768, ch. 3915). It contains two counts. In the first count the Government charges that, on August 1, 1910, the respondent, at Brockton, in the district of Massachusetts, unlawfully and knowingly shipped and delivered to a carrier for shipment and carriage from said Brockton to Greensburg, in the State of Pennsylvania, certain food called "macaroons", which food was adulterated within the meaning of the act of Congress approved June 30, 1906,

> in that a substance, to wit, glucose, had been mixed and packed with said food so as to reduce and lower and injuriously affect its quality or strength.

In the second count it was charged that the food shipped as aforesaid was misbranded within the meaning of the act,

> In that the label on said food and its containers, and the package containing the same, did bear a certain statement regarding said food which was false and misleading in certain particulars; that is to say, the statement, in substance and effect, following: 'Macaroons', whereas in truth and in fact said food was not macaroons.

There was a trial by jury, and a verdict of guilty was rendered on each count. The case is now here on the respondent's bill of exceptions, and the errors assigned are to the refusal of the court to direct verdicts for the respondent at the close of all the evidence, to its refusal to give certain requested instructions, and to the admission of certain evidence.

The provisions of the statute relied upon to sustain the first count read as follows:

> SEC. 7. That for the purposes of this act an article shall be deemed to be adulterated: * * *
> In the case of food:
> First, if any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.

It was stipulated between the parties, and the stipulation was put in evidence, that the food in question was shipped by the respondent in interstate commerce, as set forth in the information, that it contained 29.44 percent of commercial glucose, and that the package containing the food was labeled as the information alleged. There was also evidence that the food contained 42.76 percent of cane sugar.

At the trial the principal question in dispute was as to what the article of food known as a "macaroon" consisted. There was evidence tending to show that it consisted: (1) Of ground almonds, sugar,

---

[90] Revising in part, affirming in part *United States* v. *F. B. Washburn & Co.*, p. 434, *ante*.

and the white of eggs; (2) of coconut, sugar, and the white of eggs; and (3) of coconut, sugar, the white of eggs, and glucose. On the count for adulteration one of the Government's positions was that a macaroon was an almond cake, but whether it was a cake of almond or coconut it was adulterated if glucose was added. The respondent's position was that a macaroon was a cake made of coconut, sugar, the white of eggs, and glucose, and it requested the court to charge the jury, in substance, that if they found a cake so made was a macaroon they should acquit the defendant of the charge of adulteration. The court refused to give this instruction, and charged the jury that the question for them to consider on this count was whether the cakes which the respondent admitted having shipped in interstate commerce were adulterated, in that glucose had been mixed and packed with them so as to reduce or lower or injuriously affect their quality or strength, and that in considering that question they need not determine whether the cakes shipped by the defendant were properly called "macaroons" or not, but should consider that they were macaroons notwithstanding they had coconut in them. It thus appears that the court in its charge did not permit the jury to determine, on the first count, of what the article of food known as a macaroon consisted, but charged them, as a matter of law, that it consisted of coconut, sugar, and the white of eggs, and that they might find the product adulterated if the glucose, which the respondent admitted it put into its cakes, reduced or lowered or injuriously affected their quality or strength. The respondent, in view of the evidence, was entitled to have the jury, before reaching a conclusion upon the question of adulteration, determine what a macaroon was. Indeed, it was essential, in view of the theory on which this branch of the case was tried, for them to do so in order to reach a correct result. If the jury found that it consisted of ground almonds, sugar, and the white of eggs, the respondent was entitled to be discharged, for there was no evidence that it shipped in interstate commerce macaroons made of almonds to which glucose was added. Then, again, if the jury found that a macaroon consisted of coconut, sugar, the white of eggs, and glucose, the respondent was entitled to be discharged, for the evidence disclosed that the article which it shipped in interstate commerce was so composed. There was only one contingency presented by the evidence and the allegations of this count on which the respondent could be found guilty, and that was in case the jury found that a macaroon consisted of coconut, sugar, and the white of eggs, and that the respondent, by adding glucose, thereby reduced or lowered or injuriously affected its quality or strength. This requested instruction should have been given, and the refusal to do so was error.

As to whether the food product of the respondent was adulterated by the addition of glucose—it being assumed that the article known as a "macaroon" was made of ground coconut, etc., without glucose—the evidence tended to show that commercial glucose or corn sirup was a corn product chemically produced; that it was a white, sweet sirup, and in no way injurious to health; was about three fifths as sweet as cane sugar, and contained greater food properties than cane sugar; that it was a viscid or sticky substance, and gave to the

macaroon and caused it to retain a chewy quality; that a macaroon containing glucose was less pleasing to the taste, but whether this was due to a difference in the degree of sweetness between it and cane sugar, or because of the character of the taste, the evidence did not disclose. The only evidence on this point was that some of the witnesses said that they did not like a macaroon made with glucose as well as they did one made with cane sugar.

The respondent requested the court to charge the jury that the law fixed no standard for sweetness in a macaroon, and also that they were not to consider, in determining the innocence or guilt of the respondent on the question of adulteration, the sweetness of corn sirup as compared with the sweetness of cane sugar. It is true that the law fixes no standard for sweetness of a macaroon; it is also true that the evidence disclosed that the degree of sweetness in a macaroon, whether made of coconut or almond, varies with different makers; that they use a greater or less amount of sweetening as their fancy dictates. The court declined to charge the jury, as requested, in these respects, and simply told them that there was no dispute as to glucose not being as sweet as sugar—that it was only three fifths as sweet as sugar—and that, while the defendant's evidence was that this loss in sweetness was compensated for by other advantages in the use of glucose, so that, on the whole, the cakes were not reduced or lowered or injuriously affected in quality or strength by its addition, that was for the jury to determine. From this it appears that the court told the jury they might find that a macaroon made of coconut in which glucose was used was adulterated, because glucose was less sweet than cane sugar, unless they found that other advantages derived from the use of glucose so made up for the loss of sweetness as, on the whole, not to reduce or lower or injuriously affect its quality or strength. As the law fixed no standard of sweetness for macaroons, the respondent was entitled to have the jury so instructed, and, as the evidence was such as not to warrant the jury in finding that there was, in fact, any standard of sweetness for a macaroon, they could not consider the question of the degree of sweetness in arriving at a verdict on the question of adulteration; and, if the evidence would warrant no other conclusion than that of a difference in the degree of sweetness, then a verdict should have been directed for the respondent on this count. If, however, in view of the fact that the jury were permitted, in the course of the trial, to eat macaroons made according to the formula of the respondent, and macaroons made with sugar without glucose, it can be said that they had evidence before them as to the character of the taste of macaroons produced with sugar as compared with those made of sugar and glucose, and that, because of this difference, macaroons made with sugar and glucose were less palatable than those made with cane sugar alone, then there may have been some evidence on which to submit the question to the jury. But this view of the evidence was not presented to the jury by the charge, and the verdict was based apparently upon the evidence showing a difference in the degree of sweetness. For these reasons we are of the opinion that the verdict on this count must be set aside.

Furthermore, it seems to us that the trial on the first count proceeded upon a wrong theory, and that the allegations and proofs

offered would not warrant a conviction for adulteration within the meaning of the act. The evidence discloses that a macaroon is a mixed food composed of certain ingredients; that the name by which it is known is distinctive; and that the added ingredient (glucose) which the respondent used in its cakes was not poisonous or deleterious to health. It is provided in section 8, subdivision 4 (1), that a mixture known by a distinctive name shall not be regarded as adulterated if it does not contain any added poisonous or deleterious ingredient. The added ingredient here in question was neither poisonous nor deleterious, and, as the mixture or compound was known by a distinctive name, it was not adulterated within the meaning of the act. *United States* v. *Forty Barrels of Coca Cola*, 215 Fed. 535; Id. (D.C.) 191 Fed. Rep. 431.

Upon the second count the contention of the Government was: (1) That a macaroon, as commonly understood, was made of ground almonds, sugar, and the white of eggs, and if an article made of ground coconut was labeled and shipped as a "macaroon", it was misbranded; and (2) that whether, on the evidence, a macaroon should be found to consist of ground almonds or coconut, sugar, and the white of eggs, as those branded and shipped by the respondent, also contained glucose, they were not macaroons, and were misbranded.

As there was evidence on this count from which the jury could have found that a macaroon, as commonly understood, was made of ground almonds, sugar, and the white of eggs, and that those shipped by the respondent contained coconut, but were branded "Macaroons", the Government was entitled to go to the jury on this count as to this matter.

There was also evidence on this count, from which the jury could have found that a macaroon, as commonly understood, was made of ground coconut, sugar, and the white of eggs, and that those shipped by the respondent in interstate commerce were thus made up, except that glucose was added; and the question is suggested whether the jury would be warranted in finding that, by the addition of glucose, the articles ceased to be macaroons, so that the respondent misbranded them by labeling them "Macaroons." In the first count the court charged the jury that a cake made of coconut, sugar, and the white of eggs was a macaroon for the purpose of adulteration, and that, if they found those shipped by the respondent in interstate commerce contained glucose, they might find that they were adulterated if their quality or strength was thereby lowered. The respondent urges that this produces this dilemma: That a cake made of coconut, sugar, and the white of eggs is a macaroon which may be adulterated by the addition of glucose, and also that it may be found not to be a macaroon, for the purpose of misbranding, if glucose is added. But, in view of the conclusions reached with reference to the first count, we find it unnecessary to consider this contention. If the jury found that a macaroon consisted of coconut, sugar, and the white of eggs, then, inasmuch as those shipped by the respondent contained glucose and were branded "Macaroons", they were misbranded within the meaning of section 8, subdivisions 1 and 4 (1), for they were "an imitation of or offered for sale under the distinctive name of another article", and were labeled so as to

deceive and mislead the purchaser. *United States* v. *Forty Barrels of Coca Cola, supra.*

We do not find it necessary to consider the question of evidence to which the exception was taken, as it relates solely to the first count.

The decree, so far as it relates to the count for misbranding, is affirmed, but so far as it concerns the count for adulteration it is reversed, the verdict is set aside, and the case is remanded to the district court for further proceedings not inconsistent with this opinion.

UNITED STATES v. 60 BARRELS OF WINE

(District Court, W.D. Missouri, Sept. 16, 1915)

225 Fed. 846; N.J. No. 3529

Libel under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

Van Valkenburgh, *Circuit Judge.* Succinctly stated, the libel of the Government charges that the wine in question was misbranded, in that the brands and labels on the barrels represented and stated the contents thereof to be "Ohio Claret Wine", when, in truth and in fact, it was not Ohio claret wine, but was a pomace wine, either in whole or in part, by substitution or otherwise. The defense is that the wine is Ohio claret wine and denies that said barrels contained pomace wine, or that pomace wine has been substituted, in whole or in part, for claret wine, in said barrels, or any of them. Claimant further asserts that said wine was made from red grapes, that a sugar solution was added, and also a small amount of artificial coloring, all in conformity to Food Inspection Decision 120 of the United States Department of Agriculture. Both the Government and the claimant rely upon said Decision 120 in connection with the general provisions of the act in support of their variant contentions.

A great amount of testimony, expert and otherwise, was taken at the hearing. The issue framed is, however, not a complex one. It is incumbent upon the Government to establish, by a fair preponderance of the evidence, to the satisfaction of the court, first, that the contents of the barrels libeled were not Ohio claret wine within the purview of the law and of the definition established by the food department, and accepted and invoked by the claimant; second, that the contents of said barrels were a pomace wine outright or that a pomace wine had been substituted, in whole or in part, for Ohio claret wine. It will be readily seen, therefore, that the determination of the controversy must depend upon what the court finds the article to be, and it is to the solution of this disputed question that the evidence is directed. It follows that it is first necessary to determine what a legitimate claret wine must be; second, what the contents of these barrels have been shown to be. Great prolixity of statement on the part of witnesses and the pronounced technicality which characterizes the expert chemical testimony introduced render impracticable an extended analysis, in this memorandum, of the evidence produced at the trial. It will be sufficient if the court adverts

with sufficient exactness to the essentials disclosed which control the conclusions reached.

Decision No. 120, above referred to, permits the addition of a sugar solution to grape must before fermentation. If the resulting product by complete fermentation of the must under proper cellar treatment does not contain less than five parts per thousand acid and not more than 13 percent of alcohol after complete fermentation, that product may be labeled " Ohio Wine ", qualified by the name of the particular kind or type to which it belongs. Respecting pomace wine, said Decision No. 120 has this to say:

> The product made in Ohio and Missouri by the addition of water and sugar to the pomace of grapes from which the juice has been partially expressed, and by fermenting the mixture until a fermented beverage is produced, may be labeled as " Ohio Pomace Wine " or " Missouri Pomace Wine " as the case may be. If a sugar solution be added to such products for the purpose of sweetening after fermentation they should be characterized as " Sweet Pomace Wines." The addition to such products of any artificial coloring matter or sweetening or preservative other than sugar must be declared plainly on the label to render such products free from exception under the Food and Drugs Act.

We have then comprehended within the same decision the definition of Ohio claret wine and of Ohio pomace wine, which must govern this discussion, and to which in fact both parties appeal for justification. It will be noted that the permission to add artificial coloring matter is necessarily confined, by construction and context, to pomace wine. It appears in view of the earlier clauses of the decision, to wit:

> It has been decided after a careful review that the previous announcement is correct and that the term " wine " without further characterization must be restricted to products made from untreated must without other addition or abstraction than that which may occur in the usual cellar treatment for clarifying and aging.

That with the exception of the addition of the sugar solution thereafter expressly permitted, all other additions and abstractions are excluded. Claret wine made from the entire content of the grape is conceived to require no addition of artificial coloring. Pomace wine made from the impoverished content remaining after the partial expression of the juice requires such coloring to render it merchantable, and to such the use of harmless coloring matter is restricted. No offense is charged because of the addition of the coloring matter if the product should be held to be a claret wine; but this state of the law is pertinent as bearing upon the identity of this product. It is a matter to be considered by the court whether parties familiar with the law would be presumed to add coloring matter to a product from which, by the terms of the act, it is, at least inferentially, excluded, and whether they would not, in like manner, be presumed to add coloring to a product for which it is expressly permitted.

A pomace wine then, under this act and within the designated territory, is any product made by the addition of water and sugar to the pomace of grapes from which the juice has theretofore been partially expressed and by fermenting the mixture until a fermented beverage is produced. Under this definition it is immaterial to what extent the juice has been partially expressed—whether to a limited degree or almost entirely. The resulting product, made in other

respects as it is contended and admitted that this article was made, would be a pomace wine, and if such a situation is established by the evidence, then the charge in the libel is sustained; as also, if a product thus falling within the definition of pomace wine has been added to or substituted for an unimpeachable Ohio claret wine.

It is necessary, as well as desirable, then, at the outset, to determine, if possible, some characteristic of Ohio claret wine which stamps and identifies it as the legitimate product, and the absence of which condemns the product as spurious in the eye of the law. The Government, in this case, takes the positive ground that that essential characteristic is total tartaric acid, whether free or in the form of cream of tartar or both; that in the finished wine, made in accordance with the law, that constitutent must not fall below a minimum fixed as 0.2 per mille. If it is found in appreciably less quantity than that, its absence indicates that a part of the total grape content has been withdrawn. In other words, that the product has been made from a pomace of grapes from which the juice containing the missing percentage of this characteristic acid has been partially expressed. This contention is, of course, combated by the claimant.

The so-called wine under discussion was made by the claimant company at Sandusky, Ohio, from red grapes alleged to have been of Concord and Ives varieties in about equal proportions. These grapes were said to be not quite up to the standard, in that they were a little light in color, with a few berries, on some of the bunches, evidencing a slight effect of hail. They were, however, of fair quality and were up to the standard in that particular district for that year. They were delivered at the winery in the early part of October, 1912, and were treated, and are alleged to have been made into wine that fall. About one year thereafter, to wit, October 13, 1913, claimant shipped 60 barrels of this product to Antonio Basile & Co., Italian wine merchants, located in the north part of Kansas City, Mo. It was sold for 32 cents per gallon, being 5 or 5½ cents less than the average price of Ohio claret wine at that time, and 4 cents more than the average price of pomace wine. This shipment was received in Kansas City 10 days thereafter, and, before storage by the purchaser, a food and drug inspector drew from one of the barrels 4 full quart bottles; these bottles were securely corked and the seal of the Bureau of Chemistry placed thereon. An analysis was made of two parts of this sample by Mr. Ingle, a chemist of the Bureau of Chemistry, on the 23d day of November, 1913. This analysis resulted, December 2, 1913, in the seizure upon which this libel is based. This chemist Ingle was not at the trial, and after some debate between counsel his analysis was not introduced in evidence. However, on January 27, 1914, another chemist of the department, named Hartmann, analyzed one of the four bottles thus taken. He testifies that this bottle was full, well corked, and in good condition when his analysis was made. The samples taken had been carefully packed and forwarded by express to the Bureau of Chemistry of the United States Department of Agriculture at Washington. One of these bottles was, in like manner, delivered to the claimant company, and by it transmitted to its chemist Robinson. Dr. Robinson also made his analysis thereof on April 2, 1914. He testifies that this bottle, when he received it, had leaked and that,

from the condition of the cork, air had been admitted. The bottle itself when produced bore evidences of this condition.

The final result of the testimony was that Dr. Hartmann's analysis is, and is substantially conceded to be, correct. Dr. Robinson, on behalf of claimant, stated that he had no reason to criticize it; that such differences as existed between [Dr. Hartmann's analysis] and his own, aside from those due to the usual differences in computation by different analysts, would be naturally accounted for by what might be presumed to be the difference in condition of the bottles when received by the respective chemists. So that we may start with the presumption that the analysis made by Dr. Hartmann, on behalf of the Government, was substantially correct. This analysis showed that the product contained a total acidity of 0.649 and total tartaric acid of 0.05. It will be noted that the total tartaric acid was but one fourth of the amount fixed by the Government as the necessary minimum of a true wine product. The total acid agrees substantially with that testified by the claimant as having been shown at the winery by the acidimeter test. The wine left Sandusky presumably properly prepared for transportation by experienced dealers. The railroad company presumably handled it in accordance with approved methods. These presumptions stand uncontradicted in the record. But 10 days had elapsed between the date of this shipment and that on which the analyst's samples were taken. It may fairly be assumed that on the latter date it was in substantially the same condition as when it started; and the analysis, as respects the total acid content, confirms this presumption. Of that total acid content but 0.05 was tartaric acid in any form. The Government regards this as determinative of the controversy. The defense minimizes its importance.

All of the chemists finally agree, substantially, that tartaric acid is the characteristic acid of the grape. It is that which distinguishes it from other fruits. This fruit alone contains this type of acid in marked degree. It is the predominant and identifying acid of the grape. Dr. Alwood, on behalf of the Government, states that tartaric acid in no less percentage than 0.2 must be found in any authentic Ohio claret wine. Dr. Robinson says that the presence of tartaric acid in any fixed amount is no test of purity. The experience and qualifications of Dr. Alwood are fully set forth in the record and will not be repeated here. It may be sufficient to say that he has been for many years attached to the Bureau of Chemistry; that he is an expert in viniculture of international reputation; he has spent approximately 7 years at the head of the Government's experimental station for the express purpose, among other things, of determining the exact characteristics of authentic wines, particularly in the Sandusky, Ohio, district. This service had no commercial object in view. The purpose was to establish, by unimpeachable experimentation, the exact qualities and characteristics of true wines, such as the food and drugs department has to deal with. He has made a vast number of experiments under conditions calculated to produce exact and practical results. From these he states with great positiveness that no true Ohio claret wine can possibly contain less than 0.2 [percent] of tartaric acid even when aged to the extent of 3 years and under exacting filtration; that in the wines he has

made he has never found it so low as that, but usually about 0.3, and even as high as 0.5; that in no condition, here shown to exist, or which we are justified in assuming, in connection with this discussion, can that tartaric acid disappear to any appreciable extent. The minimum of 0.2 is placed arbitrarily as a matter of extreme concession in the interest of justice, although he freely states that he does not believe it can fall that low in an authentic wine. In addition to his own manufacture of wines he has examined a large number of commercial samples and finds that the great majority corroborate his own experiments. It is true that in some a smaller percentage of tartaric acid is found, but they were, as has been said, from commercial samples not authenticated and subject to legitimate suspicion as to the methods employed in their manufacture.

Dr. Robinson, the chemist employed by claimant, has analyzed a great many samples of the wines of commerce bought in the usual manner upon the market and otherwise unauthenticated and of unknown history. From such experiments he draws the deduction that the presence of tartaric acid is too inconstant to serve as a dependable test of purity. He also cites textbooks, compilations, etc., which do not affirmatively prescribe this test, and some of which do not disclose the presence of the percentage insisted upon by the Government. Dr. Alwood, in his rebuttal testimony, has to a very large extent explained and reconciled this apparent discrepancy. It may be sufficient to observe that none of the text writers submitted are shown to have been wine experts. Moreover, nearly all the data collected come from widely separated territories and involve conditions and methods which differ greatly from those to be found in the Ohio district. They also very greatly antedate the passage of the Food and Drugs Act. They concern a period when the objects to be obtained by that act were not prominently in mind and when the very practices may be presumed to exist which that law was enacted to remedy. We may likewise not ignore the possibility, if not the probability, that practices still exist, as exemplified in commercial products, that are in conflict with the provisions of the Food and Drugs Act. Experiments made from such products can in no sense compare with those made by Dr. Alwood with the sole object of establishing dependable scientific standards. As has been said, Mr. Krudwig testified that the grapes used were not quite up to the standard, in that they were a little light in color with a few berries on some of the bunches evidencing a slight effect of hail. They were, however, stated to be of fair quality and were up to the standard for that particular district for that year. This being so, their inferiority, if they were appreciably inferior, could not account for the low tartaric acid content, and it conclusively appears from the testimony that grapes a little underripe carry even a higher percentage of that acid. It must be remembered also that this wine was but a year old and had not been subjected to the severer processes of filtration applied by Dr. Alwood in his tests, which were made with wine at least 3 years old. A higher percentage of the characteristic fruit acid should be found in the younger wine.

Dr. Robinson, on behalf of claimant, having stated it to be his opinion that tartaric acid in claret wine varied so greatly in amount that it should be disregarded as a test of purity, proceeded to detail

other chemical properties by which the character of wine could be determined. The following questions and answers were propounded and returned:

The COURT. Doctor, in view of the matters which you have eliminated as proving nothing respecting the contents of the product and its relation to whether it was or was not a fruit juice, what have you left there in chemical analysis which stamps the product as the pure product of the grape?

Answer. Well, the total solids, the non-sugar solids, the ash and the character of the ash, the natural color, flavor, and aroma.

The COURT. Laying aside the color, the aroma and that sort of thing, might not those other abstract properties which you have referred to be produced from other than grape or fruit products?

Answer. Well, that is possible to some extent.

By Counsel:

Question. Do you have any reason to question the accuracy of the Governments chemists' analysis of this wine?

Answer. No, sir; not in the least.

Question. Have you ever found a single instance in which said grape juice did not contain tartaric acid?

Answer. Grape juice, as I said before, I never found a single instance in which tartaric acid was entirely out of grape juice.

If we accept the contention of the claimant in this regard these anomalies are presented: Tartaric acid is the characteristic acid of the grape; it is the predominant acid distinguishing the grape from other fruits. Nevertheless, we are told that it is not necessarily found in any marked degree in a grape wine product. We are left, in the matter of chemical analysis, to other abstract properties which may be found as well in other than grape or fruit products. In other words, we may and must disregard the characteristic, distinctive, and predominant ingredient—the very essence, as it were, of the grape. This is to say, that we are left without the most obvious and convincing means of identifying a true claret wine. I cannot accept such a paradox. Other matters were dwelt upon in the testimony; notably, the pentosans and the alkalinity of the ash. I do not base my decision upon this branch of the testimony. It is sufficient to say, however, that its ultimate effect tends strongly to corroborate and confirm the conclusion based upon the crucial tartaric acid test. Wine experts were produced who applied the tests of taste and smell to the libeled product. The consensus of their testimony was that that product was not a claret wine. Claimant's explanation of this was that the wine had spoiled; that destructive acetic acid fermentation had set in to such an extent as to render such tests untrustworthy. This, so far as the court can perceive, is the full effect of what has been spoken of as the defense of acetic acid. The testimany does not justify the inference that the wine differed materially in acetic acid content at the time the first samples were withdrawn, compared with its condition on the date of shipment. The cooperage of the barrels from which the latter samples were taken was unimpaired. This subject, as dealt with by the chemists, requires no elaboration here. In view of all the circumstances, nothing in that defense accounts for the absence of the predominant acid of the grape as shown by the analyses.

In further defense claimant produced two witnesses, Mr. Krudwig, a member of the claimant company, and Mr. Crathwal, its foreman, who testified positively that the contents of the barrels are Ohio claret wine and not pomace wine, in whole or in part. With respect

to these witnesses, the court, in all kindness, must point out that their claim of scrupulous personal attention to every detail affecting this wine from the time the grapes went into the press until the shipment a year later, presents a remarkable departure from the ordinary and usual course of business, even at their own winery. Their recollection of each step taken, at a time so far removed from the actual occurrences, is not less remarkable. Their interest is, of course, conceded, and the fact that there were at that time in the winery at least 25,000 gallons of pomace wine, used, among other things, for blending purposes. To reject or in any sense to discredit the positive testimony of an individual witness is never a pleasant duty for the court; but it is the settled rule of the Court of Appeals of this circuit, and, I believe, in practically all Federal and State jurisdictions, that where the testimony of a witness is positively contradicted by the physical facts, neither the court nor a jury can be permitted to credit it. (*Missouri, Kansas & Texas Ry. Co.* v. *Collier* (C.C.A.), 157 Fed. 437.) If these barrels, otherwise shown to be intact, had been found to contain pork, no witness could be indulged in the statement that he personally packed them with beef. To my mind, the proof that the contents of these barrels are not an Ohio claret wine, as concededly defined, is not less positive and convincing. The testimony of Dr. Alwood and Dr. Hartmann as to the contents of these barrels, chemically considered, is not opinion testimony. It is scientific testimony based upon actual facts. By exhaustive experimentation they have determined, as other facts are determined, that grapes in this district produce a certain reasonably definite wine product. On the other hand, when they pronounced this to be a pomace wine, in the state of the record, they entered the realm of opinion testimony. The court accepts it as such, persuasive and conclusive in its effect as the circumstances may warrant. I am firmly of the opinion that the contents of these barrels, as shown by the analysis, are not and cannot be Ohio claret wine. That they are pomace wine, in whole or in part, as defined in Food Inspection Decision No. 120, seems clearly established; because, in no other manner than by partial expression of the juice and subsequent fermentation, as described in that decision, can the absence of the characteristic grape content be explained. If the product has been reduced in quality by the addition of pomace wine, the charge in the libel is equally sustained. The Government has established its case in every substantial particular by a fair preponderance of the testimony, which must be credited by the court, and a decree will be entered accordingly.

UNITED STATES v. MATUSOW

(District Court, E.D. Pennsylvania, Sept. 22, 1915)

N.J. No. 4190

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

THOMPSON, *District Judge* (charge to jury). Gentlemen of the jury: The defendant is charged by the Government in this case with the violation of an act which prohibits the shipping in interstate com-

merce of certain articles of food and drugs. The specific charge in the case is that he shipped from the State of Pennsylvania into the State of Maryland certain drugs which, within the meaning of the act of Congress, the Government charges were misbranded. The specific charge of misbranding consists, in the charge of the Government, that the package or labels bore or contained statements regarding the curative or therapeutic effect of the article, or of its ingredients, which were false and fraudulent. So that in order to sustain the Government's charge in the case, the fact of shipment from one State to another being admitted, the Government must satisfy you, beyond a reasonable doubt, from the evidence, that the statements contained in the label and on the package were false and fraudulent with regard to their curative or therapeutic effects.

In a criminal case the defendant is presumed to be innocent, and that presumption follows him throughout the case. In other words, the fact that the Government has made a charge against a man and the district attorney has filed an information against him, or the fact that he is on trial, is not to be regarded by the jury as having any weight in determining the guilt or innocence of the defendant. The presumption is that he is innocent, and the jury must be satisfied from the evidence beyond a reasonable doubt of his guilt, before they are justified in rendering a verdict of guilty.

The charge is that there were statements on the labels and in the pamphlet contained in the packages containing these goods, which were false and fraudulent with regard to their curative or therapeutic effects. So that it is not sufficient for the Government to prove merely that the statements are false, but it must also prove that they are fraudulent, and if the jury are satisfied beyond a reasonable doubt that the statements referred to, which I will refer to in a minute, not only are false, but that the defendant knew them to be false, and that he stated them falsely with the intent to deceive the purchaser, then they would be justified in finding that the statements were false and fraudulent. But if, on the other hand, the jury are not satisfied that the statements are not only false, but that they are fraudulent, beyond a reasonable doubt, then it would be their duty to acquit. So that the mere falsity of a statement would not be sufficient to justify the jury in convicting unless they are satisfied that in stating the falsity the defendant did it knowingly and with intent to deceive and defraud.

The packages are charged in this information with containing certain statements which the Government claims are false and fraudulent. After setting out these statements in the information, the Government charges that the statements were false and fraudulent in that they stated, among other things, that the article contained in the packages was, in whole or in part, composed of or contained ingredients or medicinal agents effective, among, other things, as a remedy for paralysis, gout, liver, kidney, bowel, bladder, and stomach troubles, and effective as a blood purifier, when, in truth and in fact, said article was not in whole or in part composed of, and did not contain, ingredients or medicinal agents effective, among other things, as a remedy for paralysis, gout, or liver, kidney, bowel, bladder or stomach troubles, or effective as a blood purifier.

The other statements are alleged to be false and fraudulent in that they are alleged to have intended to create in the minds of the pur-

chaser the impression and belief that it was an article or drug in whole or in part composed of or containing ingredients or medicinal agents effective, among other things, as a remedy for locomotor ataxia; or effective as a remedy for Bright's disease, diabetes, dropsy, hydrocele, stone in the kidney, or all stomach troubles; or effective as a remedy in the treatment of gall stones; or effective as a remedy for or preventive of, appendicitis; or effective in the treatment of all skin diseases; whereas in truth and in fact these statements are alleged to have been false and fraudulent.

Gentlemen, you have heard the evidence on the part of the Government. The packages with the labels thereon and the pamphlets contained therein, containing the statements which are said to be false and fraudulent, have been offered in evidence before you. The Government has produced witnesses who have analyzed the contents of the packages, and stated what they found upon the analysis of the packages. The Government has called physicians who testified, as you have heard, that in their opinion, the ingredients found in the package were not effective as a remedy for the disorders which it is stated upon the label they are effective for, and that, in their opinion, there are not substances, drugs, which would be effective as remedies, according to the broad statement made on the labels and in the pamphlets. On the other hand, the defendant has called witnesses to show that in the instances in which they have been treated the drug has been effective as a remedy for the disorders for which they stated they were afflicted. Counsel for the defendant also called your attention to the fact that the chemists who put up this article stated that there were nine ingredients in it, which have not been disclosed to you, but six of which, I believe, were not mentioned by the Government's chemists.

You will take all of this evidence into consideration, and determine first whether the statements which are referred to by the Government with regard to the therapeutic and curative properties of this preparation were false. You will take into consideration the evidence of the Government and the expert physicians as opposed to that of the defendant and his witnesses and determine whether the statements were false. If they are false, then it would be necessary for you to go further and be satisfied beyond a reasonable doubt, in your mind, not only of their falsity, but that the defendant when he made them, knew them to be false and intended by making false statements to deceive and defraud. If you are satisfied beyond a reasonable doubt that the statements upon the package as to the therapeutic and curative properties were false and fraudulent, then it would be your duty to return a verdict of guilty. Upon the other hand, if you are not satisfied beyond a reasonable doubt that they were not only false but fraudulent and made with an intent to deceive and defraud the public, then it would be your duty to return a verdict of not guilty. You will bear in mind the general principles that I have called to your attention. In the first instance the presumption of innocence is in favor of the defendant. It follows him throughout the trial, and the burden is upon the Government to overcome that presumption of innocence by proof which satisfies your minds beyond a reasonable doubt.

The defendant has asked me to charge you upon certain points, which are as follows:

1. The jury are not entitled to convict the defendant unless they are satisfied beyond a reasonable doubt that the statements used by the defendant are false and fraudulent.

That is affirmed.

2. If the jury find that the defendant used the statements, the subject of the charge, in good faith and believing such to be true, the verdict should be "not guilty."

That is affirmed.

3. The jury should be satisfied beyond a reasonable doubt as to the guilt of the defendant, and if, upon consideration of the evidence the jury have a reasonable doubt as to the guilt of the defendant, the verdict should be "not guilty."

That is affirmed.

4. Before the jury are entitled to consider the guilt of the defendant, the prosecution must have established, beyond a reasonable doubt, all the elements that are required to establish the offense charged, and if it has failed to so do it is the duty of the jury to acquit the defendant.

That is affirmed.

5. The fact that the prosecution has been instituted by the Government is not to be considered by the jury as evidence of the guilt of the defendant. The defendant is presumed to be innocent, and this presumption stands until overcome by evidence that beyond all reasonable doubt establishes the guilt of the defendant.

That is affirmed.

6. The jury are not bound to accept as conclusive the opinion of an expert witness as to any fact of the case. The jury are the judges of the evidence, and they must be satisfied in their own minds as to all facts upon which testimony has been offered or opinions expressed.

That is affirmed.

7. The defendant is entitled to a verdict of "not guilty" unless the Government has established by evidence beyond a reasonable doubt that the statements appearing in the shipment of drugs were false and fraudulent regarding the curative or therapeutic effects of the articles, and that the defendant falsely and fraudulently made such statements.

That is affirmed.

8. The jury must consider all the evidence offered, and if, upon the consideration of the testimony on behalf of both the Government and the defendant, there appears a reasonable doubt as to the guilt of the defendant, the verdict must be "not guilty."

That is affirmed.

9. The jury are entitled to consider in support of the charge made against defendant only such statements, printed and published by defendant, as bear upon the curative or therapeutic effect of the tablets.

That is affirmed.

10. Statements that the tablets are a rational remedy are not statements as to their curative or therapeutic effects.

That is refused.

11. The jury are to consider no portion of the pamphlet offered in evidence, excepting that to which the Government has offered evidence tending to show a false statement, and this only when such evidence bears upon a statement

said to be false, which relates to the curative or therapeutic effects of the defendant's preparation.

That is affirmed.

12. The evidence of the medical experts is that, except in a few cases, drugs or medicines do not work a cure, but are administered for the relief of the patient, and if the jury find that the statements made by the defendant in no case assert a curative property for his preparation, there can be no conviction.

That is affirmed.

14. The jury are to disregard any evidence offered by the Government unless the same attaches to the charge set forth in the information, or is in support of an allegation made in the information.

That is affirmed.

15. The defendant is charged with having misbranded his preparation by the use of false and fraudulent statements as to its curative or therapeutic effects. Unless such has been established beyond a reasonable doubt, the defendant is entitled to a verdict of "not guilty."

That is affirmed.

16. One is entitled to boost or puff his own wares and merchandise. He can express his own views as to their worth and merit, and he is not chargeable with any offense for so doing as long as the statements made by him are not false or fraudulent.

That is affirmed.

The Government has asked me to charge you upon certain points, as follows:

1. It is unnecessary for the Government to prove that all the statements on the label or booklet were false and fraudulent. "If you believe beyond a reasonable doubt that any one statement as to the curative or remedial properties of this medicine was false in fact, and that the defendant knew that it was false, you may find the defendant guilty." *U.S.* v. *Johnson*, 221 U.S. 488.

That is affirmed.

2. If you believe beyond a reasonable doubt that this product is not a rational system remedy for paralysis, and that the defendant must have known this, you may find the defendant guilty.

That is affirmed.

3. If you find beyond a reasonable doubt that this product is worthless for any one of the things for which it is labeled, and that the defendant knew this, you may find the defendant guilty.

That is affirmed provided it is one of the things which is charged in the information.

4. If you believe beyond reasonable doubt that any one of the therapeutic claims as to its effect upon paralysis, liver, kidney, bowels, stomach, and the blood and the skin is absolutely false, and was made by the defendant with a reckless and wanton disregard as to whether it was true or false, you may find the defendant guilty.

That is affirmed.

5. If you believe beyond reasonable doubt that the defendant knew that any one of these therapeutic statements as charged in the information was false and misleading, you may infer a fraudulent intent and find the defendant guilty.

That is affirmed.

Mr. Logue. I will ask your honor for an exception to your refusal to affirm the tenth point presented on behalf of the defendant.

(Exception noted for the defendant as requested, by direction of the court.)

Mr. Logue. Also an exception to the thirteenth point presented on behalf of the defendant, which was refused.

(Exception noted for the defendant as requested, by direction of the court.)

The tenth and thirteenth points presented on behalf of the defendant, which were refused by the court, are as follows:

10. Statements that the tablets are a rational remedy are not statements as to their curative or therapeutic effects.

13. Under all evidence the verdict of the jury should be "not guilty."

UNITED STATES v. C. M. C. STEWART SULPHUR CO.

(District Court, W.D. Washington, Oct. 19, 1915)

N.J. No. 5594

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Mistrial. Verdict of guilty, on retrial.

The United States attorney filed an information against the C. M. Stewart Sulphur Co., a corporation, Seattle, Wash., alleging shipment by said company from the State of Washington into the State of Nebraska of a quantity of an article, labeled in part "Sulphurro", which was misbranded.

It was alleged that the article was misbranded for the reason that statements appearing on the label falsely and fraudulently represented it as a remedy of rheumatism, asthma, goiter, eczema, and all stomach, bowel, kidney, skin, and blood diseases, when, in truth and in fact, it was not. Misbranding was alleged for the further reason that statements included in the booklet accompanying the article represented it as effective in the treatment of diabetes when used according to directions, when, in truth and in fact, it was not, when used according to directions or when used in any other manner.

Neterer, *District Judge* (charge to jury). In this case, members of the jury, you are not concerned about the wisdom of this act of Congress. The act is passed and you are not concerned with that other than to determine what the fact is with relation to this particular case. You are only concerned with the facts in this case and you must determine what the facts are with relation to the issue which is formed by the information filed and the plea entered by the defendant. You are to approach the issue with open minds, and consider all of the evidence which has been presented fairly and not to be concluded with relation to any fact by reason of any sympathy or prejudice of any kind, but are simply to pass upon this issue fairly and impartially as 12 honest persons, and determine what the real truth is with relation to the issue here, and what the facts in this case really establish, by the witnesses who have testified.

The issue is not a complex one. The information is rather lengthy, and I will not read it. You can read that when you go to your jury room. In substance, it charges the defendant company with having violated this drug act which prohibits the false branding of

any drug so that it may mislead persons to believe a different thing is contained in it than the facts really justify, or to lead to conclusions with relation to certain properties which it does not contain, which branding is made knowing it to be false and made for the fraudulent purpose of misleading persons who might read this label.

The defendant has entered a plea of not guilty to this indictment and that places in issue every material allegation in the indictment, and the burden of proof is upon the Government to establish each material allegation beyond every reasonable doubt.

It has been stipulated that the drugs charged in the indictment to have been shipped from this State to Nebraska in interstate commerce were shipped, so that you are not concerned with that. I think about the only issue you have to determine is whether this drug was misbranded, and whether these statements are falsely and fraudulently made as charged in the information. These terms all have their common meaning. There is no technical meaning applied to the terms used, and therefore it is not necessary for me to define what the word " false " is intended to mean, or what " fraudulently " is intended to mean. It simply means exactly what the terms imply and which you all must know.

The information, as I have stated, charges misbranding of this drug called Sulphurro. The test of this branding is what the statements appearing on the label mean to the ordinary man. In other words, what the ordinary man reading the label would understand as to the properties of the drug Sulphurro and what curative effects it had. And if you are convinced by the evidence in this case that there was not anything there to mislead any person, then the further question as to whether Sulphurro can or will cure the diseases for which it is branded to cure and for which parties have purchased it, must be determined. In this case a number of witnesses have testified; on the part of the Government some medical experts testified with relation to the effect of certain drugs on the human system, and certain properties contained in such drugs. On the part of the defense, some 35 of 36 witnesses have testified with relation to the curative effects which have resulted to them individually from the use of this drug. I do not think that any witness for the Government testified that they purchased this for a certain purpose or for certain curative effects and did not obtain them. The testimony of the Government is confined to the medical experts.

In weighing the evidence in this case, you will take into consideration all of the facts and all of the circumstances surrounding these several witnesses. The mere fact that a witness states a conclusion, that does not necessarily bind you to that conclusion, unless you are convinced from the evidence offered and admitted, taking into consideration the surroundings and environment of the witnesses who have testified and the facts upon which the conclusion is based; and you will take into consideration all of those things and then will make your deductions from all of these facts. Some witnesses have testified here who are termed expert witnesses. The mere fact that they have testified to conclusions with relation to what they believe to be the fact, is not conclusive upon you. While their testimony has persuasive effect and should be considered by you with relation to all the facts and circumstances detailed by the witnesses, yet their

conclusions must be based upon facts disclosed by the evidence which would justify the conclusions, and you will take into consideration all of these facts and determine whether the conclusion is justified upon the facts upon which they are predicated. With relation to other witnesses testifying, who are not experts, but who have testified with relation to certain curative effects which they have received from the use of this drug, you will take into consideration their testimony as to their ailments and what effect the drug had upon them and what curative effects they experienced by using it, and if you should find from the evidence in this case, or if you have a reasonable doubt upon that question as to whether the parties who used this drug received the curative effects or some remedial effect, as claimed upon the label found upon the bottle and likewise the printed matter that was enclosed with this drug as it was sent in interstate commerce, then, I say, if you believe from all of these facts that it did have the curative effect or they did get the remedial effect which these labels and literature showed, then of course you will find the defendant not guilty in this case. But if you find, beyond a reasonable doubt, from all of the evidence which has been offered and admitted, that this label is false and that the literature which was enclosed with this which portrayed the curative effects which this medicine would have was false, and the statements contained therein made for the false and fraudulent purpose of inducing persons to buy this drug, then of course you would find the defendant in this case guilty as charged in this indictment.

The defendant is presumed to be innocent until proven guilty by the evidence which has been offered and admitted, and this presumption continues throughout the entire trial; and you will resolve any reasonable doubt that you may have in this case with relation to any fact which is in issue here in favor of the defendant.

It isn't necessary that the Government prove that every statement with relation to the curative effect of each ailment made upon the label is false. If the Government has established any of these statements to be false and fraudulent and made for the purpose of fraudulently misleading the public, that would be sufficient.

You will take all of the evidence into consideration which has been offered and admitted, and conclude with relation to the fact as I have indicated a moment ago as twelve fair minds with an honest purpose of arriving at a just conclusion so that justice may be done between the Government and this defendant.

A reasonable doubt for your consideration in this evidence is such a doubt as an ordinarily reasonable man would entertain in considering any matter of like concern or import to him as that before the jury is to the defendant, and which would make him pause or hesitate in arriving at his determination and conclusion. It is a doubt for which you can give a reason. It is not merely speculative, imaginary or conjectural. If a juror can say that he has an honest conviction of the proof of the charge, then of course he would be convinced beyond a reasonable doubt. If he can say to himself that he feels to a moral certainty that the fact is established, then he is satisfied beyond a reasonable doubt. But if you cannot say that, then of course he has a reasonable doubt which he must resolve in favor of the defendant.

By the COURT. Are there any omissions or exceptions?

By Mr. FRYE. We have none, Your Honor.

By the GOVERNMENT. We have no exceptions.

By the COURT to the jury. It will require your entire number to agree upon a verdict in this case. Two forms will be submitted. If you believe that the charge has been established beyond a reasonable doubt, this will be your verdict:

We, the jury in the above-entitled cause, find the defendant guilty of a violation of the act of Congress of June 30, 1906, known as the Food and Drugs Act, as charged in the indictment.

And if you have a reasonable doubt, this will be your verdict:

We, the jury in the above-entitled cause, find the defendant not guilty.

Whichever verdict you find you will cause to be signed by your foreman, whom you will elect immediately upon retiring to the jury room.

This information will be sent with you to the jury room, but it is not to be considered as evidence in the case, but is simply a paper charge to which the defendant has entered a plea of not guilty.

You may swear the bailiffs.

The jury thereupon retired; and after due deliberations returned into court, and the foreman announced that they were unable to agree upon a verdict; and the jury was discharged.

On October 19, 1915, the case came on for retrial.

NETERER, *District Judge* (charge to jury). In this case, gentlemen of the jury, you have been accepted by both sides as 12 fair-minded men, unprejudiced, without any preconceived notion as to what the facts in this case are to determine the issue which is submitted. You have a distinct duty and function to perform in this case as a part of the machinery of the Government, as have also the attorneys in this case, for the United States, and for the defense, in that it is their duty to present the facts of their respective sides before you in a fair and full manner so that you may get a viewpoint from both sides; and your duty is to pass upon the facts as presented. That is your sole province and nobody can tell you what the facts are in this case, but this you must determine from the evidence offered and admitted. The duty of the presiding judge is to see that the case is fairly tried, exclude immaterial matters, and see that the case is orderly conducted, and advise you upon the questions of law applicable to the facts presented before you for your consideration. You are a part of the machinery of the Government here. The laws must be enforced and persons against whom complaints are made by the officers of the law must be given a fair trial; so you can very readily understand the importance of the functions you perform in this proceeding. You are the sole judges of the facts in this case. I can't tell you what a single fact is, and if I should refer to any fact, it is your duty to disregard it. It is not my purpose to impress upon you any opinion that I may have of any fact. You are the sole arbiters of the facts and must determine what the facts are upon the issue presented by the information filed in this case by the United States district attorney and the plea of not guilty which has been entered by the defendant.

The issue is not a complex one, and it is made, as I have stated, by the information which has been filed by the United States district attorney, and the defendant's plea of not guilty. The plea of not guilty places in issue every material allegation in the information. In other words, it is a denial. By plea of not guilty the defendant denies all of the allegations in the information, and that places upon the Government the burden to prove every material allegation in the information beyond a reasonable doubt. This information you may take with you to the jury room when you retire. You may read it and see just what the charge is, but it is not to be considered as evidence in the case in any sense. The information is entirely too long for me to read to you now and I will leave that to you.

While the burden of proof is upon the Government to establish every material allegation of the information beyond a reasonable doubt, you understand, of course, that when admissions are made upon the trial by the defendant as to the truthfulness of a statement, no proof need be offered with regard to such admission or the fact that has been admitted. It has been admitted on behalf of the defendant that the drugs which are set out in the information were shipped from this State to the place named in the information, and were shipped in interstate commerce, so that no proof need be offered upon that allegation; and I think it has been admitted, if not formally, upon the argument, that Mr. Stewart is the agent of the defendant company, and likewise that the defendant company is a corporation. You will understand that corporations can only act through their agents and representatives, and that any representations made or any act done with relation to the charge in this information by Mr. Stewart is the act of the defendant corporation.

The only issue of fact in controversy in this case to be determined by you is whether the drug described in the information was misbranded. The test of this misbranding is what the statements appearing upon the label mean to the ordinary man, and when I refer to the label I mean likewise the circular or pamphlet which was enclosed in the package as it was transmitted in interstate commerce. In other words, what the ordinary man reading the label would understand as to what properties the drug Sulphurro contained or the curative or therapeutic effects it had. I will not attempt to define or set out the various ailments or physical disabilities which it is claimed the statements contained that this drug would cure, but these diseases or physical ailments you will understand to be such diseases or ailments as the public generally understood and the generally accepted meaning of these drugs by the public, and you are not confined in your deliberations in applying to these diseases the technical medical definition or term which has been scientifically limited by some of the witnesses. I have indicated the generally accepted understanding of the public as to what these terms mean and what physical disabilities they include, and you will apply the curative or therapeutic effect of the drug to the definition as generally understood. And you will also understand that it is not only necessary for the Government to show beyond every reasonable doubt that the statements that were made were false in fact and that the drugs did not have the curative or therapeutic effects that the statements attributed to them, but the Government must further prove beyond a

reasonable doubt that the statements are fraudulent and that the defendant knew them to be false, and that they were falsely made with the intent to deceive the public or induce the purchaser to buy them because of such statements. And if you believe that the statements were false and the defendant knew they were false and made them with the intent to deceive the purchaser, or if, acting as an ordinary prudent man would act under like circumstances, he should have known that the statements were false, then you will find that the statements were falsely made as charged in the indictment, and under such circumstances your verdict should be guilty. On the other hand, if you have a reasonable doubt as to whether the statements were false or whether they were fraudulently made, then it would be your duty to acquit the defendant. So that the mere falsity of the statements would not be sufficient to justify you in returning a verdict of guilty, but in addition to that it requires the further proof that the defendant made them knowingly and with intent to deceive and defraud.

I hardly think it is necessary for me to enter into any definition of these various terms, but suffice it to say that a fraudulent statement is a statement which is recklessly made without knowledge of its truth, but which is really false, and an unqualified statement of that which one does not know to be true, or has no reasonable ground to believe to be true, is equivalent to a statement of that which one knows to be false.

In determining whether the defendant knew the statements were false and fraudulently made, you will take into consideration all of the evidence which was offered and admitted surrounding the placing of this drug upon the market, which led to placing it in interstate commerce as charged in the information, and you will consider all of the testimony with regard to these statements that is before you from the inception, dealing or treating with this drug up to the time of the filing of this information, the date of which you will find endorsed upon the cover of the information, and from all of these statements as disclosed by the evidence bearing on the conduct of the defendant with relation to this drug, determine whether it acted as an honest, fair-minded, average man would act under like circumstances, and whether it had reason to believe, acting as a reasonably prudent man would act under such circumstances, that this drug did contain the curative or therapeutic effects which are attributed to it in the statements, and when I say it, referring to the defendant, I mean Mr. Stewart, who seems to have had the management and control of the concern.

In this case some eight physicians have testified, among whom are some specialists, as you will remember, as well as a chemist or analyst, who has testified with relation to the ingredients of the drug in question. The testimony of the Government is all confined to expert medical evidence, except the testimony of the chemist or analyst. They have testified with relation to the several ingredients contained in this drug as disclosed by the evidence and the curative effect of the drugs separately and likewise the therapeutic effect of the drugs taken together, based upon their experience as practitioners and likewise upon their reading in medical journals and treatises by eminent doctors. The defendant has presented to you some 35 or 36 persons

who have testified that they have been treated by this drug Sulphurro and have been cured of various ailments. Some of them say they have been afflicted for years and have recovered, so they say, their health entirely, and have stated to you what they understand that they were afflicted with. You will weigh all of the evidence which has been presented here. It is not my purpose, nor do I intend, to enter into an analysis of the testimony, or give you a synopsis of my recollection of the evidence. The evidence has all been reviewed by counsel for the Government and the defendant. They have given you their version of the testimony and the conclusions that should be drawn from the testimony of the witnesses, and while you are not bound by the statements or the recollection of the attorneys for the respective parties, you should give these statements and their version of the testimony consideration. Nor are you bound by the conclusions of the witnesses upon the testimony which has been offered and admitted upon either side. You will weigh the evidence in this case very carefully. You are the sole judges of the facts in this case and the weight that should be accorded to the testimony, and you must determine what that is. You are likewise the sole judges of the credibility of the witnesses who have testified before you, and in determining the weight or credit which you desire to give to the testimony of any witness, you will take into consideration the demeanor of the witness upon the witness stand; the opportunity of the witness for knowing the things concerning which he has testified; the interest or lack of interest of the various witnesses in the result of this controversy; the apparent frankness or truthfulness of the witnesses; the reasonableness of the stories of the witnesses who have testified; and from all of these determine which of the witnesses impressed you the more strongly of telling the truth. In considering the conclusions of the witnesses, both the medical experts and likewise the witnesses on the part of the defendant, with relation to the therapeutic effect of the medicine or with relation to the illness with which the witnesses on the part of the defendant claimed to be afflicted, you will determine whether the conclusions are based upon facts which have been disclosed by the evidence as you understand it, and as it is conveyed to you, and the truthfulness of the conditions as portrayed by the witnesses, and while these conclusions are perhaps somewhat persuasive and should be considered by you, yet the facts upon which they are based should be closely scrutinized by you, and determine whether they are true and justified from all of the circumstances developed upon this trial, and apply to each witness who has testified before you the same test you would apply to any person in the ordinary affairs of life, the truthfulness or falsity of whose statements might be under consideration by you, and determine the credit or the weight that should be given to the statements that have been made upon this trial.

The defendant, under the plea of not guilty, is presumed to be innocent until proven guilty beyond a reasonable doubt, and this presumption continues throughout the entire trial and until you are convinced from the evidence beyond every reasonable doubt of its guilt. And in this connection I would say that a reasonable doubt for a trial juror is just such a doubt as the word implies. It is a doubt for which you can give a reason. When a juror can say to himself that

he is convinced to a moral certainty of the guilt of the defendant, then he would be convinced beyond a reasonable doubt. It is not a doubt which is speculative, imaginary, or conjectural, but is such a doubt as a man of ordinary prudence, sensibility, and decision would have in determining an issue of like concern to himself as that before the jury is to the defendant, which would make him pause or hesitate in arriving at his conclusion.

In this case, while the Government must prove beyond every reasonable doubt the material allegations of the information, this need not be done with relation to every disease which is named upon this label or in the statement which is included within this package as it was transmitted in interstate commerce. If you believe from the evidence that this drug has many curative qualities and will cure many of the diseases which are named on the label or the package, but will not cure others, and believe beyond a reasonable doubt that there are some ailments named upon the label or the literature or statement enclosed with the package, as charged in the information, concerning which the statements were false and known to be false at the time they were made, and were made for the fraudulent purpose as charged in the information—if you are so convinced beyond a reasonable doubt of the falsity of the statements with relation to one of the diseases, then it would be sufficient to support a verdict of guilty, and if you are so convinced, your duty would be to return a verdict of guilty. But if you have a reasonable doubt as to all of these, then your duty would be to return a verdict of not guilty.

You will approach the issue in this case as 12 fair-minded men, eliminating from your minds any prejudice that may be there and dispose of this case upon the evidence presented and not be influenced by sentiment or prejudice of any kind or character.

I think I should say in these instructions that this case was tried before during this term before another jury, and you undoubtedly have learned in some way that the other jurors did not agree. I think I should say that in this case additional witnesses have been presented on the part of the Government and likewise on the part of the defendant, and there is evidence before you that was not before the other jury. You are not concerned as to what the other jury did. It is your duty in this case as 12 reasonable men who have been impanelled to try this issue, to honestly endeavor to reach a conclusion. When you go to the jury room you will undoubtedly approach this issue from 12 different viewpoints. You cannot come to any conclusion by continuing to have 12 different viewpoints. You must discuss the issue here from every standpoint from which it can be approached and harmonize the facts in this case as disclosed by the evidence and by an analysis of the evidence, eliminate that which can have no bearing upon the issue, and apply that which is material, and in that way harmonize all of the testimony so that you may ultimately come to a conclusion where you all see this in the same light. No juror should surrender any conscientious conviction which he may have as to any fact established by the evidence in this case, but before he concludes with relation to that conviction and is convinced that he is right, he should approach the subject from the viewpoint of each of the other jurors who may differ with him, and see whether your conclusions cannot be harmonized. I do not know that these

instructions are necessary, but in view of the fact that this case was recently tried and perhaps some information reached you as to the other trial, I thought possibly that I should instruct you upon that phase, so that you might not be influenced thereby. You will therefore entirely disregard what the other jury did and not consider it in any way.

By the COURT. Have I covered the whole subject, or are there any omissions or exceptions?

By COUNSEL FOR THE GOVERNMENT. No exceptions, Your Honor.

By COUNSEL FOR THE DEFENSE. We have no exceptions.

By the COURT to the jury. It will require your entire number to agree upon a verdict. Immediately upon retiring to the jury room you will elect one of your number foreman. Two forms of verdict will be submitted; one will be finding the defendant not guilty, and the other guilty. These forms of verdict speak for themselves, and when you have concluded, you will cause your verdict to be signed by your foreman and report to the court.

You may swear the bailiffs.

UNITED STATES v. 25 BAGS OF NUTS

(District Court, N.D. West Virginia, Oct. 23, 1915)

N.J. No. 4329

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict directed in favor of claimants.

The United States attorney filed a libel for seizure and condemnation of 25 bags of nuts, alleging that the same had been shipped and transported from the State of New York into the State of West Virginia and remained unsold in the original unbroken packages.

Adulteration was alleged in the libel for the reason that the nuts were wormy, some of them empty and moldy and unfit for food, portions thereof being filthy and decayed.

Misbranding was alleged for the reason that the term "Fancy Mixed Nuts", appearing on the label, was false and misleading, because the nuts were not fancy mixed nuts but were of a grade inferior thereto.

DAYTON, *District Judge.* Well, under this law as I understand it, persons—property might be confiscated and the owners held subject to fine—I think there is a criminal offense connected with the violation of the branding feature of the law. Now I don't believe the trade can establish what shall constitute a criminal offense nor that the opinion of men engaged in any special line of business can establish a standard which may hold another man engaged in that business, guilty of a criminal offense and lay him to fine and confiscation of his property.

Well, gentlemen, I don't think I will permit you to go and introduce evidence tending to establish a standard set up by the opinion of the "trade" so called. How can any set of individuals be empowered to speak for the "trade" anyway? It doesn't seem to me

that it would be fair or reasonable to allow the opinion of men who deal in nuts or any other commodity to establish what may be an offense by some one [of] their brother tradesmen. It seems to me it would make it very easy for one set of men to injure and destroy competitors in a similar line. It seems to me that until the Department establishes a set standard of quality for nuts to be branded as "fancy", or "choice", or what not, that it would be altogether unsafe to attempt to set up a standard by common consent of the trade, and to use that standard to harass and annoy dealers who may be in good faith trying to live up to the law, and to make them amenable to such a vague and indefinite standard as I understand the Government seeks to establish by the testimony of men engaged in the business of handling these nuts. The Department under the Pure Food and Drugs Act, as I understand, has the power to establish certain standards—they can establish a standard as to what shall constitute fancy mixed nuts and what shall not, and until they do so, I don't see how it will be possible to proceed under this law. As I understand, there have been standards established for different commodities, and it can be done in the case of nuts, and unless you can establish such a set standard, open and understood by those who come under its rulings, it doesn't seem to me that the Government can hope to establish its case.

I certainly will not permit you to bring in anybody who deals in nuts and have them say that in their opinion these nuts did not come up to the grade of fancy mixed, until you show that there is a Government standard, because this law establishes what is in effect an offense punishable at least by confiscation of property, and I believe under certain circumstances by fine, and this would simply mean allowing the trade to fix what will become a criminal offense, instead of fixing it by regulation of the Department, as the act provides it shall be done. Under the view taken by the Government it seems to me a half a dozen or a dozen dealers, if they wanted to break up a prosperous firm, could get together and swear that they were selling a lower grade of commodity under a brand of a higher grade and were thus guilty of misbranding, and the opinion of these men might prevail in a court of law and thus work great hardship upon a firm or individual.

As I understand, the grade of fancy mixed nuts is not established by any regulation of the Department, but is a mere trade term, which is likely to be different in different localities, and may mean one thing here and something very different at another point, and inasmuch as that standard involves a criminal offense I think it should be established by the Department itself and not by private individuals, who might conceivably have an interest in establishing a grade suitable to themselves and be swayed by self-interest, in their testimony.

The Government has it within its power to fix regulations by which these nuts can be gaged as a quality, whether up to standard called for by the brand or not, and the Government ought to do it and not seek to set a standard by the mere opinion of private individuals.

Well, gentlemen, you can't get me, as a matter of conscience, to believe that any person under an act authorizing the Department of Agriculture to issue regulations as to what shall constitute misbranding, and if that regulation be violated—because the act gives the

Department the right to establish such regulations—and if that act is violated, the party can be made criminally responsible. Now you can't get me to believe in conscience that the Department of Agriculture can, without making any regulation known to the public whereby dealers can be governed and guided, bring in a man or even seize his property, and upon the opinion of the so-called "trade" hold him guilty of a criminal offense, or at least liable to seizure of his property. There is no use of arguing that any further.

The trouble is, it seems to me, that the trade practice in New York might be entirely different from the practice here. Fancy mixed nuts in one place might be an entirely different and distinct grade from that classification in another place. If your idea were proper, we might establish one grade for instance in New York, another in Wheeling, another in Philippi, and so on. Gentlemen, I have stated my ruling before. The Department of Agriculture has the power to fix a standard but fails to do it. Now it brings in a case at Wheeling, where the standard is one thing, and puts it up to the trade in general—brings in perhaps a witness from Baltimore, where the customs may be entirely different as to classification and grading. I don't think it is fair or equitable, and I am not willing it shall be done.

There is no trouble about the name. The trouble lies in the utter failure of the Department to establish what percentage of bad nuts shall constitute the standard of "fancy mixed nuts." The percentage of bad nuts or of small nuts or of the various sorts of nuts contained in the mixture. They have failed to do that, and they can't put that responsibility on the trade. I don't think that meaning was ever intended to be given to the Food and Drugs Act.

You are not in position to establish this case until you can establish a standard set up and published by the Department. A standard which would be known to the trade, so that any dealer who desired to comply with the law as to branding would have access to it and would have absolute knowledge of its requirements and not be dependent altogether on the mere opinion of trade experts who, as I say, might differ materially in their views according to the locations where their business or experience had been attained.

Well, my ruling is that you can't prove by the trade, by a number of witnesses, the trade understanding as to what constitutes fancy mixed nuts, that no such standard can be used as a basis for this action, but that it must be a Government standard fixed and published by the Department of Agriculture.

Let the record show that the defendant claimant objected and excepted to the tender of testimony on this question, and the court sustains such objection, for the reason that these nuts were seized in 1913 and their outside appearance at this time would be manifestly misleading, but more particularly for the reason that the Department of Agriculture under the Pure Food and Drugs Act has full authority by regulation to determine what percentage of these nuts shall constitute a fancy mixed nut or first grade and what percentage second grade or choice nut and to enforce such regulation when published, by the criminal provisions of this act, and that it cannot, in the judgment of this court, fail to establish such regulation and then leave it to the opinion of dealers in various sections

of the country to establish whether 17 percent of badness will constitute a violation of the statute and condemn them, and 10 percent of badness would prevent a person from being so prosecuted.

UNITED STATES v. 11 GROSS PACKAGES OF DR. WILLIAMS' PINK PILLS

(District Court, E.D. Pennsylvania, Oct. 25, 1915)

N.J. No. 4849

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States. Motion for a new trial overruled.[91]

The United States attorney filed a libel praying seizure and condemnation of 11 gross packages, more or less, of Dr. Williams' Pink Pills, alleging that the article had been transported from the State of New York into the State of Pennsylvania, and charging misbranding in violation of the Food and Drugs Act, as amended.

The article was labeled (on bottle wrapper):

Dr. Williams Pink Pills for Pale People, trade-mark registered, safe and effective tonic for the blood and nerves for anaemia, diseases due to impoverished blood, such as rheumatism, diseases of women, nervous disorders resulting from malnutrition, including neuralgia, sciatica, St. Vitus' Dance. Useful in locomotor ataxia and partial paralysis. A digestive tonic for dyspepsia and chronic constipation.

Circulars accompanying the article contained, among other things, the following:

This remedy is offered the public with full confidence in its efficacy in the treatment of diseases arising from or dependent upon impoverished Blood, such as Anaemia, Chlorosis or Green Sickness, Rheumatism, Lumbago, General Debility, Female Weakness, Leucorrhoea, Tardy, Irregular, or Painful Periods, Disturbances due to Change of Life, etc. As the health of the nerves depends directly upon the condition of the blood these pills are a valuable remedy for Nervous Debility, Nervous Prostration, Sleeplessness, Neuralgia, Sciatica, Sick Headache, and have accomplished beneficial results in the more severe nervous disorders such as St. Vitus' Dance, Partial Paralysis and Locomotor Ataxia. Locomotor Ataxia.—This is one of the most stubborn of nervous diseases in yielding to treatment of any kind. Cases diagnosed as Locomotor Ataxia and a Partial Paralysis, and having characteristic symptoms have shown beneficial results under this tonic treatment and in the cases under observation the resulting improvement has been lasting. For Men.—Dr. Williams Pink Pills are valuable for building up the system shattered by excesses or disease, and for the various ills caused thereby, viz: Spermatorrhoea, Impotence, Nervous Despondency, Confusion of Ideas, Irritability of Temper and Pain in the Back and Perinaeum. For Children.—Parents will find Dr. Williams Pink Pills a safe and effective strengthening medicine for weak and bloodless children. The remedy is also suitable as a nerve tonic for the young and for the treatment of St. Vitus' Dance.

THOMPSON, *District Judge* (charge to jury). Gentlemen of the jury: The case which has been tried before you is a proceeding under the Pure Food and Drugs Act. The proceedings in this case are not brought against an individual, but are brought against certain packages of pills. The act of Congress under which the proceedings

[91] Affirmed, *11 Gross Packages of Dr. Williams' Pink Pills* v. *United States*, p. 752, *post*.

are brought was passed for the purpose of preventing the transportation in interstate commerce—that is, from one State to another, of foods, articles of food, or articles of drug which are adulterated or misbranded. In this case the proceeding is brought for the purpose of confiscating or having condemned these packages of pills upon the allegation of the Government that they are misbranded. So that the proceedings have been commenced by a seizure on the part of the Government, the articles in question being seized by the marshal. The Dr. Williams Pink Pills Co. has intervened as the claimant of these pills; that is to say, it comes into court and claims that the pills belong to it, that they are its property, and it denies the statements in the Government's libel, as it is called, on which the Government bases its right to have these pills seized and destroyed. So that that makes the issue in the case, and throws the burden on the Government of proving the facts which are set out in the libel. The object of this particular paragraph of the act under which these proceedings are brought is to prevent the carrying in interstate commerce from one State to another of drugs which are worthless or injurious, when they are transported with false and fraudulent statements as to their curative effects, the object being to protect credulous and ignorant people, and to protect the public generally from having imposed upon them as medicines, things to be used as medicines, drugs which will not perform the functions which it is claimed they will perform, and to prevent people being injured by the use of harmful drugs. In this case the pills are claimed to be misbranded because the packages contain certain statements as to their therapeutic and curative properties, which the Government claims are false and fraudulent. You have heard the evidence in the case. As I stated, the burden is on the Government to prove what it alleges in its libel. That requires, in a case of this sort, that the statement shall not only be false, but shall be fraudulent. So that there will be a double inquiry of the jury here—first, to ascertain whether the statements are false, and, second, as to whether they are fraudulent. So that in examining into the case it will be necessary for you to examine the labels on the packages, of which you will have copies, and the statements made in the pamphlet or folder that accompanied the packages, and to take into consideration the language used in those statements and ascertain what the statements are. In examining those statements you will give to the language used its ordinary and common meaning, and you will take into consideration what those statements would mean to an ordinary intelligent man who purchased the pills. Having applied that test to the language in determining what the language as set out means, you will then determine from the evidence whether those statements are false. If they are not false, if the statements are true, then, of course, you need go no further in the case. In determining whether they are false, you will take into consideration the testimony which has been offered on the part of the Government, and the evidence which has been offered on the part of the claimant. There has been a great deal of expert testimony here, testimony, in the first place, on the part of the chemists who analyzed these packages, these pills, and who have testified before you as to what are the contents or the ingredients of the pills. In addition to that there has been medical testimony, the testimony of expert physicians, who

have testified as to their opinion as to the therapeutic or curative value of those ingredients, the ingredients which they were informed by the testimony of the chemists were contained in the pills.

In considering expert testimony there has been a good deal said here about it being merely opinion testimony. That is true. The statements of the physicians are merely statements of their opinions, and those opinions are to be considered by you as evidence from which you may draw inferences of fact. The opinions of the experts have more or less value, as they are based on a greater or less amount of experience and learning and opportunities to know what the opinions of other people are who are skilled in the profession as to the therapeutic value of these pills for the ailments for which they are recommended in the statements on the boxes and in the pamphlets as remedies. So that you will take into consideration the testimony of these experts and draw from that testimony such inferences of fact as in your own judgments that testimony warrants.

The question, then, will be whether the statements on these labels are true or false. If you determine that the statements are true, considering the interpretation which would be conveyed to the mind of the ordinarily intelligent man, then it would be your duty to render a verdict for the defendant. If, on the other hand, you are satisfied from the evidence, from the preponderance of the evidence, that they are false, then you would proceed further to determine whether or not they are fraudulent.

As I stated, the object of this part of the act is to prevent credulous and ignorant people and the public generally from being deceived in the purchase of proprietary medicines such as these are. So that in determining whether they are fraudulent you will take into consideration the statements made on the labels, and determine whether or not the claimant, when it made these statements, had them put upon the bottles, knew them to be false. If it knew them to be false, then you would have no difficulty in determining that they were fraudulent, because it would be the inevitable conclusion, willfully making a false statement, that it intended to defraud. But you are at liberty to go further than that. In determining a man's intent, we are very often, and in fact nearly always, obliged to take into consideration the facts and circumstances accompanying his act. Every man is presumed to intend the natural and probable consequences of his act. So that it is not necessary, and it is impracticable, to go into a man's inner consciousness and find out whether or not he intended a thing, but the law imputes the intent to do the thing which would naturally follow from the act of the person charged with the intention. So that in this case you will take into consideration, in case you go that far with the case, whether these statements made on the label were made with an intent to defraud, or with such willful and gross negligence to inquire into the effects of these medicines before making the statements, that the intent would be presumed. In case, after a consideration of all of the evidence, you determine that the statements were false, that they were made with an intent to deceive the public, and the pills were transported with those statements with that intent, then it would be your duty to return a verdict in favor of the Government.

As I stated, the burden of proof in this case is on the part of the Government. It is necessary for you to be convinced by a preponderance of the evidence that the Government has sustained that burden of proof before you would be justified in returning a verdict in its favor.

If, on the other hand, you are satisfied from the evidence that the Government has not sustained that burden of proof, or you are satisfied that the pills were shipped in interstate commerce, with an honest belief on the part of those responsible for making the statements that they would do just what was stated on the labels they would do, then it would be your duty to return a verdict in favor of the defendant.

When you come to consider the statements made in the labels, you will take the statements into consideration in whole and also separately. In other words, if you find that any statement made on these labels or on the folders in relation to the curative or therapeutic value, effect of the pills, was false and fraudulent, then it would be your duty to return a verdict in favor of the Government; that is to say, if any part of those statements is such that you, under the manner of reasoning that I have explained to you, conclude it is false and fraudulent, that would be sufficient to cause a condemnation of the whole of these packages. It is not necessary that all the statements should be false and fraudulent, but if the Government has sustained its contention in regard to any one of them, then it would be your duty to return a verdict in its favor. So that in considering the statements you will bear that in mind.

I hardly think it is necessary for me to review the statements which are made and which are set out in the Government's libel as having been made on these packages. You have heard all of the evidence, and you will have the labels with you, and you will consider the language in the effect which in your judgment it would convey to the mind of an ordinarily intelligent man. As I read the labels, there is no direct statement that these pills are cures for the various sorts of diseases mentioned. The general effect of the statements is that the pills are valuable as a tonic for the blood and nerves, and that they are valuable for use in cases where the ailment is the result of or is accompanied by anemia. So that in considering that you will take those facts into consideration, and determine whether or not it was the intention of this language, interpreting it as an ordinarily intelligent man would, on the part of the claimants to convey the impression that they were to cure or act as a remedy for the diseases and ailments even where the language does not directly say so. If it was the intention so to frame a statement that it conveyed those impressions, and those statements were false, and they were known to be false, or you can infer the intention to defraud, then it would be your duty to return a verdict in favor of the Government. If you do not find that intention, of course you will return a verdict in favor of the defendant.

The district attorney has asked me to charge you on certain points:

1. It is unnecessary for the Government to prove that all the statements on the label or circular were false and fraudulent. If you believe from the evidence that any one statement as to the curative or therapeutic properties of these pills was false in fact, and that the claimant knew that it was false, then you may find a verdict for the Government.

That point is affirmed.

2. If you believe from the evidence that as to any one of the ailments for which these pills are recommended by the label or circular, and about which the Government has complained in its libel, these pills would have no beneficial effect whatever, and the claimant knew this, you may find a verdict for the Government.

I will affirm that point.

3. If you believe from the evidence that any one of the therapeutic claims as to the effect of these pills upon locomotor ataxia, St. Vitus' dance, sciatica, rheumatism, impotence, spermatorrhœa, or partial paralysis was false and was made by the claimant with a reckless and wanton disregard as to whether it was true or false, you may find a verdict for the Government.

I will affirm that point.

The fourth point is declined.

5. If you believe from the evidence that any one of the therapeutic statements upon the label or circular, and of which the Government complains in its libel, was partly true, but was so artfully worded as to convey a meaning as to its therapeutic properties which was wholly false, and that the label and circular were so worded for the purpose of deceiving the public, then that statement would be false and fraudulent, and you may find a verdict for the Government.

I will affirm that point.

I will decline the sixth point.

The claimant has requested me to charge you as follows:

1. The burden is on the Government in this case to prove by the preponderance of the evidence that the statements complained of were both false and fraudulent.

That point is affirmed.

2. There is a difference between mistaken opinion and false opinion. You can only find that these statements were false if you find that the Government has shown that, apart from any question of opinion, the so-called remedy is absolutely worthless and hence the label demonstrably false.

That is true, but it depends on how you find the question of fact based on the opinion evidence. If you find it as a fact that the statements were false, and known to be false, then, of course, your verdict would be for the Government. If you find as a fact that they were not false, or that being false there was no intent on the part of the defendant, either actual intent or implied intent to defraud, then your verdict would be for the claimant.

The defendant's third point is denied.

The defendant's fourth point is denied.

The fourth and sixth points presented on behalf of the United States, which were refused by the court without being read, are as follows:

4. If you believe from the evidence that the defendant knew that any one of these therapeutic statements as charged in the libel was false and misleading, you may infer a fraudulent intent and find a verdict for the Government.

6. If you believe from the evidence that any statement upon the label or circular as to its therapeutic claim was wholly false and one about which there is absolutely no contrariety of medical opinion, you may infer from these facts a fraudulent intent and find a verdict for the Government.

(Exception noted for the United States to the refusal of the court to affirm the fourth and sixth points presented on behalf of the United States.)

(Exception noted for the United States to the affirmance by the court of the defendant's first and second points, by direction of the court.)

The third and fourth points presented on behalf of the claimant, which were refused by the court without being read, read as follows:

3. Unless you find that the Government has shown that the statements complained of were not the honest expression of Mr. Conde's honest opinion, you can not find that these statements were fraudulent.

4. Under all the evidence in the case your verdict must be for the defendant.

(Exception noted for the claimant to the refusal of the court to affirm the third and fourth points presented on behalf of the claimant.)

(Exception noted for the claimant to the affirmance by the court of the Government's first, second, third, and fifth points, by direction of the court.)

(Exception noted for the claimant to the court's answer to the second point presented on behalf of the claimant, by direction of the court.)

Mr. JONES. I would like to except to the charge because of the failure to make clear just what the difference is between "mistaken opinion" and "false opinion."

(Exception noted for the claimant, as requested, by direction of the court.)

Mr. JONES. I would like to have the Government correspondence go out with the jury.

Mr. STERRETT. I object to those letters going out with the jury—the Government letters.

The COURT. Were they offered in evidence?

Mr. JONES. They were offered in evidence and read.

The COURT. You may send them out with the jury.

Mr. STERRETT. May I have an exception?

The COURT. Yes.

(Exception noted for the United States, by direction of the court.)

Mr. STERRETT. I do not know what they are; that is the only thing.

UNITED STATES v. 350 BAGS OF SHELL PEANUTS

(District Court, S.D. New York, Oct. 27, 1915)

N.J. No. 4877

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The United States attorney filed a libel for the seizure and condemnation of 350 bags of shell peanuts, alleging that they had been shipped and transported from the State of Virginia into the State of New York and remained unsold in the original unbroken packages, and that they were adulterated in violation of the Food and Drugs Act.

Adulteration of the article was alleged in the libel for the reason that it consisted in part of moldy peanuts, 13 per cent; empty shells, 8 per cent; wholly immature shriveled kernels, 40 per cent; and partly immature shriveled kernels, 24 per cent.

MAYER, *Judge* (charge to jury). Gentlemen of the jury: This case has been extremely interesting to me, and I hope it has been to you. This is an illustration of the useful information that we all get in the court room, opening our eyes to the development of industries in this country concerning which probably most, if not all of us, know very little. It is apparently an important case and deserves at your hands equivalent consideration.

My charge to you must be a little bit technical, because I am dealing with the statutes; and in order that the subject matter may be made clear to you, I desire to sweep away at the outset those questions which you are not to consider. I might content myself with being silent about them but for the fact that, in view of your interest, and in view of the fact that this litigation was a sort of human kind of litigation, even though it deals with inanimate thngs, I always like to feel that the court should reserve to itself certain questions and permit the jury to pass upon others. It is the duty of the court to take away from the jury any question which resolves itself merely into a question of law and to leave to the jury questions of fact.

This proceeding is technically known as a forfeiture proceeding, in which the Government proceeds by a process that we call a libel or complaint. A libel is the same thing as a complaint in an ordinary litigation. In this litigation the Government is called not the plaintiff, but the libelant; and the parties who claim that these peanuts are their property are called the claimants and not defendants. But this is simply phraseology, and it all amounts to the same thing; so for convenience, and in order not to confuse you, if I use any of these terms I shall speak of the Government as the plaintiff and the owners of these bags of peanuts as the defendants.

The Government proceeds in its libel or complaint upon the theory that two things have taken place here: (1) That the defendants have misbranded their goods; (2) that the defendants within the purview of the act have adulterated their goods. You will have nothing whatever to do with the question of misbranding. That I do not submit to you and for this reason: The Pure Food Law, broadly speaking, dealt with two general propositions. One was to safeguard the health of the public; the other was to prevent deception, where it might very well be that the subject matter contained in the article to be sold was in no manner deleterious. Now, as a simple illustration of misbranding, a man might sell, we will say, Maria Farina Cologne, which is a well-known product made in the city of that name and having that designation of Maria Farina. Now, if he puts out upon the market a liquid of a similar character but not coming from Cologne, and not being the Maria Farina brand, and called it Cologne of the Maria Farina brand he would be misbranding that article; and yet that article would do nobody any harm from a physical standpoint. That is an illustration of that part of the statutes that has to do with misbranding.

These goods are sold as Gewaltney's Circus Peanuts. The evidence is uncontradicted that that is the name by which they are known in the trade. It has nothing to do whatever with the name by which the public buys, because there is no evidence of that character in the case. If a man orders, as it is presumed he does, a lot of Gewaltney's Circus Peanuts and he gets the sacks or bags which

are here in evidence, he gets precisely what he orders, precisely what is known in the trade and there is no case of misbranding whatsoever; and as there is no evidence of misbranding, or any evidence of attempt to deceive, that part of the case we will not deal with at all.

That brings me to the part of the case with which you would deal, and I would ask your closest attention while I read the statute.

Section 10 of the act says that any article of food, drug, or liquor that is adulterated or misbranded within the meaning of the act, and is being transported from one State, Territory, District, or insular possession to another for sale, or, having been transported, remains unloaded or unsold or in original unbroken packages, or if it be sold or offered for sale in the District of Columbia or insular possessions of the United States or be imported from a foreign country for sale, or if it is intended for export to a foreign country for sale, shall be liable to be proceeded against in any district court of United States in the district where the same is found and seized for confiscation by a process of libel for condemnation.

Under that statute, the Government, taking the position that these peanuts contained in these 350 bags were adulterated within the meaning of the act, seized the 350 bags because the shipment was a shipment in interstate commerce; and they now ask you to render a judgment, the effect of which will be to confiscate all of the 350 bags and all of their contents, so that the Gewaltney concern shall be deprived of the property contained in the 350 bags, the Government taking the position that all of the contents of those bags, whether the peanuts are good or bad, are forfeited to the Government.

Adulterated, under the statute, may mean one of several things. Our popular understanding of adulteration, I think, has been, that you put something into a substance; but Congress went further and provided among other things as follows:

I am reading from section 7, subdivision 6:

> That for the purposes of this act an article shall be deemed to be adulterated: * * *
>
> In the case of food: * * * If it consist in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal, or one that has died otherwise than by slaughter.

Now, at the very outset of the case, we are met with what I think is rather a novel question in this class of cases.

For instance, suppose a man were to ship, let us say for illustration, in interstate commerce, 10 quarters of lamb in a refrigerator car and the Government were to find 1 of those that was diseased, within the meaning of this act, and found the other 9 absolutely fit in every respect for human food; it cannot be that Congress meant that the Government could forfeit the whole 10 of those quarters of lamb simply because 1 happened to be within the condemnation of the act. In a case of that kind, if it were my duty to pass on it, I should say that the 1 diseased or unfit quarter of lamb was forfeit to the Government, and the remaining 9 should still remain the property of the shipper or the consignee as the case might be.

We have here, however, a very curious situation and my attention has not been called by the Government or counsel for the defendant to any analogous case which would either guide you or me. We have here a small nut enclosed in bags, those bags in turn enclosed in sacks, the whole aggregating a great many nuts, speaking individually, and that large total running into some thousands and concededly a certain part thereof are not within the condemnation of the act. Now, there can be no question at all that the mature nuts, or as they were called by some of the witnesses, the sound nuts, are not within the condemnation of the act. Further than that, it is my duty to charge you, as a matter of law, that the so-called immature nuts, whether wholly or partly immature, are articles of food not within the condemnation of the statutes; because the evidence is uncontradicted that the immature nuts are fit for human food; that they do not contain any filthy, decomposed, or putrid vegetable substance; and that the only distinction between the immature nuts, whether wholly or partly immature, and the wholly mature nut is in relative food value, as these experts call it, or relative nutrition value, as we laymen call it.

So that, what your case gets down to is this—that a certain number of these nuts were what is called moldy and a certain number of these nuts were what is called wormy. The highest percentage of both combined testified to by any of the witnesses called is, if my recollection is right, the percentage testified to by Dr. Seeker, who says that he found 10 percent moldy and wormy; so that, out of the total shipment here, there were 90 percent which in no manner, shape, or form, were in violation of this statute, and I charge you that, as a matter of law, in any event, 90 percent of the contents of these 350 bags are not subject to forfeit by the Government and the Government must be ordered to return them to the defendants. That is so charged because these articles are separate articles. They are capable of selection, if not in the shell at least after breaking the shell. The details of how they shall be returned is no concern of yours or mine at the moment. But the Government in a case of this kind, where only 10 percent are complained of, cannot, as a matter of law, forfeit 90 percent of merchandise that is not contrary to the statute. That gets us down to the sole question with which you gentlemen are concerned.

Certain of these peanuts are said to be moldy and wormy, or moldy or wormy; and the witnesses agree as to that. They differ as to percentages, and there is no exact figure which will enable anybody to say how many actual peanuts were wormy or moldy. We cannot deal with abstractions and therefore we will accept the basis of percentage; and it is for you to say if you should decide against the defendants what percentage were moldy or wormy. When I say 10 percent, I do not mean that you should find that 10 percent were moldy or wormy. I mean that this is the very most that the Government could retain, because some of the witnesses for the defense put the percentage considerably below that. These nuts may be moldy and wormy, either or both, and yet not subject to forfeiture by the Government, unless you find that within the meaning of the statute they were filthy, decomposed, or putrid

vegetable substance. You are not to be concerned, nor is it any part of your duty, under the statute in this case, as to whether these nuts are better or worse than other nuts; as to whether they are commercially more valuable or not; you are only concerned with determining whether within the meaning of the act, those nuts that are moldy or wormy, or both, are filthy, decomposed, or putrid vegetable substance. If they are, then they are of a character that are deleterious to health, and they come within the purpose of the statute in safeguarding the public health. If they are not, then you must render a verdict for the defendants.

Those words, standing by themselves, cannot mean a mere abstraction. The mere fact that something is decomposed, cannot of itself subject that article to forfeiture, and this is the reason. You have heard the testimony in this case that there are many articles of food which are decomposed, both from a scientific and a lay standpoint, and yet that those articles of food are commonly eaten; and there is not only no evidence that they are harmful, but there is evidence from which you may readily conclude they are not harmful; and many of those articles of food are articles that you are familiar with. If this statute were to be construed as meaning that any article which was decomposed, irrespective of its effect upon the public health, could be forfeited to the Government, then logically the Government could forfeit many kinds of cheeses and many kinds of other articles of food, simply because from looking at it from the standpoint of a theory, these articles were technically decomposed, whether you use that word scientifically or in the lay language. Upon the particular facts in this case, confining myself only to this case—and I am not endeavoring to go beyond this case with any general definitions—it must be for you to say whether the so-called "wormy or moldy," or both, peanuts were first, as a matter of fact, filthy; second, as a matter of fact, decomposed; or third, as a matter of fact, putrid, vegetable substance. If you find that they were any one of the three, whether from the evidence in the case, their consumption as food may tend to be injurious to health. Counsel during the trial said that these words were to be construed by their ordinary meaning—not by the meaning that some scientists might give you—and counsel is entirely right. Scientists differ a whole lot about definitions. This act was framed in ordinary understandable language which any man of reasonable education can understand, and these are the definitions that are to govern. While I regret to take up the time, yet the importance of the case requires that I shall read to you from some standard dictionaries the definitions of these words.

In the Standard Dictionary, filthy is defined: Of the nature of or containing filth; dirty; nasty.

Filth—Anything that soils or makes foul; that which is foul or dirty; also the state or quality of being foul; nastiness; dirt.

Decomposed—In a state of decomposition; decayed; rotten.

Decompose—To resolve into constituent parts or elements, as by means of chemical agents or natural decay; especially to cause it to decay or rot; to putrefy; decay; rot.

Putrid—Being in a state of putrefaction; tainted; as putrid flesh.

In the Century Dictionary the definition is substantially the same. I will not take the time to read it. In Webster's New International Dictionary the definitions are also substantially the same. Now, within those definitions, or within that you know to be the ordinary meaning of these three words, were these moldy or wormy nuts filthy or decomposed or putrid? You are not to employ the scientific meaning, if you are satisfied that any scientific definition was given to these words. There is some controversy as to this law point, but with this you are not concerned. I think you have a right in that connection to determine what I said before when you are considering this case—whether the condition of these nuts on the testimony here offered was such as may tend to injure the public health. If you think it was not, and that the evidence does not justify such a finding, you will find for the defendants to the extent of the nuts that come within this category. If you think that they were, you will find for the Government to that extent, and that extent only. You remember the testimony. If I state it incorrectly, you are not to take what I say; you are to take your own recollection of the facts and your own construction of the facts.

It appears that the mold in the nuts in the case at bar and in the case of all peanuts, if these gentlemen are right, does not appear until after the nut leaves the ground; that it is created by moisture conditions, and that that condition may come up at any time if the nuts are shipped in cars where there is moisture, lying on docks where there is moisture, or otherwise where there is moisture.

You will remember that there is no evidence in the case to show the effect upon the human system of these moldy nuts in a roasted peanut. There was some evidence by Dr. Rusby of what he thought about it, but no evidence of any tests of any kind or description to indicate whether or not these moldy nuts were injurious to public health. The witnesses for the defense insisted that these nuts did not come within any of these words by way of definition, and I shall not spend any time reviewing their testimony.

In regard to the wormy nuts there was no evidence in the case of any scientific tests as to the effect of those nuts or what those nuts may do in the way of injury to health if taken internally. The defendants insist that within these definitions these nuts are not in contravention of the statutes. The plaintiff's position is based upon the proposition that they are.

Finally, I may say to you that the burden of proof in this case is on the Government; that the Government is bound to satisfy you by a preponderance of evidence. That does not mean the number of witnesses, but means the quality of witnesses; the impression that they create upon your minds and the way their testimony impresses you. If, in your opinion, the evidence upon the one question submitted to you upon the vital question, is evenly balanced, you must render a verdict for the defendants. If, however, the evidence of the Government overbalances by ever so little that of the defendants, then they have sustained the preponderance and there must be a verdict for the Government. I therefore submit the matter to you, requesting that you return a verdict in which you shall say either that the verdict shall be for the defendants, namely, the claimant, or

the owners of the merchandise; or, if you find for the Government, that you state in your verdict what percentage of the goods contained in these 350 bags the Government is entitled to forfeit and confiscate.

I have been asked by counsel for the Government to charge you in several respects. As to request no. 1, I am of the opinion that I have covered all that is necessary.

As to request no. 2, I decline to charge as requested and think that what I have said covers the subject matter so far as applicable.

As to request no. 3, in view of the fact that the question at issue is whether the peanuts are adulterated, it seems to me that the third request to charge would only tend to confuse, and I decline to charge as phrased.

I would charge no. 4. The fact that it is not possible to detect moldy and wormy peanuts without breaking open the shells does not constitute a defense to a proceeding of this nature, provided the jury find as a fact that peanuts of that character are a filthy, decomposed, or putrid vegetable product. But I confine that construction to the particular peanuts which, under my charge, the jury have to decide were or were not filthy, decomposed, or putrid vegetable substance.

I decline to charge no. 5.

Mr. BARNES. I take an exception to Your Honor's refusal to charge as requested and Your Honor's qualification on charge no. 4, and I ask that the request be given to the stenographer to be incorporated. I also except to that portion of Your Honor's charge that takes from the jury the question of misbranding, and request to go to the jury on whether the placing of this article in bags labeled "Circus Peanuts" is or is not misbranding within regulation no. 26 of the Department of Agriculture and within the meaning of section 8 of the act in the case of "Food", particularly the second and fourth subdivisions.

The COURT. I decline to allow that question to go to the jury.

Mr. BARNES. I take an exception. I also except to that portion of Your Honor's charge which stated that if a portion only of the shipment was within the prohibition of the act, the entire shipment is not subject to condemnation or forfeiture; and I further except to that portion of Your Honor's charge which stated that 90 percent of the product seized is not subject to condemnation or forfeiture and must be returned to claimant. Of course, I object to the general principle of all—I claim the whole amount is forfeited. If my recollection is correct, Dr. Read testified she found 12 percent.

Mr. MENKEN. That testimony was ruled out.

The COURT. Perhaps it is better to put it this way. I will charge that not to exceed 10 percent of the shipment is the subject in controversy now, within the instructions I have laid down.

Mr. BARNES. I take an exception to the charge as amended. I also except to that portion of the charge that in addition to finding that the article is a filthy, decomposed, or putrid vegetable substance, it is necessary for the jury to find that it is injurious to health.

The COURT. You may have an exception.

Mr. BARNES. I also except to the form of the verdict that Your Honor has directed.

Mr. MENKEN. I except to Your Honor's charging the Government's request No. 4. If Your Honor please, I ask that when the jury retire, they be instructed that they can send for such samples as they want. I particularly want them to take some of the roasted peanuts and some of the unroasted peanuts.

The COURT. Yes; that's all right. I think I should say this, although I am quite sure the jury remembers about it; and that is, to direct your attention to the testimony of the witnesses as to the destruction of bacteria by the roasting of these nuts and as to the uncontradicted testimony in this case that these nuts are roasted and that they are not used for oil.

Mr. MENKEN. I ask Your Honor just to make one charge. Perhaps you have already charged it; and that is, that if the jury finds, as a common-sense proposition, that these peanuts are not filthy, decomposed, or putrid, they must find for the claimant.

The COURT. I so charge.

Mr. BARNES. I except to that.

The COURT. When you say "common sense" you mean by construing the words as in their ordinary significance?

Mr. MENKEN. Yes; as we understand them normally in everyday life.

Mr. BARNES. I also except to that portion of Your Honor's charge where you stated that the testimony is that the peanuts are roasted. My recollection is that the bags seem to contain all unroasted peanuts.

The COURT. The testimony is that in the trade this particular brand of peanuts is used for roasting. If I am in error, the jury can take their own recollection.

LIBELANT'S REQUEST TO CHARGE

1. If the jury find as a fact in this case that the 350 bags of peanuts that are the subject of this proceeding, consisted in part, of peanuts that were filthy, decomposed, or putrid, they shall find a verdict in favor of the Government.

2. If the jury find as a fact in this case that the 350 bags of peanuts that are the subject of this proceeding consisted of peanuts, 10 percent of which were filthy, decomposed, or putrid, they shall find a verdict in favor of the Government.

3. The fact that a percentage of the peanut crop is ordinarily and necessarily moldy and wormy does not justify a shipment of moldy and wormy peanuts in interstate commerce and does not constitute a defense to a proceeding of this nature.

4. The fact that it is not possible to detect moldy and wormy peanuts without breaking open the shells does not constitute a defense to a proceeding of this nature, provided the jury find it a fact that peanuts of that character are a filthy, decomposed, or putrid vegetable product.

5. If the jury finds as a fact that this shipment of 350 bags of peanuts consisted, in part, of filthy, decomposed, or putrid peanuts, the Government is entitled to a verdict and to the condemnation and forfeiture of the entire shipment, and was not bound to separate the good peanuts from the bad, and to return or release the good peanuts to the claimant.

UNITED STATES v. SHUCART

(District Court, E.D. Missouri, Nov. 8, 1915)

N.J. No. 4330

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against Jacob Shucart, doing business under the name of National Bottling Co., St. Louis, Mo., alleging shipment by said defendant from the State of Missouri into the State of Illinois of a quantity of cider which was adulterated and misbranded.

Adulteration of the article was alleged in that a substance, namely, saccharin, had been mixed and packed with the article so as to reduce or lower or injuriously affect its quality or strength; and in that substances other than sweet cider, namely, water, saccharin, and caramel, had been substituted in whole or in part for sweet cider which the article purported to be; and in that the article had been colored with caramel in a manner whereby its inferiority was concealed; and in that the article contained an added poisonous or added deleterious ingredient, namely, saccharin, which might render said article injurious to health. Misbranding of the article was alleged in that the statements "Sweet Cider" and "Produced of Concentrated Pure Apple Juice," borne on the labels of the bottles, were false and misleading, because, as a matter of fact, the article was not sweet cider produced of concentrated pure apple juice, as represented by said statements, but was an imitation cider prepared wholly or in part from water, saccharin, and an apple product artificially colored with caramel; and in that the article was an imitation of sweet cider, prepared by mixing water, saccharin, and caramel with an apple product, and said imitation so prepared was offered for sale and sold under the distinctive name of another article, namely, "Sweet Cider"; and in that the article was labeled and branded so as to deceive and mislead the purchaser into the belief that it was sweet cider, whereas, in truth and in fact, it was not sweet cider, but was a mixture or compound prepared from water, saccharin, and caramel.

DYER, *District Judge* (charge to jury). Gentlemen of the jury: On the 30th of June, 1906, an act was passed by the Congress of the United States and was approved by the President of the United States. That is, "An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes." That is the style of the act.

Of course, there can be no punishment under this act for anyone who may in this State adulterate or misbrand such products if their sale is made within the State of Missouri and confined alone to the State of Missouri, but the act of Congress regulating the sale in interstate commerce has control of it so that while under the State law the misbranding or adulteration of food or drugs may be prosecuted in the State court for violation within the State, we have to go beyond that before we can convict a man in the Federal court, because

he must have sold or shipped or transferred to another State the product so adulterated or misbranded. If there was no such shipment, no such carrying to the other side of the river in the State of Illinois, however much the article may be deleterious to health or otherwise, or however false the brand on it may be, there can be no conviction of the party in the Federal court.

The best and wisest law that has found its way upon the statute books in a half century is this particular statute. It is a statute aimed to protect the consumer against adulterated food, or buying in the belief it is one thing under a brand that is put upon it, and finding out afterwards that it is another thing. It is an act for the protection of the consumer of these products, and it insists that if you brand an article at all you shall tell the truth by your brand, and if you do not tell the truth by the brand that you put on the article, then the article is misbranded. That is all there is to this whole business from start to finish. If you sell a food and it has been adulterated and does not represent truly what that food is, then it is a violation of the act to sell such adulterated food, and if you misbrand it by calling it one thing when it is another, then you have violated the law.

You may remember that during the course of this case and during the examination of witnesses the court called the attention of the witnesses on the stand to the averment in this information as to the character of the brand that was upon the article, about which there does not seem to be any dispute at all. Nobody disputed it; it is not disputed, as I understand.

What is it that was sold? As charged in the first count of the information: "Sweet cider produced of concentrated pure apple juice preserved with 1/1000 part of benzoate of soda." That is what was on the bottle, together with the name of the National Bottling Co., 1311 North Leffingwell Avenue, St. Louis, Mo.

That is what the Government complains of in this article—that the defendants claimed to be selling that particular thing when in point of fact, as the Government undertook to show, it was not sweet cider produced of concentrated pure apple juice preserved with 1/1000 part of benzoate of soda.

What did they do; what is it? To get down to the facts: The testimony here is, and it is uncontradicted—there were not two analyses made of this cider, but an analysis made by the Government, and that analysis shows what the contents of that bottle were. That analysis shows that the bottle that was here shown (the analysis of which had been made in the laboratory of the Government) contained solids of 1.6 percent; it contained sugar of 0.6 of 1 percent; it contained ash of 0.06 of 1 percent; it contained saccharin of 0.014 of 1 percent; it contained benzoate of soda of 0.003 of 1 per cent.

The testimony further showed, and about which there seemed to be no contradiction, as to what sweet cider should contain; that it should contain solids of from 8 to 16 percent, whereas the article that was examined, as shown to you by the testimony, contained only 1.6 of 1 percent of solids.

The testimony shows that sweet cider should contain from 6 to 13 percent of sugar, whereas this exhibit here was shown to contain only 0.6 of 1 percent of sugar.

Of ash it should have contained 0.58 of 1 percent, whereas in the sample shown it contained 0.06 of 1 percent.

It was stated that saccharin should not be used in sweet cider, but in this case the amount of saccharin used was 0.014 of 1 percent.

Of benzoate of soda in pure sweet cider none should be used, whereas in this case it showed that 0.003 of 1 percent was used.

With that showing from the testimony in this case are you able to comprehend and did you understand why the court of its own motion asked witnesses as to whether sweet cider produced of concentrated pure apple juice preserved with 1/1000 of benzoate of soda, what that article was?

Pure apple cider: What did you find here? You did not find that? No. Ingredients were put into this product that adulterated the cider. That is the proof. Not necessarily that it should affect the health of anybody. That is one thing, but to keep the product pure is another thing.

What is the label? "Sweet cider produced of concentrated apple juice preserved with 1/1000 part of benzoate of soda." The question is: Does the article that is produced here answer to that description?

There are practically but two questions here: If this defendant did not go to Illinois, did not authorize anyone to go to Illinois, to sell this product, then he can not be bound by any act done by any other person. You have heard the testimony with reference to that particular matter. You are the judges of the testimony, not the court. You are the sole judges. It is your province, and not the court's province, to see whether in 1912 this defendant was selling this so-called cider on the other side of the river or not.

You have heard it stated here that this foreigner, who spoke very indifferent English, and it was very difficult to hear and understand exactly what he said, stated that he went over there in company with Shucart, in company with both of them, eventually, and that they obtained a wagon license in Granite City and in Madison. He says they got the license in the name of this company. The defendant says they did not. Which of them is telling the truth? That you must decide. Vasiloff said they got the license. It appears here in evidence that a license was issued over there to this company. There is no dispute about that, but, as I say, the defendant says he did not get the license and Vasiloff says they did. Somebody got it. There cannot be any doubt about that, because the license was produced here.

All of this testimony you have to take together and see in what way it is corroborated.

The question arose as to when Vasiloff was discharged from the employ of this company. Each of these witnesses, Israel and Jacob Shucart, said that he was discharged in July, somewhere about the 18th or 20th of July, 1912; that they discharged him the evening of the day that they received notice from the Government that Vasiloff had been selling this cider over in Illinois. They say it was for that reason that they discharged him; that he had violated his contract with them and was selling outside of St. Louis instead of selling in St. Louis.

The original notice that was sent to these defendants by the Government was not produced; it had been mislaid or lost, but the

Government showed that two notices were sent to this defendant with reference to this particular cider. One of the notices was dated the 30th of September, the other the 17th of October. The Shucarts say that they discharged this man because they received this notice from the Government. Vasiloff says he was discharged because of the purchase of a horse by them for which he had received a check which, when presented, was not paid by the bank. He says that was the reason for the split-up. It is for you to say which of these witnesses is to be believed. You are the sole judges of the testimony. You heard the testimony of all three of these men, and all the facts and circumstances, and it is for you to say which one of them has told the truth at this trial.

This is an information filed under the statute. One count charges adulteration and the other charges misbranding. You are to pass upon both counts. You may, upon the evidence, find the defendant guilty on one or both counts of the information, or you may find the defendant guilty on one or the other count of the information.

This is the act of Congress to which I called your attention before, being section 2 of the act, which provides:

> That the introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded, within the meaning of this act, is hereby prohibited; and any person who shall ship or deliver for shipment from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, or to a foreign country, or who shall receive in any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or foreign country, and having so received, shall deliver, in original unbroken packages, for pay or otherwise, or offer to deliver to any other person, any such article so adulterated or misbranded within the meaning of this act, or any person who shall sell or offer for sale in the District of Columbia or the Territories of the United States any such adulterated or misbranded foods or drugs, or export or offer to export the same to any foreign country, shall be guilty of a misdemeanor.

And he may be prosecuted under that statute.

The court charges you that cider is a food within the meaning of this statute.

I do not know that it is necessary that I should charge you further. I have been asked to charge in several ways by the defendant. I have aimed to cover all their requests in the charge that I have delivered to you.

If you find, first, that Vasiloff took this product across the river into Illinois, and that he did so with the knowledge, consent, and approval of the defendant, then he was the agent of the defendant, and as such, under the law, the defendant is bound.

A contract between these parties was produced here. It is for you to say from all the facts and circumstances involved as to whether that contract offered in evidence was a genuine contract, intended to confine Vasiloff to St. Louis alone, or whether it was made for the purpose of protecting these defendants in the event that Vasiloff should go into the State of Illinois.

These are matters for your consideration. You take all the facts and circumstances in this case, and in considering it you may take into consideration the intelligence and the ability of this witness, Vasiloff, to read, write, and understand what was written.

This is a criminal proceeding under the statute, and it is governed by certain laws that have been found wise in their application. The defendant here entered a plea of not guilty. That raises the presumption of his innocence, and that presumption continues throughout the trial and until it is overcome by testimony which satisfies you beyond a reasonable doubt of his guilt. He is presumed to be innocent. The law gives him the benefit of the doubt, but if you are satisfied beyond any reasonable doubt that this defendant engaged in shipping this product to Illinois, and that this man, Vasiloff, was acting as his agent in so doing, if you believe that from all the evidence in the case, then you should convict him. If you have such doubt arising from the evidence in the case, then it is your duty to return a verdict of not guilty against the defendant on this count.

You may take the case. A form of verdict has been prepared by the clerk. If you find the defendant guilty, sign the verdict as written. If you find him not guilty, insert the word "not" before the word "guilty."

Mr. KLENE. If Your Honor please, I believe the rule is that any exception I have to the charge ought to be made in the presence of the jury?

The COURT. Yes.

Mr. KLENE. I want to except to the action of the court in not granting our several requests for a charge, numbering from 1 to 8.

The COURT. That may be allowed.

Mr. KLENE. I want to except to that part of the charge wherein the court stated that saccharin should not be used.

The COURT. The court did not say any such thing. The court stated what the witnesses said, that saccharin should not be used.

Mr. KLENE. Let me put it that way, then.

The COURT. Very well. I quoted the testimony of the witnesses.

Mr. KLENE. I except to the court stating that a witness should determine whether or not saccharin should be used.

The COURT. I did not say that. I said that the testimony of witnesses had been introduced and the witnesses testified so-and-so.

Mr. KLENE. I except to the court telling the jury that witnesses may say that saccharin shall not be used.

The COURT. You may have that exception.

Mr. KLENE. I except further to the court's instruction wherein he said it was not necessary for the Government to show that the use of saccharin should not affect the health of anyone. That language I took down——

The COURT. My charge will speak for itself. You may have your exception.

Mr. KLENE. I except further to the comment of the court (although I know it is permissible to make comments) that Vasiloff said that they obtained the license, when the court did not also say in that same connection that Vasiloff said he was not present when the license was taken out.

The COURT. You state that and I do not dispute it. Vasiloff says they got the license. He was not present when they got it. It turned out they had the license.

Mr. KLENE. I except to that statement.

The COURT. I am talking to you.

Mr. KLENE. I except to the insinuation the court made as to the genuineness of this contract when the Government called it in question.

The COURT. You may have your exception to that.

Mr. KLENE. I further except to the fact that the court has not indicated to the jury the maximum of punishment.

The COURT. Gentlemen of the jury, you have nothing to do with the punishment in this case. Your duty will be performed when you find this defendant guilty or not guilty. It is the business of the court to assess the punishment, and not the jury. [To Mr. Klene:] Does that satisfy you?

Mr. KLENE. Yes, sir.

GOODE v. UNITED STATES

(Court of Appeals, District of Columbia, Nov. 29, 1915)

44 App. D.C. 162; N.J. No. 4310

Appeal from decree of the Supreme Court of the District of Columbia. Decree affirmed.[92]

Before SHEPARD, ROBB, and VAN ORSDEL, Justices.

ROBB, *Justice.* This is an appeal from a final decree in the Supreme Court of the District condemning seven cases, more or less, of "Buffalo Lithia Water", for misbranding in violation of the provisions of the Pure Food Act of June 30, 1906 (34 Stat. 768).

In the libel as amended it is alleged that each bottle in the seized cases is

> branded and labeled with a certain label containing, among other things, the following, to wit: "Buffalo Lithia Water—Springs No. 2," "Buffalo Lithia Springs Water—Nature's Materia Medica," "Buffalo Lithia Water Company, Buffalo Lithia Springs, Va.,"

and that each bottle is misbranded

> for the reason that each and every bottle in said cases purports to contain a food and drug, that is to say, a liquid known as lithia water, the said cases and bottles bearing labels as aforesaid, which said labels bear certain statements regarding said food and drug which are false and misleading, in this, that the said statement imports that the liquid contained in said bottles is a lithia water, whereas, in truth and in fact, the food and drug contained in said bottles is not a lithia water, or entitled by reason of its ingredients to be so called; and said cases and the bottles therein contained are further misbranded in that the same are offered for sale, as more fully hereinafter set forth, under the distinctive name of article, to wit, under the name of lithia water, when, in truth and in fact, the contents of said bottles is not a lithia water or entitled to be so called; and further in that the said bottles and each thereof are labeled and branded so as to deceive and mislead the purchaser thereof, etc.

After the overruling of a demurrer to the libel as amended, an answer was interposed. A jury trial was waived, voluminous testimony taken, and the court upon the pleadings and testimony found the seized property to be misbranded in violation of the Pure Food Act and ordered its condemnation and forfeiture. To this ruling

---

[92] Affirming *United States* v. *Seven Cases of Buffalo Lithia Water,* p. 573, *ante.*

and order no exception was taken, but appellants did note an appeal therefrom in general terms and subsequently filed assignments of error in which it is alleged that the court erred in entering judgment against the property seized and in admitting and considering evidence objected to by them. It now is urged, on behalf of the appellant, that the case is here for trial *de novo*, both as to law and fact.

In *443 Cans of Egg Product* v. *United States* (226 U.S. 172), the court ruled that it was not intended to liken proceedings under the Pure Food Act—

> to those in admiralty beyond the seizure of the property by process *in rem*, then giving the case the character of a law action, with trial by jury, if demanded, and with the review already obtaining in actions at law.

The court observed that if—

> The action is tried in the district court without a jury, the circuit court of appeals is limited to a consideration of such questions of law as may have been presented by the record proper, independently of the special finding—

And cited *Campbell* v. *United States* (224 U.S. 99), as authority for the proposition. The court further said:

> But as the party on jury trial may reserve his exceptions, take a bill of exceptions, and have a review upon writ of error in the manner we have pointed out.

Inasmuch as provision has been made in the District of Columbia for a trial of issues of fact in civil cases by the court without a jury, the ruling in the Campbell case does not apply. In this jurisdiction the finding of the court upon the facts, which may be either general or special, has the same effect as the verdict of a jury. An exception may be taken to any ruling of the court during the hearing and to such finding on the ground that the evidence was insufficient in law to justify it, and may be stated in a bill of exceptions as in case of a jury trial. (See Code, secs. 70–71.)

From the foregoing it is apparent that our review of this case must be confined to questions of law presented by the record proper and to such other questions as may have been reserved by exceptions duly noted during the progress of the trial. The only exceptions taken, which are followed up in appellants' brief, relate to the admission of evidence introduced by the Government tending to prove the inappreciable quantity of lithium in Buffalo Lithia Water, and that the trace of lithium found would not of itself give any therapeutic effect. The libel as amended alleges that the water in question is misbranded because, as branded, it is represented as lithia water, when it is not such a water or entitled by reason of its ingredients to be so called, and that by reason of this misbranding the purchaser of the water is deceived. Clearly, under these averments, it was competent for the court to receive evidence concerning the real character of this water. Evidence that an analysis of about half a gallon of the seized water failed to disclose any lithium except by the use of the spectroscope, and then only a trace, and evidence that water from the Atlantic and Pacific Oceans, from the Mississippi and Potomac Rivers, contained five times as much lithium as the same quantity of " Buffalo Lithia Water ", certainly shed some light upon the question whether such so-called lithia water was in fact what the label under which it was sold represented it to be.

Appellants insist that the libel fails to allege any facts constituting misbranding and hence that it is fatally defective. It alleges that is false and misleading—

> In this, that the said statement imports that the liquid contained in said bottles is a lithia water, whereas, in truth and in fact, the food and drug contained in said bottles is not a lithia water, or entitled by reason of its ingredients to be so called.

In other words, the libel alleges that the seized property is branded, labeled, and sold as lithia water, when, in fact, it is not, and that by reason of such branding the public is deceived and misled. If appellants mean that the libel should have characterized this water, we do not agree with them. Whether it should be called a mineral water or a spring water is not important. The important question is whether it is what the label represented it to be—a lithia water. The libel in unambiguous terms alleges that it is not, and we think the averments sufficiently explicit.

The decree must be affirmed, with costs.

Affirmed.

UNITED STATES v. SIMPSON

(District Court, N.D. Ohio, Nov. 30, 1915)

N.J. 5526

Information in two counts alleging violation of section 2 of the Food and Drugs Act. Jury trial. One count dismissed. Verdict of guilty as to the other.[93]

The United States attorney filed an information in 2 counts against Charles M. Simpson, alleging shipment from the State of Ohio into the State of Minnesota of a quantity of an article labeled in part "Cerebro-Spinal Nerve Compound", which was misbranded.

Misbranding of the article was alleged in the first count for the reason that it contained 0.36 percent of alcohol, and the package containing the article failed to bear a statement on the labels of the bottle and carton of the quantity or proportion of alcohol contained therein. It was alleged in substance in the second count of the information that the article was misbranded for the further reason that certain statements appearing on the carton, and certain statements included in the circular accompanying the article, falsely and fraudulently represented it as a treatment of all diseases which are really the result of diseases of the brain, spinal cord, medulla oblongata, the nerves given off from each of them, all nervous diseases and heart troubles; and as a valuable remedy for lost nervous strength, nervous prostration, spinal diseases, mania, melancholia, and neurasthenia; and as a remedy for dementia or acquired feeble-mindedness, and katatonia or alternating insanity, when, in truth and in fact, it was not.

The defendant entered a plea of not guilty to the information, and the case came on for trial before the court and a jury. During the

---

[93] Affirmed, *Simpson* v. *United States*, p. 832, *post*.

progress of the trial it was ordered that the first count of the information be dismissed, as will more fully appear from the following remarks by the court:

CLARKE, *District Judge.* Gentlemen, I have concluded that the first count in this information should be dismissed. The charge is that goods shipped and delivered for shipment as aforesaid, said article of drugs, was then and there misbranded within the meaning of said act of Congress in that it contained 0.36 percent of alcohol, and that the package containing the said article then and there failed to bear a statement on the labels of the bottle and carton of the quantity or proportion of alcohol contained therein.

You will see that in the count it is set out that the carton did contain a statement that this bottle contains about one third of a drop of alcohol to each teaspoonful. Now, there has been no evidence to indicate that this statement of the quantity of alcohol is not correct, and of course, I assume that if it was not a reasonable approximation to the amount of alcohol which the analysis shows, counsel would have to have testimony. Therefore, it seems to me, under the state of the proof as it now is, the count is, to say the least, contradictory. The case will proceed on the second count.

The trial of the case was then resumed, and after the submission of evidence and arguments by counsel the following charge was delivered to the jury by the court:

Gentlemen of the jury: I am submitting this case to you upon the second count of the information only. In this count the Government charges that on the 28th day of May, 1914, the defendant, Charles M. Simpson, trading as Dr. C. M. Simpson's Medical Institute, of Cleveland, Ohio, unlawfully shipped from the city of Cleveland, in the State of Ohio, to the city of St. Paul, in the State of Minnesota, one dozen bottles enclosed in cartons (which simply means pasteboard boxes) which contained an article designed and intended to be used for the cure and mitigation of diseases of man; and that these bottles or rather the pasteboard boxes in which they were shipped were branded or marked, and contained a circular within them, and that upon the carton and circular were printed certain statements which were false and fraudulent as to the curative or therapeutic properties or contents of the bottles. "Therapeutic" is a word that is used in this count and has been frequently used in the testimony, and as used in this case it means simply healing or curative properties of any substance to which it may be applied.

Now, the statements appearing on the pasteboard box or carton which the Government charges were false and fraudulent are as follows, viz:

Dr. C. M. Simpson's Cerebro-Spinal Nerve Compound, a valuable remedy for lost nervous strength and treatment of all diseases which are really the result of the diseases of the brain, spinal cord, medulla oblongata and the nervous diseases given off from each of them.

Dr. C. M. Simpson's Remarkable Discovery for the treatment of all nervous diseases, also heart troubles * * * a most valuable remedy for nervous prostration, spinal diseases * * * melancholia, neurasthenia.

And the statements as to the therapeutic or curative effects of the substance contained in the bottles, which it is charged were printed in the circulars enclosed in the pasteboard boxes with the bottles are as follows:

> For * * * dementia, or acquired feeble-mindedness, katatonia or alternating insanity.

The charge of the Government is that these statements as to the curative properties of the substance which the defendant was selling were fraudulent and false and that the substances did not contain ingredients or medical agents effective among other things as a remedy for the diseases which the statements which I have read to you from the carton and from the circular contained.

The Government claims that these statements were not only false when thus used on the cartons containing the bottles and in the circular, but that they were made with the fraudulent purpose of inducing persons sick or afflicted with one or more of the diseases named, to purchase the so-called remedy so that the defendant might make money out of the sale of it.

The act of Congress under which this charge is being prosecuted is entitled:

> An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes.

This is important legislation intended to protect the people so far as this case is concerned from the transportation and sale of misbranded medicines, experience having shown that men and women afflicted with disease are disposed to try a professed remedy, no difference how useless or even harmful it may be if it is strongly recommended, and it is to protect the sick and afflicted and people who are easily imposed upon, from fraudulent practices of the unprincipled and avaricious that this law was passed. It is a wise law and in proper cases should be rigidly enforced.

It is admitted by the defendant that the bottles in the pasteboard boxes or cartons were shipped from Cleveland to St. Paul, Minn., as charged in the information. It is also not questioned that the boxes or cartons had printed on them the language I have quoted to you from the information as constituting the charge of the Government against the defendant. The language which the Government charges was falsely and fraudulently used was not all that was printed upon the carton or in the circular, but the entire inscription is in evidence, and you may look to any other part of the printed matter to determine whether the language especially set out in this second count was or was not falsely and fraudulently used.

You will note, gentlemen of the jury, that before you can find the defendant guilty, you must find not only that the statements charged in the information were false, but that the defendant knew they were false when he used them, and that he used them for a fraudulent purpose. This is a criminal case and so the degree of proof that is necessary to convict the defendant is higher and greater than is sufficient in a civil case to support a verdict.

Before you can find the defendant guilty as charged in the information, you must be satisfied not by a preponderance of the evidence as in a civil case, but you must be satisfied beyond a reason-

able doubt both that the statements set out in the second count were false, and also that they were fraudulent. The burden of this proving the defendant guilty beyond a reasonable doubt is on the Government.

The expression "reasonable doubt" seems to me to be so clear, plain, and exact an expression that to attempt to define or explain it is more likely than not to obscure its meaning. You all know that doubt as to how a case should be decided is an uncertainty of mind arising from the evidence introduced in the trial or the lack of evidence which may be necessary to create a clear conviction with respect to the guilt of the accused. Such a doubt springing from evidence, or from the lack of what you may think is necessary evidence, if honestly entertained, is a reasonable doubt such as is meant when the expression is used in this charge. This doubt, in order to justify your making it the ground of a verdict of acquittal, should be of such a character that it would require some evidence to remove it. It should not be a doubt raised by a mere whim, caprice, or prejudice on the part of a juror.

The rule is intended to be a shield for the innocent and not as a protection for the guilty.

The pasteboard cases or cartons with the inscriptions thereon and the circular which was in each of the cartons and which contained the statements, which are charged by the Government to be false and fraudulent, have been introduced in evidence and will be before you in your jury room.

The Government has produced a witness who has analyzed the contents of one of the bottles and has stated what he found as the result of his analysis. An analysis has also been made of the compound by a witness called by the defendant. So far as the curative properties of the compound are concerned, these two analyses do not differ substantially.

The Government has called physicians who have testified, as you have heard, that in their opinion the ingredients found in the bottle analyzed by the Government chemist are not effective as a remedy for the disorders which it is stated upon the label, and in the circular, and enumerated in the second count it is effective in the treatment of, and they have testified that in their opinion there is no single combination of substances or drugs which would be effective as a remedy for all of the diseases which are enumerated in the charge in this second count.

On the other hand, the defendant has called several witnesses who state that they have used the compound as a medicine and that it has proved in their cases effective as a remedy for the disorders with which they have stated to you they were afflicted. The question involved in this case is peculiarly one of professional learning, and it is significant that not a single doctor has been called by the defendant. One young doctor was called as a witness but on preliminary examination he said he was not competent to testify as an expert physician upon the subjects involved in the case, and he was dismissed without testifying. This is a fact which you should take into consideration in arriving at your decision of this case.

Gentlemen, you will take all of this evidence into consideration and determine first of all whether the statements which are referred

to in the second count and which I have read to you with regard to the therapeutic—that is, the curative—properties of this preparation were false, and in deciding this question you should take into consideration all of the evidence which has been produced by the Government, as well as that produced by the defendant.

If you find that the statements on the cartons and in the circulars which are set out in the second count were false, then before you can find the defendant guilty, it will be necessary for you to go further and consider whether such statements were fraudulently made. If you find beyond a reasonable doubt that the statements set out in this second count with respect to the curative properties of this compound were false, and that they were made with the fraudulent purpose of deceiving people, and so inducing them to buy the compound, then you should return a verdict of guilty. But if you find that these statements were not false, or that they were not made with the fraudulent purpose of deceiving people into purchasing and using the compound, then you should return a verdict of not guilty.

Gentlemen of the jury, you will be furnished with two forms of verdict, one finding the defendant guilty, and one finding him not guilty. You will fill in one of these forms of verdict as your decision of the case may render proper and have the verdict signed by your foreman and return it into court.

(Addressing counsel:) Gentlemen, have you any suggestions or exceptions?

(None.)

(Addressing jury:) You may retire and consider the case.

UNITED STATES v. 1,000 CASES OF TOMATO PUREE

(District Court, S.D. New York, Dec. 29, 1915)

N.J. No. 4597

Libel under section 10 of the Food and Drugs Act for seizure and condemnation of 1,000 cases, each containing 4 dozen cans, of tomato purée. Libel dismissed as to all except 46 cans. Jury trial. Verdict in favor of the United States as to one can, and for the claimant as to 45 cans.

The United States attorney filed a libel for the seizure and condemnation of 1,000 cases, each containing 4 dozen cans, of tomato purée, alleging that the article had been shipped from the State of New Jersey into the State of New York, and charging adulteration and misbranding in violation of the Food and Drugs Act. The cases were labeled: "4 Doz., Contents 10 oz. net, No. 1 tin, Ceres Brand Tomato Puree, Francis H. Leggett and Co., Distributors, New York." The retail packages were labeled: "Ceres Brand, Contents 10 avoir. oz. Tomato Puree, Francis H. Ligget and Company, New York City, Distributors, Reg. U.S. Pat. Off."

Adulteration of the article was alleged in the libel for the reason that it consisted in particular [part] of a filthy, putrid, or decomposed vegetable substance, to wit, decayed tomato, contrary to the provisions of section 7, subdivision 6 under "food," of the Food and Drugs Act.

Misbranding was alleged for the reason that the article was contained in cans with labels which bore a picture of a whole ripe tomato and contained no statement that the product was manufactured from peelings, cores, and trimmings, contrary to the provisions of section 8, first general paragraph, and paragraph second under "food," of the said Food and Drugs Act.

The case came on for hearing before the court and a jury. At the conclusion of the Government's case, the court dismissed the libel as to all of the cans except 46, which had been opened and analyzed by the Government's analysts. The action was taken upon motion of counsel of Francis H. Leggett & Co., New York, N.Y., claimant, and, in granting the motion, the court (HAND, *District Judge*) said: "I will grant that motion upon the ground that it appears from the evidence that there was a variation in the contents and amount of mold in the different cans, and that it does not sufficiently appear from any testimony offered as to the manufacture of this product and the introduction and filling of the cans which have not been examined, that they contain, filthy, putrid, or decomposed vegetable substance, to wit, decayed matter." After the completion of the introduction of evidence and arguments by counsel, the following charge was delivered to the jury by the court:

HAND, *District Judge.* Gentlemen of the jury: This action is brought under what is known as the Pure Food Law to condemn 46 cans of tomato purée, which are all that are involved before you now, on the ground that those cans are adulterated, and the statute makes a statement in regard to adulteration which I will read to you:

> That for the purposes of this Act an article shall be deemed to be adulterated * * * In the case of food: * * * If it consist in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not.

For the purposes of this case before you the definition of the statute might be read as follows:

> That for the purposes of this Act an article shall be deemed to be adulterated in the case of food if it consists in whole or in part of a filthy or decomposed animal or vegetable substance.

So that the question which first arises here is whether this article, this tomato purée, can be considered filthy or decomposed. If it is filthy or decomposed it is subject to seizure and condemnation under the provisions of the statute. There is no doubt in my mind, and I do not believe that either counsel would contest the proposition that the words "filthy" and "decomposed" are not to be used or considered by you in a purely technical and scientific sense. They are to be used in a practical common sense way, and are to relate to a substantial presence of filth or decomposition. Some of the dictionaries give definitions of these words. For instance, in the Standard Dictionary, filthy is defined as of the nature of or containing filth; dirty; nasty. Filth: Anything that spoils or makes foul; that which is filthy or dirty; also, the state or quality of being foul; nastiness; dirt.

I think the question for you to determine here, gentlemen, is whether upon all the facts appearing in this case there was such a substantial presence of mold in this tomato purée that you regard it as filthy in a natural, practical sense.

Now, to come down to decomposition or decomposed. Some of these experts have given you, among other things, a very technical definition of decomposed, the scientific definition, which relates to structural changes, that is to say, changes in its composition, the breaking down of a complicated system of cells, for instance, into a lower and simpler system of cells. That, I take it, is not the meaning of decomposed, or decomposition referred to in the statute. Decomposed as given in some of the dictionaries is decayed, rotten, and that is the definition that I shall give to you, and I shall leave to you the question of whether or not upon all the facts appearing in this case you find that there was a substantial degree of decomposition in whole or in part in these 46 cans or any of them. To the extent that you find that there was, you shall condemn the 46 cans or any part of them in which you find such a degree of decomposition exists.

Now, I will say a word in regard to the testimony of these experts. You have probably heard so much about it that you remember very distinctly Dr. Howard's test, his method of examining tomato purée at any rate, and I presume other things. In order to find the presence of molds, as I understand it, two drops are extracted and under a microscope these drops are divided into 25 fields, and then the person making the examination determines whether or not if each field, of the 25 in each drop, that is to say whether in all the 50 fields there are any molds present. If he finds mold in 50 of the fields, he would say that there were a hundred percent and if he finds molds in 25 of the fields he would say 50 percent. It is argued that that does not show the percentage of molds at all; it simply shows if there was a hundred percent according to Dr. Howard's test, that there may be some molds, no matter how little; no matter how extremely little, in each field of the drop, and it is claimed that by a further churning process, or stirring process, or some dividing process of these molds, you could get a more even distribution than the ordinary stirring under Dr. Howard's test, and you could determine the real percentage of the mold in the mixture, which undoubtedly Dr. Howard's test does not attempt absolutely to do. So that on the side of the defendant it is claimed that Dr. Howard's test is too uncertain. He says admittedly some of these tests show only 60 percent and others show 100 percent, and it is impossible to get the mixture sufficiently stirred and the molds sufficiently separated so that you can tell how substantial the presence through the mixture or even in any one drop, is of the mold. On the other hand, I think, all of the experts would have to admit that this test of Dr. Howard's is some evidence. It is certainly evidence of the presence of mold. It shows that there are some molds.

Now, taking into consideration, gentlemen, these arguments and counterarguments, for you are made by the law the sole judges of the facts, and if I have intimated anything in regard to the facts you are at liberty to disregard it, you are only to take the law from the court. Taking all these arguments and counterarguments, I say, into consideration, you are to determine whether upon the whole case there was a sufficient presence of these molds in these cans of tomato purée to render the product filthy or decomposed. If you find that there was such a substantial presence of these molds as to render the product filthy or decomposed, you must find a verdict for the

Government. If you find to the contrary you must find a verdict for the defendant.

The defendant has asked me to charge that the jury will remember that the testimony of the Government experts as to the percentage of the fields in which they found mold, are statements of facts, but that the inference that they draw from these facts are opinions which they can accept or reject. I so charge. In other words, the statements of the experts as to this Howard method merely state the method in which they determine the percentage of fields which contain molds. They do not purport to state a definite percentage of molds in the tomato purée. I leave to you the inference that is to be drawn as to the degree of mold that was in this tomato purée from the fact that in these various specimens taken by the Government there was an average of from 60 to 100 percent of some kind of mold found in the various drops. I also remind you of the fact, gentlemen, that the defendant did not examine the cans examined by the Government, but examined other cans which for reasons it is unnecessary to discuss before you, in my judgment, are not under consideration in this case. I charge you that the Government must establish its case by the preponderance of evidence and if you are in doubt on the whole case as to whether the Government has made a case or not, you must find for the defendant.

I refuse the first two of the requests which I have not charged, which have been submitted by counsel, as follows:

(1) The Government must not only establish its case by the weight of evidence, but, this being a case involving the forfeiture of property, the evidence must be of a clear and convincing character.

(2) If they find products not unwholesomely decomposed, they must find for the claimant.

The jury thereupon retired, and after due deliberation returned into court with its verdict in favor of the Government for the condemnation of one can of the article, and in favor of the claimant as to the remaining 45 cans.

SEVEN CASES OF ECKMAN'S ALTERATIVE v. UNITED STATES

SIX CASES OF ECKMAN'S ALTERATIVE v. UNITED STATES

(Supreme Court of the United States, Jan. 10, 1916)

239 U.S. 510; N.J. No. 4816

Error to the District Court for the District of Nebraska. Judgments affirmed.

Mr. Justice Hughes delivered the opinion of the court.

Libels were filed by the United States, in December, 1912, to condemn certain articles of drugs (known as "Eckman's Alterative") as misbranded in violation of section 8 of the Food and Drugs Act.

The articles had been shipped in interstate commerce, from Chicago to Omaha, and remained at the latter place unsold and in the unbroken original packages. The two cases present the same questions, the libels being identical save with respect to quantities and the persons in possession. In each case demurrers were filed by the shipper, the Eckman Manufacturing Company, which challenged both the sufficiency of the libels under the applicable provision of the statute and the constitutionality of that provision. The demurrers were overruled, and the Eckman Company having elected to stand on the demurrers, judgments of condemnation were entered.

Section 8 of the Food and Drugs Act, as amended by the act of August 23, 1912, ch. 352, 37 Stat. 416, provides, with respect to the misbranding of drugs, as follows:

SEC. 8. That the term "misbranded," as used herein, shall apply to all drugs or articles of food or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as the State, Territory, or country in which it is manufactured or produced.

That for the purposes of this Act an article shall also be deemed to be misbranded. In case of drugs:

* * * * * * *

Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

The amendment of 1912 consisted in the addition of paragraph "Third," which is the provision here involved.

It is alleged in each libel that every one of the cases of drugs sought to be condemned contained 12 bottles, each of which was labeled as follows:

Eckman's Alterative,—contains twelve per cent. of alcohol by weight, or fourteen per cent. by volume—used as a solvent. For all throat and lung diseases including Bronchitis, Bronchial Catarrh, Asthma, Hay Fever, Coughs and Colds, and Catarrh of the Stomach and Bowels, and Tuberculosis (Consumption) * * * Two dollars a bottle. Prepared only by Eckman Mfg. Co. Laboratory Philadelphia, Penna., U. S. A.

And in every package, containing one of the bottles, there was contained a circular with this statement:

Effective as a preventative for Pneumonia. We know it has cured and that it has and will cure Tuberculosis.

The libel charges that the statement "effective as a preventative for pneumonia" is "false, fraudulent, and misleading in this, to wit, that it conveys the impression to purchasers that said article of drugs can be used as an effective preventative for pneumonia, whereas, in truth and in fact said article of drugs could not be so used"; and that the statement "we know it has cured" and that it "will cure tuberculosis" is false, fraudulent, and misleading in this, to wit, that it conveys the impression to purchasers that said article of drugs will cure tuberculosis, or consumption, whereas, in truth and in fact said article of drugs would not cure tuberculosis, or consumption, there being no medicinal substance nor mixture of substances known at present which can be relied upon for the effective treatment or cure of tuberculosis, or consumption."

The principal question presented on this writ of error is with respect to the validity of the amendment of 1912.

So far it is objected that this measure, though relating to articles transported in interstate commerce, is an encroachment upon the reserved powers of the States, the objection is not to be distinguished in substance from that which was overruled in sustaining the White Slave Act, ch. 395, June 25, 1910, 36 Stat. 825. *Hoke* v. *United States*, 227 U.S. 308. There, after stating that "if the facility of interstate transportation" can be denied in the case of lotteries, obscene literature, diseased cattle and persons, and impure food and drugs, the like facility could be taken away from "the systematic enticement of and the enslavement in prostitution and debauchery of women," the court concluded with the reassertion of the simple principle that Congress is not to be denied the exercise of its constitutional authority over interstate commerce, and its power to adopt not only means necessary but convenient to its exercise, because these means may have the quality of police regulations. *Id.* pp. 322, 323. See *Gloucester Ferry Co.* v. *Pennsylvania*, 114 U.S. 196, 215; *Hipolite Egg Co.* v. *United States*, 220 U.S. 45, 57; *Lottery Case*, 188 U.S. 321.

It is urged that the amendment of 1912 does not embrace circulars contained in the package, but only applies to those statements which appear on the package or on the bottles themselves; that is, it is said that the word "contain" in the amendment must have the same meaning in the case of both "package" and "label." Reference is made to the original provision in the first sentence of section 8 with respect to the statements, etc., which the package or label shall "bear." And it is insisted that if the amendment of 1912 covers statements in circulars which are contained in the package it is unconstitutional. Such statements, it is said, are not so related to the commodity as to form part of the commerce which is within the regulating power of Congress.

But it appears from the legislative history of the act that the word "contain" was inserted in the amendment to hit precisely the case of circulars or printed matter placed inside the package, and we think that is the fair import of the provision. Cong. Rec. 62d Cong., 2d Sess., Vol. 48, Part 11, p. 11,322. And the power of Congress manifestly does not depend upon the mere location of the statement accompanying the article, that is, upon the question whether the statement is *on* or *in* the package which is transported in interstate commerce. The further contention that Congress may not deal with the package, thus transported, in the sense of the immediate container of the article as it is intended for consumption, is met by *McDermott* v. *Wisconsin*, 228 U.S. 115. There the court said:

> That the word "package" or its equivalent expression, as used by Congress in sections 7 and 8 in defining what shall constitute adulteration and what shall constitute misbranding within the meaning of the act (Food and Drugs Act), clearly refers to the immediate container of the article which is intended for consumption by the public, there can be no question. * * * Limiting the requirements of the act as to adulteration and misbranding simply to the outside wrapping or box containing the packages intended to be purchased by the consumer, so that the importer, by removing and destroying such covering, could prevent the operation of the law on the imported article yet unsold, would render the act nugatory and its provisions wholly inadequate to accomplish the purposes for which it was passed.

And, after stating that the requirements of the act thus construed were clearly within the power of Congress over the facilities of interstate commerce, the court added that the doctrine of original packages set forth in repeated decisions, which protected the importer in the right to sell the imported goods, was not "intended to limit the right of Congress, now asserted, to keep the channels of interstate commerce free from the carriage of injurious or fraudulently branded articles and to choose appropriate means to that end." *Id.* pp. 130, 131, 137.

Referring to the nature of the statements which are within the purview of the amendment, it is said that a distinction should be taken between articles that are illicit, immoral, or harmful and those which are legitimate, and that the amendment goes beyond statements dealing with identity or ingredients. But the question remains as to what may be regarded as "illicit" and we find no ground for saying that Congress may not condemn the interstate transportation of swindling preparations designed to cheat credulous sufferers and make such preparations, accompanied by false and fraudulent statements, illicit with respect to interstate commerce, as well as, for example, lottery tickets. The fact that the amendment is not limited, as was the original statute, to statements regarding identity or composition (*United States* v. *Johnson*, 221 U.S. 488) does not mark a constitutional distinction. The false and fraudulent statement, which the amendment describes, accompanies the article in the package, and thus gives to the article its character in interstate commerce.

Finally, the statute is attacked upon the ground that it enters the domain of speculation (*American School of Magnetic Healing* v. *McAnnulty*, 187 U.S. 94) and by virtue of consequent uncertainty operates as a deprivation of liberty and property without due process of law in violation of the fifth amendment of the Constitution, and does not permit of the laying of a definite charge as required by the sixth amendment. We think that this objection proceeds upon a misconstruction of the provision. Congress deliberately excluded the field where there are honest differences of opinion between schools and practitioners. Cong. Rec., 62d Cong., 2d Sess., vol. 48, Part 12, App., p. 675. It was, plainly, to leave no doubt upon this point that the words "false *and fraudulent*" were used. This phrase must be taken with its accepted legal meaning, and thus it must be found that the statement contained in the package was put there to accompany the goods with actual intent to deceive,—an intent which may be derived from the facts and circumstances, but which must be established. *Id.* 676. That false and fraudulent representations may be made with respect to the curative effect of substances is obvious. It is said that the owner has the right to give his views regarding the effect of his drugs. But state of mind is itself a fact, and may be a material fact, and false and fraudulent representations may be made about it; and persons who make or deal in substances, or compositions, alleged to be curative, are in a position to have superior knowledge and may be held to good faith in their statements. *Russell* v. *Clark's Executors*, 7 Cranch 69, 92; *Durland* v. *United States*, 161 U.S. 306, 313; *Stebbins* v. *Eddy*, 4 Mason 414, 423; *Kohler Mfg. Co.* v. *Beeshore*, 59 Fed. 572, 574; *Missouri Drug Co.* v. *Wyman*, 129 Fed. 623, 628; *McDonald* v. *Smith*,

139 Mich. 211; *Hedin* v. *Minneapolis Medical Institute*, 62 Minn. 146, 149; *Hickey* v. *Morrell*, 102 N.Y. 454, 463; *Regina* v. *Giles*, 10 Cox, C.C., 44; *Smith* v. *Land & House Corporation*, L.R., 28 Ch. Div. 7, 15. It cannot be said, for example, that one who should put inert matter or a worthless composition in the channels of trade, labeled or described in an accompanying circular as a cure for disease when he knows it is not, is beyond the reach of the law-making power. Congress recognized that there was a wide field in which assertions as to curative effect are in no sense honest expressions of opinion but constitute absolute falsehoods and in the nature of the case can be deemed to have been made only with fraudulent purpose. The amendment of 1912 applies to this field and we have no doubt of its validity.

With respect to the sufficiency of the averments of the libels, it is enough to say that these averments should receive a sensible construction. There must be a definite charge of the stautory offense, but we are not at liberty to indulge in hypercriticism in order to escape the plain import of the words used. There is no question as to the adequacy of the description of the article, or of the shipments, or of the packages. It is said that there was no proper statement of the contents of the circular. But the libels give the words of the circular and we think that the allegations were sufficient to show the manner in which they were used. The objection that it was not alleged that the statements in question appeared on the original package or on the bottles themselves, as already pointed out, is based on a misconception of the statutory provision. The remaining and most important criticism is that the libels did not sufficiently show that the statements were false and fraudulent. But it was alleged that they were false and fraudulent, and with respect to tuberculosis it was averred that the statement was that the article "has cured" and "will cure", whereas "in truth and in fact" it would "not cure", and that there was no "medicinal substance nor mixture of substances known at present" which could be relied upon to effect a cure. We think that this was enough to apprise those interested in the goods of the charge which they must meet. It was, in substance, a charge that, contrary to the statute, the article had been made the subject of interstate transportation with a statement contained in the package that the article had cured and would cure tuberculosis, and that this statement was contrary to the fact and was made with actual intent to deceive.

Judgments affirmed.

UNITED STATES v. KELLETT

(District Court, District of Utah, Jan. 20, 1916)

N.J. No. 4846

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney for the district of Utah filed an information against John L. Kellett, alleging shipment by said defendant from the State of Utah into the State of California, of quantities

of "Dr. J. L. Kellett's Oil of Eden No. 1" and "Dr. J. L. Kellett's Sweet Spirits of Eden" which were misbranded.

Misbranding of the article labeled "Dr. J. L. Kellett's Oil of Eden No. 1" was alleged in the information for the reason that certain statements regarding the therapeutic or curative effects thereof, appearing on the cartons enclosing the bottles containing the article, and included in circulars or pamphlets accompanying the article, were false and fraudulent in that they were applied to the article knowingly and in reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to the purchasers thereof, and create in the minds of purchasers thereof the impression and belief, that it was, in whole or in part composed of, or contained, ingredients or medicinal agents effective, among other things, for curing all ordinary complaints of a rheumatic nature when used in conjunction with Sweet Spirits of Eden, for dissolving and removing ulcerated tumors, enlarged glands, and all other eruptions, for the cure of rheumatism and gout, in the treatment of granulated eyelids, for curing deafness, and as a cure for rheumatism and goiter, when used in conjunction with Sweet Spirits of Eden, when, in truth and in fact, it was not in whole or in part composed of, and did not contain, ingredients or medicinal agents effective, among other things, for curing all ordinary complaints of a rheumatic nature when used in conjunction with Sweet Spirits of Eden or when used in any other manner, or for dissolving or removing ulcerated tumors, enlarged glands, or all other eruptions, for the cure of rheumatism or gout, in the treatment of granulated eyelids, for curing deafness, or, when used in conjunction with Sweet Spirits of Eden or when used in any other manner, as a cure for rheumatism or goiter.

Misbranding of the article labeled "Dr. J. L. Kellett's Sweet Spirits of Eden" was alleged in the information for the reason that a statement, appearing on the labels of the article, to wit, "Alcohol 25 percent," was false and misleading in that it indicated to purchasers thereof that the article contained 25 percent of alcohol by volume, when, in truth and in fact, it contained a greater amount of alcohol, to wit, 50.48 percent. Misbranding was alleged for the further reason that certain statements regarding the therapeutic or curative effects of the article, appearing on the cartons inclosing the bottles containing the article, and included in a circular or pamphlet accompanying the article, were false and fraudulent in that they were applied to the article knowingly and in reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to the purchasers thereof, and create in the minds of purchasers thereof the impression and belief, that it was in whole or in part composed of, or contained ingredients or medicinal agents effective, among other things, for curing nervous prostration, and as a cure for rheumatism and goiter when used in conjunction with Oil of Eden, when, in truth and in fact, it was not in whole or in part composed of, and did not contain ingredients or medicinal agents effective for curing nervous prostration or as a cure for rheumatism or goiter when used in conjunction with Oil of Eden or when used in any other manner.

The case having come on for trial before the court and a jury, after the submission of evidence and arguments by counsel, the following charge was delivered to the jury by the court:

JOHNSON, *District Judge.* Gentlemen of the jury: The defendant, John L. Kellett, is charged by the United States Government in this case on three counts with the violation of what is commonly known as the Food and Drugs Act.

Each count of the information charges that the defendant, John L. Kellett, trading as California's Cooperative Medicine Company, of Salt Lake City, Utah, did within the Judicial District of Utah, and within the jurisdiction of this court, on or about the 13th day of April, 1914, then and there, in violation of the act of Congress of June 30, 1906, known as the Food and Drugs Act, as amended by the act of August 23, 1912, unlawfully ship and deliver for shipment from Salt Lake City, State of Utah, to the city of San Francisco, State of California, consigned to H. C. Moore, certain packages, to wit, six bottles, enclosed in cartons, and containing an article designed and intended to be used in the cure, prevention, and mitigation of diseases of man.

The Foods and Drugs Act, gentlemen, makes it unlawful for any person to ship or deliver for shipment from any State into any other State, any drugs misbranded within the meaning of the act, such shipment being made with the intent upon the part of the shipper that such misbranded drug shall be used by the consignee, or any other person.

In this connection, gentlemen, I instruct you that the preparations, Oil of Eden and Sweet Spirits of Eden, introduced in evidence as exhibits, are drugs within the meaning of this act.

Before you can convict the defendant on any of the counts of the information, you must be convinced by the evidence in the case beyond a reasonable doubt that the defendant, on or about the date alleged in the information, shipped or caused to be shipped from the State of Utah—from any point within the central division of the Judicial District of Utah—into the State of California, the preparations, Oil of Eden and Sweet Spirits of Eden, exhibits of which are in evidence in this case, and that the defendant in making or causing to be made said shipment intended that said preparations, or either of them, should be used by the witness Moore, or by some other person, as a remedy for some one or more of the ailments mentioned on the labels, cartons, or in the literature accompanying the shipment.

In this connection I charge you that in order that the defendant be liable under the act as the shipper of these preparations, it is not necessary that he should have been the owner of them, or either of them, or that he shipped them for his own profit; he would be equally liable as shipper under this act if he as an officer, agent, or manager of any company or corporation, made the shipment or caused the same to be made for the purpose aforesaid.

Under the head of "misbranded" the act provided that for the purposes of this act an article shall be deemed to be misbranded, in case of drugs, if its package or label shall bear or contain any statement regarding the curative or therapeutic effect of such article or

any of the ingredients or substances contained therein, which is false and fraudulent.

(The court here reviewed the various charges in the information.)

The labels, cartons, and circulars are in evidence as exhibits, and you are at liberty to take them with you to the jury room for your information in determining your verdict.

In addition to the instructions already given you with respect to the shipment by the defendant, if you so find, I charge you with respect to the first and third counts of the information, that, as appears from the information as read to you, the charges are that there were statements on the labels, cartons, and in the circulars in the packages containing these preparations which were false and fraudulent with regard to their curative or therapeutic effects. So that it is not sufficient for the Government to prove merely that the statements were false, but the Government must also prove beyond a reasonable doubt that they were fraudulent. If you, gentlemen of the jury, are satisfied beyond a reasonable doubt that the statements referred to and charged as false and fraudulent in the third count, are not only false, but that the defendant knew them to be false, or, not knowing whether they were true or false, yet in reckless and wanton disregard of their truth or falsity, and without any reasonable ground to believe that they were true, he stated them falsely and knowingly, or without knowledge of their truth or falsity, as I have explained to you, with the intent to deceive the witness Moore, or any other person who might use the preparations, then you will be justified in finding that the statements were false and fraudulent, and it would be your duty to return a verdict of guilty upon both of said counts, or either of them, as your finding may be with respect to the matters charged as false and fraudulent, in these counts, respectively. But if, on the other hand, you are not satisfied beyond a reasonable doubt that the statements were not only false but that they were also fraudulent, then it would be your duty to acquit the defendant upon both of said counts, or either of them, as your finding may be with respect to the matters charged as false and fraudulent in said counts, respectively.

The mere falsity of a statement would not be sufficient to justify you in convicting the defendant, unless you are satisfied beyond a reasonable doubt that in stating the falsity the defendant did it knowingly, or, without knowing, did it in reckless and wanton disregard of the truth or falsity of the statement and without any reasonable ground to believe it to be true and with intent to deceive and defraud.

In order to convict the defendant it is not necessary that you find beyond a reasonable doubt that all of the statements charged by the Government to be false and fraudulent were in fact so. If you believe from the evidence beyond a reasonable doubt that any one statement charged as false and fraudulent, as I have before explained to you, is in fact so, then it would be your duty to find the defendant guilty upon the count in which such false and fraudulent statement is charged.

In respect to the second count of the information I charge you, gentlemen of the jury, that if you believe from the evidence beyond a reasonable doubt, and so find, that the label or carton or literature

on or accompanying the Sweet Spirits of Eden contained a statement showing "alcohol 25 percent", and you further find that the content of alcohol in the Sweet Spirits of Eden was different in quantity or volume in any substantial proportion and was false and misleading in that it indicated to the purchasers thereof that the said article of drug contained 25 percent, and it in fact contained some other substantially different quantity or volume, then it would be your duty under the evidence, if you so find, to return a verdict of guilty upon this count.

In respect to the several counts, gentlemen of the jury, you have heard the evidence on the part of the Government; the packages, or at least some of them, with the labels thereon, the cartons, with the printed matter thereon, and the circulars which are charged to be false and fraudulent, have been offered in evidence and are before you. The Government has produced a witness who has analyzed the contents of the Sweet Spirits of Eden, and who has stated to you the result of his analysis and the percentage of alcohol. The Government has called physicians who have testified, as you have heard, that in their opinion the preparations, and the ingredients found in them, are not effective as a remedy for the disorders which it is stated they are effective for, and in respect to which it is charged by the Government that such statements are false and fraudulent, and who stated that in their opinion there are no substances or drugs that would be effective as remedies according to the statements made on the labels and in the pamphlets and on the cartons. On the other hand, the defendant has called witnesses to show, in the instances in which they have been treated, that the drug has been effective as a remedy for the disorders with which they stated they were afflicted.

You will take all of this evidence into consideration and determine, first, whether or not the statements which are referred to by the Government with regard to the therapeutic or curative properties of these preparations are false; and you will also take into consideration the evidence in behalf of the Government of the expert physicians, as opposed to the evidence introduced in behalf of the defendant, and determine whether the statements were false. If they were false, then it will be necessary for you to go further and be satisfied beyond a reasonable doubt in your minds not only of their falsity but that the defendant when he made them knew them to be false or, not knowing, had no reasonable ground to believe them to be true, and that he put forth the statements in reckless and wanton disregard of their truth or falsity and intended by such false statements to deceive and defraud. If you are satisfied beyond a reasonable doubt that the statements as to the therapeutic or curative properties of the preparations were false and fraudulent with respect to all or any one of the diseases charged in the information, then it would be your duty to return a verdict of guilty. Upon the other hand, if you are not satisfied beyond a reasonable doubt that they were not [only] false, but fraudulent, and made with the intent to deceive and defraud the public, then it would be your duty to return a verdict of not guilty.

In the first instance, the presumption of innocence is in favor of the defendant, and it attends him throughout the trial, and the

burden is upon the Government to overcome that presumption of innocence by proof which satisfies your minds beyond a reasonable doubt.

By reasonable doubt, gentlemen, is not meant all doubt. A reasonable doubt is one that arises upon a consideration of all of the evidence, and which addresses itself to your reason, such a doubt as would affect your action in matters of the highest importance to you.

You are required to decide this case, as every other criminal case, upon the strong probabilities of the case, and in order to warrant a conviction those probabilities must be so strong as not to exclude all possible doubt or possibility of error, but to exclude all reasonable doubt.

You are the judges of the facts in this case and of the credibility of the witnesses, as well as the weight to be attached to their testimony. If you believe that any witness has willfully sworn falsely to a material fact in this case, you are at liberty, though not required, to disregard all the testimony of that witness, except where it is corroborated by other credible testimony. In considering the weight to be attached to the evidence of any witness, you should consider the interest, bias, or prejudices which any such witness may have in the result of the case, as affecting the credit to be given to his testimony. You should judge of that bias, prejudice, and interest of the witness from his manner in giving his testimony, his deportment on the stand, and in fact anything which strikes you from his manner of testifying that tends to show that he is swearing to an untruth or falsehood.

There will be submitted to you, gentlemen, a form of verdict in which a blank space will be left before the word " guilty ", one applying to the first count, another to the second count, and another to the third count. If you shall find the defendant guilty upon any one or all of the counts, you shall sign the verdict as written; but if you find the defendant not guilty upon any one or all of the counts, write the word " not " before the word " guilty."

Mr. Cook. With respect to the second count, may it please the court, we wish the jury to be instructed with respect to the branding of the quantity of alcohol, that the intent of the defendant with respect to the marking of the percentage is immaterial; that the law is directed merely at the correctness of the statement, and that the defendant should be found guilty, without regard to the defendant's intent, if the statement is incorrect.

The Court. That instruction or request is granted, gentlemen of the jury. The matter of intent on the second count is immaterial—that is, the intent of the defendant.

Mr. Cook. With respect to the marking.

The Court. In respect to the matter concerning which that charge was given.

Mr. Cook. It is sufficient that the label, at the time of shipping, is incorrect.

The Court. That is the intention in the granting of your request.

UNITED STATES v. SWIFT & CO.

(District Court, D. New Jersey, Jan. 20, 1916)

N.J. No. 4850

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

HAIGHT, *District Judge* (charge to jury). Gentlemen of the jury: The defendant, Swift & Company, is charged with having violated the National Pure Food and Drugs Act, with which generally, no doubt, all of you are familiar, both as respects its general scope and the purpose for which it was enacted. I shall not, therefore, endeavor to explain the many features of the act to you.

It appears that on January 17 or 18, 1913, Swift & Company shipped to a concern at Baltimore, Maryland, a certain number of boxes containing "digester tankage", and on those boxes they caused to be written or labeled that the products therein contained protein to the amount of from 60 to 70 percent. These facts are not disputed at all: they are admitted. The Government contends that this tankage did not in reality contain protein to the extent of from 60 to 70 percent, but that the amount of protein, or the percentage of protein, in the tankage was much less, it having been testified by the witnesses for the Government that the three examinations which were made for the purpose of ascertaining the amount of protein resulted as follows: In the analysis which was made in the summer—I think it was in July—of 1913 the tankage was found to contain protein to the extent of 44.19 percent. At the examination that was made on November 6, 1913, it was found that the protein in the tankage was 44.75 per cent; and then at the subsequent analysis, which was made by Mr. Bidwell, in January of 1914, it was found that the protein in the tankage was 43.19 percent.

Now then, it is admitted that this tankage was shipped from one State to another. That is a necessary element of the crime charge—that it be shipped from one State to another—namely, from the State of New Jersey to the State of Maryland. It is also admitted that the bags in which the tankage was contained purported to be and were in fact labeled so as to convey to a person who looked at it information that the amount of protein in the tankage was from 60 to 70 percent. The only question to be decided is this: What amount of protein did it contain at the time it was shipped—namely, in January of 1913? If it contained less at that time than the 60 to 70 per cent, which is the amount mentioned on the labels of the bags in which the tankage was packed, then the defendant is guilty. If it did not contain less than the 60 to 70 percent, then the defendant is not guilty. So, gentlemen, you have only that simple question to determine.

Now, then, the defendant finds itself in an embarrassing position by reason of its inability to get a witness, and has not been able to, at any rate, has not produced any evidence as to the amount of protein that was in this tankage at the time it was shipped. Nor, for

that matter, has the Government, and necessarily so, been able to produce any direct evidence as to the amount of protein that was in the tankage at the time it was shipped, because the Government did not, and indeed could not, at that time make an analysis of it. But in the July succeeding the time of the shipping of the tankage, which was about 6 months thereafter, an analysis was made of some samples of the tankage, which admittedly had been taken by the Government from these bags, and it was then found that it contained a far less amount of protein than the amount stated on the bags in which it was.

You have heard the evidence of the Government's chemists as to the condition of the tankage as they found it, and the unlikelihood that the amount of protein in the tankage could have been materially changed by any conditions that may have existed between the time of shipping and the time of the analysis; and therefore if you find from the evidence in the case that there is nothing to account for the difference in the amount of protein stated on the labels, and the amount of protein that the Government chemists state they found, then your verdict will be that the defendant is guilty. If, on the other hand, you are not convinced from the evidence that the amount of protein that the tankage was found to contain in July, or at the time of any of these examinations, fairly represents the amount of protein it contained in January, then your verdict will be that the defendant is not guilty.

As this is a criminal case the general rule of the criminal law is applicable to it; that is, that every man is presumed to be innocent until he is proven guilty. The burden of proving that the defendant is guilty beyond a reasonable doubt rests upon the Government. I do not mean by that that a person in order to be found guilty must be proven guilty beyond all doubt, but only beyond a doubt based upon reason and arising from evidence; not a doubt that is merely captious or capricious, but a doubt which prevents you, upon all the evidence that you have, from having an abiding conviction of the guilt of the defendant, or saying that you are convinced of its guilt to a moral certainty. If, under those circumstances, you have a reasonable doubt of the guilt of the defendant, then your verdict must be not guilty.

UNITED STATES v. 408 BUSHELS OF OYSTERS

(District Court, S.D. New York, Mar. 16, 1916)

N.J. No. 4922

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The United States attorney filed a libel for the seizure and condemnation of 408 bushels of oysters in the shell, alleging that they had been shipped and transported from the State of New Jersey into the State of New York and remained unloaded and unsold, and that they were adulterated in violation of the Food and Drugs Act.

Adulteration of the article was alleged in the libel for the reason that it consisted in particular [part] of a partially filthy, decomposed, and putrid animal product, to wit, polluted oysters.

The case came on for trial before the court and a jury, and the following charge was delivered to the jury:

HAND, *District Judge.* Gentlemen of the jury: I will first, before beginning a more general discussion of the case, charge certain propositions requested by the counsel for the defendants. In order to consider the conclusions of the Government experts, the jury must first find that the Government has proved all the facts submitted to its experts in its behalf, because otherwise, the conclusion of the Government experts would be based upon an incorrect premise. I charge that so far as it relates to the opinion of the Government experts, expressed in answer to the hypothetical question.

If the jury shall find that any facts alleged in the Government's hypothetical question have not been established by a preponderance of evidence, then the jury must not consider either the conclusions nor the evidence of the Government experts in answer to the hypothetical question, in arriving at its verdict. If the jury shall find the testimony of Professor Gorham and other Government experts is based upon any fact that the Government does not prove by a preponderance of evidence, then the jury shall in arriving at its verdict disregard the testimony of these experts as to such matters. You are not bound to accept the scoring system, but you must pass on the question of whether or not filth was or was not present in a substantial amount. If you find it was not, you must find for the claimant. You must give the same weight to the testimony of the experts testifying for the defendants as to that of the experts appearing for the Government, if you find that they have equal qualifications. The United States Department of Agriculture has no right or authority to condemn oyster beds or prohibit their use for growing oysters for shipment in interstate commerce or otherwise.

If you find that sewage in fact did not reach these particular oyster beds, you will disregard all testimony as to the amount of sewage going into Jamaica Bay. If you find that these oysters in fact did not contain filth at the time they were seized, you will then disregard all testimony in reference to Jamaica Bay or any other place in which the oysters may have been. There is no evidence in this case that these oysters were unhealthy. For that matter, the question of health is not involved under this statute. The testimony of Dr. Parsons as to the number of coli he found in the oysters is a statement of fact. The statements of Miss Noble, of the Board of Health of the City of New York and the representative of the Lederle Laboratory as to the number of coli that they found in the oysters, are also statements of fact, but the inference that experts draw from these statements of fact are opinions, which you can accept or reject. There is no legal standard of 50 for oysters, and the United States Department of Agriculture has no right or authority to accept such a standard. If you find that the testimony of Miss Noble, of the Department of Health of New York City, and of the representative of the Lederle Laboratories as to the coli test is untrue, you must then consider whether or not there was filth present

in a substantial amount, and if you find there was not, you must find for the claimant.

You must remember that Miss Noble, of the Department of Health of the City of New York, was an uninterested witness. Therefore, give due weight to her testimony, if you believe it to be true.

In charging these facts which have been requested by defendant's counsel in regard to the Department of Agriculture, I don't mean to say that they are not right in taking certain stands in the matter which they have, as to a 50 count, or anything else, which they deem proper and in conformity with the law. All I mean to charge you is, and all I imagine that defendant's counsel asks me to charge is, that any pronouncement in that regard by them is not binding on this court here; that the question you will have to determine is whether in fact there was a substantial amount of filth in these oysters.

The COURT. I decline to charge the other requests, and I have marked them, Mr. Carlin; they will appear on those pages.

Mr. CARLIN. Thank you.

The COURT. Now, gentlemen of the jury, this question before you here is a question arising under the Food and Drug Law, as it is commonly called. It is not a question of health, as submitted to us here. It is purely a question of whether these oysters, these 408 bushels of oysters, which were libeled by the Government, were filthy within the meaning of the Pure Food Act.

This is a case, as the Government views it, that is of importance to the Government and importance to the public. You would realize that from the number of experts that have [been] called, and the amount of attention they have given to it. It is also a case which is of great importance to the oyster growers who maintain that industry at Jamaica Bay. These considerations, however, can have no place here in your deliberations, except in a single respect in which they must affect any man who has a part in this proceeding, and that is that it undoubtedly fills you, as it does me, with an added sense of responsibility in dealing with the question.

But the only question for you to consider is the somewhat narrow, legal question, as to whether the 408 bushels of oysters were filthy or not at the time they were seized by the Government. You gentlemen are the sole judges of the facts in this case. You are to take the law as laid down by me. If I indicate, or have appeared to indicate at any time during the trial that I had any opinions in regard to the facts, you are entirely at liberty to disregard it, because you are the sole and absolute judges of the facts in this case.

In the first place, what is filth? What does it mean? I think that both counsel in this case would take the dictionary definition which I think Mr. Barnes gave in his summing up, nasty, foul, or dirty. It has no technical significance. It has a practical significance.

I also charge you, that for these oysters to be regarded and held by you as filthy, the filth or degree of filth, must be substantial. In saying that I do not necessarily mean to indicate that filth which is microscopic so far as observation goes, that is so small in quantity that you cannot see it with the naked eye, may not be substantial in amount. Under all the circumstances, if you should find that a substantial portion of human excrement was in these oysters, you may find that they were filthy to a substantial extent, even though

the filth was present to a degree that can be only observed under a microscope. It is for you to say, gentlemen, under all the circumstances, taking into account the character of the product and the character of the filth, if you find any, whether or not these oysters were filthy to a substantial degree.

It is for the Government to prove by the preponderance of evidence that these oysters were filthy to a substantial degree, and if you find that they have failed to do that, if after considering all the evidence you are in doubt, then it is your duty to find for the defendant.

Some of the experts, gentlemen, say the tests are unreliable. Some say they could not give an opinion unless they knew whether the beds were in a place likely to be polluted. Others say the presence of *B. coli* alone in large scores indicates the presence of sewage and other animal excrement. Some say Jamaica Bay was polluted; others, that it was not. The testimony of Mr. Parsons gives high scores, that of Miss Noble, examining for the city of New York, low scores; that of the Lederle Laboratories, low scores; that of Schwartz, low scores. Are the tests correct? Were the oysters submitted genuine? In other words, were they fair specimens and fair tests in these different scores? You must analyze all the evidence and discover the truth. It is for you gentlemen to do the hard work of deciding when doctors disagree. You may consider the amount of sewage poured into Jamaica Bay, the testimony of the experts who say it reaches the beds, the testimony of those who say it never could have reached the beds, or if so, only when dead and mineralized. All these facts are for your consideration. You have heard a vast amount of testimony, a vast amount of very novel and very interesting testimony. You heard the argument and conflict of the experts, and you have heard all the facts, and it all boils down to the very simple proposition of law, for you to determine upon these facts whether these oysters were substantially filthy or not.

There is one other thing which I have not mentioned: Certain oysters were examined, other oysters were not examined. The oysters examined, were, of course, very few as compared with the large bulk of 408 bushels of oysters. If you condemn the other oysters, which have not been tested here at all, that is, individually, specifically, you will have to find, of course, in the first place, that there was substantial filth in the oysters that were examined; in the second place that those were fair specimens, so that the other portion of the 408 bushels were similar, and would be properly condemned with those that were actually found to contain excrement. So the question is first whether any of these oysters were filthy to a substantial degree. If you find the oysters actually examined were filthy, to a substantial degree, and that is the result of your finding, and you find there is a preponderance of evidence to that effect, then those would be condemned. If you find they were fair samples of the rest, then you would condemn the rest.

I hope, and I believe I am perfectly clear. It is a narrow question to be determined, and involves the consideration of a large amount of conflicting evidence, and that, gentleman, if [is] your province.

Mr. BARNES. Will Your Honor allow me an exception? I think very likely Your Honor did not intend to charge—I except to Your Honor's charge that the jury must give the same weight to the testimony of experts for the defense as to that of the experts testifying for the Government, if you find they have equal qualifications.

The COURT. I mean by qualifications, Mr. Barnes, qualifications in all senses, as to ability and reliability, truthfulness and experience.

Mr. BARNES. That is all I want Your Honor to charge, that the question of credibility of witnesses is exclusively for the jury.

The COURT. It is exclusively for the jury.

Mr. BARNES. I will read another request: There is no evidence in the case that Mr. Holborrow, a city official, did not deliver the samples just as he took them, and in the absence of evidence to that effect you must accept his testimony, unless you say he is unworthy of belief.

The COURT. I so charge.

Mr. BARNES. I except.

Mr. CARLIN. I respectfully ask Your Honor to charge that if the jury finds that samples from this shipload of oysters scored under 50, they must find for the claimant upon all the evidence.

The COURT. I decline so to charge.

Mr. CARLIN. Exception.

The COURT. The question as to what is a substantial degree of filth here, is one for the jury.

Mr. CARLIN. I except.

The COURT. You may retire.

UNITED STATES v. ABBOTT BROS. CO.

(District Court, N.D. Illinois, May 4, 1916)

N.J. No. 4842

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.[94]

The United States attorney filed an information against the Abbott Bros. Co., alleging shipment from the State of Illinois into the State of Ohio, of a quantity of "Abbott Bros. Rheumatic Remedy," which was misbranded.

Misbranding of the article was alleged in the information for the reason that certain statements regarding the therapeutic or curative effects thereof, appearing on the carton enclosing the bottles containing the article, on the labels on the bottles, and included in a booklet accompanying the article, were false and fraudulent in that the same were applied to the article knowingly and in reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to the purchasers thereof, and create in the minds of purchasers thereof the impression and belief, that it was in whole or in part composed of, or contained, ingredients or medicinal agents effective, among other things, as a remedy for rheumatism of every form and stage, for inflammatory rheumatism, for sciatica, for acute

[94] Affirmed, *Abbott Bros. Co.* v. *United States*, p. 831, *post*.

rheumatism, for all uric-acid diathesis, for all uric-acid troubles, and for eczema, and as a cure for sciatica, gonorrheal rheumatism, acute inflammatory rheumatism, rheumatoid arthritis, inflammatory rheumatism, and Bright's disease, when, in truth and in fact, it was not in whole or in part composed of, and did not contain such ingredients or medicinal agents.

The case having come on for trial before the court and a jury, the following charge was delivered to the jury:

ANDERSON, *District Judge.* Gentlemen of the jury: This is a criminal case, and in this case you are the judges of the evidence, the weight of the evidence, and the credibility of the witnesses. It is your exclusive province to determine what the facts are, but you are bound by the law as it is given to you by the court. During the course of the trial defendant's counsel objected to some statements made by the court in colloquy between court and counsel, or in ruling upon some evidence as to questions of fact. You will understand, gentlemen of the jury, that you are not bound by any statement that the court may make as to the facts in this case, but, as I have stated, you are the exclusive judges of the facts. If, in the course of these instructions, the court should make any statement of fact, that statement is not made, will not be made for the purpose of binding your judgments, controlling your minds, but only for the purpose of assisting and aiding you in coming to a correct conclusion upon the facts.

Now, Congress has forbidden the transportation of drugs in interstate commerce which are misbranded, and it is defined in the law which prohibits transportation, what that misbranding shall consist in. If a person transports in interstate commerce an article which is misbranded, as I shall define to you, the law says he or, in this case it, the defendant in this case being a corporation, shall be guilty of a misdemeanor and shall be fined not to exceed $200. Now, this statute says that it shall be an offense, a misdemeanor, to ship in interstate commerce any drug which is misbranded, it says for the purpose of this act an article shall be deemed to be misbranded in case of drugs if its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent. The word "therapeutic" means specifically the same as the word "curative." "Therapeutic" means pertaining to the healing or curative therein. You will understand it best in determining the questions here, the word "therapeutic" practically means the same as "curative." This statement, as you will see, in order to subject the defendant to a successful prosecution, should be false and fraudulent. The false statement needs no definition. A false statement is a statement which is not true. A fraudulent statement is a statement which is not true and which is made for the purpose of misleading some one—made for the purpose of gaining some advantage. Now, in this case the charge is made by an information by the district attorney; it is in one count. It charges that the defendant, a corporation, did on a certain day in November 1913, I believe—January 1913—the defendant shipped in interstate commerce 12 dozen, I believe it was, of bottles of a certain article, describing it. It sets forth that on the label and within

the package in which this article was packed there were certain statements made with regard to the curative and therapeutic effects of this so-called medicine. It is not necessary for me to read to you this information, as you will be allowed to take it with you to the jury room and can read it there, nor is it necessary for me now to read over to you the statements which are relied upon by the Government to make up this case—they are contained in the information and are upon the cartons and the bottle, which will go out with you if you desire, and you can then see just what they are.

Now, this information proceeds after setting out the fact that this shipment was made and that the carton and bottle, or the package contained in it, and the bottle contained on it certain labels, certain statements in the label and in the package, [and] avers that these statements were false and fraudulent in this, that the same were applied to said article knowingly, and in reckless and in wanton disregard of truth or falsity so as to represent falsely and fraudulently to the purchasers thereof, and create in the minds of purchasers thereof an impression and belief that it was in whole or in part composed of or contained ingredients or medicinal agents effective, among other things, as a remedy for rheumatism of every form and stage, and effective as a remedy for inflammatory rheumatism, and effective as a remedy for sciatica, and effective as a remedy for acute rheumatism, and effective as a remedy for all uric-acid diathesis, and effective as a remedy for all uric-acid troubles, and effective as a remedy for eczema; when, in truth and in fact, said article was not, in whole or in part, composed of, and did not contain, ingredients or medicinal agents effective, among other things, as a remedy for rheumatism of every form or stage; or effective as a remedy for inflammatory rheumatism; or effective as a remedy for sciatica; or effective as a remedy for acute rheumatism; or effective as a remedy for all uric-acid diathesis; or effective as a remedy for all uric-acid troubles; or effective as a remedy for eczema.

Now, to these things there has been entered a plea of not guilty, and that makes the issue which you are to try; and upon that issue, before the Government can ask a verdict at your hands it must establish all the material averments of the information beyond all reasonable doubt. There has been filed in this case a stipulation which relieves you of determining some of the facts put in issue by this plea. It has been admitted here before you that the shipment was made as averred of the articles as averred in interstate commerce at the time and in the place averred in the information so that with that stipulation in the record it leaves for you to determine simply these two questions:

1. Was there any statement within this package, or upon the label attached to this article, which was false; and

2. Was that statement, was such statement, if false, fraudulent?

If you find that the statement was false and fraudulent both, then your verdict should, of course, be guilty. If you should find that the statement was not false, then you need go no further, because it must be false and fraudulent. If you determine that the statement or any statement within this package or on this label is false, then you will proceed to consider whether or not it was fraudulent.

Now, you will notice that the statute does not require or provide that in order to make a defendant amenable to its provisions that every statement made in the label or in its packing, that its package or on the label shall be false or fraudulent, if its package or label shall bear or contain any statement regarding the curative or therapeutic effect of said article, or any of the ingredients or substances contained therein, which is false and fraudulent, it shall be misbranded within the meaning of this act.

So you will proceed to determine, gentlemen of the jury, first, whether or not the statements which are on the label and contained in the packages which were shipped, as the stipulation shows, were false, and if you determine that they were false, then you will proceed to determine whether they were fraudulently named; that is, made for the purpose of gaining some advantage, monetary or otherwise—in this case, of course, money.

In a criminal case a defendant is presumed to be innocent until he is proven guilty beyond all reasonable doubt, and this presumption of innocence remains with him throughout the trial; with it throughout the trial in this case, and before the Government can ask the jury to return a verdict of guilty, it must remove that reasonable doubt and overcome that presumption of innocence by proof beyond a reasonable doubt. A reasonable doubt, gentlemen of the jury, is what the term implies. It means a doubt for which a reason can be given. It is not a speculative or captious doubt, it is not a doubt conjured up by your own ingenuity or by the ingenuity of counsel, but it is a reasonable, substantial misgiving generated by the evidence or the want of it. As I have said, you are the judges of the evidence, the weight of the evidence, and the credibility of the witnesses. In determining what weight you shall give to the testimony of any witness you should take into consideration his manner, bearing upon the witness stand, his knowledge or want of knowledge of the things about which he testifies, his intelligence or his want of intelligence, and his interest or his want of interest in the result of the suit. Many of the witnesses who have testified here are what are known in law as expert witnesses—because all men cannot know about all things, and because some men by studied examination learn about things which the average man does not know, it is permissible for persons who are schooled in certain matters and branches of learning to state their conclusions and express their opinions for the guidance and assistance of juries in investigations of fact. Expert evidence is often spoken of as opinion evidence, and it is opinion evidence. When a man has devoted years of study to a science or a branch of learning, and has become proficient in that branch, it is of assistance to juries and to average men to have their opinions upon certain questions of fact about which the witness is informed and about which the jurors ordinarily are not informed. Now, when you come to determine what weight you will give to the testimony of an expert witness, you will apply the same rules that you will apply to any other witness so far as they are applicable. In other words, you will inquire what interest, if any, the witness has in testifying in the case, what his knowledge or opportunities are for knowing the things about which he testifies, what his opportunities and quali-

fications are for expressing the things which he is allowed to express upon the witness stand, and when you come to consider the testimony of what are not properly considered expert witnesses, but non-expert witnesses and average men. The man who follows his trade of blacksmith, barber, or farmer, or lawyer, for that matter, when it comes to medicine and he states upon the witness stand that he had a certain disease and that he took a certain remedy, and that it cured him, in determining what weight you will give to his testimony you will consider what knowledge he has upon the subject, what he knows, what particular investigation or experience—investigation he has made or experience he has had which will enable him to say to you that he had a particular disease or what he knows about medicine or the curative effects of medicine whereby he can state to you that a certain thing that he took effected a certain remedy; and when you are to determine whether or not this medicine will or will not do things which are claimed for it, and you are weighing the testimony on the one side of experienced and learned men who have given their lives to the study of this question, giving consideration to their testimony in determining what weight you will give to it when you come to considering it to the testimony of witnesses who have never studied such subjects and have had no opportunity to become acquainted with such subjects, you will then decide what weight you will give to the opinions which they express as to what afflictions they were suffering from and as to what effect, if any, the medicine which they took had upon those afflictions.

You will also understand, gentlemen of the jury, in our system of jurisprudence the unsworn testimony—statement of a third party—is no evidence, and you will not give weight to the statements made by many witnesses upon the stand, that Dr. So-and-so said he had rheumatism. Dr. So-and-so is not here upon the witness stand, and that is the unsworn statement of a third party and is hearsay evidence and is not regarded as of weight in a court like this.

Now, you will take this case, gentlemen of the jury, weigh the evidence in the light of the instructions which I have given to you. If you, after having considered this evidence, weighed and compared it in the light of the instructions which I have given to you, have a reasonable doubt as to the guilt of this defendant, it is your duty to return a verdict of not guilty. But, if upon full consideration you determine that the Government has established the averments of the information beyond a reasonable doubt as defined to you, it is your duty to return a verdict of guilty. A good deal of evidence has been allowed to go before you upon the question of good faith—ordinarily what somebody said to the defendant or what the defendant said to somebody else is not evidence, but where there comes a question in the case as to whether or not a defendant, and in this case the defendant's officers have acted in good faith, then the information that has come to him, whether it be reliable or not and which he claims to have acted upon becomes pertinent for the jury to consider. Now, the president of this defendant has taken the witness stand and testified as to the various persons who have told him that they have taken his medicines and of the curative effects

it has had, and that evidence has been allowed to go to you, that bearing upon the question whether he honestly believed that this medicine could do the things which are claimed for it. In determining, gentlemen of the jury, the question of the good faith of the defendant you will take into consideration the fact that the president of this organization, the only officer who has appeared here and testified here for it, who himself says he originated the manufacture of this thing and has superintended it throughout the course of this business—he himself says that he is neither a physician nor a chemist, that he has never studied medicine nor the practice of it, that he has never studied chemistry nor the science of chemistry, and when you are asked to find that he acted in good faith in selling to persons who supposed themselves to be afflicted with certain diseases, this so-called remedy, you will take into consideration the fact that he himself admits that he is neither a physician nor a chemist, and bear those things in mind, as well as the other circumstances in the case, determine whether or not if you find that these statements were not true they were made either knowing them to be untrue or with such a reckless disregard of the truth as to amount to fraud.

You will have nothing to do with the punishment in this case if you find the defendant guilty. If you find the defendant guilty the duty of inflicting the punishment which can not be anything but a fine not to exceed $200, is imposed upon the court. You have nothing to do except to determine the simple question whether or not the defendant is or is not guilty. Forms of verdict will be provided to you. If you find that the defendant is guilty the form of your verdict will be: We, the jury, find the defendant guilty as charged. If you find the defendant not guilty the form of your verdict will be: We, the jury, find the defendant not guilty as charged in the information. The verdict is signed by all the jurors.

The COURT. Any suggestion?

Mr. ANDERSON. If Your Honor please, I do not think the fact as to what constitutes fraud was brought out sufficiently. The court instructed the jury as I understood it, that fraud is where the proposition was false and was put out to mislead the public.

The COURT. Knowingly; I intended to use that word.

Mr. ANDERSON. And, further, the proposition as the charge now stands, I believe that the jury are instructed to disregard all statements as to what physicians may have told the witnesses, although they told that to Mr. Abbott, I think.

The COURT. Except as bearing upon the question of good faith.

Mr. DICKINSON. Your Honor, in stating the charge, made no refcrence to statement in the pamphlet.

The COURT. I said statement on the label; the charge is specific. It is so understood, gentlemen of the jury, the statement in the package or on the label are to be considered by you statements in the package as well as on the label.

You have no exceptions?

Mr. ANDERSON. None further than I have stated and which you corrected.

UNITED STATES v. SIMON ET AL.

(District Court, E.D. Pennsylvania, May 10, 1916)

N.J. No. 4979

Information charging violation of the Food and Drugs Act. On motion to quash. Motion denied.

DICKINSON, *Judge*. The district attorney, in his official capacity, instituted proceedings against the defendant for a violation of the food and drugs statute through and by an information. The defendant has moved to quash the proceedings because, as is averred, they did not in actual fact have the previous sanction of an allowance by the court. In every proceeding, whether criminal or civil, before the cause can be determined by a court and judgment go against the defendant, the court must have jurisdiction of the subject matter and of the person of the defendant. The first is necessary because the court cannot proceed to render judgment unless vested with the lawful power and authority to do so. The second is necessary in order to meet the requirement of justice that both sides shall be heard. Although, therefore, jurisdiction of the subject matter may exist, some process must be resorted to in order to bring the defendant into court. This process, it is clear, must be a lawful process in the sense that it must be such as the law recognizes as sufficient to justify the finding that the parties whose rights are to be adjudged are before the court with the opportunity to be heard. Hence we have provisions made for forms of writs and the manner of service. The established practice of the courts supplies us with information of what these provisions are. The sanction or authority for some of them is to be found in statutes; for others their accepted usage in a long-established practice or in the recognition of the inherent power of the courts to adopt and issue appropriate writs of process. In criminal procedure against individuals several modes of bringing the defendant to trial have come to be well known and accepted as usual and because of this, regular. They are all followed by a trial in open court. One is by a complaint, followed successively by a warrant of arrest, a preliminary hearing before a magistrate, and an indictment by a grand jury. Another is by the presentment of a grand jury followed by the issuance of a bench warrant without the preliminary complaint and hearing. Still another is an information emanating from the official representative of the sovereign power in lieu of the other procedure preceding the indictment. In the course of time some of these processes, although recognized as lawful in the sense of being authorized by law, were, or were thought to be at least, fraught with the possibility of abuse resulting in oppression. Out of this sprang the provisions of the Constitution of the United States and like provisions of the constitutions of different States. The practice of the courts must, of course, yield to these mandates. The practice followed in the instant case must therefore meet these two tests. It must be in accord with recognized procedure and it must not be within the inhibitions of the Federal Constitution.

The legal literature of the subject supplies us with a rich mine of learning, an opening into which is afforded by the opinion in *Weeks*

v. *United States*, 216 Fed. Rep. 292. Into this, however, we need not delve further than to extract the fact that prosecutions by information have long had a recognized place in criminal procedure. This narrows the inquiry into the constitutional provisions. It is clear that they are directed against arrests and seizures, and because of this have no application to the case before us. In form, informations proceed with the leave of court. Whether this leave is made formal or actual is a matter of practice to be regulated by the courts. Actual leave may be exacted, or it may be permitted to be assumed, unless and until challenged. The latter we think to be the established practice, and to be on the whole the better practice, because it leaves the propriety of the proceedings to be determined on its merits. The distinction between proceedings in which the sovereign is directly concerned and those which directly concern private persons is of doubtful practical value. It narrows and limits the control of the courts over its process by shifting the inquiry from the broad one of whether the proceeding should go on to a narrow inquiry into the mere nature of the offense charged.

The practice adopted, as we are informed, in the Western District of this circuit of requiring actual leave before permitting informations to be filed presents certain advantages, as does the practice followed in other jurisdictions of permitting leave to be assumed until challenged, but each comes in the end to be the same.

We find no abuse of process in the present case and no reason to revoke the leave, by virtue of which the information purports to have been filed.

The motion to quash is denied.

UNITED STATES v. TUBERCLECIDE CO.

(District Court, S.D. California, May 15, 1916)

252 Fed. 938; N.J. No. 5616

Information alleging violation of section 2 of the Food and Drugs Act. Trial before the court. Judgment for defendant.

On May 15, 1916, the United States attorney for the Southern District of California, acting upon a report by the Secretary of Agriculture, filed in the District Court of the United States for said district an information against the Tuberclecide Company, a corporation, Los Angeles, Calif., alleging shipment by said company, in violation of the Food and Drugs Act (act June 30, 1906, ch. 3915, 34 Stat. 771), as amended (act Aug. 23, 1912, ch. 352, 37 Stat. 416), on or about August 25, 1914, from the State of California into the State of Arizona of quantities of an article labeled in part "Tuberclecide," which was misbranded.

It was alleged in substance in the information that the article described as "Tuberclecide" was misbranded for the reason that certain statements appearing on the labels falsely and fraudulently represented it to be effective as a remedy for tuberculosis (or consumption), and effective when used in connection with "Metablitone" as a reliable treatment for tuberculosis, and effective when used in connection with the plasters accompanying said articles as a

remedy for tuberculosis, and effective when taken in doses of 14 drops in the capsules accompanying said articles as a remedy for tuberculosis, when, in truth and in fact, it was not so effective when used as described, or when used in connection with any plasters, or when taken in any quantity in any capsules or in any other manner. It was alleged in substance that the article was misbranded for the further reason that certain statements included in the circular accompanying the article falsely and fraudulently represented it to be effective as a remedy, reliable treatment, and cure for tuberculosis, and also to be effective as a remedy, reliable treatment, and cure for tuberculosis when used in connection with the tonic, when taken in number O capsules, and when used in connection with the chest pads, when, in truth and in fact, it was not so effective when used as described, or when taken in any capsule, or when used with any chest pads.

TRIPPET, *District Judge* (orally). This action is brought under the paragraph denominated third, of section 8 of the Food and Drugs Act, approved June 30, 1906. That third paragraph reads as follows:

> If its package or label shall bear or contain any statement design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein which is false and fraudulent

it shall be deemed misbranded within the meaning of the act.

The action is one alleging that this shipment in interstate commerce contained a misbranding under the paragraph quoted. It is necessary for the Government to establish that the package or label was both false and fraudulent. The word "Tuberclecide" is used, and that is claimed to be a misbranding. The word "Tuberclecide" is a coined word. It has no meaning aside from the meaning which is given to it by the people that coined it and put it out. The evident purpose of the word and of the representations accompanying the word, is to indicate that it is a remedy or cure for tuberculosis. The representations do not go any further, as I understand it, than to assert that it is a remedy for tuberculosis. Now, let us consider first whether or not this thing is false. I want it distinctly understood that I have not decided, and will not decide, because it is not necessary, that this medicine will cure or will not cure, that it will remedy or will not remedy, tuberculosis. It is not necessary for me to decide that it is or is not a remedy for it, and I am not going to decide that. I may say, however, that that is one of the things which it was necessary for the Government to prove—that the claims made for this medicine were false.

The Government produced physicians, the most eminent in this city, graduates of the best colleges, who testified upon the subject, and I take it from their testimony that they conclude that there is no cure, in the sense in which that word is understood, for tuberculosis; that there is no specific remedy for it. In that connection, however, I do not construe this medicine as being advertised as a specific. I think it is fair to say that they do not advertise that it is a specific for consumption. The physicians brought by the Government testified that creosote carbonate has been discarded, as a remedy for tuberculosis, for a great many years. Creosote carbonate is one of the ingredients of this medicine. According to the analysis

given by the chemist testifying on behalf of the Government, that is the principal ingredient of this medicine. Now, the defense brings an equal number of physicians. So far as I know, they are regular physicians, of good repute, graduates from good colleges, who testify that creosote carbonate is used today as a remedy for tuberculosis. They not only do that, but they bring standard medical works, one printed this year, which say that it is used as a remedy for tuberculosis.

Aside from that, however, the Government produced a chemist who testified that he analyzed a bottle of the stuff, and it seems that he used practically all of the contents of the bottle to make the analysis; there is not a half a teaspoonful left in the bottle. He found certain things in this bottle. The man that got up this medicine testified that it had many other things in it, at least four more ingredients than the chemist gave. The Government offers no proof whatever that the testimony of that man is false. There is no proof offered on the subject, but I believe it is a fact that chemists cannot always tell what is in a mixture. It seems to me that if the Government claimed that this medicine did not contain the four other things which the man that manufactured it said it contained, it was up to the Government to produce that testimony. The Government has another quantity of this medicine and refused to produce it for the defense. I do not like that attitude.

Now, these physicians, on behalf of the Government, testified that a medicine containing the ingredients which the Government chemist testified this medicine contains, would have no remedial effect upon a consumptive. They were testifying about this medicine as analyzed by this chemist. They were not testifying about this medicine according to its true properties as proven by undisputed evidence in this case. There are four other ingredients in this medicine according to the undisputed testimony of the manufacturer. They do not say anything about the medicine as it is proven to be; that is, about the actual ingredients of the medicine. I repeat that I am not deciding that this stuff is a remedy or is not a remedy for tuberculosis.

In addition to proving that the statements are not true, the Government must show that they are fraudulent. Now, a man may make a statement that is not true, but if he believes it to be true, and is warranted by his information in making the statement, it is not fraudulent. What do these people do that are going to buy this formula and sell this medicine. They get physicians to examine patients that have been treated with it. I think they had four physicians to investigate it, and these physicians advised them that it was a remedy for tuberculosis. Aside from that, they bring three physicians here who say that they have prescribed this stuff to patients, and that it has proven itself by experience to be a remedy. The Government doctors never prescribed it to any person, while one of the witnesses for the defense testified that he had treated 3,000 patients with it, with good results. Do not these people representing defendant have a right to act upon that? Can anybody say that they willfully falsified anything in the face of that testimony? We all know from our own observations that doctors disagree. I have heard them disagree in making sworn statements in this court many

a time. Schools of physicians disagree. One school thinks that the other school does not know anything, and that they are practicing fraud and deception. Can it be fairly said that a man is practicing a fraud when he acts upon the advice of a physician, although other physicians disagree with him? Have we come to such a pass that fraud can be attributed to a man when he accepts the advice of a doctor, or several doctors, notwithstanding that other physicians may disagree with those whose advice he accepts? For my part, I cannot see why a man cannot act in perfectly good faith in following the advice of any doctor that he chooses to consult, if he acts with fair intelligence in getting that advice. The doctors that advised these people are all licensed physicians, and why could they not accept their advice?

Let me illustrate my idea of this case by a supposititious one. Take vaccine. Vaccine is a coined word. It means what the coiner of the word meant for it to mean; namely, that vaccine is a preventive of smallpox. Suppose a party should transport vaccine in interstate commerce under an advertisement that it was the only known remedy for preventing smallpox, and that it would prevent smallpox. Suppose the Government were to prosecute him under this statute. Suppose the Government could bring physicians who would testify that vaccine would not prevent smallpox; that it was not only not a preventive, but that it was positively injurious to those who used it. This is by no means an improbable presumption. Then the defense would bring in an array of physicians to testify that it would prevent smallpox. Would any court convict the man that shipped the article for fraud in misbranding it?

The prosecution in this case seems to want to make a point of the fact that the man who prepared the formula for Tuberclecide was not a licensed physician, nor a graduate of any college, although he did practice medicine for several years. Doctor Jenner, who discovered vaccine, did not do it by any scientific method. He discovered it from deduction from the fact that milkmaids did not have smallpox, or if they did have it at all, they had it only in a mild form. It did not take a graduate from any college, or a licensed physician, to make that deduction, and the same might probably be said concerning Tuberclecide.

I cannot see how these people were practicing a fraud in the face of the testimony in the case. They believed they were doing good.

The case will be dismissed.

UNITED STATES v. THE ATHLOPOROS CO.

(District Court, District of Connecticut, May 19, 1916)

N.J. No. 4834

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against The Athlophoros Co., a corporation, New Haven, Conn., alleging shipment by said company from the State of Connecticut into the State

of California of a quantity of an article labeled "Athlophoros" which was misbranded.

Misbranding of the article was alleged for the reason that the following statements regarding the therapeutic or curative effects thereof, appearing on the label (on label of bottle and on carton), to wit, "Athlophoros, Remedy for Sciatica, Gout, sick headache," and included in a circular or pamphlet accompanying the article, to wit, "It reaches the liver and kidneys, cleansing them from irritating substances, and restoring the organs to regularity and health. The unpleasant symptoms will soon pass off, leaving the patient free from neuralgia. For sick headache—Athlophoros has proved an absolute specific * * *. Our observation and experience warrant the positive claim that Athlophoros is an absolute cure for * * * Neuralgia wherever and whenever these diseases alone exist," were false and fraudulent in that the same were applied to the article knowingly and in reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to the purchasers thereof and create in the minds of purchasers thereof the impression and belief that it was, in whole or in part, composed of, or contained, ingredients or medicinal agents effective, among other things, as a remedy for sciatica, gout, and sick headache, for cleansing the liver and kidneys from irritating substances and restoring those organs to regularity and health, for curing neuralgia, and as a specific for sick headache, when, in truth and in fact, it was not, in whole or in part, composed of and did not contain such ingredients or medicinal agents.

The case having come on for trial before the court and a jury, the following charge was delivered to the jury:

THOMAS, *District Judge.* On the 14th of May 1915, the learned district attorney for the United States for this district filed a criminal information against the defendant, the Athlophoros Company, charging it with a violation of what is known as the Pure Food and Drugs Act. To this information the accused has pleaded not guilty. This puts in issue every material allegation contained within the information, and the burden of proof rests upon the Government to establish the truth of all those allegations beyond a reasonable doubt.

Section 8 of the Food and Drugs Act, as amended by the act of August 23, 1912, provides, with respect to the misbranding of drugs, as follows:

That the term "misbranded" as used herein, shall apply to all drugs, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular. That for the purposes of this act an article shall also be deemed to be misbranded, in case of drugs, if its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent. (The court here reviewed the charges in the information.)

Those are all of the important allegations of this information. As I stated, the defendant's plea of "Not guilty" puts the burden

of proof upon the Government to establish the truth of all of those allegations beyond a reasonable doubt.

The jurisdiction of the Federal court is invoked because the act of Congress is intended to reach an interstate shipment, and there is no question raised in this matter of the interstate shipment. The object of the act under which this prosecution is brought is to prevent the carrying in interstate commerce, that is, from one State to another, of drugs which are worthless and injurious when they are transported with false and fraudulent statements as to their curative or therapeutic effects, the object being to prevent credulous and ignorant people, and to protect the public generally, from having imposed upon them as medicine, things to be used as medicines, drugs which will not perform the functions which it is claimed they will perform, and to prevent people being injured by the use of harmful drugs. In this case it is claimed by the Government that this article is misbranded because the packages contain certain statements as to their curative or therapeutic properties which the Government claims are false and fraudulent.

Now, gentlemen, you have given very patient consideration to the extended arguments of able counsel in behalf of the Government and for this defendant, to both of whom you and I are indebted for their courtesy and their efforts to expedite this trial. Each one of them has, with much ability and free from the personalities which sometimes enter the trial of a long case, presented the evidence and their respective claims. Of course, it is now my duty to give you the principles of law which are applicable, and which you must carefully apply to that state of the case which you find true from the evidence. You are aware, doubtless, that your verdict, as does the verdict of every other jury, consists of two things—first, the truth as you find it; and second, the principles of law applicable to that truth. In that way you reach the result which we call a verdict. These principles of law affect either the whole or some particular feature of the case, and in any instance you are to bear them carefully in mind and diligently apply them wherever they are applicable.

Courts are established to administer the law and enforce its execution. The law is the only standard by which judges and jurors can be governed, and in considering your verdict you should be governed by the law as it is given you by the court, and by the evidence as you hear it from the witness stand. You have heard the evidence offered on both sides of this controversy. From that evidence you must decide what the facts are and what the truth is.

The attorneys have had a wide range of discussion. They have had complete freedom of argument before you upon all questions of fact and have asked you to draw certain inferences and conclusions from either conceded or proven facts. It is their privilege in the argument to criticize the evidence, the attorney for the Government to criticize the conduct of this defendant, and the attorney for the defendant to criticize the conduct of the Government and its witnesses, to attack the credibility of the witnesses. Arguments of counsel are not evidence, however, and only insofar as their respective claims are, in your opinion, supported by the evidence in the case should their claim receive consideration. You should arrive at your

verdict only after a cool, calm, careful, and scrutinizing consideration of all the evidence in the case.

In all criminal cases a person charged with crime, as is charged here by virtue of the provisions of this act, starts out at the threshold of the trial with the presumption in his favor that he is innocent of the crime with which he is charged. It is a humane provision of law, and it is based upon the theory that neither a jury nor the court shall presume that a person is guilty simply because he is charged with a violation of a criminal statute, but, on the contrary, the law presumes that all persons are honest and righteous in their dealings with their fellow men. So that if a criminal information has been filed by the district attorney, yet that information does not take away from this defendant the presumption of innocence; that presumption remains with it throughout the trial and it is only removed when you, as a result of the conscientious consideration which you are required to give to the evidence in this case, conclude that the defendant is guilty of the crime with which it is charged. Moreover it is a fundamental rule of law that the Government which makes this charge shall satisfy you of the guilt of the accused beyond a reasonable doubt.

Before we come to the questions particularly involved in this case I ought to and do remind and charge you that you, and you alone, are the sole judges of all questions of fact which arise here, and you are to determine those questions upon a careful consideration of all the evidence before you without direction or suggestion from the court as to what weight or value you should give to all or any part of the testimony, nor are you in any way to be governed in your conclusions by any opinion the court may express or even seem to express.

In analyzing testimony and drawing conclusions from it a juror must use all of his experience, his knowledge of human nature, his knowledge of human events, his knowledge of the motives which influence and control human action, and test the evidence in the case according to such knowledge and render his verdict accordingly.

It is properly within your province, in listening to the testimony of witnesses, to observe their manner and bearing, their intelligence, their character, their means of knowledge, and to take into consideration any interest or bias or prejudice any witness may have or entertain, and reconcile so far as possible any conflicting testimony. In weighing the evidence and determining the credibility of the witnesses, and each of them, you should look to the manner and demeanor of each witness, to the readiness and willingness, or tardiness or unwillingness, if any, in answering; to the consistencies or inconsistencies of his testimony; to the interest or want of interest, if any, upon the one side or the other; to the witness' means of knowledge and opportunity for knowing the facts he testified to and professes to know and understand; to the reasonableness or unreasonableness, the probability or improbability of the facts and circumstances related by the witnesses when considered in connection with all the facts and circumstances in evidence before you, and having thus carefully considered all of these matters you must fix the weight and the value of the testimony of each and every witness and the evidence as a whole.

In considering this case and in drawing your conclusions, you may be guided to some extent by the testimony of expert witnesses. I therefore deem it necessary to instruct you with reference to the evidence of such witnesses. An expert witness is one who is skilled in any particular art, trade, or profession, being possessed of peculiar knowledge concerning the same, acquired by study, observation, and practice. The jury is not necessarily bound by expert testimony, but such testimony should be considered by you in connection with all the other evidence in the case. Their evidence is subject to your consideration, to your supervision, and to your judgment. Such testimony is to be taken and treated by you like the evidence of other witnesses; and their testimony, their opinions, are subject to the same rules of credit or discredit as the testimony of other witnesses, and are not necessarily conclusive upon you. Whether the matters testified to by them are facts, whether they are true or false, and the value of their opinions, is to be determined by you and you alone; and you will carefully consider and examine their testimony in this case, subject to the same rules of credit and disbelief as the testimony of other witnesses.

The only issue of fact in controversy in this case, gentlemen, which must be determined by you, is whether the product described in the information was misbranded. The test of this misbranding is what the statements appearing on the label mean to the ordinary man, and when I refer to the label I mean likewise the circular or pamphlet which was enclosed in the package as it was transmitted in interstate commerce. In other words, what the ordinary man reading the label would understand as to what properties Athlophoros had or the curative or therapeutic effects it had. I will not attempt to define or set out the various ailments or physical disabilities which it is claimed the statements contained that this drug would cure, but these diseases or physical ailments you will understand to be such diseases or ailments as the public generally understood and the generally accepted meaning of those drugs by the public, and you are not confined in your deliberations in applying to these diseases the technical medical definition or term which has been scientifically limited by some of the witnesses. I have indicated the generally accepted understanding of the public as to what these terms mean and what physical disabilities they include, and you will apply the curative or therapeutic effect of the drug to the definition as generally understood. And you will also understand that it is not only necessary for the Government to show beyond all reasonable doubt that the statements that were made were false in fact and that the drugs did not have the curative or therapeutic effects that the statements attributed to them, but the Government must further prove beyond a reasonable doubt that the statements are fraudulent and that the defendant knew them to be false, and that they were falsely made with the intent to deceive the public. If you find they were not false, then your inquiry is ended; if you find they were false, you have to go on further and find they were fraudulently—that they were fraudulently made with intent to deceive the public or induce the purchaser to buy them because of such statements. If you believe that these statements were false and the defendant knew they were false and made them with the intent to deceive the purchaser, or if, acting as an ordinary pru-

dent man would act under like circumstances, he should have known that the statements were false, then you will find that the statements were falsely made as charged in the information, and under such circumstances your verdict would be guilty. On the other hand, if you have a reasonable doubt as to whether the statements were false or whether they were fraudulently made, then it would be your duty to acquit this defendant. So that the mere falsity of the statements would not be sufficient to justify you in returning a verdict of guilty, but in addition to that it requires the further proof that the defendant made them knowingly and with intent to deceive and defraud.

It will not be necessary for me to enter into any definition of these various terms, but suffice it to say that a fraudulent statement is a statement which is recklessly made without knowledge of its truth, but which is really false, and an unqualified statement of that which one does not know to be true, or has no reasonable ground to believe to be true, is equivalent to a statement of that which one knows to be false. This phrase "false and fraudulent" must be taken with its accepted legal meaning, and thus it must be found that the statement contained in the package was put there to accompany the goods with actual intent to deceive—an intent which may be derived from the facts and circumstances, but which must be established. That false and fraudulent representations may be made with respect to the curative effect of substances is of course obvious. The owner has the right to give his views regarding the effect of his drugs. But state of mind is itself a fact and may be a material fact, and false and fraudulent representations may be made about it; and persons who make or deal in substances or compositions, alleged to be curative, are in a position to have superior knowledge and may be held to good faith in their statements.

In determining whether the defendant knew the statements were false and fraudulently made, you will take into consideration all of the evidence which was offered and admitted surrounding the placing of this drug on the market, which led to placing it in interstate commerce as charged in the information, and you will consider all of the testimony with regard to these statements that is before you from the inception, dealing or treating with this drug up to the time of the filing of this information, May 22, 1915, and from all of these statements as disclosed by the evidence bearing on the conduct of the defendant with relation to this drug, determine whether it acted as an honest, fair-minded, average man would act under like circumstances, and whether it had reason to believe, acting as a reasonably prudent man would act under such circumstances, and that Athlophoros did contain the curative or therapeutic effects which are attributed to it in the various statements. In this case a number of physicians have testified, among whom, if I remember correctly, are some specialists. A chemist or analyst testified regarding the ingredients, about which there has been no dispute. The testimony of the Government is confined largely to expert medical evidence, except the testimony of the chemist or analyst. They have testified with relation to the sodium salicylate contained in this drug as disclosed by the evidence, and the curative and therapeutic effect of sodium salicylate, based upon their experience as practitioners and likewise upon their reading in medical journals and treatises by emi-

nent doctors. The defendants claim to have established the value of sodium salicylate in rhemuatism, and I take it there is no contention about its value in what is known as acute articular rheumatism. The defendant further claims in that connection that these various diseases that are enumerated on the carton and in the literature are what are known as kindred ailments. If you find from the evidence that these various diseases enumerated on this carton and bottle are kindred ailments, kindred to rhemuatism—if you find that to be true. you may take that into consideration as bearing upon the question of good faith or bad faith.

Perhaps at this point I ought to call your attention to this question of testimonials. You will understand that I said to you yesterday that they were not entered as proof of the truth contained in those letters, but merely bearing upon this charge or question of fraud—question of intent. If they received such letters as those, assuming those letters to be true, it is claimed that it is an evidence of the fact that they were acting in good faith in continuing their business right down to the date of this information and labeling their article as they have labeled it.

It is not my purpose to go into an analysis of the testimony or give you a synopsis of my recollection of it. It has been reviewed by counsel for both sides, and while you are not bound by their recollection of it, you will give their statements, their version of it, such consideration as you think it is entitled to receive.

In this case, while the Government must prove beyond every reasonable doubt the material allegations of the information, this need not be done with relation to every disease which is named upon this label or in the statement which is included within this package as it was transmitted in interstate commerce. If you believe from the evidence that this drug will cure many of the diseases which are named on the label or package but will not cure others in which it is alleged that it would effect a cure, and believe beyond a reasonable doubt that there are some ailments named upon the label or the literature or statement enclosed with the package, as charged in the information, concerning which the statements were false and known to be false at the time they were made, and were made for the fraudulent purpose, as charged in the information—if you are so convinced beyond a reasonable doubt of the falsity of the statements with relation to one of the diseases—then it would be sufficient to support a verdict of guilty; and if you are so convinced, your duty would be to return a verdict of guilty. But if you have a reasonable doubt as to all of these, then your duty would be to return a verdict of not guilty.

Throughout the charge I have told you that the Government must prove the material allegations of the information beyond a reasonable doubt. By reasonable doubt it is not meant that the proof should establish this defendant's guilt to a certainty, but merely that you should not convict unless from the evidence you find the defendant guilty beyond a reasonable doubt. Speculative notions or possibilities arising upon mere conjecture, not arising nor deducible from the proof or from the want of it, should not be confounded with reasonable doubt. A doubt suggested by the ingenuity of counsel, or by your own ingenuity, not legitimately warranted by the evidence,

or the want of it, or one born of merciful inclination to permit the defendant to escape the penalty of the law, or one prompted by sympathy, is not what is meant by reasonable doubt. It is an honest, substantial misgiving, generated by the proof or want of it; that is, such a state of the proof as fails to convince your judgment or conscience and satisfy your reason of the guilt of the accused. If the evidence, when carefully examined, weighed, compared, and considered, produces in your minds a settled conviction or belief of the guilt of the defendants—such an abiding conviction that you would be willing to act upon it in the most weighty and important affairs of your own lives—you may be said to be free from any reasonable doubt and may find a verdict in accordance with that conviction or belief.

I have been requested by the defendant to make certain charges. I will take them up by paragraphs.

First, I charge as requested. I think I have substantially covered it.

First. This offense is that the defendant misbranded its label and circular accompanying the remedy by statements as alleged in the information regarding the curative or therapeutic effects of the medicine which, it is claimed, were false and fraudulent. If, then, the statements were not false and fraudulent, no crime has been committed and the law has not been violated. In other words, the gist of this action is that the statements were both false and fraudulent.

Second. In deciding whether they are false and fraudulent, I would instruct you that the expression "false and fraudulent" has a well-defined meaning in the criminal law. The word "false" means untruthful in its ordinary sense. The word "fraudulent", as used in this criminal statute and as a very material word in the allegation in this information, which charges the defendant with fraudulently representing certain things, is given its legal meaning, and that is that the defendant deliberately planned, and it was its purpose and intent, to deceive the public. In other words, that it made such false statements regarding the curative or therapeutic effect of the remedy, well knowing that the remedy contained nothing in its ingredients which could operate beneficially and as a remedy for the various ailments it pretended to benefit, and this for the sole purpose of deceiving the public.

Third. That the statements as to the curative or therapeutic effects of this remedy must be both false and fraudulent, within the meaning I have described. And in this connection I would inform you that it is well recognized that the curative properties of articles purveyed as medicinal preparations are matters of opinion largely, and the contrariety of views among medical practitioners and the conflict between the schools of medicine are imperfectly described. If you should find from the evidence that the defendant made its statements based upon an honest opinion arising out of this contrariety of views of medical practitioners and this conflict between the schools of medicine regarding the curative and therapeutic effect of the ingredients, you may take those facts into consideration as bearing upon the good faith of the defendant and upon his honest intention to put out an article labeled with such statements as he honestly believed to be true,

and as bearing upon the question of fraudulent intent. With these variations I charge paragraph three.

Fourth. In order for you to find this defendant guilty of the offense charged, you must find that the statements of the curative and therapeutic effects of this remedy were a false representation of a fact; in other words, that in labeling the article as a remedy or cure as alleged it was nothing of the sort from any point of view. If you find that there is honest diversity of opinion among the medical profession and among schools of medicine upon the curative or therapeutic effect of the ingredients of the medicine, with reference to the diseases named, and this defendant acted upon this honest opinion, this evidence will then bear upon the question of whether it made any false statements and which were made fraudulently for the purpose of deceiving the public. Of course, if you find that it did not make them fraudulently, it would then be your duty to acquit the defendant.

Further, that the use of the word "fraudulent" in this prosecution requires the Government to prove such a state of facts regarding the properties of the remedy sold as alleged, which imply a knowledge on the part of this defendant that the medicine will not do the thing that is asserted on the label or circular. In other words, it must show that the so-called "remedy" is absolutely worthless as to its curative or therapeutic effect upon the ailments for which it is claimed, and this the Government must prove beyond a reasonable doubt. If the Government has not proved to you, beyond a reasonable doubt by facts and circumstances, that the remedy is absolutely worthless as to its curative or therapeutic effects upon the ailments or diseases claimed for it, or any one of them set out in the information, then you must find that the defendant is not guilty and render your verdict accordingly.

Further, that the word "fraudulent" is descriptive of the wrongful motive with which the statements are made, and it is the duty of the Government to satisfy you beyond a reasonable doubt that the statements were made with that wrongful motive for the purpose of deception. If, as I have said before, the motive was an honest motive, from all the facts and circumstances surrounding the preparation and sale of the remedy, due to the fact that there is a contrariety of views in the medical profession regarding the curative or therapeutic effect of the remedy, or due to any other fact in evidence, then your verdict must be for the defendant, for under such circumstances the statements cannot be held to be false and fraudulent.

I further charge you that in considering the question as to whether the statements alleged in the information are false and fraudulent, you are to consider not only the statements upon the carton but upon the bottle and in the circular, and all of them, and from the entire context you are to draw your conclusions whether or not they can be said to be false and fraudulent within the meaning I have described. If the statements alleged as false and fraudulent are matters only of opinion, taking them all as I have stated, based upon the contrariety of views of practitioners and schools of medicine as to the curative or therapeutic effect of the remedy employed, you should take this seriously into consideration as bearing upon the good faith or the bad faith of the defendant, as bearing upon the

defendant's honest belief that the statements on the carton and the literature were true and were not made with fraudulent intent.

Paragraphs 8 and 9 I must decline to charge. Eight I will charge in a modified form:

That you may take into consideration the statements upon the bottle and within the circular relative to the use of Athlo Tablets in connection with the Athlophoros, as an aid and as a part of the remedy, and when this bottle of Athlophoros was sold to the purchaser that Athlo Tablets was really an assential part of the remedy—all bearing again on its good intention.

The COURT. If you wish, Mr. Webb, you may have an exception to refusal to charge paragraph nine.

Mr. WEBB. Exception to the modification.

Mr. SPELLACY. The Government has no requests.

Gentlemen, you may retire to the jury room and when you have arrived at your verdict you will make it known by your foreman.

UNITED STATES v. COCA COLA CO.

(Supreme Court of the United States, May 22, 1916)

241 U.S. 265; N.J. No. 4801

Error to the Circuit Court of Appeals for the Sixth Circuit, affirming judgment of District Court for the Eastern District of Tennessee. Judgment reversed.[95]

Mr. Justice HUGHES delivered the opinion of the court.

This is a libel for condemnation under the Food and Drugs Act (June 30, 1906, ch. 3915, 34 Stat. 768) of a certain quantity of a food product known as "Coca Cola" transported, for sale, from Atlanta, Ga., to Chattanooga, Tenn. It was alleged that the product was adulterated and misbranded. The allegation of adulteration was, in substance, that the product contained an added poisonous or added deleterious ingredient, caffeine, which might render the product injurious to health. It was alleged to be misbranded in that the name "Coca Cola" was a representation of the presence of the substances coca and cola; that the product "contained no coca and little if any cola" and thus was an "imitation" of these substances and was offered for sale under their "distinctive name." We omit other charges which the Government subsequently withdrew. The claimant answered, admitting that the product contained as one of its ingredients "a small portion of caffeine," but denying that it was either an "added" ingredient, or a poisonous or a deleterious ingredient which might make the product injurious. It was also denied that there were substances known as coca and cola, "under their own distinctive names," and it was averred that the product did contain "certain elements or substances derived from coca leaves and cola nuts." The answer also set forth, in substance, that "Coca Cola" was the "distinctive name" of the product under which it

---

[95] Reversing *United States* v. *40 Barrels and 20 Kegs of Coca Cola*, p. 606, *ante*. For case in the lower court, *United States* v. *40 Barrels and 20 Kegs of Coco Cola*, see p. 239, *ante*.

had been known and sold for more than 20 years as an article of food, with other averments negativing adulteration and misbranding under the provisions of the act.

Jury trial was demanded, and voluminous testimony was taken. The district judge directed a verdict for the claimant (191 Fed. 431), and judgment entered accordingly was affirmed on writ of error by the Circuit Court of Appeals (215 Fed. 535). And the Government now prosecutes this writ.

First. As to "*adulteration.*" The claimant, in its summary of the testimony, states that the article in question "is a syrup manufactured by the claimant * * * and sold and used as a base for soft drinks both at soda fountains and in bottles. The evidence shows that the article contains sugar, water, caffeine, glycerin, lime juice, and other flavoring matters. As used by the consumer, about 1 ounce of this syrup is taken in a glass mixed with about 7 ounces of carbonated water, so that the consumer gets in an 8-ounce glass or bottle of the beverage, about 1.21 grains of caffeine." It is said that in the year 1886 a pharmacist in Atlanta "compounded a syrup by a secret formula, which he called 'Coca-Cola Syrup and Extract'"; that the claimant acquired "the formula, name, label, and good will for the product" in 1892, and then registered "a trade mark for the syrup consisting of the name Coca Cola" and has since manufactured and sold the syrup under that name. The proportion of caffeine was slightly diminished in the preparation of the article for bottling purposes. The claimant again registered the name "Coca Cola" as a trade mark in 1905, averring that the mark had been "in actual use as a trade mark of the applicant for more than ten years next preceding the passage of the act of February 20, 1905", and that it was believed such use had been exclusive. It is further stated that in manufacturing in accordance with the formula "certain extracts from the leaves of the Coca shrub and the nut kernels of the Cola tree were used for the purpose of obtaining a flavor" and that "the ingredient containing these extracts", with cocaine eliminated, is designated as "Merchandise No. 5." It appears that in the manufacturing process water and sugar are boiled to make a syrup; there are four meltings; in the second or third the caffeine is put in; after the meltings the syrup is conveyed to a cooling tank and then to a mixing tank where the other ingredients are introduced and the final combination is effected; and from the mixing tank the finished product is drawn off into barrels for shipment.

The questions with respect to the charge of "adulteration" are (1) whether the caffeine in the article was an added ingredient within the meaning of the act (sec. 7, subd. 5), and if so, (2) whether it was a poisonous or deleterious ingredient which might render the article injurious to health. The decisive ruling in the courts below resulted from a negative answer to the first question. Both the district judge and the Circuit Court of Appeals assumed for the purpose of the decision that as to the second question there was a conflict of evidence which would require its submission to the jury. (191 Fed. 433; 215 Fed. 540.) But it was concluded, as the claimant contended, that the caffeine—even if it could be found by the jury to have the alleged effect—could not be deemed to be an "added in-

gredient", for the reason that the article was a compound, known and sold under its own distinctive name, of which the caffeine was a usual and normal constituent. The Government challenges this ruling and the construction of the statute upon which it depends; and the extreme importance of the question thus presented with respect to the application of the act to articles of food sold under trade names is at once apparent. The Government insists that the fact that a formula has been made up and followed and a distinctive name adopted do not suffice to take an article from the reach of the statute; that the standard by which the combination in such a case is to be judged is not necessarily the combination itself; that a poisonous or deleterious ingredient with the stated injurious effect may still be an added ingredient in the statutory sense, although it is covered by the formula and made a constituent of the article sold.

The term "food" as used in the statute includes "all articles used for food, drink, confectionery, or condiment, * * * whether simple, mixed, or compound" (sec. 6). An article of "food" is to be deemed to be "adulterated" if it contain "any added poisonous or other added deleterious ingredient which may render such article injurious to health" (sec. 7, subd. 5 [96]). With this section is to be read the proviso in section 8, to the effect that "an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be adulterated or misbranded" in the case of "mixtures or compounds which may be now or from time to time hereafter known as articles of food, under their own distinctive names," if the distinctive name of another article is not used or imitated and the name on the label or brand is accompanied with a statement of the place of production. And section 8 concludes with a further proviso that nothing in the act shall be construed "as requiring or compelling proprietors or manufacturers of proprietary foods which contain no unwholesome added ingredient to disclose their trade formulas, except insofar as the provisions of this act may require to secure freedom from adulteration or misbranding." [97]

---

[96] Section 7, with respect to "confectionery" and "food," is as follows:

"SEC. 7. That for the purposes of this act an article shall be deemed to be adulterated:

* * * * * * *

"In the case of confectionery:

"If it contains terra alba, barytes, talc, chrome yellow, or other mineral substance or poisonous color or flavor, or other ingredient deleterious or detrimental to health, or any vinous, malt, or spiritous liquor or compound or narcotic drug.

"In the case of food:

"First. If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.

"Second. If any substance has been substituted wholly or in part for the article.

"Third. If any valuable constituent of the article has been wholly or in part abstracted.

"Fourth. If it be mixed, colored, powdered, coated, or stained in a manner whereby damage or inferiority is concealed.

"Fifth. If it contain any added poisonous or other added deleterious ingredient which may render such article injurious to health: *Provided,* That when in the preparation of food products for shipment they are preserved by any external application applied in such manner that the preservative is necessarily removed mechanically, or by maceration in water, or otherwise, and directions for the removal of said preservative shall be printed on the covering or the package, the provisions of this Act shall be construed as applying only when said products are ready for consumption.

"Sixth. If it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal, or one that has died otherwise than by slaughter."

[97] Section 8 provides:

"SEC. 8. That the term 'misbranded,' as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingre-

In support of the ruling below, emphasis is placed upon the general purpose of the act which it is said was to prevent deception, rather than to protect the public health by prohibiting traffic in articles which might be determined to be deleterious. But a description of the purpose of the statute would be inadequate which failed to take account of the design to protect the public from lurking dangers caused by the introduction of harmful ingredients, or which assumed that this end was sought to be achieved by simply requiring certain disclosures. The statute is entitled "An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors," etc. In the case of confectionery, we find that it is to be deemed to be adulterated if it contains certain specified substances " or other ingredient deleterious or detrimental to health." So, under section 7, subdivision 6, there may be adulteration of food in case the article consists in whole or in part of " any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal, or one that has died otherwise than by slaughter." In *United States* v. *Lexington Mills Co.*, 232 U.S. 399, 409, it was said that—

> the statute upon its face shows that the primary purpose of Congress was to prevent injury to public health by the sale and transportation in interstate commerce of misbranded and adulterated foods. The legislation, as against misbranding, intended to make it possible that the consumer should know that an article purchased was what it purported to be; that it might be bought for what it really was and not upon misrepresentations as to character and quality. As against adulteration, the statute was intended to protect the public health from possible injury by adding to articles of food consumption poisonous and deleterious substances which might render such articles injurious to the health of consumers.

See also *United States* v. *Antikamnia Co.*, 231 U.S. 654, 665; H.R.Rept. No. 2118, 59th Cong., 1st Sess., 6–9. It is true that in

---

dients or substances contained therein which shall be false or misleading in any particular. * * *

" That for the purposes of this Act an article shall also be deemed to be misbranded:

* * * * * * *

" In the case of food:

" First. If it be an imitation of or offered for sale under the distinctive name of another article.

" Second. If it be labeled or branded so as to deceive or mislead the purchaser, or purport to be a foreign product when not so, or if the contents of the package as originally put up shall have been removed in whole or in part and other contents shall have been placed in such package, or if it fail to bear a statement on the label of the quantity or proportion of any morphine, opium, cocaine, heroin, alpha or beta eucaine, chloroform, cannabis indica, chloral hydrate, or acetanilide, or any derivative or preparation of any such substances contained therein.

" Third. If in package form, and the contents are stated in terms of weight or measure, they are not plainly and correctly stated on the outside of the package.

" Fourth. If the package containing it or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein, which statement, design, or device shall be false or misleading in any particular: *Provided,* That an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be adulterated or misbranded in the following cases:

" First. In the case of mixtures or compounds which may be now or from time to time hereafter known as articles of food, under their own distinctive names, and not an imitation of or offered for sale under the distinctive name of another article, if the name be accompanied on the same label or brand with a statement of the place where said article has been manufactured or produced.

" Second. In the case of articles labeled, branded, or tagged so as to plainly indicate that they are compounds, imitations, or blends, and the word 'compound,' 'imitation,' or 'blend,' as the case may be, is plainly stated on the package in which it is offered for sale: *Provided,* That the term 'blend' as used herein shall be construed to mean a mixture of like substances, not excluding harmless coloring or flavoring ingredients used for the purpose of coloring and flavoring only: *And provided further,* That nothing in this Act shall be construed as requiring or compelling proprietors or manufacturers of proprietary foods which contain no unwholesome added ingredient to disclose their trade formulas, except in so far as the provisions of this Act may require to secure freedom from adulteration or misbranding."

executing these purposes Congress has limited its prohibitions (*Savage* v. *Jones*, 225 U.S. 501, 529, 532) and has specifically defined what shall constitute adulteration or misbranding; but in determining the scope of specific provisions the purpose to protect the public health, as an important aim of the statute, must not be ignored.

Reading the provisions here in question in the light of the context, we observe:

(*a*) That the term "adulteration" is used in a special sense. For example, the product of a diseased animal may not be adulterated in the ordinary or strict meaning of the word, but by reason of its being that product the article is adulterated within the meaning of the act. The statute with respect to "adulteration" and "misbranding" has its own glossary. We cannot, therefore, assume that simply because a prepared "food" has its formula and distinctive name, it is not, as such, "adulterated." In the case of confectionery, it is plain that the article may be "adulterated," although it is made in strict accordance with some formula and bears a fanciful trade name, if in fact it contains an "ingredient deleterious or detrimental to health, or any vinous, malt, or spiritous liquor or compound or narcotic drug." And the context clearly indicates that with respect to articles of food the ordinary meaning of "adulteration" cannot be regarded as controlling.

(*b*) The provision in section 7, subdivision 5, assumes that the substance which renders the article injurious, and the introduction of which causes "adulteration", is an ingredient of the article. It must be an "added" ingredient; but it is still an ingredient. Component parts, or constituents, of the article which is the subject of the described traffic are thus not excluded but are included in the definition. The article referred to in subdivision 5 is the article sought to be made an article of commerce—the article which "contains" the ingredient.

(*c*) "Adulteration" is not to be confused with "misbranding." The fact that the provisions as to the latter require a statement of certain substances if contained in an article of food, in order to avoid "misbranding" does not limit the explicit provisions of section 7 as to adulteration. Both provisions are operative. Had it been the intention of Congress to confine its definition of adulteration to the introduction of the particular substances specified in the section as to misbranding, it cannot be doubted that this would have been stated, but Congress gave a broader description of ingredients in defining "adulteration." It is "any" added poisonous or "other added deleterious ingredients", provided it "may render such article injurious to health."

(*d*) Proprietary foods, sold under distinctive names, are within the purview of the provision. Not only is "food" defined as including articles used for food or drink "whether simple, mixed, or compound", but the intention to include "proprietary foods" sold under distinctive names is manifest from the provisos in section 8 which the claimant invokes. "Mixtures or compounds" which satisfy the first paragraph of the proviso, are not only "articles of food", but are to enjoy the stated immunity only in case they do "not contain any added poisonous or deleterious ingredients". By the concluding clause of section 8 it is provided that nothing in the

act shall be construed to require manufacturers of "proprietary foods" to disclose "their trade formulas" except insofar as the provisions of the act "may require to secure freedom from adulteration or misbranding", and the immunity is conditioned upon the fact that such foods "contain no unwholesome added ingredient." Thus the statute contemplates that mixtures or compounds manufactured by those having trade formulas, and bearing distinctive names, may nevertheless contain "added ingredients" which are poisonous or deleterious and may make the article injurious, and if so, the article is not taken out of the condemnation of section 7, subdivision 5.

(*e*) Again, articles of food including "proprietary foods" which fall within this condemnation are not saved because they were already on the market when the statute was passed. The act makes no such distinction; and it is to be observed that the proviso of section 8 explicitly refers to "mixtures or compounds which may be now, or from time to time hereafter, known as articles of food." Nor does the length of the period covered by the traffic, or its extent, affect the question if the article is in fact adulterated within the meaning of the act.

Having these considerations in mind, we deem it to be clear that, whatever difficulties there may be in construing the provision, the claimant's argument proves far too much. We are not now dealing with the question whether the caffeine did, or might, render the article in question injurious; that is a separate inquiry. The fundamental contention of the claimant, as we have seen, is that a constituent of a food product having a distinctive name cannot be an "added" ingredient. In such case the standard is said to be the food product itself which the name designates. It must be, it is urged, this "finished product" that is "adulterated." In that view, there would seem to be no escape from the conclusion that, however poisonous or deleterious the introduced ingredient might be, and however injurious its effect, if it be made a constituent of a product having its own distinctive name it is not within the provision. If this were so, the statute would be reduced to an absurdity. Manufacturers would be free, for example, to put arsenic or strychnine or other poisonous or deleterious ingredients with an unquestioned injurious effect into compound articles of food, provided the compound were made according to formula and sold under some fanciful name which would be distinctive. When challenged upon the ground that the poison was an "added" ingredient, the answer would be that without it the so-called food product would not be the product described by the name. Further, if an article purporting to be an ordinary food product sold under its ordinary name were condemned because of some added deleterious ingredient, it would be difficult to see why the same result could not be attained with impunity by composing a formula and giving a distinctive name to the article with the criticized substance as a component part. We think that an analysis of the statute shows such a construction of the provision to be inadmissible. Certain incongruities may follow from any definition of the word "added", but we cannot conclude that it was the intention of Congress to afford immunity by the simple choice of a formula and a name. It does not seem to use to be a reasonable construction that in the case of "proprie-

tary foods" manufactured under secret formulas Congress was simply concerned with additions to what such formulas might embrace. Undoubtedly it was not desired needlessly to embarrass manufacturers of "proprietary foods" sold under distinctive names, but it was not the purpose of the act to protect articles of this sort regardless of their character. Only such food products as contain "no unwholesome added ingredient" are within the saving clause, and in using the words quoted we are satisfied that Congress did not make the proprietary article its own standard.

Equally extreme and inadmissible is the suggestion that where a "proprietary food" would not be the same without the harmful ingredient, to eliminate the latter would constitute an "adulteration" under section 7, subdivision 3, by the abstraction of a "valuable constituent." In that subdivision Congress evidently refers to articles of food which normally are not within the condemnation of the act. Congress certainly did not intend that a poisonous or deleterious ingredient which made a proprietary food an enemy to the public health should be treated as a "valuable constituent", or to induce the continued use of such injurious ingredients by making their elimination an adulteration subject to the penalties of the statute.

It is apparent, however, that Congress in using the word "added" had some distinction in view. In the Senate bill (for which the measure as adopted was a substitute) there was a separate clause relating to "liquors", providing that the article should be deemed to be adulterated if it contained "any added ingredient of a poisonous or deleterious character"; while in the case of food (which was defined as excluding liquors) the article was to be deemed to be "adulterated" if it contained "any added poisonous or other ingredient which may render such article injurious to human health." (Cong. Rec., 59th Cong., 1st Sess., vol. 40, p. 897.) In explaining the provision as to "liquors", Senator Heyburn, the chairman of the Senate committee having the bill in charge, stated to the Senate (*Id.*, p. 2647):

> The word "added", after very mature consideration by your committee, was adopted because of the fact that there is to be found in nature's products as she produces them poisonous substances to be determined by analysis. Nature has so combined them that they are not a danger or an evil—that is, so long as they are left in the chemical connection in which nature has organized them; but when they are extracted by the artificial processes of chemistry they become a poison. You can extract poison from grain or its products and when it is extracted it is a deadly poison; but if you leave that poison as nature embodied it in the original substances it is not a dangerous poison or an active agency of poison at all. So, in order to avoid the threat that those who produce a perfectly legitimate article from a natural product might be held liable because the product contained nature's poison it was thought sufficient to provide against the adding of any new substance that was in itself a poison, and thus emphasizing the evils of existing conditions in nature's product. That is the reason the word "added" is in the bill. Fusel oil is a poison. If you extract it, it becomes a single active agency of destruction, but allow it to remain in the combination where nature has placed it, and while it is nominally a poison, it is a harmless one, or comparatively so.

For the Senate bill the House of Representatives substituted a measure which had the particular provisions now under consideration in substantially the same form in which they were finally enacted into law. (Sec. 7, subd. 5; sec. 8, subd. 4, provisos.) And the committee

of the House of Representatives in reporting this substituted measure said (H. R. Rept. No. 2118, 59th Cong., 1st Sess., pp. 6, 7, 11):

> The purpose of the pending measure is not to compel people to consume particular kinds of foods. It is not to compel manufacturers to produce particular kinds or grades of foods. One of the principal objects of the bill is to prohibit in the manufacture of foods intended for interstate commerce the addition of foreign substances poisonous or deleterious to health. The bill does not relate to any natural constituents of food products which are placed in the foods by nature itself. It is well known that in many kinds of foods in their natural state some quantity of poisonous or deleterious ingredients exist. How far these substances may be deleterious to health when the food articles containing them are consumed may be a subject of dispute between the scientists, but the bill reported does not in any way consider that question. If, however, poisonous or deleterious substances are added by man to the food product, then the bill declares the article to be adulterated and forbids interstate traffic.

This statement throws light upon the intention of Congress. Illustrations are given to show possible incongruous results of the test, but they do not outweigh this deliberate declaration of purposes; nor do we find in the subsequent legislative history of the substituted measure containing the provision any opposing statement as to the significance of the phrase. It must also be noted that some of the illustrations which are given lose their force when it is remembered that the statutory ban (sec. 7, subd. 5) by its explicit terms only applies where the added ingredient may render the article injurious to health. See *United States* v. *Lexington Mills Co.*, *supra.* It is urged that whatever may be said of natural food products, or simple food products, to which some addition is made, a "proprietary food" must necessarily be "something else than the simple or natural article"; that it is an "artificial preparation." It is insisted that every ingredient in such a compound cannot be deemed to be an "added" ingredient. But this argument, and the others that are advanced, do not compel the adoption of the asserted alternative as to the saving efficacy of the formula. Nor can we accept the view that the word "added" should be taken as referring to the quantity of the ingredient used. It is added ingredient which the statute describes, not added quantity of the ingredient, although of course quantity may be highly important in determining whether the ingredient may render the article harmful, and experience in the use of ordinary articles of food may be of greatest value in dealing with such questions of fact.

Congress, we think, referred to ingredients artificially introduced; these it described as "added." The addition might be made to a natural food product or to a compound. If the ingredient thus introduced was of the character and had the effect described, it was to make no difference whether the resulting mixture or combination was or was not called by a new name or did or did not constitute a proprietary food. It is said that the preparation might be "entirely new." But Congress might well suppose that novelty would probably be sought by the use of such ingredients, and that this would constitute a means of deception and a menace to health from which the public should be protected. It may also have been supposed that, ordinarily, familiar food bases would be used for this purpose. But, however the compound purporting to be an article of food might be made up, we think that it was the intention of Congress

that the artificial introduction of ingredients of a poisonous or deleterious character which might render the article injurious to health should cause the prohibition of the statute to attach.

In the present case the article belongs to a familiar group; it is a syrup. It was originally called "Coca Cola Syrup and Extract." It is produced by melting sugar, the analysis showing that 52.64 percent of the product is sugar and 42.63 percent is water. Into the syrup thus formed by boiling the sugar there are introduced coloring, flavoring, and other ingredients, in order to give the syrup a distinctive character. The caffeine, as has been said, is introduced in the second or third "melting." We see no escape from the conclusion that it is an "added" ingredient within the meaning of the statute.

Upon the remaining question whether the caffeine was a poisonous or deleterious ingredient which might render the article injurious to health there was a decided conflict of competent evidence. The Government's experts gave testimony to the effect that it was, and the claimant introduced evidence to show the contrary. It is sufficient to say that the question was plainly one of fact which was for the consideration of the jury. (See *443 Cans of Egg Product*, 226 U.S. 172, 183.)

Second. As to "*misbranding*." In the second count it was charged that the expression "Coca Cola" represented the presence in the product of the substances coca and cola, and that it contained "no coca and little if any cola." So far as "cola" was concerned, the charge was vague and indefinite, and this seems to have been conceded by the Government at the beginning of the trial. With respect to "coca", there was evidence on the part of the Government tending to show that there was nothing in the product obtained from the leaves of the coca plant, while on behalf of the claimant it was testified that the material called "Merchandise No. 5" (one of the ingredients) was obtained from both coca leaves and cola nuts. It was assumed on the motion for a peremptory instruction that there might be a disputed question of fact as to whether the use of the word "coca" is to be regarded "intrinsically and originally" as stating or suggesting the presence of "some material element or quality" derived from coca leaves, and it was also assumed that the evidence might be deemed to be conflicting with respect to the question whether the product actually contained anything so derived (191 Fed. 438, 439). But these issues of fact were considered not to be material. On this branch of the case the claimant succeeded upon the ground that its article was within the protection of the proviso in section 8 as one known "under its own distinctive name." (215 Fed. 544.)

Section 8 (*ante*, p. 743), in its fourth specification as to "food", provides that the article shall be deemed to be "misbranded" "if the package containing it or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein which * * * shall be false or misleading in any particular." Then follows the proviso in question, that an article not containing any added poisonous or deleterious ingredients "shall not be deemed to be * * * misbranded" in the case of "mixtures or compounds which may be now or from time to time hereafter known as articles of food, under their own distinctive names, and not an

imitation of or offered for sale under the distinctive name of another article" if the name is accompanied with a statement of the place where the article has been produced.[97a]

A distinctive name is a name that distinguishes. It may be a name in common use as a generic name, e.g., coffee, flour, etc. Where there is a trade description of this sort by which a product of a given kind is distinctively known to the public, it matters not that the name had originally a different significance. Thus, soda water is a familiar trade description of an article which now, as is well known, rarely contains soda in any form. Such a name is not to be deemed either "misleading" or "false", as it is in fact distinctive. But unless the name is truly distinctive, the immunity cannot be enjoyed; it does not extend to a case where an article is offered for sale "under the distinctive name of another article." Thus, that which is not coffee, or is an imitation of coffee, cannot be sold as coffee; and it would not be protected by being called "X's Coffee." Similarly, that which is not lemon extract could not obtain immunity by being sold under the name of "Y's Lemon Extract." The name so used is not "distinctive", as it does not appropriately distinguish the product; it is an effort to trade under the name of an article of a different sort. So, with respect to "mixtures or compounds", we think that the term "another article" in the proviso embraces different compounds from the compound in question. The aim of the statute is to prevent deception, and that which appropriately describes a different compound can not secure protection as a "distinctive name."

A "distinctive name" may also, of course, be purely arbitrary or fanciful, and thus, being the trade description of the particular thing, may satisfy the statute, provided the name has not already been appropriated for something else so that its use would tend to deceive.

If, in the present case, the article had been named "Coca" and it were found that the name was actually descriptive in the sense that it fairly implied that the article was derived from the leaves of the coca plant, it could not be said that this was "its own distinctive name" if in fact it contained nothing so derived. The name, if thus descriptive, would import a different product from the one to which it was actually affixed. And, in the case supposed, the name would not become the "distinctive name" of a product without any coca ingredient unless in popular acceptation it came to be regarded as

---

[97a] Among the departmental regulations (adopted in October, 1906, pursuant to sec. 3, for the enforcement of the act) is regulation 20, with respect to "distinctive names" under sec. 8, as follows:

"(*a*) A 'distinctive name' is a trade, arbitrary, or fancy name which clearly distinguishes a food product, mixture, or compound from any other food product, mixture, or compound.

"(*b*) A distinctive name shall not be one representing any single constituent of a mixture or compound.

"(*c*) A distinctive name shall not misrepresent any property or quality of a mixture or compound.

"(*d*) A distinctive name shall give no false indication of origin, character, or place of manufacture, nor lead the purchaser to suppose that it is any other food or drug product."

Regulation 27 is as follows:

"(*a*) The terms 'mixtures' and 'compounds' are interchangeable and indicate the results of putting together two or more food products.

"(*b*) These mixtures or compounds shall not be imitations of other articles, whether simple, mixed, or compound, or offered for sale under the name of other articles. They shall bear a distinctive name and the name of the place where the mixture or compound has been manufactured or produced.

"(*c*) If the name of the place be one which is found in different States, Territories, or countries, the name of the State, Territory, or country, as well as the name of the place, must be stated."

identifying a product known to be of that character. It would follow that the mere sale of the product under the name "Coca", and the fact that this was used as a trade designation of the product, would not suffice to show that it had ceased to have its original significance if it did not appear that it had become known to the public that the article contained nothing derived from coca. Until such knowledge could be attributed to the public the name would naturally continue to be descriptive in the original sense. Nor would it be controlling that at the time of the adoption of the name the coca plant was known only to foreigners and scientists, for if the name had appropriate reference to that plant and to substances derived therefrom, its use would primarily be taken in that sense by those who did not know or who took pains to inform themselves of its meaning. Mere ignorance on the part of others as to the nature of the composition would not change the descriptive character of the designation. The same conclusion would be reached if the single name "Cola" had been used as the name of the product and it were found that in fact the name imported that the product was obtained from the cola nut. The name would not be the distinctive name of a product not so derived until in usage it achieved that secondary significance.

We are thus brought to the question whether if the names coca and cola were respectively descriptive, as the Government contends, a combination of the two names constituted a "distinctive name" within the protection of the proviso in case either of the described ingredients was absent. It is said that "coca" indicates one article, and "cola" another, but that the two names together did not constitute the distinctive name of any other substance or combination of substances. The contention leads far. To take the illustration suggested in argument it would permit a manufacturer, who could not use the name chocolate to describe that which was not chocolate, or vanilla to describe that which was not vanilla, to designate a mixture as "Chocolate-Vanilla", although it was destitute of either or both, provided the combined name had not been previously used. We think that the contention misses the point of the proviso. A mixture or compond may have a name descriptive of its ingredients or an arbitrary name. The latter (if not already appropriated) being arbitrary, designates the particular product. Names, however, which are merely descriptive of ingredients are not primarily distinctive names save as they appropriately describe the compound with such ingredients. To call the compound by a name descriptive of ingredients which are not present is not to give it "its own distinctive name"—which distinguishes it from other compounds—but to give it the name of a different compound. That, in our judgment, is not protected by the proviso, unless the name has achieved a secondary significance as descriptive of a product known to be destitute of the ingredients indicated by its primary meaning.

In the present case we are of opinion that it could not be said as matter of law that the name was not primarily descriptive of a compound with coca and cola ingredients, as charged. Nor is there basis for the conclusion that the designation had attained a secondary meaning as the name of a compound from which either coca or cola ingredients were known to be absent; the claimant has always in-

sisted, and now insists, that its product contains both. But if the name was found to be descriptive, as charged, there was clearly a conflict of evidence with respect to the presence of any coca ingredient. We conclude that the court erred in directing a verdict on the second count.

The judgment is reversed and the cause is remanded for further proceedings in conformity with this opinion.

It is so ordered.

Mr. Justice McReynolds took no part in the consideration or decision of this case.

ELEVEN GROSS PACKAGES OF DR. WILLIAMS' PINK PILLS v. UNITED STATES

(Circuit Court of Appeals, Third Circuit, May 22, 1916)

233 Fed. 71; N.J. No. 4849

In error to the District Court for the Eastern District of Pennsylvania. Decree affirmed.[98]

BUFFINGTON, *Circuit Judge*. In the court below, the United States filed a libel to forfeit certain packages of pills. Thereupon the Dr. Williams Medicine Company claimed the packages seized, answered the libel, and the case proceeded to trial. After a verdict for the plaintiff and a decree of forfeiture, the claimant sued out this writ.

The claim of forfeiture is based on an alleged misbranding of the packages of pills in violation of an amendment to the Food and Drugs Act, passed August 23, 1912, which provides:

> That for the purposes of this act an article shall also be deemed to be misbranded: In case of drugs: * * * Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

The errors alleged group themselves into rulings on evidence, answers to points and exceptions to the court's charge. Without entering into a discussion of the many refined questions of words, terms, and medical theories with which the general subject is beclouded, we may say that to our mind the words used in the statute are clear in meaning, and the court below tried the case on that basis. The purpose of the act was, in the branding of drugs, to punish false and fraudulent statements regarding the curative or therapeutic effects of such drug or any of its ingredients. It follows, therefore, the case below resolved itself into two questions: First, were the statements regarding the curative or therapeutic effects of these pills false, and, second, were they fraudulent? Without citing in detail the rulings of the court in admitting the evidence, in answering the points, and in charging the jury, we may say the court consistently adhered to admitting proof and directing the attention of the jury in points and charge to the two decisive elements of the branding being false and fraudulent. Limiting our extracts to locomotor

[98] Affirming *United States* v. *11 Gross Packages of Dr. Williams' Pink Pills*, p. 680, *ante*.

ataxia alone, we note the branding complained of made the statement that the pills were—

> Useful in locomotor ataxia and partial paralysis. * * * This remedy is offered to the public with full confidence in its efficacy in the treatment of diseases arising from or dependent upon impoverished blood. * * * rheumatism, leucorrhoea. * * * These pills are a valuable remedy for * * * sciatica * * * and have accomplished beneficial results in * * * partial paralysis and locomotor ataxia * * * cases diagnosed as locomotor ataxia and as partial paralysis, and having characteristic symptoms have shown beneficial results under this tonic treatment and in the cases under observation the resulting improvement has been lasting.

The libel alleged that:

> These statements were false and fraudulent in this, that they indicated to the purchaser thereof and created in the minds of the purchasers thereof the impression and belief that the said article was a remedy for, when in fact it was not a remedy for, locomotor ataxia, partial paralysis, etc.

and that

> These statements were false and fraudulent in this, that they indicated to the purchaser thereof and created in the minds of the purchasers thereof the impression and belief that the said article was a remedy for, when in fact it was not a remedy for, partial paralysis, locomotor ataxia, etc., which statements were made with the knowledge of their falsity and in reckless and wanton disregard of their truth or falsity for the purpose of defrauding the purchasers.

In support of its case the Government called several witnesses, physicians of proven ability, knowledge, and experience, who testified that the pill would not and why it could not have any beneficial effects in locomotor ataxia and the other diseases named. They also testified to the fact that medical opinion was unanimous in so saying. It was also shown, and all this without contradiction, that the pill was practically the well-known Blaud pill used generally in medical practice. It is complained, however, that the testimony of these witnesses was not competent, being a mere expression of their personal opinion or views. But an examination of the proofs shows that the case was wholly different from one where witnesses were testifying to their personal views upon a controverted question of opinion. The testimony here was of fact, namely, that there was general, uncontroverted consensus of opinion. For example, referring to the effect of these pills, the proofs were:

> Q. How about locomotor ataxia?
> A. Utterly useless.
> Q. Is there any difference at all in medical opinion on that point?
> A. I should say not, as far as I know medical opinion * * *.
> Q. Is there anything known to medicine that can have a beneficial effect upon all these various troubles in one pill?
> A. No, sir.
> Q. Is there any difference of medical opinion on that point?
> A. None whatever. I think medical opinion would be unanimous on that.

In the absence of countervailing proof in such matters, it was manifestly a question for the jury to determine the fair or fraudulent character of the branding statement. This question the court left to it, saying if they were satisfied "that the pills were shipped in interstate commerce, with an honest belief on the part of those responsible for making the statement that they would do just what was stated on the label they would do, that then it would be your duty to return a

verdict in favor of the defendant." Referring to such statements, the court further said:

> You will take those facts into consideration and determine whether or not it was the intention of this language, interpreting it as an ordinarily intelligent man would, on the part of the claimants to convey the impression that they were to cure or act as a remedy for the diseases and ailments even where the language does not directly say so. If it was the intention to so frame a statement that it conveyed those impressions and those statements were false, and they are known to be false, or you can infer the intention to defraud, then it would be your duty to return a verdict in favor of the Government. If you do not find that intention, of course you will return a verdict in favor of the defendant.

See also, in answer to points, the court said, in substantial accord with *Cooper* v. *Schleslinger*, 111 U.S. 148, and *Lehigh Co., etc.*, v. *Bamford*, 150 U.S. 665:

> If you find it as a fact that the statements were false, and known to be false, then, of course, your verdict would be for the Government. If you find as a fact that they were not false, or that being false there was no intent on the part of the defendant, whether actual intent or implied intent, to defraud, then your verdict would be for the claimant.
>
> If you believe from the evidence that any one of the therapeutic claims as to the effect of these pills upon locomotor ataxia, St. Vitus' dance, sciatica, rheumatism, impotence, spermatorrhea, or partial paralysis, was false, and was made by the claimant with a reckless and wanton disregard as to whether it was true or false, you may find a verdict for the Government.

On the whole, we may say the cause was properly tried and fairly submitted, and finding no error in the rulings, charge, points, or answers in the court below, its decree is affirmed.

UNITED STATES v. G. F. HARVEY CO.

(District Court, N.D. New York, June 21, 1916)

N.J. No. 4980

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against the G. F. Harvey Co., a corporation, Saratoga Springs, N.Y., alleging shipment by said company, from the State of New York into the State of New Jersey, of a quantity of an article labeled, in part, "Fluid Extract of Cinchona", which was adulterated and misbranded.

Adulteration of the article was alleged in the information for the reason that it was sold under and by a name recognized in the United States Pharmacopoeia, to wit, fluid extract of cinchona, and differed from the standard of strength, quality, and purity as determined by the test laid down in said Pharmacopoeia official at the time of the investigation and shipment of said article, in that said Pharmacopoeia specifies that fluid extract of cinchona shall contain 4 grams of anhydrous ether-soluble alkaloids from cinchona per 100 cc, whereas said article did not contain said amount of anhydrous ether-soluble alkaloids from cinchona per 100 cc, but did contain a less amount of said alkaloids, to wit, 2.97 grams per 100 cc.

Misbranding was alleged for the reason that the statement, to wit, "Fluid Extract Cinchona", borne on the label, was false and mis-

leading in that it purported and represented to purchasers that said article was fluid extract of cinchona, a product well-known to contain 4 grams of anhydrous ether-soluble alkaloids from cinchona per 100 cc, whereas, in fact, it was not, but was a so-called fluid extract of cinchona containing a less amount of anhydrous ether-soluble alkaloids from cinchona per 100 cc, to wit, 2.97 grams of said alkaloids per 100 cc.

The following charge was delivered to the jury:

RAY, *District Judge.* Gentlemen of the jury: This trial has occupied many days and I have allowed to the defendant considerable latitude to the end that every question involved might be fully and fairly presented to the court and to the jury. However, the questions involved are narrowed so far as you are concerned to one, and that question is: Did the defendant, The G. F. Harvey Co., on or about the 8th day of November 1912, deliver for shipment in interstate commerce from the city of Saratoga Springs, in the State of New York, consigned to C. B. Smith & Co., at Newark, in the State of New Jersey, three 1-pint bottles containing an article designed and intended to be used as a drug and which was labeled, marked, and branded as described in the information, viz, " This preparation contains not more than 68 percent alcohol by volume. Assayed. Fluid extract cinchona, yellow cinchona calisaya, Weddell. 12312, 88405. Dose, 15 to 60 minims. The G. F. Harvey Co.", and did this fluid extract so offered for shipment in interstate commerce by the defendant differ from the standard of strength, quality, or purity as determined by the test laid down in the United States Pharmacopœia or National Formulatory official at the time of shipment, when the offense, if any, was committed?

It is conceded by the defendant by stipulation in writing and in evidence that the defendant is a corporation organized and existing under and by virtue of the laws of the State of New York and that its office and principal place of business is Saratoga Springs, in the Northern District of New York. That on or about the 8th day of November 1912 the defendant did ship from the city of Saratoga Springs, in the State of New York, to C. B. Smith & Co. of Newark, N.J., a consignment consisting of three 1-pint bottles containing a liquid designed and intended to be used as a drug, and which bottles were then and there designated as to the contents thereof and labeled, marked, and branded as set forth in the information in this case and which label and brand I have already recited. It is also stipulated and conceded and admitted by the defendant that the samples of this consignment consisting of the three bottles taken were sold by the said C. B. Smith & Co. to Herman Lind, an inspector of the United States Department of Agriculture, after being properly marked and identified by him with the marks, " I.S. No. 1649-e ", and that no change was made in said samples of three bottles from the time the same was sold and shipped in interstate commerce by the defendant to said C. B. Smith & Co. up to the time the same was sold and delivered by that company to said Lind.

The evidence shows without contradiction, so far as any evidence has been given on the subject, that Lind, an inspector of the United States Department of Agriculture, turned these three bottles of this mixture, fluid extract of cinchona, over to the Department of Agri-

culture at Washington, D.C., with seals, etc., unbroken, except as to one bottle which was assayed or tested by Mr. Darling, another employee of the Department of Agriculture, in the State of New York, for the purpose of determining whether or not it was up to standard. The evidence also shows that one of the bottles of fluid extract so purchased of C. B. Smith & Co. and shipped to that company by the defendant was returned with the seal, etc., unbroken to the defendant here so as to enable it to make an examination as to its strength, quality, etc. The other two bottles were retained by the United States and one of same has been produced in court. The evidence shows or tends to show that both bottles retained by the Government were examined and tested by it and that one of them has been broken, lost, or destroyed without fault on the part of anyone. On being tested and examined in the manner prescribed and pointed out by law the Government contends that the two bottles examined, tested, and assayed by it shows that the composition or fluid extract contains only, in round numbers, three quarters of the essential ingredients of such a mixture and that it was therefore far below the required standard and was adulterated within the meaning of the Pure Food and Drugs Act of June 30, 1906, as subsequently amended and as in force at the time of the sale and shipment mentioned. Two different chemists of experience and connected with the Department of Agriculture at Washington, D.C., Mr. Darling and Mr. Wright, tested and analyzed these two bottles and they have given the contents as to the essentials as follows: Mr. Darling, first trial, 2.97 grams, second trial, 2.95 grams; Mr. Wright, first sample, 2.87 grams, second sample, 2.99 grams, third sample, 2.84 grams per 100 cubic centimeters, when under the law it should have contained 4 grams per 100 cubic centimeters of the anhydrous ether-soluble alkaloids from cinchona.

The standard required by the law is 4 grams for the ingredients to which attention has just been called.

The third bottle which was returned to the defendant was examined and analyzed, it is claimed by Mr. Ellery, a chemist of the Union College at Schenectady, N.Y., and he found that it contained the following of the essentials referred to, viz, first sample, 3.786 grams, second sample, 3.902 grams, third sample, 3.766 grams per 100 cubic centimeters. He says he took three samples from the bottle and made three separate tests and that the results were as stated. This test made by this professor of chemistry employed by the defendant company shows, as you will readily see, that the samples or bottle of this compound or fluid extract tested by him contained less of the essential substances than is required by the standard set up in the statute. Professor Grose says he tested the contents and found: First test, 3.9 grams, and second test, 4.1 grams; but that this was made last Wednesday, the 14th of this month, and that the fluid extract had undergone changes.

The Government further contends that this bottle or these bottles of fluid extract so sold and shipped by the defendant, and which were but a part of a larger quantity, were not manufactured, compounded, and put up as they should have been to insure the required and necessary degree of strength as pertains to the essential ingredients and that the result was necessarily an inferior quality which differed considerably from the standard. The Government further contends

that when this fluid extract had been run through the percolator at the factory of the defendant it was found by the defendant itself and known to it that the fluid extract fell short of the standard and that offering it for sale and shipping it in interstate commerce at that strength would have been a plain violation of the statute and would have subjected the defendant to the fines and penalties prescribed by law.

The Government contends that thereupon the defendant undertook to remedy the defect by putting into the mass of fluid extract in one receptacle or container a quantity of quinine and cinchonidine in powdered form and stirring it in with a stick and that this mode of manufacture, thereby attempting to bring the fluid extract up to the standard required, was not sufficient and did not, in its results, bring the fluid extract up to the required standard. The Government says that even if the requisite amount of powdered quinine and cinchonidine was put in in the powdered form and stirred in with a stick that it was not properly distributed through the mass and dissolved and that while some portions thereof might contain enough, other portions would be liable to be deficient, and that, therefore, the fluid extract of cinchona put upon the market and sold in interstate commerce by the defendant at the time mentioned was adulterated within the meaning of the law in that it failed to come up to the standard; that is, that this drug was sold under or by a name recognized in the United States Pharmacopœia and differed from the standard of strength, quality, and purity as to ingredients mentioned, as determined by the test laid down in the United States Pharmacopœia official at the time of investigation or shipment. That it also lacked some of the anhydrous ether-soluble alkaloids, as only two were added when several were required.

The law itself, gentlemen of the jury, determines what shall be deemed a drug within the meaning of the law, and also determines when a drug shall be deemed to be adulterated.

By section 2 of the act of Congress referred to it is provided that the introduction into any State from any other State of any drug which is adulterated or misbranded within the meaning of the act is hereby prohibited; and that any person who shall ship or deliver for shipment from any State to any other State any such adulterated or misbranded drug shall be guilty of a misdemeanor and fined not exceeding $200 for the first offense.

By section 6 of the act to which attention has been called it is provided that the term "drug" as used in this act shall include all medicines and preparations recognized in the United States Pharmacopœia for internal or external use, and any substance or mixture of substances intended to be used for the cure, mitigation, or prevention of disease of either man or other animals. There is no question, gentlemen, or dispute that this fluid extract in question here is a drug within the meaning of the law.

By section 7 of the law to which I have called your attention it is declared when and under what circumstances an article or drug is deemed to be adulterated, and section 7 declares in express terms

> That for the purposes of this act an article shall be deemed to be adulterated; In the case of drugs:
>
> First. If, when a drug is sold under or by a name recognized in the United States Pharmacopœia or National Formulary, it differs from the standard of

strength, quality, or purity, as determined by the test laid down in the United States Pharmacopœia or National Formulary official at the time of investigation: *Provided*, That no drug defined in the United States Pharmacopœia or National Formulary shall be deemed to be adulterated under this provision if the standard of strength, quality, or purity be plainly stated upon the bottle, box, or other container thereof, although the standard may differ from that determined by the test laid down in the United States Pharmacopœia or National Formulary.

Second. If its strength or purity shall fall below the professed standard or quality under which it is sold.

In this case, gentlemen of the jury, there is no pretense or claim that the standard of strength, quality, or purity was plainly stated upon the bottles, boxes, or other containers of this fluid extract, and for that reason, as it was not made known what the standard of strength, quality, or purity was, it becomes a simple question in this case whether or not, as determined by the test laid down in the United States Pharmacopœia, this fluid extract did differ essentially from the standard of strength, quality, and purity as to the essentials to which I have called your attention as determined by that test. That this fluid extract was up to the quality required by law when or as determined by some other test than that laid down in the United States Pharmacopœia would constitute no defense if not up to the standard required by the test prescribed by law. The law is somewhat exacting, but it is the law nevertheless and provides in express terms that this fluid extract cinchona, yellow cinchona calisaya, must not differ from the standard of strength, quality, or purity required, as determined by the test laid down in the United States Pharmacopœia or National Formulary official at the time of the investigation, meaning time of shipment. That is, the one that was official at the time these simples were taken and the shipment was made.

This law, gentlemen, was enacted for a purpose, or for purposes, and one of the purposes was to keep adulterated drugs out of interstate commerce and to insure to the purchaser and user of the drug shipped in interstate commerce an article that was up to and which complied with the standard prescribed by law. This would insure the purchaser and user of these drugs shipped in interstate commerce against fraud and imposition and would give to the purchaser that which he purchased and which he understood he was purchasing, and it would insure to the physician who prescribed it to a patient, or who would use it in other compounds that he was giving to the patient, or putting into the medicinal compound just what he supposed he was putting in and just what the needs and conditions of the patient required. When an article of this kind, like fluid extract of cinchona, is purchased in the market, having been shipped in interstate commerce, with this law in force the purchaser has the right to assume that he is receiving a preparation of a certain well-defined strength, quality, or purity, as the case may be, and neither he as a user, nor the physician, nor the druggist who gives it to others is under any obligation to make tests for themselves but may rely to an extent at least upon the article being of the strength, quality, or purity fixed by this standard. The manufacturer who compounds them and puts them on the market in interstate commerce is bound at his or its peril to see to it that they are up to the standard fixed by law not only when made and shipped but are so compounded

and put up for sale that they will be of the required standard when shipped interstate commerce for sale to the consumer or user.

This law, gentlemen, assures to the user and consumer and to the physician in a degree not only a safeguard in the respects to which I have called your attention, which may affect the health of the patient and have to do with his proper treatment, but that he gets his money's worth; that is, what he pays for. It is not for you, gentlemen of the jury, or for this court to question either the propriety or the wisdom of this law. It is the law of the land, and if violated by this defendant, and you are so satisfied beyond a reasonable doubt, then it is your duty to so say by your verdict. The court has no alternative. It is its duty to instruct you as to the law as it finds it. In the opinion of this court this was and is a wise and a necessary law, and, gentlemen, it is not necessary for the Government to show the adulteration here complained of was deleterious and injurious to the health of the user and consumer.

There is no question of intent, gentlemen, involved in this case. No question, necessarily, of evil mind or purpose. It is not a question whether or not the defendant *intended* to comply with the law, but whether it *did* comply with the law. It is no defense to the charge contained in this information that this defendant intended to bring this fluid extract of cinchona up to the required standard and supposed and honestly believed it had done so when it sold and shipped the same in interstate commerce, if you find that it was in fact below the standard required—that is, not up to the standard required by the law. In this case, as in all cases of this character, it being a criminal charge, the defendant is presumed to be innocent until proven guilty beyond a reasonable doubt. Hence the burden of proof was upon the Government to establish that this fluid extract of cinchona in question here was below the standard. If it has done this and you are satisfied of that fact under this proof beyond a reasonable doubt, then that presumption of innocence, of course, would be overcome and would disappear, and it would be your duty to say "Guilty." If, on the other hand, you have a reasonable doubt whether or not this fluid extract was below the standard and are not satisfied beyond a reasonable doubt that it was below the standard when shipped, then, of course, it would be your duty to find the defendant not guilty. But, gentlemen, you are to take the evidence as it is and not surmise, guess, or speculate or theorize that this fluid extract may have been up to the standard if the evidence proves it was not. A reasonable doubt, gentlemen, is not a surmise, a guess, a speculation, or a speculative theory that a thing may not be so. A reasonable doubt is not a speculative theory. A reasonable doubt is just what the term implies—a doubt founded in reason, and for which a reason can be given by the jury if called upon to do so. It may arise from the lack of evidence or from the uncertainty of that presented. It may arise from the character or quality of the evidence given; that is, the character of the witnesses giving it may be such that the jury does not give credence to the testimony. The witnesses may be impeached in some one of the modes known to the law, or the witness may be so uncertain or unreliable or contradictory or unreasonable in his statements that the jury fails to place reliance on what he says. However, gentlemen, a jury has no right to disregard the testimony

of an unimpeached witness who knows whereof he speaks, who has the facts within his knowledge, and who is disinterested and fair and consistent in giving his statements, and whose testimony is consistent with the other known and proved and conceded facts in the case.

In a criminal case the evidence must exclude every reasonable hypothesis except that of guilt, and if just as consistent with the innocence of the defendant as with its guilt, then the case is not made out.

Considerable has been said here about allowances, variations, and tolerances, meaning, I assume, that allowances and tolerations may be made for differences in results obtained when the formula or mode of procedure pointed out by law is followed in making an analysis of the article being analyzed. Of course, you, gentlemen of the jury, on this evidence and from this evidence, are to determine and say on your oaths as jurors, whether or not this fluid extract of cinchona compounded and sold and shipped in interstate commerce; that is, from one State into another State of the United States—from New York to New Jersey—did contain, when so shipped and sold, 4 grams per 100 cubic centimeters of the anhydrous ether-soluble alkaloids from cinchona. If it did, then the statute was not offended against or violated in this respect. If it did not contain 4 grams of such anhydrous ether-soluble alkaloids, but a lesser quantity of such alkaloids or ingredients, then the statute was violated by the defendant and your verdict should be "guilty", as charged in the first count of the information, irrespective of whether the defendant knew of the deficiency or intended the deficiency or not. The statute is imperative, as I have stated, and absolute in its requirements, and demands that this drug, or fluid extract of cinchona, shall contain when sold and shipped in interstate commerce—that is, from one State to another State—at least 4 grams per 100 cubic centimeters of these anhydrous ether-soluble alkaloids from cinchona as determined by the process or analysis described in the work mentioned. That, gentlemen, is the standard fixed by law for determining the contents of the fluid extract, and no other analysis can be substituted and furnish evidence which will constitute a defense when the analysis made according to law and pursuant to the mode prescribed by law shows to your satisfaction that the article was not up to the standard required.

And, gentlemen, it will not do to say that a lesser quantity of these anhydrous ether-soluble alkaloids from cinchona per 100 cubic centimeters is or may be just as good and just as efficient as the quantities of these ether-soluble alkaloids required by the statute. Congress has the right in the interest of the general public and in the exercise of its control over interstate commerce to prescribe the standard up to which certain drugs when shipped in interstate commerce must come, and in this case it has done so. This drug, fluid extract of cinchona, is a drug sold under and by a name recognized in the United States Pharmacopœia or National Formulary, and the statute expressly declares that such drug "shall be deemed to be adulterated if it differs from the standard of strength, quality, or purity as determined by the test laid down in the United States Pharmacopœia or National Formulary official at the time of investigation," and neither the court nor the jury is at liberty to surmise, guess,

theorize, or speculate that the drug would be just as good if it did differ from that standard of strength, quality, or purity and contain a lesser quantity of the ingredients to which I have repeatedly called your attention—those being the essential ingredients of the fluid extract. Of course, the variation from the standard fixed by law must be real and not imaginary or the result of guesswork, but if it does vary to any substantial amount in strength, quality, or purity from the standard fixed by the statute, then the case is made out irrespective of intent, as I have already stated, and irrespective of the effect of such adulteration on the health of the consumer.

The credibility of the witnesses who have testified in this case as well as their accuracy is for the jury to determine. Were the tests or analyses made carefully, honestly, and intelligently by competent persons who knew how to do that which they undertook to do? You are to consider the experience and skill and knowledge of the men who made these tests of these fluid extracts in question. You are to note and consider the fact that the Government's chemists expert in this business as well as Professor Ellery, from Union College, agree that in the respects named as to these essential ingredients as shown by their tests the fluid extract fell below the standard fixed by law.

You are to consider the fact that the chemist from Union College concedes that he threw away the wrapper and marks and writing thereon on the bottle of fluid extract given to him by the defendant and from the contents of which he made his analysis. It is for you to say whether or not the bottle given him and from which he took the samples which he subjected to is analyses and from which Mr. Grose and Mr. Kirschberg took theirs was the same bottle or container returned to the defendant by the Department of Agriculture. If the wrapper with the writing put there by Mr. Lind had been preserved it would have been better, but, gentlemen, the force and effect of this evidence, in view of all the evidence produced and circumstances in the case established to your satisfaction, is for your consideration and determination.

So you are to consider in determining what the strength of this fluid extract really was in the respects named; the mode and manner adopted for bringing it up to the standard when found, after coming from the percolator, to be below that standard which is required by the law. The law would not be complied with if the defendant adopted an improper method of bringing it up to the standard, one which by mixing in the powder in the manner described brought certain parts of the fluid extract up to the standard and left other parts of it below the standard. You have heard the evidence on that subject as well as a description of the mode and manner or process by means of which fluid extract of cinchona is properly made. You have heard the evidence as to the three essential anhydrous ether-soluble alkaloids found in fluid extract of cinchona. Considering the method used to raise the standard of this fluid extract after it came from the percolator it is for you to say, under this evidence, did this fluid extract on being bottled and shipped in interstate commerce contain the anhydrous ether-soluble alkaloids from cinchona required, viz, 4 grams per 100 cubic centimeters? In short the methods pursued in the manufacture are to be considered as well as the

method adopted for bringing it up to the standard when found deficient as well as what was done in the various analyses made by the several witnesses who have given testimony in this case.

One or more of the witnesses for the defendant was employed by it to make a test or analysis, and one said that he knew something was depending on the result of the analysis he made. Did or did not this induce him to take any measures which would cause his analysis to show more of these essential alkaloids than it really did? And did he in fact have the sample that came from the Department of Agriculture? The chemists who gave evidence for the Government are in the employ of the Government and it is for you to say whether or not this fact has in any way affected them in giving their testimony and induced them to vary the test or analysis to any extent or in any way favorable to the Government.

This case is one of importance not only to the Government but to the defendant, as it involves the imposition of a fine on the one hand and the maintenance of the law, if it has been violated, on the other hand.

You are to act fairly, fearlessly, and impartially, and if satisfied beyond a reasonable doubt that this fluid extract of cinchona offered and shipped in interstate commerce by the defendant on or about the 8th day of November 1912 did not then contain 4 grams per 100 cubic centimeters of the anhydrous ether-soluble alkaloids from cinchona, then say " Guilty " as charged in the first count of the indictment.

If, on the other hand, you find from the evidence that the fluid extract mentioned did in fact contain 4 or more grams of the anhydrous ether soluble alkaloids from cinchona per 100 cubic centimeters when shipped, then your verdict will be " Not guilty."

It may be of interest, gentlemen, for me to say to you that a centimeter is a measure of length and is one hundredth of a meter, or 0.3937 of an inch, which is considerably less than one half an inch, while a gram is the unit of weight in the metric system, or 15.43 grains troy weight. Cinchona is the name of a tree, and from its bark is extracted certain anhydrous alkaloids or ingredients which are soluble in ether, and one of these is what we know as quinine, useful in medicine and especially in certain fevers. Ether-soluble alkaloids include quinine, quinidine, and chinchonidine.

You take the law from the court, of which the court is the sole judge. This is your sworn duty. You are sole judge of all the disputed facts and of the inferences to be drawn from conceded or proved facts. Conceded facts you are not at liberty to question, but when the evidence conflicts you are to decide. This is your sworn duty, guided by the principles of law to which your attention has been called. The credibility of the witnesses—their truth and accuracy—is for you.

The following requests by the defendant for charge to the jury were refused by the court:

8. This method laid down was not followed by the witnesses who testified for the plaintiff.

No. It is for you to say, gentlemen, in this evidence what the process used by the Government experts was; and was it the process described in this law as I have read.

9. The assays made by the witnesses for the United States are therefore not to be relied upon as giving correct results.

No. It is for you to say did this process followed give correct results.

19. That the result obtained by analysis by the Government chemists is not entitled to any greater consideration or respect by the jury than is the result obtained by other chemists of acknowledged standing and ability in their profession.

No, as written, but yes with this addition: "For the reason they are Government employees of [or] Government chemists. You are to consider their interest, if any, their character, their knowledge and skill and experience, and the care exercised by them in making their analyses; and say whether or not they were correct in view of all the evidence in the case, including that of defendant and its witnesses, and whether the defendant's witnesses were incorrect and inaccurate in their results."

The jury thereupon retired, and after due deliberation returned a verdict of guilty, and the court thereupon imposed on the defendant company a fine of $200.

UNITED STATES v. BOWERS

(District Court, E.D. Tennessee, Sept. 19, 1916)

N.J. No. 5072

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

SANFORD, *District Judge* (charge to jury). Gentlemen of the jury: This defendant is charged in this case with violation of the Food and Drugs Act, commonly called the Pure Food Law, charged by criminal information, which has the same effect as an indictment. It contains two counts, the first count charges that he shipped in interstate commerce, as oil of birch, a certain article of food which was adulterated in that it contained methyl salicylate, which had been mixed with it so as to injuriously reduce its quality and strength and in which methyl salicylate had been substituted in whole or in part for oil of birch [which] the article purported to be.

In the second count he is charged with shipping the same article of food which is alleged to have been misbranded in that it was a solution of oil of birch and offered for sale under the name of oil of birch. There is no dispute in this case about the fact that this defendant shipped these four cans, which contained the articles in question seized.

Now, I charge you that if oil of birch, as from the proof, is an article which is used as one of the ingredients entering into the composition of root beer, that then it is an article of food within the meaning of the Food and Drugs Act.

It has been testified to by the Government witness, the chemist, that an examination of these four cans showed that it was not composed exclusively of oil of birch but that about 75 percent of it was another substance known as methyl salicylate, at least 75 percent; oil of birch being the natural product resulting from the distillation

of birch bark, methyl salicylate being what is called a synthetic product, that is, an artificial product made from coal tar. Now, there is some question in this case as to whether or not methyl salicylate put in oil of birch would injuriously affect it, whether it makes any substantial difference in the food. You need not bother about that question, because it is immaterial because it is involved in another paragraph of the same first count. It is charged that it was substituted in whole or in part for oil of birch, so that is sufficient. Now then, this defendant insists he sold it, offered it for sale as oil of birch. Now, of course, the first thing for you to find is that oil of birch is an article of food. If you find it is an article of food, as I find it is, you have then got to find whether the methyl salicylate was substituted. The Government has to prove that or it has no case at all. That rests on the undisputed testimony of the chemist. If you believe his testimony, that proves that fact; if you don't believe it, it is not proved at all; but if you find this article of food oil of birch, and that methyl salicylate was substituted, then you come to the real question about which the contest is chiefly based in this case, as shown in the testimony and argument of counsel, whether or not the defendant knew or had reason to know that this article which he shipped or which is shipped by his clerks was an imitation of oil of birch in that methyl salicilate had been substituted to the extent of about 75 percent. That is the point in this lawsuit about which the real contest has been.

Now, this defendant is entitled to the presumption of innocence, with which the law shields every defendant tried on a criminal charge; he is not to be found guilty by you unless after careful consideration of the evidence you are satisfied of his guilt and have no reasonable doubt in your mind about it. If you are not satisfied, have a reasonable doubt about it, then it will be your duty to acquit him. I charge you as a matter of law, in regard to the criminal intent under this statute, as well as other statutes that if he does it without knowledge of the fact that otherwise makes it unlawful, unless he had knowledge of the fact or facts that brought knowledge home to him, then he is not guilty. A man, of course, might ship anybody, might ship any article that was misbranded or adulterated with certain things and unless he had reason to know it was a misbranded or adulterated article he would not be guilty under the criminal law, he can't be made criminally liable unless he knew or had reason to know that it had been adulterated or misbranded, otherwise he would be innocent. So then the real point in this case is whether or not this defendant knew or had reason to know that the so-called oil of birch he offered for sale or shipped, either through himself or his clerks, that it was an imitation or that it contained this methyl salicylate which had been substituted. Of course, if his clerks carried on that sort of business and shipped it for him he would be just as guilty as if he had done it himself, as he instructed them to do it. If, on the other hand, his clerks had carried on this business and shipped any of it without his knowledge, and he was entirely innocent of the matter he would not be guilty under the act, not criminally responsible for his clerks. The Government says he must have known that and that he had been engaged in the oil business, and the Government has shown him to have bought in the last year or two, I believe, I don't remember how much, it seems that the

witness says 1,500 pounds in 1913 and 1914. He bought this methyl salicylate, and that he must have been buying it according to the Government's theory, because he was using it for this very thing, for the purpose of adulterating oil of birch. The way prices were then running there was a large profit in it. If that theory is supported by the facts, if you believe that is what really happened, and you find this is an article of food and had methyl salicylate in it, [which had] been substituted for the oil of birch, the natural oil of birch, then you will find him guilty.

Now, on the other hand, his theory is that nothing of that sort did happen; that his clerks bought a large quantity of it in his absence; that he believed and they believed, so far as he knew, that it was real oil of birch; that one of the men from whom he bought it told him that and gave him an affidavit and he believed that to be true, and he continued to sell it because he acted in good faith believing it was real oil of birch. He did buy this methyl salicylate in large quantities, he does not know exactly how much he bought; that he was buying that for entirely different purposes, mainly for purpose of selling to people up there as a remedy for rheumatism, selling it to people at Elizabethton and any other place, and that is the way he disposed of this large quantity of methyl salicylate by selling it to people who wanted it. That he never sold it to anybody connected with the manufacture of oil of birch so far as he knew, and he had no reason to suspect it. It is for the jury [to say] whether his clerks adulterated it or the mountain men adulterated it; I am not sure, the argument was not clear on that point. I presume the theory would be the distillers adulterated it; that was not brought out by counsel or in the defendant's testimony, but I presume he would say the mountain men and not his clerks. The Government says that explanation is wholly unreasonable and uncorroborated. That is the substance of the Government's argument. That it is too unreasonable for the jury to believe and that the only reasonable explanation is the methyl salicylate was put in with his knowledge for adulterating this oil of birch. That is the Government's position. I extend no view to you whatever on the facts in the case to be passed on by the jury. You take into consideration, as to the weight to be given to them, and, of course, then the main question is as to the veracity of this defendant. He has appeared before you, you heard him testify and you must judge of the reasonableness of his statement on the witness stand and as to whether or not you believe the statement, consider the impression he made on you, also to remember he is the defendant and is interested in the case. The case must to a great extent turn on the effect he produced on you. It is a question of fact, if you believe from this evidence that he knew, had reason to believe that the product was shipped and was oil of birch, but knew at the time it was really in a large quantity composed of methyl salicylate, and was an article of food, if you believe that, have no reasonable doubt about it, he is guilty and should be so found under both counts.

If, on the other hand, you don't believe that, you don't believe he knew it, or had reason to believe such adulteration, he did not know it or had any reason to believe it and acted in good faith, if you have reasonable doubt about it, then it is your duty to acquit him.

There are the two reasons, I submit them to you with[out] expression of opinion.

UNITED STATES v. 1,367 CASES OF PORK AND BEANS

(District Court, W.D. Michigan. Oct. 31, 1916)

N.J. No. 5059

Libels under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

SESSIONS, *District Judge* (charge to jury). Gentlemen of the jury: At the outset you should disabuse your minds of any feeling or belief that by this suit the Government is making an attack upon the bean industry or the canning industry of this State. An impression seems to have been sought to be created that in this proceeding the Government is attacking one of the important industries and businesses of this State. That is not true in any sense or to any degree, and the verdict and judgment in this case, whatever they may be, will not in anywise affect the business of the bean grower, the bean dealer, or the bean packer, and will not in anywise affect the industry or product of any other canning concern than the claimant, the Oceana Canning Company, and will not affect its industry in any way except as to the canned pork and beans involved in these particular shipments. No claim is made and no charge is made by the Government that the processes employed in canning pork and beans are defective, or that there is anything wrong with them.

The specific claim that is made by the Government in this case is that in the packing and canning of the particular pork and beans involved in this controversy beans of an inferior and defective grade, or of an inferior and defective stock, were obtained and used, and that the beans were so inferior and so defective that they were partly decomposed and rotten and came within the ban of the act of Congress known as the Food and Drugs Act, the purpose of which was and is to protect the public against deception, imposition, and injury with relation to foods and drugs. That is the issue and the only issue in this case.

Congress in its wisdom has seen fit to prohibit the transportation in interstate commerce (that is, from one State to another) of adulterated foods, and Congress has declared in unequivocal and unambiguous terms what shall constitute adulterated foods. Congress has seen fit to enact that adulterated food shall not be permitted to go into the channels of interstate commerce; that it shall be forfeited and condemned, and, so far as the Government can prevent, shall not be permitted to be consumed by the public.

In this consolidated case—and it is four suits consolidated into one and treated as one suit—the Government seeks to condemn and forfeit 1,169 cases and 58 cans of pork and beans which were manufactured or canned by the claimant, the Oceana Canning Company, at Shelby, Mich., and which were transported in interstate commerce; and its right to forfeit and condemn the product involved in this controversy is based upon the claim that these cans of pork and beans consisted in whole or in part of decomposed vegetable substances, or a decomposed vegetable substance.

This is not a criminal case. The Government does not seek the conviction and punishment of any person or corporation for the com-

mission of a criminal offense; and, therefore, the rules of evidence applicable to criminal trials do not prevail in this proceeding. As you all know, in a criminal case the Government, or the people, must establish a case beyond a reasonable doubt to warrant a conviction. That is not true in this case, because it is not a criminal suit. This is a civil suit, but it is of an unusual nature, in that the Government does not here seek to recover a money judgment or to recover property for itself. It does seek to condemn and forfeit certain articles of food which it claims are within the prohibition of the act of Congress known as the Food and Drugs Act. So that in this case the Government is not required to establish its cause of action by evidence which satisfies you of its right to recover beyond a reasonable doubt. It is necessary, to warrant a verdict in favor of the Government, that it shall have established its case and each and every essential element thereof by a fair preponderance of the evidence, and by evidence which is clear and satisfactory and convincing to you. No greater burden than that rests upon the Government. To warrant a verdict in its favor the Government must have so established—

First. That the article sought to be condemned is a food or a food product;

Second. That it has been transported in interstate commerce, that is from one State to another;

Third. That at the time of its seizure, having been transported, it was still in the unbroken or original package, or unloaded; and

Fourth. That at the time of the shipment and seizure the article was adulterated within the meaning and purview of the act of Congress here under consideration.

The first three elements of the Government's cause of action are established by the evidence in the case. It does appear by the undisputed evidence that canned pork and beans are articles of food. It does appear by the undisputed evidence that the cans of pork and beans, or cases of pork and beans involved in this controversy have been transported in interstate commerce. It does appear that at the time of their seizure by the Government they were still unloaded or in the original and unbroken packages.

So that the sole question for your determination is whether, within the meaning and purview of the Food and Drugs Act of Congress, these cans of pork and beans were adulterated.

Something has been said with relation to the pork and beans in controversy being unfit for food, or deleterious to health if consumed by human beings. Those are questions with which you have no concern; those are questions which are not involved in this controversy, and they are matters which do not constitute an element of the Government's cause of action which it is required to establish.

Again, Congress in its wisdom and in its discretion and in the exercise of its power has declared the rule and the standard in those regards. In certain sections of the Food and Drugs Act, Congress has seen fit to provide that before the Government will be entitled to condemn or forfeit the article under consideration and in controversy it must establish that the article is deleterious to health. The term "unfit for food" is not used in the statute; but in the section and provision of the statute here involved Congress has declared what the rule shall be, and has not limited or restricted the right of condem-

nation and confiscation to such articles of food as are found to be adulterated to an extent to render them deleterious to health. In other words, as I have said, Congress has made the rule and established the standard and has declared that any article of food which consists in whole or in part of a decomposed vegetable substance shall be deemed adulterated and shall not be permitted to go into the channels of interstate commerce. Thus the issue is narrowed to the one question: Did the cans of pork and beans involved in this controversy, and which have been seized by the Government, at the time of their seizure, consist in whole or in part of a decomposed vegetable substance?

The term "decomposed" as it appears in this act of Congress is not confined to its technical or scientific definition. Strictly speaking, or scientifically speaking, an article may be said to be decomposed when it is broken down, when it is separated into its constituent elements; but as the term is here used that is not the final test. If it were, foods which are produced by the decomposition of some other food substance would be within the ban of the statute. To illustrate, I think we all know, as a matter of common knowledge, that sauerkraut is produced and manufactured partially by the decomposition of cabbage, and yet sauerkraut is a food and it is not decomposed so as to be within the prohibition of this statute, or the meaning of the term as it is used in this statute. In the same way butter, and cheese, and buttermilk result from the decomposition of milk, and yet they are not decomposed or adulterated articles of food. So that there must be some other or some additional meaning of this term "decomposed", as it is used in this act of Congress; and it means decayed, or rotten as these terms are commonly and ordinarily understood. I think nothing can be added to that definition that would be of aid or assistance to the jury. You all know what is commonly meant by a decayed or rotten vegetable substance.

It has been said in the course of the argument that, that being true, there was no necessity for the testimony of experts and scientists in this case. That conclusion does not follow at all from the premise. The testimony of the experts and the scientists who have testified in this case is of great importance to you in determining the question which is presented to you for your determination. I think I may safely say that we all know a rotten apple, or a partially rotten apple, when we see it, if it has decayed and become rotten to such an extent that the decay or rot is visible or can be detected by the senses. But I doubt if any one of your number would be able to tell or define what produced the rot in the apple, or the kind of rot that existed in the apple, or what its effect might be upon another vegetable; I doubt if any one of you could tell what it consisted of or whether it was a mold or a fungus growth. Those matters are not within our ordinary experience, and it becomes important for us to learn from those who are versed in such matters what the cause of the rot is, what produces it, and then applying the information so obtained to this particular case it enables us, and will enable you, to determine whether the beans contained in the cans of pork and beans involved in this controversy were decayed or rotten or partially so. So that in determining the question presented to you it will be your duty carefully to consider all of the testimony and all of the evidence

in this case, that on the part of experts as well as that on the part of nonexperts.

Something has been said in this case as to there being a difference between dry rot and wet rot. The statute does not recognize any such difference. You have all in your experience and in your observation seen and found rot that was not a so-called wet rot, and yet it may have been rot. While I am not an expert, I presume to say that the question of whether a rot is a dry rot or a wet rot depends pretty largely upon the nature of the substance upon which it is acting. We have all of us seen rotten wood, which was not a wet rot; nevertheless it was a true rot and we could all tell it if we saw it. We have all of us seen both dry and wet rots in vegetables of different kinds. So that the test in this case is not whether this was a dry rot or a wet rot which affected these beans, nor is the test whether the rot was active or inactive at the time of the seizure of the beans. The test is, was a part of the substance of which those cans of pork and beans consisted rotten or decayed at that time; not whether it was wet or dry, or active or inactive, but under the testimony in the case it is for you to determine whether a part of the beans in those cans were decomposed or partially decomposed, and whether the cans of pork and beans consisted partially of decomposed beans.

Some other terms used in this statute ought to be defined. The term "consists of" is employed. That term means something more than the word "contains." The term "contains" ordinarily means something added to or embraced within the original substance. The term "consists of" as here employed means a part of or a constituent element of the product; in other words, there must be something more than a trace of rottenness in these beans. There must be such an amount or such a degree of rottenness in the beans as to be definable, measurable, and appreciable. It need not be of any particular degree, but it must be something that can be found substantially in the article of food under consideration.

At the risk of inaccuracy and mistakes as to details, but for the purpose of aiding you if I can to a correct conclusion in this case, I will try and give you some illustrations of the effect of this statute as regards the transportation in interstate commerce of adulterated foods. A carload of potatoes is shipped in interstate commerce; a few of the potatoes in that carload are rotten. You would at once say that the Government would not be justified in condemning that whole carload of potatoes because a few of the potatoes therein were decomposed and rotten; because decomposition, to some extent, is going on all the time in a vegetable of that kind after it has ceased to grow. Why may it be true that a carload of potatoes containing a few rotten potatoes is not subject to forfeiture and condemnation? As I view the law this is the reason and the foundation for it: In that instance each potato is a unit, and each potato is treated by itself before it is used or consumed as an article of food, and each potato must be so treated, that is, by itself, before it is consumed. But suppose that that carload of potatoes as a whole, the good and the bad and the sound and the rotten, was converted into potato flour, and there was in the potato flour made from that carload of potatoes an appreciable and definable and substantial amount of rotten potatoes, that flour would be subject to condemnation and

forfeiture. And why? Because the rotten substance therein, or the decayed substance therein is not capable of separation from the rest of the mass and it is all to be consumed by the consumer. I am simply giving you this as a rough illustration. In the same way a barrel of apples containing a few rotten apples might not be subject to condemnation, at least we have not that question here before us for determination. But suppose that the entire barrel of apples, the sound and the rotten, were converted into apple sauce, or apple butter, or apple jelly, and the rotten substance derived from the rotten apples in that apple sauce, and apple butter, and apple jelly, was an appreciable, measurable, and definable amount, then that food product would be subject to condemnation and forfeiture if it was transported in interstate commerce.

The same way with tomatoes. A crate of tomatoes containing a few rotten tomatoes might not be subject to condemnation and forfeiture; but if those tomatoes, the rotten and the sound, the good and the bad, were manufactured into tomato pulp or tomato catsup, then the rotten substance therein could not be separated from the sound, from the wholesome; the unadulterated could not be separated from the adulterated, and the whole mass would become adulterated and liable to confiscation if shipped in interstate commerce. To go a step further, if you had a carload, we will say, of ears of corn and some of the ears of corn to an amount that would be definable and appreciable and measurable were rotten and decayed, the Government might not have the right to condemn that whole carload of corn—I do not say that it would not, but at least it might not; but certainly if that corn was shelled and the whole carload of corn, including the rotten and the sound, was converted into cornmeal for human consumption and then shipped in interstate commerce it would be liable to condemnation. And to bring the illustration to this case: Field beans as they come from the field, some of them discolored—if decomposed, and that is the question for you to determine—in the dry state might not be subject to confiscation or condemnation if shipped by the farmer or the warehouseman in interstate commerce, for the reason that it appears by the evidence in this case that those beans are treated, they are picked in order to separate the discolored beans from the white beans, and we all know, as a matter of common knowledge, that whether beans have been hand-picked or mechanically picked, when they come to the housewife and the cook they are picked over before they are cooked and placed upon the table for consumption. For that reason and because the good may be separated from the bad, it may be that beans that are field run or cull beans, designed to be used as a food product, may not be subject to condemnation in the dry state. But when those beans are canned, processed, and if those discolored beans are decayed or rotten—and as I have said that is the question for you to determine—if they are decomposed within the meaning of this statute, then the can of beans becomes the unit, and in the ordinary course of consumption the discolored beans are not separated from the white beans and the whole mass is consumed, the discolored with the others. So that if discolored beans are decomposed within the meaning of this statute, then such a can of beans transported in interstate commerce comes within the ban of this statute.

It is not necessary for the Government to show that there were any beans in any of these cans which were wholly decomposed or rotten, because if a bean is partly decomposed and partly rotten, that rotten part which goes into the can is a decomposed substance just as much as the whole bean would be if entirely discolored. I do not mean that it would be the same quantity, but the decomposed part would still be decomposed, notwithstanding that it did not affect the entire bean.

So that the issue is a narrow one. It is for you to say from the evidence in this case: Did these cans of pork and beans as they were canned, as they were shipped in interstate commerce, as they were seized by the Government, consist in part of a decomposed substance? In other words, were the beans, some of them, contained in these cans of pork and beans, partly rotten or decayed? That is the question for you to determine. If you find from the evidence in the case that these cans of pork and beans consisted in part of a decomposed vegetable substance, your verdict will be in favor of the Government. If you find that they did not, your verdict will be in favor of the claimant.

In form your verdict will be, if you find for the Government: We find for the Government and that the canned pork and beans ought to be condemned. If you find for the claimant: We find for the claimant and that the canned pork and beans ought not to be condemned.

Mr. Clerk, you may swear an officer.

Mr. MASTER. We desire to except to the charge of the court which eliminates the elements of unfitness for food and deleteriousness to health as not constituting an element of the issue in this case. Also, on account thereof, that the issue is narrowed to one question.

We desire to except to the illustrations given relative to the potatoes in the car of potatoes, the apples and apple jelly, tomatoes and tomato catsup, as being within the ban of the statute, when there is no reference to unfitness for food or deleteriousness to health.

We desire to except to the refusal of the court to charge as asked for by claimant in its additional requests to charge and numbered 1 to 12, inclusive.

We desire to except to that portion of the charge which states that the decomposition involved did not depend on whether the rot was active or inactive.

Mr. WALKER. I don't know whether I ought to take any exceptions at all; it would be simply to the failure to give the Government's requests to charge as preferred, 1, 2, and 3. The other three were covered by the general charge, and I think perhaps these were.

UNITED STATES v. WEDELL

(District Court, District of Utah, Nov. 22, 1916)

N.J. No. 5608

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty. Motion in arrest of judgment and for a new trial overruled.

JOHNSON, *District Judge* (charge to jury). Gentlemen of the jury: The defendant, Walter B. Wedell, is charged in this case by the United States on an information filed by the district attorney with the violation of what is commonly called the Food and Drugs Act of Congress. The charge is in two counts, the first of which is, beginning with the charging part,

That Walter B. Wedell, of the city of Hot Springs, State of Utah, did within the Judicial District of Utah, and within the jurisdiction of this court, on or about the 25th day of October, in the year 1913, then and there, in violation of the Act of Congress of June 30, 1906, known as the Food and Drugs Act, unlawfully ship and deliver for shipment from the city of Hot Springs, State of Utah, to the city of Denver, State of Colorado, consigned to W. B. Wedell, for delivery to the Western Fruit and Vegetable Company, a certain consignment, to wit, 630 boxes containing an article designed and intended to be used as an article of food, to wit, apples, which were then and there denominated as to the contents thereof and labeled, marked and branded as follows, to wit: "Gano Extra."

That said article of food, when shipped and delivered for shipment as aforesaid, was then and there adulterated within the meaning of said act of Congress in that it consisted in whole or in part of a filthy vegetable substance; all of which was and is contrary to the form of statute in such case made and provided and against the peace and dignity of the United States of America.

The second count charges

That said article of food, when shipped and delivered for shipment as aforesaid, was then and there misbranded in that the following statement regarding the article and the ingredients and substances contained therein appearing on the label aforesaid, to wit, "Gano Extra," was false and misleading in that it indicated to purchasers thereof that the said article consisted of apples of gano type or variety, which were of extra or superior quality, when, in truth and in fact, the said article did not consist of gano apples of extra or superior quality, but did consist of, to wit, gano apples which were in whole or in part wormy, worm eaten, and otherwise filthy; and the said article was then and there further misbranded in that it was labeled "Gano Extra," so as to deceive and mislead the purchasers into the belief that the said article consisted of apples of gano type or variety, which were of extra or superior quality, when, in truth and in fact, the said article did not consist of gano apples of extra or superior quality, but did consist of, to wit, gano apples which were in whole or in part wormy, worm eaten, and otherwise filthy; all of which was and is contrary to the form of statute in such case made and provided and against the peace and dignity of the United States of America.

The statute governing in this case, gentlemen of the jury, in so far as it is material to the issues, reads as follows:

That the introduction into any State * * * from any other State * * * of any article of food which is adulterated or misbranded, within the meaning of this act, is hereby prohibited; and any person who shall ship or deliver for shipment from any State * * * to any other State * * * any such articles so adulterated or misbranded within the meaning of this act, shall be guilty of a misdemeanor.

* * * * * * *

The term "food," as used herein, shall include all articles used for food, drink, confectionery, or condiment by man or other animals, whether simple, mixed, or compound.

* * * * * * *

That for the purposes of this act an article shall be deemed to be adulterated:

* * * * * * *

Sixth. If it consists in whole or in part of a filty, decomposed, or putrid animal or vegetable substance.

Under the second count the language of the statute reads as follows:

That the term "misbranded," as used herein, shall apply to all * * * articles of food, or articles which enter into the composition of food, the pack-

age or label of which shall bear any statement, design, or device regarding such article, * * * which shall be false or misleading in any particular, * * *

That for the purposes of this Act an article shall also be deemed to be misbranded:

* * * * * * *

In the case of food:

Second. If it be labeled or branded so as to deceive or mislead the purchaser.

Under this statute I charge you, gentlemen of the jury, that a shipment made from Hot Springs in this State to Denver in the State of Colorado, by railroad, would be a shipment in interstate commerce.

You will observe that under this statute and under the two counts in the information the defendant is charged in the first count with a shipment of an article adulterated as defined in the statute. Under this count the matter of labeling is immaterial. The only question that you have for consideration in determining your verdict upon this count is, were the apples, or any part of them, alleged to have been shipped by the defendant, adulterated as defined under the statute, which means, as defined under the statute, did the said apples, or any part of them, consist in whole or in part of a filthy vegetable substance.

There has been evidence offered in the case for the purpose of tending to prove or show that some of the apples contained in these boxes shipped by the defendant were what has been termed "wormy" apples. And it is claimed by the prosecution that wormy apples fall within the definition "as consisting in whole or in part of a filthy vegetable substance." Whether or not these apples shipped by the defendant were wormy, or whether, being wormy, they contained matter filthy and a vegetable substance, is a question of fact, gentlemen of the jury, for you to determine from all of the evidence offered in the case.

The word "filthy" has its ordinary and usual signification. I shall not attempt at this time to define the word by the use of other language. It is a term that is familiar to you and of common use and is used in its ordinary and usual acceptation.

If, upon a consideration of the meaning of the word, you shall find that these apples were wormy and that they were or contained a filthy vegetable substance as a result of being wormy, then, under the definition as given by the statute, they were adulterated and their shipment was and is prohibited by the terms of the statute in interstate commerce trade.

If you shall find that these apples, or some part of them, consisted in whole or in part of a filthy vegetable substance, then I instruct you, gentlemen of the jury, that the defendant would be guilty upon the first count. If, however, you shall find that they were not or did not consist in whole or in part of a filthy vegetable substance, then I instruct you that your verdict should be, upon that count, not guilty.

The defendant is charged in the second count, as I have already stated to you, with misbranding the boxes of fruit or apples shipped by him, in that they were so labeled or branded as to deceive or mislead the purchaser.

By the words used in the statute "the purchaser" is meant not only the wholesale dealer who might buy the apples or the retail dealer who might purchase them but includes also the ultimate consumer who might purchase them for use.

It is charged in the information that they were misbranded in that they were labeled "Extra Gano" or "Gano Extra", and that they were misbranded in that they were not in fact Gano Extra, but an inferior apple. The name or expression "Gano Extra," it is claimed by the prosecution, has a distinctive meaning, that it characterizes apples of a certain variety or quality, and it is claimed that these apples shipped by the defendant in this shipment were not of the quality which the name "Extra Gano" designates.

Evidence has been introduced in this case tending to show or to prove this designation, and it is for you to determine, gentlemen of the jury, from all of the evidence in the case what is the distinctive meaning of the language or words "Extra Gano" or "Gano Extra."

It is also claimed by the prosecution that these apples were not of the quality which this name designates, but were of an inferior quality, in that they were wormy or worm-eaten. Now I charge you, gentlemen of the jury, that if the name "Gano Extra" or "Extra Gano" designates an apple which is not wormy, and if you shall find from the evidence that the apples shipped by the defendant in this case were, in whole or in part, wormy apples, then the apples would not, in fact, correspond to the designation, and those words being considered alone, if a purchaser seeing a box of the apples with this label was deceived or mislead with respect to their quality, then the defendant would be guilty of misbranding, and if that were all in this case, would be guilty as charged in the second count of the information. But, gentlemen of the jury, it appears in this case that this box of apples shipped by the defendant had upon them brands or labels placed there by certain officers of the State; the language of the statement contained upon these brands or labels reads, as I now remember it: "This fruit has been condemned by the State of Utah and is shipped to be used in the manufacture of byproducts."

Now it is claimed by the defendant in this case that notwithstanding the use of the words "Extra Gano", assuming that some of these apples were wormy and were not of the quality which that name designated, that nevertheless by reason of these brands or stamps placed upon the boxes by the State officers, a purchaser would be so informed as not to be deceived or misled with respect to them. Whether that contention is or is not true, gentlemen of the jury, I shall submit to you as a question of fact to be determined in this case by you. For the determination of that particular question you may take into consideration the language used upon this State label or brand, its size, its location on the box, and from all of these facts as they may appear in the evidence before you determine whether or not a purchaser of a box of these goods with this label placed there by the defendant "Extra Gano" and these other labels or brands placed upon the boxes by the officers of the State, would be misled or deceived with respect to what he was buying. If such a purchaser would not be deceived or misled and would reasonably know that notwithstanding the stamp "Extra Gano" that he was not getting "Extra Gano", then I charge you, gentlemen of the jury, that there would be no misbranding in this case and the defendant would not be liable; but if, on the other hand, after a consideration of all the matters to which I have called your attention you shall believe that

a purchaser, and by "purchaser" I mean, as I said before, anyone who might buy, a person of ordinary and reasonable intelligence, if such a person would be misled and deceived and fairly and reasonably suppose that he was buying "Extra Gano" apples, then the defendant would be guilty as charged in the information.

The question of the intent of the defendant in this action or his motive with respect to this shipment or the labels or stamps placed upon the boxes is immaterial. Under the first count the question is, Were these apples adulterated within the meaning of the statute? Under the second count were they misbranded within the meaning and language of the statute?

In all the matters concerning which I have instructed you that you must find in this case in order to convict the defendant, I now instruct you that it is necessary that you find each and all of such facts beyond a reasonable doubt.

A reasonable doubt is a doubt based upon reason and which is reasonable in view of all the evidence. It is a fair doubt growing out of the evidence or lack of evidence in the case. It is not a mere imaginary, captious, or possible doubt but a fair doubt based upon reason and common sense., and if after an impartial comparison and consideration of all the evidence in the case you can not candidly say that you are satisfied of the defendant's guilt, you have a reasonable doubt, and if such is the condition of your mind after considering all the testimony you should find the defendant not guilty. But if after such impartial comparison and consideration of all the evidence you can truthfully say that you have an abiding conviction to a moral certainty of the defendant's guilt, you have no reasonable doubt. A doubt to justify an acquittal must be such a doubt as would cause a reasonable, prudent, and considerate man to hesitate and pause before acting in the graver and more important affairs of life.

The defendant in this case is presumed to be innocent until he is proven guilty, and this presumption, gentlemen of the jury, accompanies each defendant in a criminal case throughout its entire course and until that presumption is overcome and overthrown by evidence offered in the case.

You are the exclusive judges of the facts proven, of the credibility of the witnesses, of the weight and effect of the evidence and of the inferences to be drawn therefrom, and in determining these matters you are to exercise your best judgment based upon your experience in life as men and your knowledge of the motives which influence persons in their statements.

You have a right to take into consideration the conduct and manner of the witnesses while testifying before you, their intelligence and means of observation, their opportunities to know and capacity to remember and to state the facts to which they testify, their interest or lack of interest, if any has been shown, in the result of the trial, their prejudice or bias, if any has been shown, the state of mind of any witness at the time of the occurrence of the things to which he has testified insofar as the evidence enables you to judge it, and the probability or improbability of the truth of these statements in view of all the other evidence.

You are not bound to believe the testimony of any witness or any number of witnesses. You are to search for the truth, believing only such testimony as carries conviction of its truth to your minds.

If you shall believe that any witness has willfully testified falsely as to any material fact in the case, you are at liberty, but not required, to disregard the whole of the testimony of such witness, except in so far as he may have been corroborated by credible witnesses or credible evidence in the case.

If there is a conflict in the testimony of witnesses then it is your duty to reconcile such conflicts in so far as you can, but it is still for you to determine for yourselves what the ultimate truth of the case is.

It is your duty to consider the evidence all together fairly, impartially, and conscientiously. You should arrive at your verdict solely upon the evidence introduced before you upon the trial. You should not consider or be influenced by any evidence offered but not admitted by the court, nor any evidence stricken out by the court or withdrawn by counsel.

When you retire to your jury room you will elect one of your number to act as foreman and when you have agreed upon your verdict your foreman will sign it as such in behalf of all of you.

Forms of verdict will be furnished you, gentlemen of the jury, providing for the acquittal or conviction of the defendant upon each of the counts or both of the counts, as your deliberations may result.

At the request of the district attorney I will say to you, gentlemen of the jury, that it is not necessary for the Government to prove any concrete case of a purchaser being deceived or misled. As I stated to you in my instructions heretofore, a purchaser might be any person, as I explained to you, who might buy these apples.

What is a filthy apple, gentlemen of the jury, is a matter for you to determine from all the evidence in the case of course, from your own common experience; you have the right to take that into consideration as well as what you hear. If you hear something that you know is not true of your own experience, you have a right to consider it.

Mr. Cook. I think this suggestion should be made in that connection: the language of the count is "consisting in part of filthy vegetable substance."

The Court. Oh, yes; the whole apple does not have to be filthy. The language of the statute is, the language of the charge is, and my instruction is, I think throughout the instructions, "in whole or in part."

Mr. Cook. So the whole apple, even though wormy, does not need to be filthy, if it consists in part of filthy vegetable substances.

The Court. It would have to contain filthy vegetable substances.

Mr. Henderson. The question for this jury to decide is whether a wormy apple is a filthy apple.

The Court. That is the question for them to decide, certainly.

Mr. Henderson. It is for this jury to decide that question.

The Court. That question is submitted to them.

The jury thereupon retired and after due deliberation returned a verdict of guilty. Thereupon the defendant, by his counsel, filed his motions in arrest of judgment and for a new trial and on January 20, 1917, said motions were denied, as will more fully appear from the following decision by the court (Johnson, *D. J.*):

In this case the defendant was convicted on two counts; the first count involved the question which counsel has discussed as to a filthy substance; the second count involved misbranding.

That these apples were misbranded, as charged in the second count of the indictment, I have not any doubt. The boxes were labeled "Extra Gano", and the proof showed that "Extra Gano" was a term that signified the apples were extra good, and at least were not wormy. As I understood it at the time, the only reason that counsel for the defendant contended that they were not misbranded was that certain other brands or notices were stamped on the boxes. I think the court properly left to the jury whether or not these other brands modified the main brand. The fact is I have some doubt in my own mind whether I should have left that question to the jury at all. Just why these apples were put into boxes that had the name "Extra Gano" on them, or why this brand was put on after they were put in, it is not necessary to discuss. The apples could have been shipped without any brand on the boxes at all, except such as the State put on. But those words were there, and I think the defendant got all under the instructions that he was entitled to, and possibly more.

Now, whether or not the statute is intended to cover wormy apples is a question, of course, that is open to discussion. It is like the construction and scope to be given any other statute—the Mann Act, the Safety Appliance Act, and a great many others. I do know this, that the Supreme Court of the United States has shown by its interpretation of these various acts a very liberal interpretation as to their scope and purpose, and in view of the interpretation of the court of final resort upon statutes of this character I think that this court would be abusing its power to undertake in this jurisdiction to put a narrow construction upon a very useful statute.

However, I should be very glad, indeed, to have counsel review this case in the court of appeals. It is important, of course, to determine whether or not wormy apples can be shipped in interstate commerce. It is important to every grower of fruit and every shipper of it. In this case I am inclined, so far as this court is concerned, to accept the verdict of the jury as final.

Upon each count the motion in arrest of judgment and the motion for a new trial may be denied, and the judgment of the court is that the defendant pay a fine of $100 upon each of the counts upon which he stands convicted.

UNITED STATES v. KOSHLAND

(District Court, N.D. California, Jan. 5, 1917)

N.J. No. 5246

Information alleging violation of section 2 of the Food and Drugs Act, Jury trial. Verdict of guilty.

DOOLING, *District Judge* (charge to jury). Gentlemen of the jury: The defendant is charged in an information, filed October 2, 1916, with a violation of the act of Congress of June 30, 1906, known as the Food and Drugs Act.

It is charged that the defendant did unlawfully ship and deliver for shipment from the city and county of San Francisco, State of California, to the city of New York, State of New York, with instructions to notify James Chieves & Company, a certain consignment, to wit, 612 sacks containing an article designed and intended to be used as an article of food, to wit, horse beans, which were then and there, unlabeled; that said article of food, when shipped and delivered for shipment as aforesaid, was then and there adulterated in that it consisted in whole or in part of a filthy, putrid, and decomposed vegetable substance.

The second count of the information charges a violation of the same statute, at the same time and place the consignment therein being 707 sacks of horse beans, which were adulterated in the same manner as the beans charged in the first count.

In the third count it is charged in the same manner as aforesaid, that at the same time and place a consignment of horse beans, 912 sacks labeled, marked, and branded "Monte 418" "20567" and "A", was shipped unlawfully, and also were adulterated. The act provides that any person who shall ship or deliver for shipment from any State or Territory to any other State or Territory any article adulterated within the meaning of the act, shall be guilty of a misdemeanor.

If as much as 25 per cent of the beans in question contained weevil, larvæ, or grubs, such beans would be filthy within the meaning of the statute.

The act nowhere requires proof of intention by the use of the words knowingly, willfully, or like words. It would be destructive of the act itself and nullify it entirely to allow the intent of the person violating it to be considered as a defense; it is therefore unnecessary to prove that the defendant had knowledge that the article shipped by him was obnoxious to some provision of the act. He is charged with a knowledge of the condition of the article.

The fact that the defendant did not intend to violate the law is not a question here. The question is, was the law in fact violated?

For the purpose of the act an article shall be deemed to be adulterated: if it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance. The shipment of the beans here is admitted, and the question for you to determine is whether they were adulterated within the meaning of the act.

The Food and Drugs Act provides that any person who shall ship or deliver for shipment from any State or Territory to any other State or Territory any article adulterated within the meaning of the act, shall be guilty of a misdemeanor.

The burden of proof in this case is upon the Government, and it is not necessary for a defendant to offer evidence in disproof of any allegation of the information until the facts proven, if unrefuted by him, are sufficient to establish his guilt, beyond a reasonable doubt. The law presumes the innocence of a defendant, and that presumption abides with him through the trial and extends to every fact necessary to constitute the offense, and continues until his guilt is finally established by the evidence beyond a reasonable doubt, and determined by your verdict. A reasonable doubt arises when the jury, after a fair and impartial consideration of all the evidence in the

case, are unable to say that they feel an abiding conviction to a moral certainty of the truth of the charge; a certainty which satisfies the reason and directs the understanding of those who are bound to act conscientiously upon it. If, therefore, after a full consideration of all the evidence presented, the jury entertain such a doubt as to any fact or element necessary to constitute the offense charged, they must resolve that doubt in his favor by an acquittal. That is to say, if you have any doubt as to whether the beans were shipped by him, or any doubt as to whether they were adulterated within the meaning of the statute, you must give the benefit of that doubt to the defendant. But you will not understand from this that the Government is called upon to make a case free from any possible doubt, that is, to prove the defendant's guilt to an unassailable demonstration. Such is not the law, for such proof is rarely obtainable in dealing with human transactions. In other words, the doubt which will justify your hesitation must be based in reason and arise upon the evidence and not consist of a mere fanciful hesitation growing out of your sympathies, or based upon something other than a fair and impartial consideration of the evidence in the case.

The purpose of this act is to protect the public from the manufacture, sale, or transportation of adulterated or misbranded [foods and drugs] or [those] below a certain standard. The burden is upon the seller or shipper to know the condition of the article which he ships.

It takes the concurrence of all of you gentlemen to agree upon a verdict, and when you have so agreed you will have such verdict signed by your foreman and returned into court.

(The jury returned at 4:20 o'clock p.m. into court for further instructions.)

The COURT. Gentlemen, have you reached a verdict?

A JUROR. We would like to have the instructions re-read.

The COURT. I have stated the contents of the information which you have in your possession. The Food and Drugs Act provides that any person who shall ship or deliver for shipment from any State or Territory to any other State or Territory any article adulterated within the meaning of the act shall be guilty of a misdemeanor; and that for the purpose of the act an article shall be deemed to be adulterated if it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance.

The shipment of the beans here is admitted, and the question for you to determine is whether they were adulterated within the meaning of the act.

It is the opinion of the court that if as much as 25 percent of the beans in question contained weevil, larvæ, or grubs, such beans would be filthy within the meaning of the statute.

The act nowhere requires proof of intention by the use of the words knowingly, willfully, or like words. It would be destructive of the act itself and nullify it entirely to allow the intent of the person violating it to be considered as a defense; it is therefore unnecessary to prove that the defendant had knowledge that the article shipped by him was obnoxious to some provision of the act. He is charged with a knowledge of the condition of the article.

The fact that the defendant did not intend to violate the law is not a question here. The question is, was the law violated?

You have been instructed that the burden of proof is upon the Government, and it is not necessary for a defendant to offer evidence in disproof of any allegation of the information until the facts proven, if unrefuted by him, are sufficient to establish his guilt, beyond a reasonable doubt. The law presumes the innocence of a defendant, and that presumption abides with him throughout the trial and extends to every fact necessary to constitute the offense, and continues until his guilt is finally established by the evidence beyond a reasonable doubt, and determined by your verdict. But you will not understand from this that the Government is called upon to make a case free from any possible doubt; that is, to prove the defendant's guilt to an unassailable demonstration. Such is not the law, for such proof is rarely obtainable in dealing with human transactions. In other words, the doubt which will justify your hesitation must be based in reason and arise upon the evidence and not consist of a mere fanciful hesitation growing out of your sympathies, or based upon something other than a fair and impartial consideration of the evidence in the case. The question is whether these goods were shipped in interstate commerce by the defendant, and whether they were adulterated within the meaning of the act. If you find they were so shipped, you should bring in a verdict of guilty, and if you have any reasonable doubt, it is your duty to return a verdict of not guilty.

It requires the concurrence of all of you to agree upon a verdict, and if you so agree you will have such verdict signed by your foreman and returned into court.

UNITED STATES v. 5,060 CANS OF TOMATO PULP

(District Court, N.D. Illinois, Jan. 16, 1917)

N.J. No. 5527

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States. Motion for a new trial overruled.

LANDIS, *District Judge* (charge to jury). Gentlemen of the jury: In this case there is one fact for you to find, and that fact is whether or not the product involved in this inquiry was composed, in whole or in part, of decomposed or filthy vegetable substance. That is the issue which is tendered to you in this case. The matter comes into the Federal court because the substance was transported in interstate commerce, and solely because it was transported in interstate commerce. If it never had left the confines of the State of Indiana, it would be a matter for State determination, but being an interstate transaction, it falls within the jurisdiction of the act of Congress known as the Pure Food Law, and therefore the obligation and the authority of the Federal Government attaches to it. And the authority to seize having been exercised by its officers charged by law with the enforcement of its provisions, has set in motion the machinery that has cast upon you now the obligation of determining the fact whether or not the articles, as stated before, in whole or in part, are decomposed or filthy vegetable substance.

This is a civil action, and being a civil action the rule is that the case of the United States is to be established by the preponderance of the evidence, or the greater weight of the evidence, as distinguished from what the rule would be in a criminal case where the doctrine of presumption of innocence, and the doctrine of reasonable doubt control.

Now, by preponderance of evidence is meant not which side has the greater number of witnesses, but it is that side of this controversy on which is the believable statement of facts, as distinguished from the other side. One hundred witnesses testifying to a thing that is obviously untrue, or to a thing that is obviously an error, does not give to that side the preponderance of evidence against one witness testifying in favor of a thing that is obviously true. So, it is not to be determined solely by the number of witnesses.

Now, in determining here where is the preponderance, whether the preponderance is in favor of the accusation against the product, namely, that it is composed in whole or in part of filthy or decomposed vegetable substance, bring to bear upon this controversy that common sense and judgment that would characterize your consideration of a controversy away from court, at home, or in your business, dealing with a matter of concern to you personally.

The seizure in this case was made at Sycamore, Ill. The product seized is called tomato pulp. It was found in upward of 5,000 sealed cans. The charge of the Government, as I stated before, is that the pulp contains decomposed or filthy vegetable matter. The fact, therefore, for the witness is whether or not at the time the product entered interstate commerce—that is to say, when it was put aboard cars at Brownsberg—it was in part filthy or decomposed in its contents.

Now, to determine the question, to elucidate to you the question respecting that matter, the United States presented a number of witnesses who testified as to examinations made by them of the product after its arrival at Sycamore—microscopists, biologists, and other expert witnesses—and they testified to you what they found, and they gave you, on the basis of that testimony, including in that testimony other evidence given by other witnesses of conditions, their judgment as to whether this commodity contained in part decomposed or filthy matter. There was evidence as to tests made by one or more of the Government's witnesses, in the tomato pulp manufacturing industry at canneries covering a substantial period of years, one witness dealing with tests made in the United States and in Italy, in connection with the preparation and manufacture of this article.

Now, the defendant, the manufacturer, or superintendent, secretary and treasurer of the manufacturing concern testified as to conditions at the plant, the treatment of tomatoes up to the time they went into the boiling vat, including inspection, cleansing, and so forth. For the defendant, the witness Wesner testified. He gave you no evidence of tests such as you have in mind when you think of expert tests, that is to say, he did not use a microscope. He made no technical bacteriological test; he made no chemical test; there was no such evidence introduced by the defendant, that is to say, no expert evidence, the evidence being evidence based upon the test made by the witness who subjected the articles to an examination by the three senses, taste, smell, and sight.

There was introduced by the United States in rebuttal, after the close of the defendant's case, four bottles of an article testified to be pulp, and the witness testified that he manufactured it, and gave you the condition under which it was done. Those four bottles were submitted to the witness Wesner while he was on the stand, and he subjected them to the same test that he had previously testified he had subjected most of the articles in question hereto, and which tests he made in your presence, and you recall his evidence as to the content of those four bottles, or jars. Now, I make no comment upon it, as to what that means in view of the evidence as to the content of the four bottles, what went into it, how it was made, what it was made of, but, I call it to your attention as being worth your while to recall and determine it, the weight of the evidence of the witness Wesner as to the sufficiency of the eye test and smell test of an article of this kind in an effort to determine its content with a view to answering the question, does it contain decomposed or filthy matter in whole or in part. Now, so much for that.

There were many witnesses called by the prosecution. In determining the weight you will give to their evidence, you have in mind many other things—I will include all the witnesses in this for the prosecution and the defense, experts and everybody else—having in mind first, the kind of witness he is, the kind of man, how the witness appears to you here, whether the witness seems to be engaged in an effort to deceive or mislead you to a false judgment in this case; and in determining that fact, ask yourselves the question about the various witnesses, what interest has this witness in deceiving and misleading the jury; what is to be gained by deceiving you. Then have in mind the intelligence of the witness as disclosed by his demeanor in the court room and on the stand, whether he knows what he is talking about, apparently. You are not obliged to accept the statement of a man that is inherently improper, that is repulsive to your intelligence, merely because he swears to it. Ultimately it is for you to put it in the scales and weigh it and to appraise it, what it is worth. What I have said in that respect applies to witnesses on both sides. If you find that any witness has started out here, or, being a witness has entered upon the enterprise of telling you something that is not true, of getting into your mind a judgment about this controversy that is false or erroneous, you excuse that gentleman from this case entirely, respecting everything that he said, except insofar as any of the testimony he has given is corroborated by other witnesses, whose testimony you believe, or by facts and circumstances proven on this trial. In other words, in determining what the fact is here, decomposed or not, filthy or not, approach the controversy as I said a while ago, just as you would a controversy of concern to you at home or in your business.

Now, it is not a question solely whether this stuff—I do not use that word "stuff" in any significant way—this article, is fit or unfit for food. I will tell you why I say that. The evidence is this article is sterile; that means the contents has its injury-producing qualities killed by heat; so that even though this article was 5 percent bad—that is, 5 percent bad tomatoes, and 95 percent good tomatoes, or 10 percent bad tomatoes and 90 percent good tomatoes at the time the tomatoes went into the boiling vat down there in Brownsberg—the evidence in this case is, if you eat this tomato pulp, the 5 or 10 per-

cent rotten tomatoes have undergone such treatment that their power to injure you has been killed by the heat. I will say no more upon that. You gentlemen all understand that principle.

So I say, the question is not whether it is fit for food. The question is, whether or not, in manufacturing, the 10 percent bad tomatoes did go in, or the 5 percent bad tomatoes did go in. That is the question. And if you find it did, your verdict will have to be against the tomato pulp, even though you believe, even though you know, that you could eat the whole cargo of the product without suffering any evil consequences.

I do not know whether I ought to say anything about the high cost of living which my brother Batchelder talked about. I hesitate to speak upon the subject that a lawyer brings in in his argument, with the broad latitude given a lawyer. I expect probably nobody ever enjoyed that latitude any wider or further than I did when I was practicing law, but it is your business and mine not to be enticed away from our duty, when we have submitted to us a question to decide, by getting into closing argument, that suggests to us considerations that may have a tendency away from court to induce use to take a liberal or broad view of subjects. There may be men on the jury that raise tomatoes; certainly there are men on the jury that eat tomatoes. Don't consider this controversy from the standpoint of either the man that raises tomatoes or the man that eats them. Denude yourself of that, and decide this question as though you never would or had raised tomatoes, or never would or had eaten tomatoes. You can do that thing. The high cost of living has got nothing to do with this thing. At all events, counsel did not mean to solve the problem of the high cost of living by having us eat bad tomatoes. He did not mean that.

Of course, if there is an order of destruction here, somebody has got to lose. That has not anything to do with your judgment. In a criminal case, if there is a verdict of guilty, somebody is punished, but in determining the question of fact whether or not the man is guilty, in determining the question of fact whether in this commodity there is filthy or decomposed vegetable substance, it won't afford you the slightest aid in finding the fact in this case to have in mind that if you reach a certain verdict somebody will lose. What happens to this tomato pulp in the event of a verdict of guilty—a verdict of condemnation, a verdict that it is composed in whole or in part of decomposed or filthy matter, is of no concern to you. It is to me. Wisely or unwisely, the law has cast upon the judge the authority and responsibility in the event of a verdict against the pulp by you, of disposing of the matter. And in deciding the question which the law has submitted to you, of course you will not be influenced even to the slightest extent by any thought or speculation as to what I may do with it, in the event you reach a verdict a certain way.

Any exceptions, Mr. Batchelder? Any suggestions, Mr. Prosecutor?

Mr. DICKINSON. I have none, Your Honor.

The COURT. I neglected to give the technical legal names of the litigants. In this case, in this kind of a proceeding, the paper that

is filed by the United States, which contains the formal accusation against the pulp is called a libel; in a criminal case an indictment; in a civil action for damages, a declaration; in this case it is called a libel. The Government in this case is called the libelant, the person that brings the action the libelant. The claimant in this case, represented by Mr. Batchelder and his associates, is called the claimant. That is the person that represents the article against which the libelant proceeds for condemnation.

So, if you find against the tomato pulp—that is, that it is composed in whole or in part of decomposed or filthy vegetable substance—the form of your verdict will be, "We, the jury, find the issues for the libelant." If you find for the tomato pulp—that is, that it is not composed in whole or in part of filthy or decomposed vegetable substance—the form of your verdict will be, "We, the jury, find the issues for the claimant." That means for the pulp.

You may retire, gentlemen.

UNITED STATES v. RUSSIAN MONOPOL CO.

(District Court, E.D. New York, Jan. 19, 1917)

N.J. No. 5542

Information in three counts alleging violation of section 9 of the Food and Drugs Act. Jury trial. Two counts withdrawn. Verdict of guilty on one count.

The United States attorney filed an information against the Russian Monopol Co., a corporation, Brooklyn, N.Y., alleging the sale by said company, in violation of the Food and Drugs Act, under a guaranty that the article was not misbranded within the meaning of the said act, of a quantity of an article labeled in part, "Vodka for Passover", which was a misbranded article, and which said article, in the identical condition in which it was received, was shipped by the purchaser thereof, on or about March 4, 1915 [1914], from the State of New York into the State of Pennsylvania, in further violation of the said act.

Misbranding of the article was alleged for the reason that the following statements appearing on the labels, regarding the article and the ingredients and substances contained therein, to wit (translation) "Vodka for Passover. * * * Under the supervision of the Rabbi Joseph Michel, of Vilna, overseer of the seals. * * * Vodka for Passover, Rectified. I come to make acquainted that during the time of my traveling from Boston, I turned over my duties of taking care of this vodka, which is made in Zurad, to my friend who is now Rabbi in Boston, and I have found out that he is a great, learned man, also full of knowledge", together with the general appearance of the label and other statements in the Russian and Hebrew languages, were false and misleading in that they indicated to purchasers that the said article was imported vodka, produced in the Empire of Russia; and for the further reason that the article was a domestic product and had been manufactured in the United States of America.

CHATFIELD, *District Judge* (charge to jury). Gentlemen of the jury: I am going to be very brief as to some of these matters and explain more in detail only those which are actually questioned.

In the first place, this is a criminal case; that is, the Government has seen fit to bring this corporation into court, charging that it has violated a statute, and that immediately puts upon the Government the burden of satisfying a jury beyond a reasonable doubt as to every material matter that enters into the charge. So that you start with the proposition that there is nothing against the defendant except as you have heard the case here from the evidence. It is merely present in court, and the Government starts out to show what it charges against it, and presents that for you to listen to, and if they make out a case so as to show you beyond a reasonable doubt that the defendant broke the law in the sense I shall explain later to you, then, of course, your verdict would be guilty. If the Government does not prove the case to that extent, if you have a doubt in your minds as to whether the defendant broke the law in the sense we are to consider, if you cannot determine the matter, or if it is evenly balanced in your minds, that means you do not reach the point where you can say they are guilty beyond a reasonable doubt, and in that case your verdict would be for the defendant.

So long as it is a corporation you can see you don't have to give thought to whether it was convicted before, or is of good reputation or bad. A corporation has to use men to do its work. Those men may be good men or bad men. They may be men who abide by the law, or lawbreakers, but that would not affect the corporation, unless the corporation did something which of itself broke the law. If any witness testifies, he submits himself to you. You can determine whether or not he is telling the truth. The test of all this evidence you have heard is whether, in your mind, it conveys certain facts that you find to be the truth, so that you take those facts and hold them in your memory, so as to use them in reaching this determination, or opinion, as to whether the Government makes out its case. You can see, in doing that, that you must scrutinize as carefully as you can—weigh as carefully as you can—the testimony of everyone who appears in the case. If he is connected with the Government and his duties are such that it affects his opinion in some of these matters, take that into account, so as to scrutinize it with the idea of determining what you take as facts. When one of the men connected with the defendant testifies you are to take into account that he is interested from the sense that the result of the case will indirectly affect him, and you have to judge what he says from the standpoint of his connection with the defendant and the standpoint of the way he testifies and what facts he tells you about himself. You can see by that that it is not the quantity of the testimony. There were more witnesses for the Government than the defendant, and yet if the Government does not make out a case to the extent that I have told you, the number of witnesses does not make any difference.

What I have charged with respect to any corporation is, of course, the law with respect to this particular charge, and so, looking at the evidence—the testimony you have heard—weighing the statements of the witnesses from that standpoint, just fixing these facts

so as to see what you do determine, do agree, and thereby arriving at matters which you may consult about together (because you cannot reach a verdict until you go to your room and your twelve minds work one with the other so as to result in one verdict), then you will by that process of elimination get certain things which you start out with as the facts which you find, and then, from those, consider next what is the charge against this company, and then see whether the facts prove beyond a reasonable doubt that the charge is made out.

This Pure Food and Drug Law, of course, has purposes that in general I think everyone approves of. It is to benefit, or help, the public. It is to prevent the use of articles of food or of drugs that will do harm through the lack of information on the part of those who use something that they think is different from that which it actually is. We need not go into all those possibilities.

In the case of foods, it is intended to do two things: One, to enable the persons to get exactly what they think they are getting, and in the next place to prevent their getting something that may do them harm or may defraud them by making them pay an additional price, or will cause them to be cheated in the various ways that are defined in the statute, by covering up the sale of one thing in place of that which the article purports to be.

In these particular sections we have to do with there are in general two propositions—one as to adulteration and the other as to misbranding. In this particular case on trial we are concerned with misbranding.

When the Government presented the case in court on this information they had three counts. They have withdrawn two of them because of the particular words on which the count was based, and we have one left, which refers to the same act, the same transactions, as those expressed in the other two, and so far as you gentlemen are concerned any one of the three counts would leave the same question to you because, in addition to the statement of it as presented in this paper which is on file, the matter has gone on and been heard upon the testimony, and you are to consider the case as presented from what you heard, not from the way the district attorney or some one in his office may have chosen the language that went into this particular paper.

In count 2, which is the one going before you, they have attempted to charge a case of misbranding. In addition to the fact that it has to do with the question of the sale and use of food products, I must call your attention to the way it gets into this court.

The Constitution gives Congress the right to make certain laws. You understand that the States, for instance, have the right to make police regulations as to a person's conduct (if he is going to commit a burglary or that sort of thing here in Brooklyn), and that the United States, under the Constitution, has the right to make such laws as those stating how a person coming from Vilna, Russia, would get into the United States. There is a definite marked boundary line between the laws that are within the States' jurisdiction and the laws that are applicable to the whole country, and one of those boundary lines is drawn with reference to what is State commerce; that is, business within the boundaries—as far as we are concerned—of New York State, and business that is interstate; that is, for in-

stance, the acts of the people of New York who conduct business with people in some other State. When that happens, the business goes across the State line, and then the Constitution says the United States courts, which will apply the law according to the same standards and feelings in either State, will hear the case, or will have to do with the matter, instead of having the matter determined, perhaps, for a resident of New York by a court in New Jersey. So, where this interstate commerce, where the matters of business (products) are going from one State to the other, Congress has the right to make regulations and to provide for criminal provisions, criminal laws, criminal penalties, for the violation of those laws, so long as it is a regulation of the actual passage of the commercial articles from one State to the other or the acts of parties who are sending the articles from one State to the other, and who thereby are taking part in something that the United States can control.

So this law was passed with reference to the regulation of food products and drugs, and the acts of persons who were dealing in food products and drugs which went from one State to the other, and intended to do that when they were put into commerce.

You can see that if this Russian Monopol Company was making vodka, that they knew was going to be drunk on the premises, or drunk in Brownsville, it would have nothing to do with commerce in New Jersey, Pennsylvania, Connecticut, or the rest of the world. It would not be interstate or foreign commerce. It could not get out of the State until after it was drunk, and therefore, the commerce part would be local. But if they sold this product to a dealer, like the jobber, Mr. Storm, and he should take a boat, automobile, or wagon and go in Connecticut and peddle it, the vodka would get out of the State and into interstate commerce. And yet, the Monopol Company would have nothing to do with the way it got there except that they made it and started it. So the law made a provision in section 2 of the statute that the introduction into any State from any other State or Territory of any article of food or drugs, which is adulterated or misbranded within the meaning of the act is thereby prohibited. That means that the shipment of the goods is made illegally. The goods could be stopped in shipment if Congress provides the machinery for so doing, and when Congress passes a statute about that they become contraband.

Then the statute goes on to say that if any person shall ship or deliver for shipment from one State to another State, in original unbroken packages, any such article so adulterated or misbranded within the meaning of this act, or who shall offer for sale in the District of Columbia, or the Territories and so on, any of these misbranded or adulterated articles can be seized and the shipper punished.

You can see that if these goods are sold by a jobber, as you have heard in this case they were sold by the Russian Liquor Company (which has the word "Russian" in it, but aside from that it might be New York Liquor Company or anything else) if it was sold by that company to this man in Philadelphia, and if the liquor company did the packing and the shipping and took the goods to the express company or the depot, then the Russian Monopol Company, the manufacturer, never had any idea until they came in court as to

just what party got this liquor or what party would drink it. So you can see, if you are merely considering the statute, "No person shall ship or offer for shipment any of these articles," you would immediately say that was the liquor company, and the manufacturer had nothing to do with it. So in order to prevent the manufacturer from sending out something adulterated or misbranded and then having an innocent third party or second party do the shipping, and thereby get in trouble with this statute, Congress went on and said that no dealer (that is, jobber) shall be prosecuted when he can establish a guaranty signed by the wholesaler or manufacturer from whom he purchased the article, to the effect that the same is not adulterated or misbranded, and the guaranty shall show the name and address of the party or parties making the sale, and in such case the said party or parties shall be amenable to the prosecution, fines, and other penalties which would attach in due course to the dealer under the provisions of the act.

So by this statute the responsibility for the transshipment of misbranded or adulterated vodka is, if it is shipped, for instance, to Philadelphia, transferred to the party who manufactures it and sells it, so that he may be brought into the shipment. So that knowledge of what is going to be done with it, or how it got there has nothing to do with the case, and this defendant is brought here in court to answer such a charge. I only explain this because you can dismiss all that part of the case out of this question.

This defendant is brought here charged with this: That it, on a certain date which you have here, here in Brooklyn, manufactured an article which they—I do not mean manufactured, I mean they sold an article, not whether it was actually made by them or bottled by them—that they put it into commercial form, and that they sold it with the idea that it should be put into consumption, and knowing, if it was consumed in New York, or retailed in New York, that the laws of New York would apply; and if anyone sold it out of the State, that the laws of the United States would apply, and they, therefore, attempted to comply with the statute of the United States by giving his guaranty so that the articles could go into interstate commerce, and this they put upon the bottle in print, the guaranty by the Russian Monopol Company, which, of course, shows they are the persons who stand in the position of maker or dealer rather than jobber, "Guaranteed by the Russian Monopol Company under the Pure Food Act", and then it is torn off "30, 1906." So that makes this defendant responsible for whatever happens if you are satisfied beyond a reasonable doubt that the article did go through interstate commerce, and was in the condition that it is brought in here when it went through interstate commerce.

As to that you have the right to consider the testimony of the witnesses, and if you do not believe that this bottle was found in Philadelphia, that it was sold to a Philadelphia man, and that it ever went into interstate commerce, if you are not satisfied of that beyond a reasonable doubt, of course, your verdict will be not guilty.

But there is no serious dispute made of that. Most of the facts as to that were admitted, so you can assume that the defendant is here in court defending or justifying the label and the statements that are upon the bottle upon the facts which, if you believe them as

they were stated, indicate that it had furnished a guaranty. You can assume that the goods went into interstate commerce, that thereby the United States has jurisdiction, this statute applied, and that thereby a charge of misbranding would be made out if this article was misbranded so that it would come within the statute. So, if the Government establishes that beyond reasonable doubt, that brings us to the question of what constitutes misbranding and whether or not the defendant is shown beyond reasonable doubt to have sent out this article misbranded.

Now, there are a number of provisions in the law about this term of misbranding. I do not want to read all of that. Section 8 says that the term "misbranded" shall apply to articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article or the ingredients or substances contained therein which shall be false or misleading in any particular. And in the case of food it shall be deemed misbranded if it be an imitation of or offered for sale under a distinctive name of another article. That is, if the label be branded so as to deceive or mislead the purchaser or purport to be a foreign product when not so, and if it shall not correctly state the quantity and weight, and so on, or improperly show the ingredients of which it is made. That presents the question you have here. I am not going to go into all the testimony.

You will have to take this up step by step, as I have indicated, and see if the Government has proved beyond reasonable doubt each step, and when you come to consider this last step or question, as to whether there is a misleading label which would make this purport to be a foreign product, and whether it would inform the purchaser as to what were the sort of contents, as to whether it would inform the purchaser so as not to be false and misleading, then you would render your verdict after having reached a conclusion as to the other matters according to the way in which you would answer the question whether the Government has proved beyond a reasonable doubt that this exhibit, this bottle, does have upon it a label that was misleading or which would indicate it was a foreign product when it was not, and whether it is false in any material particular.

Now, then, I must refer to one thing about that. That question you will see does not include this question of knowledge or intent, except in this way: This being a corporation, we can assume that human beings—that is, men—have to do the work, and that, therefore, whoever bottled this liquor, put the labels on, did it with the exercise of some mental process; even if it was done by machinery, somebody had to run the machine and provide the material for it. A corporation could not do that without some service; and although the defendant is a corporation, you must look at it from the same standpoint as if it were a man and that he had done all these acts himself. And the question is this, whether this defendant, assuming the total of its acts is the same as the acts of an individual, used a label which was actually false and misleading and purported to show that this was a foreign product and was intended to deceive people into purchasing it or considering it a foreign product when it was not. And that, of course, involves a proposition or understanding of the language on the label, the way in which the goods would be used

and the character of the persons who would buy the goods and the circumstances under which it might be sold.

That brings you to another point. If they had an order to sell these goods to a professor in some college who was known to have a chair for a teaching of the Hebrew language and the Russian language, if they sent this bottle to him, you would judge of the act from the standpoint of the intelligent knowledge of the person who sent it, or who shipped it, and of the person who was going to use it. If the product was going to be sold to the public generally (you have heard testimony enough to indicate as to whether that public constituted those who can read Russian and those who can read Hebrew and those who can read English) those who were interested in a Russian or kosher product to be used by a Jew or sold to some one who wanted spirits, whisky, vodka, or schnapps, or whatever they call it—it contained a fairly large percentage of alcohol—and who was purchasing it without reference to the name or label upon it, simply because of the amount of alcohol in it.

All those customers are within the knowledge of possible intent. Insofar as they told you what the customers were, you can judge of the knowledge of those customers. You can view whether this label could not be misleading and whether it was not a label for that purpose at all, whether it was a label that might receive somebody, or whether it was intended to be misleading, deceiving, and would purport to show something not in the bottle to those who would be deceived. You can see if they took an old tomato catsup bottle and put this product in it and the words "Tomato Catsup" were blown in the bottle it would be ridiculous for somebody to charge it was not tomato catsup unless we had other facts to raise that question. But if they sell a product that is called tomato catsup as a liquor, and when it is sold to anyone who wants that kind of liquor, you are to consider whether it would mislead or deceive, or purported to be some other article, to any of those who might have occasion to purchase it upon the statement on the label or the oral statement of those who passed it off with that label.

That brings us to the contents of the label. You have had the testimony of the picture of the rabbi, and this statement that it is all right for Passover use, so the Jews would be satisfied. You have had the statement that it has Russian in print upon it, so those who have learned to use vodka or had something to do with the kosher vodka, because they had some tie-back to Russia, would understand that this had also had some tie or connection with the Russian product. You have heard the testimony that the certificates that the rabbis put on were so that the Jews would be satisfied it was all right for them, and also that there was a rabbi who was either in Vilna, or had been in Vilna, or had been made a rabbi in Vilna, or had some connection with Vilna, so that he said he was "from Vilna", so that this substance would be connected by analogy with the substance that the people would consider Russian.

There is no harm in any of that. That does not bring them within the statute. That simply explains the way this link or tie was to be used here and the product known in Russia was made.

When you come down to the express wording, the express language upon the label, and the way in which it was printed, then you have

to consider generally this question: If instead of printing these labels all in Yiddish or all in Hebrew or all in Russian and then putting on another label which should be all in another language (for instance, if Russian were used first, if they put on a complete label that would have all the reading in Hebrew, and then another label for Yiddish, and then a fourth label, perhaps, which would have it all in English, which you know is one of the ways of conveying the information to anybody who might use it), if instead of so doing they used one langauge for each line or statement, and then when they got to the next line or statement they used a different language (as, I say, if some of the characters are Russian, some of the characters are Jewish, some of the characters of Yiddish), so it would evidently indicate only a part of the information to those who would recognize only a part of the characters, then the question comes directly to you, gentlemen of the jury, as to whether you see any misleading or deceiving method or choice of words, choice of print, choice of arrangement, or whether any of the statements would inform persons dealing with this or purchasing it that it was not actually Russian vodka. You have to see if that is proven beyond a reasonable doubt.

Now, you have had some testimony as to the price of imported vodka, or as to the use of imported vodka—if people could get it, or wanted to get it, or wanted to pay the price for it—and the issue really is a comparatively narrow one.

If the Government satisfies you beyond a reasonable doubt, having made out the other things I told you must enter into the situation, that this label and the paster and the words on the inside or backside of the label were written in the form they were so as to indicate to any of the people of these different races or nationalities that this article was something other than they would suppose it to be; and if they were misled either in buying it for something else or in paying a greater price for what was not worth so much, or in assuming they were getting one thing when they were getting another; and if the Government proves beyond a reasonable doubt that the labels were put on and created in this form, so as to make it possible to do that, then the defendant is guilty of misbranding.

On the other hand, if the Government does not prove the case to that extent, or if the testimony indicates that these labels and the way they were printed, and so on, represent merely a haphazard attempt to describe the product by issuing something that could be read or located or understood by those of the different races that were trying to identify the product; and if the label merely would sell the goods to those who did not care where they came from, and would not be deceived in what they were buying, or who would pay no attention to what they were buying; and if, therefore, this label was not prepared so as to work a deception in cases where it could deceive or would be likely to deceive, then your verdict should be not guilty.

It practically comes down, as I say (if you believe the testimony of the witnesses as to the undisputed points, and if you have got definitely in your minds the purpose and extent of this statute) to this simple question of fact, as to whether or not the labels and language were put on and sold, and whether the intelligent or knowing use of this form of bottling and the words on the labels that were put

on there was such that it would come within the prohibition of the statute and deceive persons who were buying something they thought was something else because of the way it was printed. If the Government proves that beyond a reasonable doubt, your verdict should be guilty.

I have said quite a lot about it because it is not a matter that could actually be stated in a few words. There are too many points in the case, but when you get down to the issue, if you get the idea, it is a simple question, and that rests with you.

Mr. ALTMAN. I think the charge was so eminently fair to both sides that I have nothing to add. However, the district attorney in summing up said that if the Government had produced witnesses to show that they were deceived, or received an article which they did not ask for, or asked for Russian liquor and received this, that they would not have been permitted to so testify. I ask Your Honor to charge that it is the law if persons had been produced who went and asked for any kind of liquor, they could have testified as to what they received and asked for, and whether they were deceived or not.

The COURT. I shall simply charge the jury that if there had been any witness here who could have testified, so that it could be evidence, as to just how he purchased an article, just what he understood about it, just what intelligence was conveyed to him either by what was said or by the label, I might let him testify. But, on the other hand, what I should charge if a man came here and said he could not read this thing at all but that he understood enough from something or other, I should probably exclude the testimony on the ground that he was not giving facts but that he was giving a sort of conclusion, not evidence. I could not charge on that proposition. We did not have this witness. You have the question: What would be the effect upon these ordinary individuals described in the testimony? And you have got to create a sort of purchaser in your minds, as well as what he would understand.

Mr. SMITH. In that connection, I will ask the court to charge that it was not necessary for the Government to produce persons to testify in actual instances that they had been deceived by the label.

The COURT. No. I do so charge that.

Mr. SMITH. I ask Your Honor to charge that as to the interstate shipment the jury can take into account the admissions of the guaranty and the testimony of Dr. McIntyre, who purchased this bottle.

The COURT. That is not disputed. There is no evidence to contradict it. The jury does not need to believe the evidence at all if there is anything in the case that leads them to believe the case was made up and the things charged did not happen. But the shipment and sale is not disputed, and undisputed testimony should be believed unless you see some reason to disregard it. The positively false statement appears on the labels.

Mr. SMITH. I ask Your Honor to charge that if the jury is satisfied beyond a reasonable doubt that this label, or these labels, as a whole or in part, are likely to create the impression—a mistaken impression—that this is a foreign product, they may find the offense of misbranding was committed, although no positively false statement appears on the labels.

The COURT. Yes. If the effect of the whole would cause that, you do not have to find any particular word or statement on which to base your opinion. I so charge. I think I have.

UNITED STATES v. ATLANTIC MACARONI CO.

(District Court, E.D. New York, Jan. 22, 1917)

N.J. No. 5521

Information in two counts alleging violation of section 2 of the Food and Drugs Act. Plea of guilty as to one count. Jury trial. Verdict of guilty as to other count. Motion to set aside the verdict overruled.

The United States attorney filed an information against the Atlantic Macaroni Co., alleging shipment by said company from the State of New York into the States of New Jersey and Ohio, respectively, of quantities of an article labeled in part, "Macaroni Savoia Brand Gragnano Style", which was adulterated and misbranded.

Adulteration of the article was alleged in the information for the reason that it was an inferior macaroni prepared in whole or in part from a flour other than semolina prepared from durum wheat, the material from which the best grade of macaroni is made, and the same was colored with a certain dye, to wit, naphthol yellow S., to simulate the natural appearance of macaroni made wholly from semolina prepared from durum wheat, and in a manner whereby the inferiority of said article was concealed.

Misbranding was alleged in substance for the reason that the statement, to wit, "Macaroni Savoia Brand Gragnano Style", the word "Style", appearing in such inconspicuous type and so placed on said label as to be undecipherable unless closely scrutinized, together with certain pictorial designs and devices suggesting the Italian coat of arms and Italian scenes, and the shape and style of the package, all and singular, were false and misleading in that they purported and represented that said article was a foreign product; and for the further reason that it was labeled as aforesaid so as to deceive and mislead the purchaser into the belief that it was a foreign product, to wit, a macaroni manufactured in the Kingdom of Italy, whereas, in truth and in fact, it was not so, but was a domestic product, to wit, a macaroni manufactured in the United States of America.

The defendant company entered a plea of guilty to the charges of misbranding, allowing its plea of not guilty to the charges of adulteration, theretofore entered, to stand. The case then came on for trial before the court and a jury upon the charges of adulteration.

CHATFIELD, *District Judge* (charge to jury). Gentlemen of the jury: We have a considerable amount of testimony in this case. Part of the subject matter is very interesting from the standpoint of the average juryman because of what we are talking about. Part of it is interesting from a scientific standpoint because of the way in

which the tests were made, and because of the exhibits that are produced. Part of it is interesting from the legal question that is presented under this statute.

But everything that has been allowed to go into the case as evidence for you to consider has to do with some part of the issue that is presented for you to consider. And so you cannot divide the case into that which sounds important, or that which sounds interesting, or that which seems to you perhaps has nothing to do with the question as it was originally presented. You must weigh all the testimony from the standpoint of the question that is finally shown and which I have allowed to go to you as a question of fact upon everything that has been said. It is a criminal charge and, therefore, you have to look at the matter from the standpoint of a criminal case. Now, that means that certain rules must be observed by you in weighing the testimony, and also in considering the issue of the case.

The Government is not concerned with this case in the sense of a person who is bringing an action merely to recover damages, and even though you can see that the Government and its officials and the witnesses have some interest in whether or not the routine of the Department and the work of the Department is upheld and carried out, nevertheless this case comes here (with the United States bringing the parties into Court) because of a statute of Congress under which the United States simply makes the parties appear in the court room; then it presents evidence against them, and then it is the jury's duty to see whether the United States presents sufficient evidence to prove a case beyond a reasonable doubt, or else the verdict would be in favor of the defendants, and the defendants would be free of the charge. So, in that way you have to hear all the testimony and scrutinize everything that has been said and everything that has been allowed to go into the case in just testing the question of whether the Government proves its case beyond reasonable doubt—by that I mean a doubt that you 12 men in discussing this case would consider what you would call a reasonable doubt with reference to a matter of this sort—whether the Government proves beyond such a reasonable doubt in your minds that the defendant has done that which is specifically charged in the form in which I shall outline the question to you.

Now, that makes it necessary for you to immediately bear in mind another thing. The defendant could have sat there—of course, it is a corporation, and when I refer to the defendant you will have to understand that it is illustrated by Mr. Calandara, although Mr. Calandara might not have been here. No officer, nor any particular person, need have appeared at all. If Mr. Brown, as counsel, had presented the defendant's case, without anyone from the defendant sitting beside him, you would have to assume that the defendant was there, and that Mr. Brown was talking for a person, which in that sense constituted a corporation which had to work through persons, whose acts therefore you could consider just as if the person were here, but remembering the difference between the individual and a corporation—so I say the defendant could have remained in the court room and at the end of the Government's case could have simply said "I have nothing further to present for the jury to con-

sider", and the jury would have considered whether or not the Government had made out its case upon what it had heard. But the defendant here has gone further than that and has put in some testimony which you also have heard, and so you must now consider all that has gone before you. If there is contradiction consider the testimony, weighing one thing against the other. Where the testimony agrees, that is, if you believe the statement as the witness made it, and where there is no contradiction assume that that proves the facts, unless something in the testimony makes you throw out entirely that particular piece of evidence. Thus consider the whole matter to see if the Government has shown beyond reasonable doubt that the defendant did do as charged in the indictment, and in the form in which I shall leave it to you.

Now, from that you can see, by another step in reasoning, that it is not the number of witnesses, nor the amount that they may say, nor the particular kind of thing that they are talking about that will furnish belief in your minds as you consider it. It is the worth of what is said, and it makes no difference who says it, or how it comes out. If the Government officials, the Government witnesses, through their work in the department, and their connection in the case have some feeling, either of pride in what they are doing, or of interest in their work, or feeling that they are right because of the way they do their work, then take that into account in weighing what they said, so as to see whether you find the facts according to what they say. In the case of the defendant, consider the relations of those who are connected with the business and what they say, from the standpoint of their employment, and from what they were doing at the time these acts were charged, just what point of view they testify from when they tell you about these matters. So, you see it is not merely what they may now believe or think which you should have in your mind, but determine for yourselves just what are the facts and what were the facts and just what weight and application those facts should have, in considering the issue from the standpoint of everybody connected with the matter.

Now, one or two things more I want to refer to in that general way. As I have indicated, some matters are not contradicted and are presumed to be correct, unless there is some reason in your minds to disregard the entire testimony. We have one or two matters in this case as to which there seems to be no question but they ought to be inquired into carefully, and you can see that if you once get through with a question and it is not material to the case, then you must remember the testimony, but you can disregard the steps by which we got there. For instance, these questions as to identity of the particular exhibits. Miss Doyle produced a vial here and told us that it was macaroni from box no. 1, while it apparently was of considerably larger size, so if it came from box no. 1 the yeast must have made it grow, or something else, and when we come to inquire about that, the evident situation was that the analysis, the figures that were given, applied to the other one of the two boxes, if they were kept straight prior to the time that Miss Doyle had a chance to analyze them. It is evident she has produced a sample of the other one of the two things that were analyzed at the same time, and she has given you information as to the article which she analyzed. If

it is the same one as that which she produces, then she has given you testimony as to the object which she produced and you have testimony that it was one of the two boxes coming from Cincinnati, under the circumstances that were described. If she has given you testimony as to the analysis of the other sample which she had and if she has actually brought here the wrong sample and given you the right analysis, then you have the figures as to this other exhibit, but she has given you the wrong or second object to look at. Now, you can see that after hearing all about that, if you are satisfied that the boxes were properly found, that is, I mean that the identical box was found that they are talking about, it was marked, sealed, transmitted, and analyzed, and if you have the figures that you need know about, why then we can just dismiss the question of how these exhibits were marked, or how Miss Doyle happened to refer to that one, but you can take that into account in questioning the accuracy of either the marking or keeping track of the exhibits or analysis. In other words, take everything you heard in weighing the testimony of witnesses, so you can find the facts. If you do not find facts or do not have facts, from which to consider the questions of the case, then, of course, you will be unable to arrive at a conclusion.

Now, ordinarily an individual when he submits himself to the jury to testify allows the jury to consider whether or not he is telling the truth. Consider his judgment, the way in which he testifies, the way he appears, what he says. Weigh these in connection with the other matters. A corporation has to testify, just as it has to do its work, through men that it employs, or that have the authority, the actual representatives for the corporation in whatever they are attempting to do. Now, I have already told you that you should weigh the testimony of these individuals, in so far as they represent the corporation and have done the acts that are being considered as acts of the corporation. Then you need go no further (in so far as they are acts of the persons concerned, in so far as they are acts of the corporation) outside of those individuals who have testified. You will have to assume that a corporation acts through persons, and that whether or not the corporation was intending to do something one way or another way depends upon the intent and purpose of those who at the time were doing the acts for the corporation. So, whether or not there is knowledge or plan, whether a corporation has an idea of doing something in accordance with the law, or contrary, may have to depend upon the circumstances under which the persons acted who were acting for the corporation at the time when the acts were committed. So in such a case as this you have to bear that in mind; bear in mind that a corporation is not like an individual, it does not have a reputation in the ordinary sense for truth telling, because it does not talk. You can weigh the *individuals'* testimony according to what you know about *them.* They are presumed to tell the truth, unless you disbelieve them; so a corporation is presumed to abide by the law, and you know nothing against it unless you find it from the testimony here.

So, you have to find whether the Government proves beyond a reasonable doubt that which the Government charges, and you should not reach that conclusion until you have gone up into the jury room; until you 12 men have talked about the evidence with each other so

as to see what is the finding of fact upon each of the material points, by you 12 men talking with each other. You have 12 separate minds, but those must all work in 12 parts so as to make one result, and no mind, of course, should assume that its one-twelfth is the whole, or that its one-twelfth can work without the help and the working at the same time of the other 11. So that, after you go to your jury room, determine just what you think did happen; what facts are proven in your mind beyond reasonable doubt; then consider what is the effect of these facts and whether or not the Government proves its case beyond reasonable doubt upon the whole matter.

Now, I have spoken of that longer than would ordinarily be necessary because of this question of a charge against a corporation, because of the length of time that has elapsed since the acts charged; because, also, you have heard some testimony that where a matter of this sort is brought to the attention of the Government and of a person or corporation, where there is any possible variation from the methods that were laid down by Congress, it frequently happens (as happened with relation to some of the matters that you have heard here) that the corporation or person then brings itself or himself entirely in line with the statute and so that the matter which is under consideration is not repeated. If the public have been injured at any time in the past in the way in which the statute has been intended to prevent, and if, in order to avoid repeated charges under the statute, the person whose acts are called in question (as to which there may be a hearing, as you heard, over in the appraisers' stores) after that person gets an understanding of what the Government requires it may then make its labels and its product comply with what the Government will require and then there will be no future question, but if at the time the act charged there was a noncompliance with the statute, the case may still come before a jury and the jury will have to consider whether that particular act and that particular situation was at that time a violation of the statute, without reference to whether or not it was trivial; whether it only lasted a short time; whether the effect of it was greater or less through outside circumstances and without reference to whether punishment should be severe or slight.

Now, I am going to come right back to that in just a moment when I speak of the question of misbranding, but before that I want to speak of this Pure Food and Drug Law. You understand that Congress, under the Constitution, has certain authority. It may pass a law prohibiting certain things and regulating certain matters, if the Constitution gives Congress the authority. Everything else of what we know as police matters, or health matters, belongs to the laws of the State where you live. So, in New York, if a commissioner of health, of the department of health, here in New York, wants to clean up some particular section in Brooklyn, he does it under the authority that the State of New York, through its legislature, gives to him. But if the department of health in New York City finds that some one is coming from Texas into New York, and that after he comes to New York disease arises here, they cannot stop that person or regulate the coming of a person until the person comes into the State of New York. So Congress has authority under the Constitution to regulate matters that go from one State into the

other in the sense of commerce. They have the power to regulate the passage of articles, that is, goods; they have the power to regulate the running of railroad trains; they have the power to regulate the traveling of persons who use those trains and thereby themselves constitute commercial intercourse between the States, and in the same way if cases arise in which your interest conflicts with the interest of a person in another State, that case can be heard in the United States court, and Congress has the power to make a law about it. Now, that is where this statute started. Congress had power to pass the law prohibiting the transfer or sale, that is the commerce, from one State to the other of food or drugs that did not comply with certain established standards as created by this statute, which, as you have heard, was passed and went into effect in June 1906 and which has been amended in some respects since.

Now, it covers two things—foods and drugs. I am not going to refer to the question of drugs. There are a number of provisions specifying just when drugs shall be misbranded, or adulterated, or put out in such a way that they deceive the public. There are a number of provisions relating to foods, and by section 1 of the statute it is made an offense to manufacture an article of food or drug which is adulterated or misbranded within the Territories, or in the District of Columbia, where the United States law is exclusive of the State law. Then, in section 2 it provides that the introduction into any State or Territory or the District of Columbia, from any other State or Territory, or from a foreign country, of any article of food or drugs, which is adulterated or misbranded within the meaning of the act is prohibited. That means that the article is made contraband, and its transmission can be stopped, if Congress provides the machinery for doing that, and the treatment of that article will then go on according to acts of Congress, as, for instance, in this case, you have heard that a certain lot of boxes were seized under the provisions of this act and treated as contraband goods. Now, whether or not Mr. Koch or the defendant here could take up with the Government the question of the manner of that seizure, get some of the goods back, get the value of the goods, whether the goods were properly condemned or not has nothing to do with you in this case. All we know is that, under that section of the law, at a certain time, these inspectors went to Mr. Koch's store and actually took into their custody certain articles of goods and from that time on they were treated as in the custody of the Government on a claim of the Government that it was contraband. The controversy between the defendant and Mr. Koch as to how they should pay for the goods we have nothing to do with, because that has straightened itself all out. You have merely learned what became of the goods.

Now, the next provision is: Any person who shall ship or deliver for shipment from any State to another State any article so adulterated or misbranded, within the meaning of this act, commits an offense, and it says that an article, for the purposes of this act, shall be deemed to be adulterated in the case of food, first, if any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength; second, if any substance has been substituted wholly or in part for the article; third, if any

valuable constituent of the article has been wholly or in part abstracted; fourth, if it be mixed, colored, powdered, coated, or stained in a manner whereby damage or inferiority is concealed; fifth, if it contains any added poisonous or other added deleterious ingredient which may render such article injurious to health; sixth, if it contains putrid animal matter, decomposed animal matter, with which we have nothing to do.

If this macaroni was made in certain localities or countries it might come within the sixth section, but apparently not when made in Brooklyn. The indictment makes no claim in this case that this defendant's factory is not well conducted and is not clean—that the product is not clean. No charge is made that the product is a filthy or decomposed substance, or anything that makes it filthy, injurious to health, in the sense of poison. Then there is a provision that the term misbranded shall apply to all articles of food the packages or labels of which shall bear any statement, design, or device regarding such article or ingredients or substances contained therein which shall be false or misleading in any particular. It says, for the purpose of the act, an article shall be deemed misbranded, in the case of food, if it be an imitation of or offered for sale under the distinctive name of another article; if it be labeled or branded so as to deceive or mislead the purchaser; or if the contents have been removed and others put in their place; or if it contain certain drugs; if the weight and the contents of the package are not plainly stated; or if the package containing it or its label shall bear any statement, design, or device regarding the ingredients or substances contained therein, which statement, design, or device shall be false or misleading in any particular, provided that an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed adulterated or misbranded in certain cases, that is, where they are labeled as compounded or blended.

Now, I have had to read that for this reason, that when this information was filed, and the Government brought this charge, they included four counts. Two related to each of the shipments of which the Government claims exhibit 1 in the Cincinnati case, and exhibit 5 in the Newark case were a part. Count 1 charges that by means of a delivery wagon, on or about the 1st day of August 1913, in violation of this statute, the defendant shipped, by means of this delivery wagon, from Long Island City to H. Koch Co., 180 boxes each containing 22 pounds of something that was designed for an article of food, and that they were labeled and marked, as you have seen, "Macaroni Savoia Brand, Gragnano Style. Guaranteed under the Food and Drugs Act," with a picture of the Bay of Naples, and so on. That said article of food when shipped and delivered for shipment as aforesaid was then and there adulterated within the meaning of said act of Congress in that it was an inferior macaroni prepared, in whole or in part, from a flour other than semolina prepared from durum wheat, the material from which the best grade of macaroni is made, and the same was colored with a certain dye, to wit, naphthol yellow S., to simulate the natural appearance of macaroni made wholly from semolina prepared from durum wheat, and in a manner whereby the inferiority of said article was concealed. Now the third count which you have before you charges

exactly that same offense with relation to the other exhibit, which it is said was shipped by rail to Cincinnati, and as to which you have heard testimony, and the charge is that that was shipped on or about the 10th day of October, 1913, in violation of the same law. Now count 2 provided, or charged, that the shipment of the boxes sent to Koch in Newark were misbranded in that the labels did not show the purchaser that these goods were artificially colored and did not show the purchaser that there was anything in that except semolina. Count 4 charged, in the same words, in the same fashion, that the shipment to Cincinnati was misbranded in that the boxes did not show that it was artificially colored and that it was not made from a semolina of durum wheat. When that was brought to the defendant's attention, this question as to whether or not the goods had been shipped with or without the rubber stamp, the defendant immediately admitted, so far as the record is concerned, that these boxes, which apparently they had sent out, did not bear the rubber stamp, and that therefore they were not branded as the defendant stated it had intended to have them branded when they were shipped. They, therefore, said that they were responsible under this statute for having shipped to Cincinnati and Newark goods that were not stamped as they themselves stamped them so as to comply with the law, and a plea of guilty as to the responsibility for sending out those shipments, without the rubber stamp on the label, was entered.

Now, you can see that under this statute the same article may be charged to be adulterated in that it does not show of what it is constituted, and that the lack of material, or change of material, is covered up, and the same article may be misbranded in that as it was sold to the public its true contents were not disclosed. The purpose of both of these acts may be to defraud the public, or to harm the public, either in the sense of making them pay more, or of getting a poorer article, or of not getting what they think they are buying, but there is a difference when you come to consider the acts themselves, and you must carefully distinguish whether you should charge that the product is merely misbranded or whether it is adulterated. Now, let me illustrate. Suppose an article is sent out and sold for the purpose of killing potato bugs and is labeled paris green. If, instead of containing paris green, it merely has some green coloring matter and is made out of earth, and whether potato bugs would like it, or it would do them no harm, then if that is sold for paris green, of course, it is misbranded, and would come under the misbranding section. At the same time, if it is not paris green, but is some harmless material, then there is a substitution or some imitation of a product for the genuine, and at the same time there has been an adulteration in that, and a substance is sold which is inferior in quality or strength, and in which the inferiority is covered up by the use of the green coloring matter to make the public think it is something else.

Now, this defendant, then, having been brought into court on a charge that they were doing both, both misbranding the product, in the sense that shipments were made which were not attended to as they should be, so as to see that the label was all right, and being charged also with having sent them out so that the purchaser would get an article that was adulterated, or where the inferiority was

covered up, they took the consistent position which they should take if they were innocent, (and which they should properly be in if you should render a verdict of not guilty, that is, if the Government does not prove beyond a reasonable doubt that they were adulterating) then they took the proper position as to the misbranding because this statute does not provide that these acts must be done knowingly. If the head of a great drug company assumes that he is selling paris green, and some of his clerks are substituting something else and the company should be benefiting from it, then the company may still be held responsible for the shipment. If the clerk was not profiting by it, but if he was doing it for the benefit of the company, the company could still be held responsible for the shipment.

If decomposed animal matter is allowed to form in the article that is shipped, the question whether the person who ships it knows it is there does not prevent the seizing of the article, or avoid a charge for shipping that kind of article without preventing the contamination if it comes within the statute, so that this statute is purposely framed so that it will protect the public, whether the public wants to be protected or not in the first place, whether or not the shipper intentionally evades the law, or whether a defendant is found evading the law even though he intended or thought that he was complying with it; so, I say that if this defendant is innocent of the charge of adulterating, they did the proper thing under these circumstances in coming in and saying these goods were found without the rubber stamp that constitutes a violation of the statute of misbranding, and we, therefore, plead guilty to that. We will avoid it in the future. We will change our label and the matter is trivial, and the court should impose a penalty that corresponds with the occurrence.

Now, that part of the case is left in that condition up to the present time. I have had to go into this at length, because this case is simple as to issue, but there is a whole lot to it as the matter is left to you. There is lots of evidence, lots of matters for you to consider. This case, at the present time, stands just upon the position of the defendant as I have outlined it saying that they admit the court must deal with this question of not having the rubber stamp on from the standpoint of misbranding, and that they have done no more wrong and, therefore, they say the Government has not proven the charge that is brought against them. So, now you must come to the question of whether there was any other element, any other act, because if this is all there was to it, then this question of adulteration and addition would be not only trivial, but the case would not fall under the adulteration side of the statute.

The Government then says this: Assuming that these particular boxes did go out, and assuming that no officer knew about it, and assuming that that particular leaving off of the rubber stamp was not intentional, then we still make the charge that the goods were sold for the purpose of supplying a dealer who would not buy artificially colored macaroni for what appeared to him to be natural colored macaroni—that is, macaroni made of this durum semolina, which would give that color—and that he was influenced to buy this because the price was not as high as it would be if the color were produced by the use of a durum semolina, and he was induced to buy this because he had a trade which wanted that kind of macaroni,

or macaroni of that color, and in order to make this particular sale the goods were sent out without anything to indicate to this customer that he was getting something that was not up to the standard which he was buying in quality and in color. Now, if such a charge as that is brought against a man under this statute, and if by accident or by carelessness two boxes went to Cincinnati and two boxes went to Newark, or even if 113 or 160, whatever the quantities were—you will take the testimony, because you must recollect the testimony as the witnesses give it, not take what I say, by way of illustration, because neither Mr. Brown nor Mr. France nor I are trying to give you the testimony, but we have referred to it, as when I point to a box and call it a box, and if you want to qualify my statement that it is a broken box or a poor box you could do so, but I am illustrating—as I say, if this shipment of 113 boxes or 60 boxes, whichever they were, got to Cincinnati or to Newark with something wrong in the labeling or packing, so that, for instance, they were marked as macaroni from durum semolina, but were in fact macaroni from wheat *flour*, and these Cincinnati people or Mr. Koch did not find that out, and if thereby he was misled into buying it for something else, even if the defendant admitted that a mistake was made and that in the future they would avoid mistakes, yet they were within the prohibition of the law. It would be for the court to say how they should be punished and whether it should be treated as a casual matter and they should be absolved, provided they did not do it again. But this particular charge assumes seriousness for the reason that even though these other dealers who have testified in court told you they do not compete in the sale of these particular products—that is, that they did not put on the market products which would compete with this particular trade—nevertheless there has been testimony that there is a trade with certain people that have been educated from the Italian or foreign standards and wish this material colored—macaroni. They wish it made either with or without color, according to what they do wish, but those who want it without color do not want to buy that which is artificially colored. Those who do want artificially colored, or who are willing to take artificially colored, are entitled to know under the statute what they are getting, so that the price will correspond to the goods that they receive.

Now, when the Government charges this defendant with conducting its business in such a way that it is putting on the market a product which will be sold to the jobber for sale to the customers who want a yellow product, which is uncolored, and to a trade that would consider a product inferior, or lacking in strength and in quality that they are trying to buy, if that yellow color is not produced by durum wheat semolina, if this defendant was deliberately supplying that trade with something that from that standard was inferior and was using the method of misbranding the boxes, or accidentally allowing a foreman of the label room to be careless in not checking up the product upon which these labels were going, and if that was occurring, then this defendant was doing something which assumed importance and illustrates to you the wide difference between the charge of misbranding and the charge of adulteration. As I say, if this case had involved nothing more than whether or not those two boxes might be called adulterated as well as misbranded, the matter might easily have been left to me to say whether or not

there should be a severe penalty or a trivial penalty because of the accident. So, the question of misbranding has been left to me properly by the defendant, and you cannot take from their admission that these two boxes did not have the label on; that therefore they violated the statute as to adulterating. You cannot take that admission as any evidence against them at all, because it is in their favor. In the same way, if the Government had not accepted, not presented the charge that they were adulterated (and therefore coming within this statute) for the sake of selling their product in a way that they could not have sold it otherwise, the whole matter would have been disposed of upon the same statement by the defendant that these two boxes might come within the statute, but if so, it was accidental and made no difference, and you would not have to consider the question. But the Government, instead of doing that, charges that this defendant was violating the statute in sending out a product that would be sold to a certain trade that required a certain standard, or a certain quality, or a certain kind of product in the goods which it would buy, and that therefore this product is adulterated and that it was meant to be adulterated, and that it was meant to be sold as natural colored goods, that therefore the Government charges that it was inferior, and that the inferiority was concealed by the way in which it was colored, or through the addition of this coloring matter.

Now, I referred early in the case to the matter of the Lexington Milling Co. in which some flour was bleached; that finally went to the Supreme Court of the United States, and they decided that under this fifth section an added poisonous or deleterious ingredient which might render the article injurious to health required proof that the bleached flour was harmful to health, and that if the bleaching material was so small in quantity that it would not have any effect on the health, the mere change of appearance in the flour did not bring it within that particular section. In deciding that case the Supreme Court of the United States referred to these other provisions and they used language which seemed to bring in all of these sections. They seemed to say that if the inferiority, or the substitution, did not produce some article or have some effect which would damage health, that the article was not adulterated, but if you look into the case carefully, and examine the section under which it comes, you will see that in the flour case they were talking about the addition or *poison* which would be harmful to health and that we have something entirely different here, because there is no accusation that this coloring matter would affect health, or that the use of one ounce in 12,000 pounds would make any difference under this health section. This charge comes down solely to the question of using an adulterating material (that is an artificially added material) so as to cover up inferiority in quality or strength by the change in color, and up to that point the question is simple of statement and plain of meaning. That is the charge that is made, but when you get into this question of what is inferior in quality or strength, then you have got to have a standard.

Congress had the power to pass that law. Congress had the power to use this language, and you jurors and I must apply that law according to what Congress says. When Congress provided that if it was injurious to health it would come under one section, and if not injurious to health it would come under that other section, the

Supreme Court was bound to follow Congress by saying that something that was not injurious to health was not adulterated *by a poison.* So, when we consider the proper section as to what is "inferior in quality or strength", we must try to find out what Congress meant. If there were anything to indicate that Congress meant if it should be inferior in bran or in gluten, or in the materials that are classified as protein in building up the body, if that were the general meaning of the word inferior, then you can see that the argument would come down to a definite limit. On the other hand, if the word inferior meant something cheaper in price, and there were anything in the law to indicate that Congress meant it was inferior in price or cheaper, then we would be limited to that meaning of the word inferior. If there were anything to indicate that when they were talking about paris green (that is not a food—I use it, you see, as an illustration) they should say paris green that was inferior for suiting the appetite of some particular striped potato bug, instead of one that had spots, why we would have to take that as a test. The charge here is that this is an inferior article of food for the purpose for which it is to be used as an article of food. If it is to be put on the market or sent out to a market where a person sending it knows that its saleability will depend upon the demand by Italians who want to purchase articles that have a certain color and desire the goods purchased to be made in a certain way (even if the process involves additional steps and a little increase in cost is involved in order to effect the sale of the goods even at the expense of that little increase in cost), so as to make it inferior in quality or strength from the standards that it is to be measured by in being put upon the market for that particular trade, and if any concern sends out goods so as to meet that particular demand by something that has other articles, or has coloring matter put in, so as to sell goods to meet that particular demand, then he would come within this definition of inferior in strength and quality from the standards or standpoint of the purpose for which it is to go.

So here in this case you must decide whether these shipments were made, you must decide whether the articles that were taken by the inspectors were the articles that were shipped, whether the articles taken by the inspectors were the ones that are produced here and that have been analyzed. You must decide whether or not the analyses are correct and the facts are the way the witnesses present them to you. So far as matters are not disputed (and so far as this plea of misbranding is concerned, the defendant did not question making the shipment), inasmuch as they told you that the shipment was made, of course, you can assume that is proven. You have to then go on and see when the articles were shipped, if you find that they were shipped, as I have said, whether this adulteration was intended or whether they were sent out in just a casual way so that we would have to consider whether or not the label was accidentally put on. The charge is, the matter you have to consider is, whether or not the defendant was putting on the market, and intended by this shipment to put upon the market, goods which were inferior in quality and strength to those which that market to which the goods were being sent would require, and whether thereby they were selling something which was inferior in quality and strength to that which was being bought so far as the people who bought it knew,

and whether the label upon the boxes was the means of covering up the misbranding so that the fact of the adulteration, if you find that it was adulterated, in that sense, was covered up, and if the Government proves beyond reasonable doubt that the defendant was sending out boxes or allowing its clerks to send out boxes that did not disclose properly the contents so as to comply with the statute, and if these articles were therefore misbranded in that sense, then if the misbranding was a part of putting these goods on the market so as to dispose of the goods that were adulterated in the sense that I have referred to in that part of the statute, if the Government shows all that beyond reasonable doubt, then your verdict should be guilty, and the question would rest with the court as to how the matter should be treated. If the Government does not prove the case to that extent, if you have a reasonable doubt as to any material step in the proof that leads you up to the question of determining a verdict, then your verdict should be not guilty, and, of course, you will have to remember and distinguish between counts 1 and 3, count 1 being the Cincinnati transaction and count 3 the Newark transaction, so that you could render a verdict of guilty or not guilty as you might find the facts as to either count or as to both.

Now, what requests and exceptions have you?

Mr. BROWN. I ask Your Honor to charge the jury this: That if the rubber stamps "artificially colored, made in the United States" were on these two boxes, exhibits one and five, that the contents would neither be misbranded nor adulterated?

The COURT. That is, if the goods were sent out?

Mr. BROWN. The same goods. Which is saying, that they were artificially colored so that people could buy them or not, as they saw fit, in that respect then they would not come within the statute at all because they would be just what this particular box would be purported to be.

The COURT. I so charge. It is evident that this box did not have the rubber stamp on, and therefore we come down to the serious question as to the way they went out, not simply the mere sending out of these two particular boxes.

Officer sworn and jury retired.

Jury returned with a verdict of guilty.

Mr. BROWN. I move to set aside the verdict on the ground it is against the weight of evidence; also move to set aside the verdict on the ground there was absolutely no proof of any intent on the part of the defendant, and that the verdict of the jury is not found in accordance with the charge of the court, and is contrary to the law as laid down by the court in its charge.

The COURT. I will deny your motions and give you an exception in each.

Mr. BROWN. I renew my motions to set aside the verdict on the ground that there was no proof of the commission of any crime within the contemplation of the statute.

The COURT. You may have an exception.

The jury thereupon retired and after due deliberation returned a verdict of guilty upon the charges of adulteration. The defendant company thereupon filed its motion to set aside the verdict, and said motion was denied by the court. On February 17, 1917, the defendant company was sentenced to pay a fine of $398 upon the plea of

guilty as to the charges of misbranding and upon the verdict of guilty returned by the jury as to the charges of adulteration, as will more fully appear from the following remarks of the court (Chatfield, *J.*):

The record shows that the defendant was brought into court upon an information based on two interstate shipments. There were four counts, one as to misbranding and one as to adulteration with respect to each shipment. The two counts as to misbranding were disposed of by the plea, and the two counts as to adulteration were disposed of by the verdict of the jury. The maximum would therefore be four penalties which, for a first offense, would be $200 each. It appears from the record of the court, and the fact is not contested, that this defendant was previously indicted and punished for a charge of misbranding, with relation to substantially a similar form of label, in this court. The charge of misbranding in the previous information should have brought home to the defendant the meaning of the statute and the purpose for which the law was intended. It makes no difference whether in the particular instance injury to an individual or harmfulness as a food product is actually shown. The court does not consider that a second offense is a part of the crime, nor does it consider that a person should be put on trial before a jury upon the issue of whether or not it is charged with a first or second offense. That question has entirely to do with the remedy, and if the accusation of the second offense is disputed it can be summarily heard by the court, or the court may have a doubt and impose sentence within the maximum of the first offense. The second offense provision is not a mandatory change in the nature of the crime. I shall therefore treat this matter as consisting of two offenses, one relating to the shipment to Cincinnati, and the other, the shipment to Newark, N.J., and shall consider that it is possible to impose a fine for four separate violations, and that on two of these the maximum would be $200, and as to the other two a maximum of $300 would be imposed which would make a thousand dollars in all. Recognizing the circumstances, I think that a fine of $398 divided in two parts of $199 each, so as to bring the sentence within the specific first-offense sentence upon the two adulteration counts, also stating that the total of the fine is imposed because of the nature of the second offense, and also because of the presence of the charge of misbranding as well as of adulteration, is sufficient to indicate the application of the statute to the matter. The Government may have judgment upon the sentence if it desires.

UNITED STATES v. PULMONOL CHEMICAL CO.

(District Court, E.D. New York, Feb. 10, 1917)

N.J. No. 5535

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against the Pulmonol Chemical Co., alleging shipment by said company from the State of New York into the States of Massachusetts and Minnesota,

respectively, of quantities of an article labeled in part, "Pulmonol," which was misbranded.

It was alleged that the article in each shipment was misbranded for the reason that certain statements appearing on its label falsely and fraudulently represented it as a remedy for all pulmonary diseases and all forms of consumption, and as effective for improving nutrition and relieving night sweats, when, in truth and in fact, it was not. It was further alleged in substance that the article was misbranded for the reason that certain statements included in a circular accompanying the article falsely and fraudulently represented it as effective for preventing hemorrhages and breaking up all severe colds, as a cure for consumption and tuberculosis, and as a remedy for night sweats, when, in truth and in fact, it was not.

CHATFIELD, *District Judge* (charge to jury). I think that the present case in many ways one of the most serious and one of the most important matters which I have ever been called upon to submit to a jury. In the ordinary criminal case the question is whether one individual should be held to have been shown beyond a reasonable doubt to have violated something which Congress has said should constitute a crime, and the personal liberty or liability to a fine of that individual is the limit of risk in the particular case. Insofar as the case may establish a doctrine, or insofar as the case may form an example, it may be used or not used—as the case may be disposed of if it is appealed or as Congress may legislate upon a matter of the same sort—when another case comes up. When a statute is passed it is made the law of the country, on which the act of one individual may be in a sense the test as to whether or not the opinion of a great many people or of a few people is correct, when the application of that test may mean the life or death, the health or sickness, of many people, and when you have the position of one man protesting for his ideas against the general opinion of those who are supposed to know about the subject. When a jury of 12 men are called upon to consider whether or not the ideas of the man as against everyone else, or nearly everyone else, are correct, or when the jury finds itself in a position of considering whether or not the opinion of the world up to the present time is correct, you have a very serious subject to consider, and the court has a very serious duty in deciding just how the matter shall be left to you and just what shall be left to you.

Now, the Supreme Court of the United States, in the case from which the district attorney has just read to you, said that it had been decided in other cases that Congress by this statute deliberately excluded the field where there are honest differences of opinion between schools and practitioners. It said that the statute did not intend to invade the domain of speculation. The Supreme Court has held in other cases that this statute, that the laws of the United States, do not attempt to decide whether or not a belief of one person or the belief of many persons is right, and that those laws do not bring up such a test in these criminal statutes. If I may use a plain illustration, I think if at the time that the whole world believed in witchcraft one person should have advertised something that contradicted the doctrine of witchcraft, the United States Government, under the Constitution and under its method of enacting law as it

exists at the present time, would not allow a person's liberty to be brought into jeopardy under a criminal statute by the mere decision as to whether or not witchcraft was true or false. That comes in the domain of freedom of opinion or of belief. I am inverting the case because now everyone believes that witchcraft does not exist, and no person, perhaps, could be found that would oppose that idea.

In the case at bar it is the opinion apparently of the medical world generally, and of most individuals, so far as they have gained their ideas from doctors and from the investigation of the doctor's statements that have been made—it is the idea of the world that tuberculosis, as has been stated, is a disease that comes from the presence of a germ or bacillus that is substantially always present and which may progress if circumstances give it the opportunity. Now, you have heard that it is not the general opinion that any particular medicine can keep away or remove this opportunity for these germs to develop in the lungs (because we are not talking about joint tuberculosis and other matters of that sort). You have heard from the testimony that if, according to the general opinion of doctors, after these germs have started their development and have proceeded upon this awful course that Mr. France has tried to explain to you, which I am not even going to try to follow, if they have gotten to the point where a person would say that one lung was gone, whatever that means, then the general impression and opinion as indicated by the testimony of the witnesses, and what has been stated to you, of the world today is that no medicine will either stop the going of the lung or bring the lung back from where it has gone, but that, as has been said, these germs may be stopped—that is, arrested and stay inert or dead, whatever it may be—by certain treatment that removes their opportunity to continue active. Now, when you are considering whether generally everybody is right and that the medicine does not actually do the arresting (and I think that Dr. Payne told you from his standpoint the medicine itself does not act like a policeman and cause this arrest), when you consider that, and then attempt to determine who is right in forming an opinion and reaching a conclusion as to just what medicine may have to do with the conditions which will be present if fresh air and the proper amount of exercise, and the proper number of eggs and other food are taken—when you are considering just what medicine will have to do with the creation of these conditions, and just what medicine will not have to do with the creation of these conditions, and attempt to say whether one doctor is right in saying that you should have two eggs, whether another doctor is right in saying that you should have no eggs, whether one doctor is right in saying you should have no medicine, and whether the other doctor is right in saying that you should have pulmonol with those things—these matters have nothing whatever to do with this case.

This is not a case in any sense where the practice of using pulmonol is in question. It is in no sense a case whether the Pulmonol Company should sell pulmonol. It is in no sense a question whether Dr. Payne should continue to prescribe pulmonol. We have nothing to do with whether he may convert everybody to his opinion. I can say to you, as a matter of law, that if Dr. Payne is right, we should help him convert the people to that opinion; that if he is

right, and it is a matter of opinion, the whole world should agree with him. So, I have let him put in the testimony. I have let him state these cases to you so that you should see that, viewing the facts and viewing the patients and viewing the situation, looking at it from Dr. Knopf's standpoint, looking at it from Dr. Payne's standpoint, there is a difference of opinion, as to which the two men may be as honest in their variances as may be and they may each believe absolutely that the other is entirely wrong. I do not mean entirely wrong, because they agree on some of the conditions, but I mean, wrong in saying that the other is on the wrong track. We can leave that all out of the case, but it was necessary to let that testimony in, to allow this situation to get before you so that you gentlemen, as jurors, would not be disposing of this case on a question of opinion as to whether pulmonol may be a good medicine or not. So, as the Supreme Court has said, Congress recognizes that they would not decide between one form of religion and another, as to which may be the best assistance to the doctor in administering medicine. It would not make any difference as to whether, so far as Congress was concerned, the man's wife is a Christian Scientist, or whether the man's wife is a Roman Catholic, or a Presbyterian, or a Jew, so far as his mental make-up is concerned. If he takes a dose of Epsom salts his mental attitude may have something to do with the situation. The doctor told you there was a psychology in this, and if the man would have greater psychology if he goes to one church and thinks of it one way and have less psychology and just as much of Epsom salts if he went to another church, you as jurors can leave that out, because Congress has left it out and it is not in the statute. Congress, as the Supreme Court says, used the words in order to leave no doubt upon that matter, that the statement must be false and fraudulent. In other words, there must be intent to deceive people so as to make them engage in commerce—that is, spend money or the equivalent of money—because they are misled and deceived, and that brings me to this statute itself and to what this case is about.

Perhaps some of you were here in some of these other cases that had to do with foods. Some of you may have been here in ordinary negligence cases where you heard something about the regulation of interstate commerce. But bear in mind that this is a criminal charge. At the outset this paper, which has been called an information—you can see that there is much paper in it. It costs more than one sheet would, as you can see, and the price of that paper might cost more today than it did a month ago, but that has nothing to do with this case—that information is merely a sheet of paper which notified the Pulmonol Company that they were to be here, because a jury was going to listen to their case; and they are here and you are hearing the case, and you must judge the case only from the evidence that has gone to you in the case, using your intelligence and the knowledge that you have gained throughout your lives in passing upon that evidence. So the Government must present evidence or else, of course, there would not be any case. The Government must show what will satisfy you beyond reasonable doubt that the defendant has done what it charges or else you cannot get to the point where you could render a verdict for the Government, and

therefore, of course, I charge you that, as this is a criminal matter, you must weigh everything that has been said so as to see if it was proven beyond reasonable doubt that the defendant did that with which it is charged and which I shall specifically in a moment state. You have heard what does not ordinarily happen in a case. You have heard a good many more witnesses for the defendant than for the Government in this particular matter. You must take into account not how many there were or how fast each one talked nor how many words they said, but take into account what they said which is material to the issue in the case. Consider how they said it, who they are, what relation they have either to the result of the case, or to the subject matter, and use all that as light, just as you use their appearance and their intelligence and the way of saying things to throw light upon your minds in determining how much you believe, in order to decide of what you are satisfied as to all the facts as to the different things, and then see if those facts, that you find from the testimony, prove beyond reasonable doubt that the charge is made out.

This corporation, so far as we know anything about it, is supposed to be reputable. Its connection, you have heard, with the Salvation Army; that may be considered by you as something in their favor, as to honesty in their intentions, and, so far as you know anything about this company, consider whether their intent is to defraud. Dr. Payne has testified. He has told you he is the president; he has told you he is the medical officer; he has told you he is the salesman; he has told you that he does everything that is necessary for the company and therefore he has given you a chance to judge of the company's intent and its dealings insofar as he might advertise the drug of this company or the merits it had. So from that you can determine these questions of fact as to what their purpose, their knowledge, and the meaning of their acts are. And so you come down in this case to a determination not as to whether pulmonol is a good medicine, not to a determination as to whether one person is right in thinking that it will cure consumption, not to a determination as to whether other people are right in thinking that it has no effect upon pulmonary consumption, or that it has no effect as a tonic. You come down to a determination in no way of whether or not fresh air and treatment, without medicine, is the only specific. But assuming that people generally and the public who buy medicine have been of the impression that tuberculosis is to be treated only by fresh air and change of climate and food and care, then if a remedy is presented which it is said will cure tuberculosis, and if that remedy is sold to them, and if they are thereby induced to purchase the remedy, you have to consider whether or not the statements upon the bottle and upon the papers in the package in which it is sold, in the first place, according to one paragraph of the statute, whether the package or label bears any statement, design, or device regarding such article or the ingredients or substances contained therein which is false or misleading in any particular.

Now, this statute, as I have said, was passed by Congress because they have the power to provide police regulations as to the way in which goods shall be sent from one State to another. As to how one State shall deal with another in a commercial way, Congress

has the power to decide what is good; that is, what will have a beneficial effect in this matter of police regulation upon the people of one State when they are dealing with the people of another, in the sense of regulating the goods that they may exchange. So that Congress can stop the transmission of opium from one State to another, if Congress reaches that conclusion. That is a police regulation. So Congress may legislate that liquor shall be stopped in interstate traffic. Congress has the power to say that pulmonol shall not be shipped from one State to another, if Congress reaches the conclusion that pulmonol shall be prohibited in its statute. But these statutes have not gotten down to that refinement. This general statute says that no food product and no drug shall be sent from one State to another which bears upon it a false label, or a label that is misleading as to matters of fact, as distinguished from those purely of opinion, where it is made plain that it is opinion. You have heard them talk about codeine and derivatives of opium. If a medicine contains those derivatives and they are not stated, or if the preparation is incorrectly stated so that the label is misleading, then Congress says that this shall not be sent from one State to another because those who purchase it would not know what they are buying. So under this first main section of the statute this defendant is charged with having on these two occasions, which are admitted, sent from the State of New York to another State packages of pulmonol that bear this language, which has been read to you, and the Government charges that some of those statements in there are false and misleading as facts as distinguished from opinion.

At the time when this law was passed, in 1912, apparently there was some necessity that came into the view of Congress for stopping the traffic in drugs where the statement on the label was not false as to the contents of the package, or not false as to what the package was or meant to be, but where the statements were false as to the effect of the package generally. The idea that Congress was considering was what is popularly known as the sale of patent medicines, or put-up drugs, as a matter of business where people buy them without knowing what they are. To come back to the illustration of liquor again. If an article was put out as a medicine and there was a statement that it would cure certain diseases, and if in fact it was a beverage which was furnished to people so that they thought it was a medicine, so that they either did not know it was a beverage or that they did not recognize its effect, and if that article could be shown to be sold because people would buy it to drink, and if it could be shown that it had no medicinal effect, then that article would come within the prohibition of this statute. Now, we might come to a long discussion as to whether alcohol and medicine had any medicinal effect. We will not discuss now whether a person might be charged with having misbranded an article because he said it contained 15 percent of alcohol and the alcohol would help cure a cold, or a thirst, whichever it might be. That would be a matter of opinion. But if he stated that alcohol was a cure for baldness, or if he stated that the bottle of something or other was a cure for baldness, and all it proved to be was that it was good for drink, then it could be stopped under this statute.

Now, I am using illustrations that do not come very close perhaps to this, but I do not want to come too close, because I am going to leave the question to you. The question is what the effect of this particular article may be as viewed from the statement of facts, distinguished from those of opinion. So in 1912 Congress, in order to reach the kind of cases that I have referred to, added the section that said if the label contained anything which was false or misleading—in fact that was already in the statute—and added this: If the package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic power of such article, or any of the ingredients or substances contained therein, and if that statement is false and fraudulent, then it would be treated as constituting a crime, in the same way as before, when the statute said "if it contained misstatements of fact." So that we have here a change, of course. If you find it proven beyond reasonable doubt that this label contains in it any statement of fact (as distinguished from a statement of opinion, or as distinguished from a statement of conclusion as to the recovery of a patient) which is false, then it would be within the main part of the statute. Then, if you should find that the label contains any statement as to the curative or therapeutic effect—from our standpoint therapeutic and curative are substantially the same—and if that statement is not only false; that is, if you find it is not based on fact, but if the persons who made the statement knew or should have known or must have known that the statement was false, and if they put that there for the sake of giving out a false statement and of making a statement to people which would cause them to buy something because they did not know the truth, then that would come within the second portion of the law, and if the Government proves that beyond reasonable doubt, your verdict should be guilty.

Now, this case, as has been said, is not a test as to whether or not the Pulmonol Company can do business or whether it can sell this medicine. It really is only a test as to whether or not the particular label that is upon the medicine at the present time is misleading and intentionally false and fraudulent, and whether it contains statements that are contrary to fact. If so, then, if proven beyond reasonable doubt that this was so, the defendant would be liable to the penalty of having to correct its label so that no one would be misled in that respect, and be punished in such a way as the court might see fit, according to the amount of intent in the misstatements that the package contained. It is for that purpose that Dr. Payne was notified by the Department to tell them what he knew about the contents of the article and the accuracy of the statements upon the article. If there had been a provision there that the liquid in that bottle was red, white, and blue in color, and it proved to be all red, and Dr. Payne had gone down there and they had said, "Why do you say it is red, white, and blue?" and he said, "Well, it is. When you mix it, it is first white, and then blue, and then red. I did not intend to give the impression that it was red, white, and blue all at once", the Government would have said, "Well, you should say it is first white, and then blue, and then red, and as long as it is red it is in a condition in which people can take it." He could have rebranded his label in that respect and the Government would con-

sider whether or not the company should be prosecuted for the use of the previous label, or whether it was something that did not necessarily mean that a person should be charged criminally with having put out something that is fraudulent. So, in that way this matter was called into discussion. The situation behind it, as to this disagreement between Dr. Payne and the other doctors, as to his standing in this society which is formed by physicians, and in which they attempt to regulate or control the action of those who are practicing as doctors, let us entirely leave out. The question whether you agree with them, or disagree with them, their methods, or their actions in dealing with some one who runs counter to their ideas, has nothing to do with this case, unless it affects the credibility of one of the witnesses, or unless it shows interest or bias on the part of one of the witnesses so that his statements here are not to be taken for their face value. You jurymen can weigh all those things so as to see whether a man is so certain that a person is a wrongdoer that he would not listen to anything properly that might be said in the man's favor or might be true when said about a man. On the other hand, a man who is being criticized may feel that the others were wrong to such an extent that he will not entirely give full consideration to what a third party may be doing without having the slightest interest in the difficulties between the first two.

So far as the Government is concerned, you may start with the assumption that the district attorney, and in this case the Government, in presenting this question leaves to you in no way an opportunity or idea of siding with the other doctors or with Dr. Payne. That has nothing whatever to do with the issue. Whether the Department of Agriculture learned Dr. Payne's analysis and suggested to the chemists that they look it over and see if they could find something they had not found before has nothing whatever to do with whether or not the statement on the label is all right; it only has to do with whether or not the chemists followed that suggestion. You have nothing to do with the question whether the officers of the Government may have been attempting to help the other doctors and hurt Dr. Payne (you can assume that they have been so misguided and blinded that they are not fair to one set or the other); but the thing for you to consider is whether or not their accuracy of observation in their analysis of the product is correct, as you have heard all the testimony, and then consider whether their analysis is correct. They have told you what is in the product. Then see whether this label contains anything that is false, that is, in the sense of inaccuracy or misstatement as to what the medicine is made of or as to what it is. For instance, if it said it was a solid and not a liquid you could pass on that as a question of fact. If it said that it was beneficial in certain diseases, and the bottle was empty, you could pass on it as to whether it would be beneficial to take nothing where they said you must take something. If it were proven that the bottle contained merely water and they told you that the patient must take something, why then (unless they could tell you that this psychology entered in so that if they took sugar instead of medicine and the sugar was coated with pink, it would be healthful merely because the patient thought they were getting something) then you could take into account that the statement would be false, when it

claimed that the medicine was healthful; but, if the statement is that this pink-coated sugar contains quinine, and it does not contain it, then you have a question of fact.

You have got to be very careful all the way through here to dispose on one side of all the matters of opinion and on the other side of all questions of fact. Dr. Knopf has gone through this label and in response to my question has taken up clause by clause the different statements of what is in the medicine and of its action. In most respects, perhaps in all respects, as he said, the sentences as composed of words in the English language and as stating something with relation to the contents or to matters that are used as medicine, are true. He differs when he gets to the proposition that this particular medicine is of any effect as a medicine in tuberculosis cases, and there is a question of fact for you. If the medicine has no effect and if it is sold merely because people are anxious to buy a remedy, and if they deceive themselves into thinking that remedy is doing them good (even if they thereby help themselves); or if the remedy, because they take care of themselves, does not have any effect of itself; in other words, if it is just the same as if there was so much water in the bottle and if it was sold with the intent of making people pay for water, that is, pay for an inert substance and induces them to exercise the psychology of curing themselves, and if this label you find contains a statement of a cure that does not cure as a matter of fact, with the understanding that people would get in buying it, why then the label is false and misleading, and you would consider whether you are satisfied beyond reasonable doubt that under this third section of the statute it was intentionally made false and misleading in that way.

Now, the information has two counts, one relating to the package that was sent to Boston, Mass., on or about October 4, 1913, and the other which was sent to St. Paul, Minn., on or about March 1, 1914. Of course, as I have already charged you, it would be interstate commerce to sell a bottle of medicine to some one in either Boston or St. Paul, to send it from Brooklyn to comply with the sale. There is no dispute as to the language that is upon the packages because they have been submitted to you. The counts have not been separated into a charge as to whether this is intentionally false and fraudulent as to distinguish it from merely misleading or false. In fact I have tried to distinguish that by telling you that if the Government satisfies you beyond reasonable doubt that the intent was to put out something that was false and misleading with the idea of deceiving for the purpose of disposing of it as an article of use, not necessarily of sale, then, of course, the matter would come within the language of the information. If you find that there was no intentional fraud, no intentional presentation of a false statement, and if you should still find that the language upon the package was false and misleading as to facts as distinguished from opinion, it would still come within the language of the statute. If the Government should satisfy you as to that beyond reasonable doubt, the charge would still be made out in that sense. And as I told you, it is all a question of whether you find as a fact one or two of these matters. One, that this label was intentionally false and fraudulent and sent out for the purpose of deceiving, as distinguished from an honest belief that it was helpful and that the statements made were true.

The other point is, if you find that the statements upon the paper itself state as facts what is not so in any material sense or particular, according as you determine those questions (of course, recognizing the proposition that if any witness willfully deceives you here within the court room, it is within your power to pay so much attention to what he says as you see fit, weighing all the testimony) then see if the precise charge under this information is proven beyond reasonable doubt, and do not speculate upon these matters of medical science; do not determine for yourselves whether or not you want to buy this medicine or have somebody use it, or whether you would try it as a last resort. Keep that out of the case. Simply see whether the defendant has done something that brings it within this statute and whether that is shown beyond reasonable doubt.

The Government requests me to charge:

(1) It is unnecessary for the Government to prove that all the statements on the label or booklet or circular were false and fraudulent. If you believe from the evidence that any one statement as to the curative or therapeutic properties of this compound was false in fact and that the defendant knew that it was false, then you may find the defendant guilty. I so charge.

(2) If you believe from the evidence that as to any one of the ailments for which this compound is recommended by the label or booklet or circular and which is set forth in the information this compound would have no beneficial effect whatever, and the defendant knew this, you may find the defendant guilty. In the way that I have defined fraud I do charge that, yes. If the defendant sent these out knowing that he was making a false statement, that would be a fraud.

(3) If you believe from the evidence that any one of the therapeutic claims as to the effect of this compound upon all pulmonary diseases, for all forms of consumption, for hemorrhages or for night sweats, was false and was made by the defendant with a reckless and wanton disregard as to whether it was true or false, you may find the defendant guilty. I so charge.

(4) If you believe from the evidence that any one of the therapeutic statements upon the label or booklet or circular as set forth in the information was partly true, but was so artfully worded as to convey a meaning as to the compound's therapeutic properties which was wholly false, and that the label and booklet and circular was so worded for the purpose of deceiving the public, then that statement would be false and fraudulent, and you may find the defendant guilty. I so charge. If this paper or label was made up in such a way that people would get the idea of false facts as distinguished from either a correct or incorrect opinion of the person making the statement, if that paper was gotten up so as to present false facts to people or to make them believe things were false as facts as you find them, and if sold and put on the market for the purpose of selling by means of false statements of facts, that would bring it within the section.

Now, Dr. Payne, if you think that I have stated the matter incorrectly from either standpoint of the law or of the testimony, you want to get it on the record now.

Dr. PAYNE. I have nothing to say.

UNITED STATES v. 462 BOXES OF ORANGES

(District Court, District of Colorado, Feb. 21, 1917)

249 Fed. 505; N.J. 5402

Libel under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

On December 18, 1916, the United States attorney for the District of Colorado, acting upon a report by the Secretary of Agriculture, filed in the District Court of the United States for said district a libel for the seizure and condemnation of 462 boxes of oranges, consigned on December 6, 1916, by S. M. Guthrie, Lindsay, Calif., remaining unsold in the original unbroken packages at Denver, Colo., alleging that the article had been transported from the State of California into the State of Colorado, and charging adulteration in violation of the Food and Drugs Act. The article was labeled: "Lindsay's Favorite Brand Ivan C. McIndoo, Lindsay, Tulare County, California." Adulteration of the article was alleged in the libel, for the reason that it consisted in part of decomposed oranges.

Thereafter Ivan C. McIndoo, Lindsay, Calif., claimant, filed his answer, denying the allegations in the libel. On February 14, 1917, the case came on for trial before the court, a jury having been waived, and after the submission of testimony it was held that the oranges were adulterated within the meaning of the Food and Drugs Act.

LEWIS, *District Judge.* There is no doubt about the facts in this case, but I think there is question as to whether or not the facts bring the shipment within the terms of the act of Congress. We declined to meet this question heretofore in connection with a shipment of apples; that is, we refused to issue the writ of seizure. The charge was that some of the apples were rotten, but on preliminary inquiry it appeared that many of them were sound—were in good condition for use, and could be readily seen and separated from the unsound. It is pretty difficult to free our minds from the idea of deception in the sale of this kind of fruit in the condition that the evidence shows these oranges are, and yet that element ought to be eliminated, because the act of Congress in no sense undertakes to reach the purpose of the act by bringing within its terms any fraudulent conduct in the sale of the article. You cannot determine the condition of an orange from looking at it as you can an apple. Now, the evidence, I take it, does bring the shipment within the literal terms of the act; the oranges were decomposed in the sense that on account of prior freezing they were undergoing a deteriorating change; that is, a large percent of them. I presume there is a process of decomposition going on when an apple is passed through the stages of what is popularly called mellowing; it is hard when picked and is kept for several months or weeks before it becomes highly palatable. You would not count that—if that be decomposition—as being within the meaning of the act of Congress, for that is a process purely of nature itself, normal to that fruit.

It is true that freezing does not destroy the wholesomeness, immediately, of fruit—either fruit of this character or other fruits—but it starts the process, which, in a short time, will destroy it for all food purposes; and I conclude from this evidence that would be true in this case of a great percent of these oranges. On account of having been frosted they would from that cause alone within a reasonable time become wholly unfit for food purposes; within a time less

than required to render them unfit for food if they had not been frosted. There is evidence that they were not hurtful if eaten—nothing poisonous about them—nothing harmful in any degree; but there is also evidence that frosting may cause them to have a bitter taste. However, we must conclude that freezing, as already said, through the necessary processes of nature that immediately follow, would lead to the total destruction of this shipment as a food product. Now, if that be true, is it not decomposition within the meaning of the statute? There is no doubt about the facts, that these oranges were frozen before they were shipped from California where they grew, and that rendered them increasingly unfit as a food product. From the time they were frozen they became increasingly less wholesome on that account.

I believe that is decomposition constituting adulteration within the statute. I think you expressed the true issue in the case, Mr. Lee, when you said the sole question is whether or not the facts, which are undisputed, bring them within the intent and purpose of the statute. My judgment is that in the sense of the statute they were adulterated when they were seized at Denver on the 18th of December.

You may take a decree of condemnation without costs.

UNITED STATES v. SIX BARRELS OF GROUND PEPPER

(District Court, S.D. New York, Feb. 27, 1917)

N.J. No. 5547

Libel under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

The United States attorney filed a libel for seizure and condemnation of 6 barrels of ground pepper, alleging that the article had been shipped by McCormick & Co., Baltimore, Md., and transported from the State of Maryland into the State of New York and remained unsold in the original unbroken packages; and that the article was adulterated and misbranded in violation of the Food and Drugs Act. The article was labeled in part "Pure Ground Black Pepper, McCormick & Co. Baltimore, Md."

Adulteration of the article was alleged, in substance, in the libel for the reason that added pepper shells had been mixed and packed therewith so as to reduce and lower and injuriously affect its quality and strength, and had been substituted wholly or in part for the article.

Misbranding was alleged in the libel for the reason that the statement, to wit, "Pure Ground Black Pepper", was false and misleading in that said article was an imitation of, and was offered for sale under the distinctive name of, another article, to wit, black pepper, when it was not; and for the further reason that it was labeled and branded so as to deceive and mislead a purchaser in that it purported to be another article.

MANTON, *District Judge.* On the 17th of April 1916, 10 barrels of pepper were sold by the claimant to Samuel Wildes Sons Co. under an order calling for "10 barrels pure ground black pepper." The

shipment was so marked and it was conceded by the claimant, indeed, so claimed, that the pepper sold and shipped was pure ground black pepper. On the 24th of February 1916, 6 barrels were seized by the marshal, and on the 27th of May 1916, they were sampled by the libelant and thereafter experimentation with the samples was made as hereafter stated. The samples were taken by the Government inspector at the house of Wildes, a hole was bored about a quarter of an inch in bore through one of the staves of each of the barrels by a brace and bit. The samples so taken were from various parts of each barrel. Care was taken in the preservation of these samples, and they were given to the Government chemist, Seeker, for analysis in his laboratory. He, together with an assistant, Cummings, conducted the experimentation with the results herein stated. The claimant contends that this pepper was Lampong pepper, a high grade of black pepper grown in the southeastern end of the island of Sumatra and commonly used in this country. The claimant, McCormick & Co., are large importers of pepper, perhaps the largest in this country, and have been engaged in business in Baltimore for a long period of years.

Pure ground black pepper is defined in Circular 19, issued by the Department of Agriculture on June 26, 1916, as follows:

PEPPER

Black pepper is the dried immature berry of *Piper nigrum* L. and contains not less than six (6) percent of nonvolatile ether extract, not less than twenty-five (25) percent of starch, not more than seven (7) percent of total ash, not more than two (2) percent of ash insoluble in hydrochloric acid, and not more than fifteen (15) percent of crude fiber. One hundred parts of the nonvolatile ether extract contain not less than three and one-quarter (3.25) parts of nitogen. Ground black pepper is the product made by grinding the entire berry and contains the several parts of the berry in their normal proportions.

The Department of Agriculture officially advised McCormick & Co. on August 1, 1916, that—

Ground peppers will be regarded as adulterated and misbranded, if, upon examination, they are found not to comply with the standards in Circular 19, Office of the Secretary of Agriculture.

The Government has taken the position generally, in the enforcement of the Federal Food and Drugs Act of June 30, 1906, that a ground black pepper conforming to the standards above mentioned, defined in Circular 19, is not a violation of the act. A product not made solely by grinding the entire black pepper berries and containing the several parts of the berry in their normal proportions, but containing also some added foreign substance, is not a pure ground black pepper, and if shipped in interstate commerce is in violation of the Federal Food and Drugs Act.

The Government's claim is that McCormick & Co., in order to gain an advantage in competition, adulterated its black pepper with foreign pepper shells and it contends that this adulteration was carried on only to such an extent that an analysis made of the product would find that such adulterated and misbranded pepper would come within the limits of Circular 19.

In Lampong pepper the ash and fiber are comparatively high, due to excess sand, twigs, and trash. Hence, to make room in Lampong

pepper for the addition of a larger quantity of shells, all of this excess trash, twigs, and mineral matter is taken out. If from 100 pounds of pepper there is removed 3 percent, or 3 pounds, of sand or gravel, leaving 97 pounds of pepper, there would be practically a negligible quantity of ash. By taking shells containing 8.21 percent of ash, 25 pounds can be added to the 97 pounds of clean pepper, and the result—122 pounds mixture—would give 95 pounds less ash than the original 100 pounds contained. This 25 pounds is, of course, in addition to the shells that might safely have been mixed in the pepper before the excess mineral matter was removed. Control of crude fiber could be illustrated in exactly the same way and with substantially the same result. It is claimed by the Government that by some such method of scientific control this pepper was standardized and kept as near uniform as possible. In other words, to each grind as much shell was added as could be put in with safety. After the grind customarily analyses were made, as Shoul testified, to ascertain whether the pepper as sold came up to the requirements of Circular 19. Both the Government and the claimant concede that if foreign pepper shells were added to the natural pepper berry such a mixture would be an adulteration and a violation of the act.

The sole inquiry, therefore, is one of fact, whether under the proof in this case this pepper sold to Wildes and subsequently sampled contained pepper shells as charged in the libel. This question of fact the court is called upon to decide.

It may readily be conceded that with the possibility of mixing pepper shells and the pepper berry the mix can be so arranged that it will contain the essential properties required under Circular 19. Therefore a chemical analysis alone is not sufficient as a method of detection. Apparently the Government recognizes this, for it conceived a method of detection and carried out its plan. It experimented, prior to endeavoring to carry out its plan of detection, and found that quinine alkaloid was no part of the properties of pepper or pepper shells. Such experiments were had that it was scientifically determined by the experimenting chemist that if quinine alkaloid were mixed with pepper and pepper shells, it could be subsequently detected in the laboratory on analysis.

Two well-known tests of obtaining such results are known to science. One is the so-called "modified Thalleioquin test" and the other the Hereapathite and Fluorescence tests. With this knowledge, after learning that McCormick & Co. were the consignee of 199 bags of pepper shells then at a dock in Baltimore, the Government inspectors on May 27, 1916, proceeded to the dock and there, with the use of a syringe, mixed quinine alkaloid with each of the bags of pepper shells, putting an equal quantity, 1 ounce, of quinine alkaloid in each bag.

After the samples were obtained from the barrels seized at Wildes house, the Government analysts, Seeker and Cummings, examined 19 separate samples from 7 different barrels of the shipment of pepper in issue, to determine the presence of quinine alkaloid. The modified Thalleioquin test was employed. Of the 19 samples so tested, 13 returned a negative and 6 returned a positive reaction. Of the first series of samples, 4 returned a negative and 3 a positive reaction. Of the second series of samples, 4 returned a negative and

2 a positive reaction. Of the third and final series of samples, 5 returned a negative and 1 a positive reaction. Three barrels returned a negative reaction upon every test. One barrel returned a positive reaction throughout. One barrel returned 2 positive and 1 negative reaction, and another barrel returned 2 negative and 1 positive reaction. The examining chemist explains that positive reaction refers to the red color obtained by the application of the test, and alleges that this demonstrates the presence of quinine alkaloid. In addition, the chemist, Seeker, testified that he applied the Hereapathite and Fluorescence tests on a composite sample of 400 grams of mixture, two samples from barrels A and B, and a third sample from barrel A. These last two tests returned a positive reaction. These tests were those applied by the chemist, Seeker, in his experiments prior to syringing quinine alkaloid into the pepper shells. From his previous experience, Chemist Seeker learned that a minimum of 2 mm of quinine in 200 grams of pepper sample would invariably return the positive red color reaction. Approximately 30 cc of quinine solution was injected into each of the 199 bags of pepper shells as previously described, and Seeker estimates that he can detect the presence of 6 percent at a minimum of the treated shells in this pepper, and concludes, upon the result of his examination, that this pepper contains from 10 to 28 percent of quinine-treated shells.

The inquiry, therefore, is whether this conclusion is positive and accurate. Cummings, the assistant to Seeker, gives corroborative testimony as to the findings.

The entire consignment of 6 barrels is all part of the same grind or mix, and the claimant concedes that if quinine alkaloid was found in 3 barrels, and that this indicates a mixing of pepper and pepper shells, the 6 barrels should be condemned. Learned counsel for the claimant argues that, assuming that the presence of quinine alkaloid in a part of this pepper has been conclusively established, it follows that before such evidence can be accepted as sufficient proof of the addition of quinine alkaloid-treated shells to this pepper, the Government must show the absence of any other reasonable possibility of quinine alkaloid finding its way into this pepper. In view of the concession that quinine alkaloid is not one of the properties of pepper and that McCormick & Co. were concededly using pepper shells, I cannot agree with counsel that it is incumbent upon the Government to show the absence of any reasonable possibility of quinine alkaloid finding its way into the pepper in any other manner.

The examination made of this pepper by Seeker is attacked as insufficient and inconclusive because it is said that the examination as made does not demonstrate the presence of quinine alkaloid with the certainty required. I cannot find that any of the experts called by the defense, and they were many, had ever actually experimented in detecting quinine alkaloid where it has been mixed with pepper shells.

A very general and severe attack is made, however, upon the sufficiency of the tests used by Dr. Seeker, but when the testimony is examined with care it will demonstrate that it resolves itself largely into a matter of opinion; opinion expressed by men learned in the science, but men who have not experimented. Drs. Pond and

Winton gave no testimony at all upon quinine tests. Dr. Penniman stated that the proof was not sufficiently conclusive and further that "you could not determine the presence of quinine with certainty unless you had pure quinine to test." But he did admit that if the Thalleioquin test were applied and the result obtained as claimed by Dr. Seeker, it would be some evidence of the presence of quinine and that positive reaction from the Hereapathite test would be evidence of the presence of quinine, and that the Fluorescence test would also give some evidence of the presence of quinine, and admitted generally that the three tests were of value in detecting the presence of quinine. He says that the density of the color obtained upon the positive reaction would be indicative of the quantity of quinine present and that the density would have some relation to the quantity. He then describes a method of making this test, which upon comparison with Dr. Seeker's, I find to be precisely what he did. This materially weakens the opinion evidence of Dr. Penniman.

Dr. Deghuee, another expert, on direct examination, expressed grave doubt of the sufficiency of the tests made by Dr. Seeker, but says that if both the Hereapathite and Thalleioquin tests were made, both together would "make out a little stronger case." Dr. Fuller admits that the three tests used by Dr. Seeker, if the observations of Dr. Seeker are correct, would be some evidence of the presence of quinine alkaloid. Dr. Winton's testimony is not at variance with this method of detection. Dr. Winton further testified that a microscopical examination "in itself" is not sufficient except in cases where a foreign ingredient such as almond or coconut shells or olive stones are used, and further that "if it were a carefully selected Lampong pepper, which had been cleaned and scoured and some of the natural elements removed, and those were afterward replaced by pepper shells," he would not expect to find from 10 to 28 percent of shells on a microscopical examination.

Such quibbling of experts expressing but opinion testimony in the absence of similar experimentation to that of Dr. Seeker cannot be said to overcome the observations of Dr. Seeker after his study, research, and labor which obtained a positive reaction indicating the presence of the detector which was used by the Government inspectors.

But it is said that the test of the microscope, as applied by Dr. Rusby, submitted by him, negatives the claim made here. Dr. Winston's doubt of the sufficiency of the microscopical examination "in itself" for the purposes of detection creates grave doubt as to its sufficiency. He admits that he cannot distinguish the shell of Lampong pepper from Acheen pepper. The latter, Acheen pepper, is a lower-grade pepper than Lampong, and it is hard to conceive of how the difference between the lower grade of Lampong pepper and a mixture of shells and the higher-grade pepper can be determined by the microscope. This witness produced slides in court and gave the court an opportunity to observe his various specimens. I do not think that this testimony overcomes that offered by the Government, which, I believe, shows by a fair preponderance of the evidence that quinine alkaloid was found in the pepper seized. Quinine alkaloid could not accidently have found its way into the 6 barrels seized. Mr. Shoul testified that no chemicals of any kind or foreign drugs could possibly get mixed in the pepper or pepper shells, nor can I

infer that by some possibility empty cinchona-bark barrels might have been used for packing the 6 barrels of pepper. Each of the barrels seized were lined with a heavy grade of paper, and there is no evidence in the record that the barrels were used for cinchona bark at any time. Shoul, who had charge of the grinding department, testified that no pepper shells could have accidentally found their way into this lot of pepper, and that if the pepper did contain added shells they must have been put in deliberately.

R. A. McCormick seems to have charge of the spice department of the claimant, while M. McCormick is in charge of the drug department. Shoul has been the sole head of the spice department. Large quantities of pepper shells were received within the preceding year of the date of the seizure, which are not satisfactorily accounted for by the evidence of the claimant. The original records produced did not show the disposition of the pepper shells and particularly of the quinine alkaloid marked pepper shells received in this lot of 199 bags. The only record produced of a shipment of pepper and pepper shells properly marked was to one Goldberg.

This, with the other testimony in the record, leads to the conclusion that the pepper in question was adulterated, and I will accordingly give a decree for the libelant.

UNITED STATES v. HALTIWANGER-TAYLOR DRUG CO.

(District Court, N.D. Georgia, Apr. 4, 1917)

N.J. No. 5901

Information in two counts alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty on one count.

The United States attorney filed an information against the Haltiwanger-Taylor Drug Co., a corporation, Atlanta, Ga., alleging shipment by said company, from the State of Georgia into the State of Florida, of a quantity of an article labeled in part "Dr. Biggers' Huckleberry Cordial Compound", which was misbranded.

It was alleged in substance in the information that the article was misbranded for the reason that certain statements, appearing on the label of the carton, falsely and fraudulently represented it as a remedy for children teething, cholera morbus, dysentery, and all affections of the bowels, when, in truth and in fact, it was not. Misbranding was alleged for the further reason that the statement regarding the article and the ingredients and substances contained therein, appearing on its label, to wit, "Huckleberry Cordial Compound", was false and misleading in that it indicated to purchasers thereof that the article contained a substantial and significant amount of a product produced from huckleberries, when, in truth and in fact, it did not; and for the further reason that the statement regarding the article and the ingredients and substances contained therein, appearing on the label, to wit, "Alcohol 10%", was false and misleading in that it indicated to purchasers thereof that said article contained 10 percent of alcohol, when, in truth and in fact, it did not contain 10 percent of alcohol, but did contain a less amount thereof, to wit, 2.54 percent.

NEWMAN, *District Judge* (charge to jury). Gentlemen of the jury: The first count in this indictment, which you have heard read, which is found under what is called the Food and Drugs Act, sets out, in the first place what is on the labels on these packages and then it says what is on the carton and what is on the bottles. It says that these statements "were false and fraudulent in this, that the same were applied to said article knowingly, and in reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to the purchaser thereof, and to create in the minds of purchasers thereof the impression and belief, that it was, in whole or in part, composed of, or contained ingredients or medical agents effective, among other things, as a remedy for children teething, cholera morbus, dysentery, and all affections of the bowels, when, in truth and in fact, said article was not, in whole or in part, composed of, and did not contain, ingredients or medicinal agents effective, among other things, as a remedy for children teething, cholera morbus, dysentery, or all affections of the bowels; all of which was and is contrary to the statute."

That raises the question here. It is perfectly clear that if they represented it, as this says, on the cartons and on the labels and on the literature accompanying this preparation and put on it these statements and knew them to be false, they would be guilty under this first count in the indictment. As to its effect on children teething and curing cholera morbus, if they knew, or more than that, if they made them so recklessly as to their truthfulness as to amount to willful fraud or so recklessly, in the language of the district attorney here, who has given a request on the subject, which is correct, if it appears from the evidence, beyond a reasonable doubt, that such statement was made either with knowledge that it was not true, or in reckless and wanton disregard of the truth, that it amounts to willfulness, where it was so recklessly and so wantonly made without ascertaining the truth, it would really amount to willfulness, it would be the same as if they knew it, whether they knew it or not. If you believe that in this case and are satisfied beyond a reasonable doubt as to these labels and the statements as to the remedial effect of this preparation and the curative effect, they would be guilty on this question, on that count of the indictment and on that branch of the case. Whether he made them believing them to be true, made them honestly and in good faith, and whether he made them knowing them to be not true or so recklessly or wantonly as to their truth as to amount to untruth, and consequently a fraudulent representation as to what was contained in it; that is the question on the first count in the indictment, which you will see, when you read it, recites.

Mr. WESTMORELAND. Your Honor failed to state to the jury that it not only must be false but fraudulent.

The COURT. I assumed that to be true.

You would have to believe them to be false as well as fraudulent. I was giving the fraudulent character of it. Of course, if the statements made on these things are true then there would be no case against them at all, but if you [believe] that they are untrue, they must be false and fraudulent, and if fraudulent, made with intent to deceive or with such reckless disregard of truth, and he should

know that it would deceive the public. As to the character of the representation made, of course it must be both false and fraudulent, and it must be untrue. If these statements were not untrue there would be no case here at all, of course.

Now, the second count in the indictment deals with the statement as to the amount of alcohol in it. Now, in respect to this I instruct you, the only thing I have heard here in connection with this case which seems to me would excuse him, if this quantity of alcohol was misrepresented, is his statement as shown by these calculations he made about the quantity of alcohol in this grape brandy which he was using. I do not believe that would excuse him. I believe the question is whether he materially misrepresented in his label the quantity of alcohol in there. The statute provides that "if the contents of the package as originally put up shall have been removed, in whole or in part, and other contents shall have been placed in same package, or if the package fails to bear a statement on the label of the quantity or proportion of any alcohol (among other things) contained therein." Now, I think the statement as to the amount of alcohol in one of these packages of medicine must be substantially correct. You have the evidence about that here, and if you believe it is incorrect, I believe on that part of the indictment he would be guilty if there was a material difference under the evidence, or in your opinion from the evidence, between the amount of alcohol stated on the package and the amount contained in the package, I think on that he would be guilty. I think the law holds him absolutely and arbitrarily to stating, with substantial correctness, the amount of alcohol in the package. If he has not done that, as charged in the second count in the indictment, he would be guilty as to that part of it.

Now, the next thing is the use of the words "Huckleberry Cordial" and as to its being a preparation coming from the roots of the huckleberry instead of the berry itself. That is a question, I think, for you to determine, gentlemen. It is largely in your discretion under the evidence. That is, whether or not using a mixture of the root, which he used here, of the huckleberry root, as he says, would be an imposition upon the public, because, as the contention of the case is here, that means the extract or what is squeezed out of the huckleberry itself; that that is the impression it would make on the public. If he knew that or understood that, or if he had good reason to believe that it would create that impression on the public, that it was an extract extracted from the huckleberry itself, and he used an extract from the root, that would be a reason to convict him under the second count. If old Dr. Biggers and this defendant believed the extract of huckleberry root was, over long years, satisfactory to the public for use in making huckleberry cordial, I do not believe he should be convicted on that, but if its use was to make the public believe that it was taken from the huckleberry itself when in fact it was taken from the root, he would be guilty under that head. Both that and the alcohol are in the second count in the indictment; they are both charged. If you find him guilty on either of those two things, the alcohol or the huckleberry cordial, and it is alleged that that name was used to lead the public to believe that it

was real huckleberry cordial, made from huckleberries themselves, and was intended to convey that impression. If that was true, that would be a misrepresentation for which he ought to be convicted here. On the other hand, if they truly believed and had a right to believe that an extract from the root was not a thing that would impose on the public and that it was an assistant in the way in which he used it as an astringent, if he believed that it was fairly represented to the public or had good reason to believe that it was fairly represented to the public as huckleberry cordial, then he ought not to be convicted.

Those two things and the remedial qualities of the medicine, whether or not that was a false—the statements made about that, were they both false and fraudulent, as I have stated to you. You will have to believe that, and as to the alcohol, you will find from the evidence here whether there was a material, substantial difference between the amount of alcohol in the medicine or in this preparation and the amount put on the label, and as to the huckleberry root I have already instructed you.

Now, if you do not believe him guilty on either of these counts, say you find him not guilty. If you believe him guilty on both counts, say you find him guilty. If you believe him guilty on one count and not on the other, so express it in your verdict. You should be satisfied of his guilt beyond a reasonable doubt.

Some evidence has been offered about the good character of the defendant. That goes to the jury to be considered with the evidence in the case, and particularly on the question of intent to do right. It is said that good character, if thoroughly established, is sufficient of itself, in a proper case, to raise a reasonable doubt. It is for you to say whether or not that is true in this case.

Mr. WESTMORELAND. If Your Honor please, the second count contains two subjects, and if the jury should come to the conclusion, under Your Honor's charge, that the defendant should be guilty of mislabeling as to the alcohol and not as to the other, should they not specify in the verdict as to which?

The COURT. What do you say, Mr. Alexander? I think so.

Mr. ALEXANDER. Whatever Your Honor thinks about it.

The COURT. I think so, gentlemen.

Mr. ALEXANDER. There is one matter that Your Honor has not discussed. Aside from the matter of the huckleberry being made from the root, the cordial, I think the issue in the case is this: That even though they think that the root or extract from the root can justify the use of the words "Huckleberry Cordial", that that name cannot be used when it is insignificant in amount; if that particular item should be there in insignificant quantities that it would be misleading, under the statute, to give it that distinctive name.

The COURT. I do no think so, Mr. Alexander; I have considered that.

The jury thereupon retired, and after due deliberation returned a verdict as follows: "We, the jury, find the defendant guilty of misbranding as to the amount of alcohol under the second count of the indictment."

UNITED STATES v. NINE BARRELS OF BUTTER

(District Court, S.D. New York, Apr. 9, 1917)

N.J. No. 5375

Libel under section 10 of the Food and Drugs Act. Trial before jury of one. Verdict in favor of the United States.

The United States attorney filed a libel for the seizure and condemnation of 9 barrels, each containing 225 pounds of butter, alleging that the article had been transported from the State of Tennessee into the State of New York, and charging adulteration in violation of the Food and Drugs Act.

Adulteration of the article was alleged for the reason that it consisted in whole or in part of a filthy, decomposed, and putrid animal substance, to wit, moldy, rancid, filthy, and decomposed butter; and for the further reason that floor sweepings and chicken feathers had been mixed and packed with the article so as to reduce, lower, and injuriously affect its quality and strength.

The case came on for trial before the court and a jury of one, in accordance with the stipulations of the parties, and after the presentation of evidence the case was submitted to the jury, and a verdict was returned in favor of the Government by direction of the court, the claimants having admitted that the butter was substantially in the condition charged in the libel. Thereupon the matter was taken under advisement by the court, and a formal decision was rendered by the court upon the following statement of facts:

This is an action at law for the destruction of nine barrels of number two grade packing butter shipped from Nashville, Tenn., to New York and consigned to the claimant, New York Butter Packing Company. The butter was packed in nine barrels, stout and double-headed except two, which were covered on one end with burlap. When examined in New York they disclosed the presence in substantial quantity of dirt, feathers, paper, aniline dyes which ran from the paper, the excrement of rats, and cheesy particles, as well as a substantial volume of the butter gone rancid. The claimant depends for its defense upon two theories; first, that the title to the butter had passed to it at Nashville, Tenn., on or before the date of its delivery to the carrier, a fact which was conceded; second, that the butter was destined for retreatment by which most of the impurities were removed. This retreatment is known as "ladling", and consists in dividing the butter into small portions, a pound or more in size, and in manually picking out with a trowel such parts as show dirty to the eye of the operator. The amount so removed varies generally from 2 to 3 per cent but sometimes rises much higher. The butter thus cleansed is then put into a room at about 85° F., which makes it plastic and capable of being moulded into pats of proper size and homogeneous quality. It is then colored evenly and sold only to bakers. In baking the butter passes through a temperature of from 350° to 500° F., under which most of the rancid oils are volatilized and driven off. Under the evidence as given it must be assumed that the butter so used by bakers is not deleterious to the public health.

HAND, *District Judge.* The first point of the claimant is met and answered by the case of *Hipolite Egg Co.* v. *United States*, 220 U.S. 45, and needs no other discussion. In that case the eggs had been shipped by Clark & Company to themselves and were in storage at the time in question. That case was stronger for the claimant than the case at bar.

The second point is in fact also decided by the same case, which was almost precisely like this in that aspect. Doubts may arise where goods are shipped in interstate commerce which may or may not be articles of food, as their ultimate destination may determine, but this case does not raise them. By no chance can this butter be called anything but an article of food; by no chance can I avoid the conclusion that it was filthy and decomposed in part. As such it came within the terms of the statute even though it might be saved and reclaimed by being made clean and palatable. Questions of that sort arise under section ten and under that alone. Under that section I have the power to destroy, sell, or redeliver to the owner under bond. The conditions of redelivery therefore become the important question in the case; I may deliver the goods to the owner upon condition that they "ladle" the butter, or that they otherwise treat it so as to secure the health of the community, in either case subject to a bond.

As to "ladling", I shall not allow the butter to be so treated. Certainly some filth must remain, and while baking may remove any injury to health, the question is somewhat meagerly presented, and the claimant does not press its right to do so. There is, however, another and much more radical method of cleansing such butter, known as "renovating", which is as follows: The butter is melted to a fluid so that all solid matters fall to the bottom. It is then strained and blown into a spray, in which condition hot water is allowed to percolate through the butter oil. The water is then drawn off and an emulsion made with milk is then cooled into crystals, salted, and packed in containers. As such it is sold for table butter and in many instances is unquestionably a useful article of food, and is permitted access to the markets where it is not unlawful.

I shall allow this butter to be "renovated" by the process mentioned, and after renovation the plaintiff shall have opportunity to examine it, and if it will not pass it, to convince me that it is still filthy or decomposed and should be destroyed. Therefore the decree will be that the butter be destroyed, unless the claimant elects within five days to "renovate" the same, upon giving suitable security as hereinafter described. If it does so decide, the butter shall be delivered to said claimant and after renovation to be completed within a suitable time, shall be again submitted to the plaintiff for examination. If the plaintiff at that time is not satisfied with its purity, it may apply to this court for a writ of destruction notwithstanding delivery to the claimant. The claimant shall give a bond in the sum of two thousand dollars conditioned that it will renovate said butter within a time to be fixed and will submit the product to the plaintiff for inspection; further conditioned that it will satisfy the court of the identity of the renovated butter with the subject of this action, and will hold such renovated butter subject to any writ of destruction to be hereafter issued.

If a writ of error is taken, the claimant's option to renovate may be exercised notwithstanding the same, but the bond must extend to the determination of the appeal, in which case no writ of destruction will issue until that time.

The claimant will bear the costs under section ten.

UNITED STATES v. BELL & CO.

(District Court, S.D. New York, Apr. 9, 1917)

N.J. No. 5548

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of not guilty.

The United States attorney filed an information against Bell & Co. alleging shipment by said company from the State of New York into the State of Maryland of a quantity of an article labeled in part, "Bell-ans", which was misbranded.

It was alleged that the article was misbranded for the reason that certain statements appearing on the labels of the bottle and carton and certain statements included in the circular or pamphlet accompanying the article falsely and fraudulently represented it as effective in the treatment of and for relieving vomiting in pregnancy, cholera morbus, alcoholism, and seasickness; in the treatment of indigestion, vertigo, peritonitis, and dyspepsia; for digesting every variety of food, removing every symptom of indigestion and restoring the entire digestive tract to normal condition; as a treatment for biliousness, sick headache, colic, and cramps; and as a remedy for every derangement of the digestive organs, when, in truth and in fact, it was not.

CUSHMAN, *District Judge* (charge to jury). Gentlemen of the jury: As indicated by the arguments of the attorneys, the issue has been fairly stated by both counsel. This indictment, or rather information, charges the defendant with having on a certain day in 1914 shipped in interstate commerce from New York to Baltimore certain articles, described in the information, in a package containing labels and circulars, which contained statements regarding the effect as a medicine of the contents of the package.

The information charges that these statements on the labels and in the circulars were false and fraudulent; that they were known by the company that put them out and made this shipment to be false and fraudulent; that they were made in such reckless disregard of the truth that it could not be said that they honestly believed them to be true. Hence they were fraudulent.

To this information the defendant has entered a plea of not guilty, which places the burden upon the Government of establishing every material allegation of the information by evidence sufficient to convince you beyond a reasonable doubt of the guilt of the defendant before you can return a verdict of guilty.

In that connection, I instruct you that it is not necessary that the Government, in order to warrant you in returning a verdict of guilty, should have proven that every one of the representations on these labels and in these circulars were false and fraudulent regarding the curative or therapeutic effect of these medicines—of this article of medicine—but before you could return a verdict of guilty it would be necessary that the Government should have established by evidence sufficient to satisfy you beyond a reasonable doubt that at least one of the statements regarding the curative or therapeutic

effect of this medicine—I cannot remember the name of it—was false and fraudulent.

This law, in substance, forbids anyone to send in interstate commerce misbranded articles of medicine. Then it defines an article as misbranded if the label or circular contains any statement regarding the curative or therapeutic effect of such article which is false and fraudulent. And then it prohibits anybody doing the like of that, and if they do do it they are to be punished.

Now, the issue has been narrowed very materially and counsel in their argument have conceded it. It comes to this: Is any one of the statements on this label or in this circular concerning the curative or therapeutic effect of this medicine false and fraudulent? The first thing when you retire to consider on your verdict would be to take up logically whether any one of these statements was false. If you conclude that there was not evidence sufficient to convince you beyond a reasonable doubt that any one of these statements was false, your verdict would be not guilty; but if you should find that some of these statements were false and untrue then the next step that you would have to undertake would be to determine whether the defendant in putting out these circulars and labels with those statements on them did so fraudulently. That is, whether it knew them to be false. If you find that it honestly believed from reports of doctors and patients that had taken this medicine and had good reason to believe that all these representations were reasonably accurate and true, then it would not be fraudulent, because you could not say that defendant knew them to be false.

I consider it necessary to give you a general idea of what the word "fraudulent" means in that connection. A fraudulent representation must contain the following elements: First, it must be false; second, the person who makes it must know it to be false; third, he must make it to some one with an idea that that some one will believe it and act in the belief that it is true; and, lastly, it must be made under such circumstances as might lead an ordinary person to believe it was true.

And if he did believe it was true, and acting in that belief, he parted with his money, he would be cheated out of it, because it was not so.

All those things enter into a fraudulent representation.

Take this representation set out in the indictment, or information, just take a single one to illustrate, but the same rule applies to all these statements regarding the curative or therapeutic effect of this article of medicine—that is, it is stated in there that it relieves vomiting in pregnancy. Now, taking that statement alone, before you could find the defendants guilty concerning that statement you would have to find that that statement was false; you would have to find that the defendant did not believe it to be true; that the defendant either knew it was false or made it with such reckless and wanton disregard, regarding its truth, as to amount to the same thing. And you would have to find that it was made by the defendant with the idea that people would buy the medicine in the belief that it would relieving vomiting in pregnancy; and that it was made under such conditions as to induce ordinary persons to buy it in that belief.

Many of the things charged here are admitted. That is, the defense admits that it shipped the parcel. They admit that these labels were used, and they admit, of course, that the labels were put on there to induce the buying public to buy the medicine in the belief that it would do the work as it is described as doing in the labels and circulars. So you come back to the sole question in the case for you to determine, which is, whether those statements are true or whether they are false, and if false, whether the defendant made them, knowing they were false, or with such reckless disregard of the truth as to amount to the same thing.

I will read you certain instructions that I think I have covered already in substance in what I have already told you, but to be sure that the ground is covered, these have been prepared by counsel for the defense, and I will read them that I may see that his client is protected in its rights.

As the offense charged here is a misdemeanor, the Government must satisfy you of the defendant's guilt beyond a reasonable doubt and if it fails in that respect, you must acquit the defendant.

The first question of fact for the jury to determine on the evidence of this case is whether the statements made by the defendant in its circular and label as to the therapeutic or curative effects of its tablet are false. If you are not convinced that such statements are false, you must acquit.

If you find these statements are false, then the other and remaining question is whether such statements were made fraudulently, for the crime is not established by merely showing that the statements are untrue. They must have been made fraudulently as well as untruthfully.

The question as to whether these statements were fraudulently made involves a state of mind, the defendant's state of mind when it, through its agents, issued these statements. In other words, were these statements made with the knowledge that they were untrue and with the intention to deceive? What is actually in the mind of the defendant is a question of fact for your determination from all the evidence in the case.

The officers of the defendant corporation, as the owner of this alleged remedy, had a perfect right to state their views regarding the merits and effectiveness of the tablets, and if these statements brought into issue here were made honestly in the belief that they were true they are not fraudulent within the meaning of the act.

In determining as to whether the defendant's use of the words contained in the challenged statements was false and fraudulent, the jury have the right to consider the ideas conveyed by such words in their common usage to the average person as distinguished from the ideas conveyed to the average physician or scientist.

The court's denial of the motion made by the defendant's counsel for a direction of a verdict in its behalf in no way indicates any opinion of the court upon the subject of the defendant's guilt and the views of the court as to the merits of the case. The significance of the denial is that there were questions of fact in the case which should be submitted to the jury.

There is no presumption arises against the defendant by reason of the fact that it has been indicted and brought to trial before you, but every presumption of law is in favor of the defendant's innocence. This presumption continues throughout the trial with the defendant; and until the Government has produced evidence sufficient to overcome this presumption and satisfy you beyond a reasonable doubt, and prove every material allegation of the indictment, or, in this case, the information, by evidence which satisfies you beyond a reasonable doubt of the guilt of the defendant.

If you have a reasonable doubt concerning any material allegation in the indictment, it will be your duty to acquit.

Reasonable doubt as used in these instructions is just what the two words joined together mean. That is, a doubt based on reason;

a doubt for which you can give a reason. It does not mean every possible doubt. Nothing in this world, scarcely, can be established beyond all questions of mistake, but it does require, before you can return a verdict of guilty, that the guilt of the defendant must be shown by more than a mere preponderance of the evidence. That requirement of the law is that it should be established by evidence sufficient to satisfy you beyond a reasonable doubt. Reasonable doubt has been defined to be such a doubt as a man of ordinary firmness would allow to cause him to hesitate in the more important transactions concerning his own affairs.

You are in this case, as in every case where questions of fact are submitted to the jury, the sole and exclusive judge of every question of fact in the case, and of the weight of the evidence and the credibility of the witness.

In weighing the evidence and making up your minds as to the amount of credit which should be given to the various witnesses, you should take into account their appearance upon the stand, whether they appeared to you to be credible, whether they have inspired your confidence by their appearance. You should take into consideration their manner and demeanor in giving this testimony, whether it was such as to inspire your confidence or to repel it; whether it appeared to you that the witness was trying to tell you all that he knew about the case, neither holding back nor volunteering anything, or whether it appeared to you that he was reluctant and evasive and holding back what he knew or claimed to know until it was dragged out of him. On the other hand, whether he impressed you as being too willing and anxious to volunteer matters which no one inquired about. Also, you will take into account the testimony of each witness, whether it appeared to be reasonable and probable; whether it appeared to be complete in detail as you would expect it to be under the circumstances, or whether it had holes in it; whether it is corroborated by other evidence in the case where you would expect it to be corroborated if it were true; whether it is contradicted by other evidence in the case. You will also take into account the interest each witness has in the issues presented in the case, either by his manner or his relation to the case.

ABBOTT BROS. CO. v. UNITED STATES

(Circuit Court of Appeals, Seventh Circuit, Apr. 10, 1917)

242 Fed. 751; N.J. No. 5588

In error to the District Court for the Northern District of Illinois. Judgment affirmed.[99]

Before KOHLSAAT, ALSCHULER, and EVANS, Circuit Judges.

Per Curiam. The contention of the plaintiff in error that the information charging it with having violated the Pure Food and Drugs Act, bearing the signature of the district attorney for the Northern District of Illinois, and attached to which information

[99] Affirming *United States* v. *Abbott Bros. Co.*, p. 722, *ante*.

and made a part of it were four affidavits sworn to before notaries public, is insufficient to support a judgment because of the insufficiency of the acknowledgment, must be rejected. *Weeks* v. *United States*, 216 Fed. 292; *United States* v. *Adams Express Co.*, 230 Fed. 531.

No warrant for arrest having been sought, the information signed by the United States district attorney was sufficient without any verification and without any supporting affidavits. It was unnecessary for the district attorney, who signed the information in his official character, to assert in the body of that document that he informed the court upon his oath as a Government official of the facts therein set forth. It will be presumed he acted on his oath as an officer of the Government.

Nor do we think the plaintiff in error is in a position to raise this question for the first time in this court.

Defects such as are here complained of are in any event waived, if not raised by suitable objection before trial. *People* v. *Murphy*, 56 Mich. 546; *Bryan* v. *State*, 41 Fla. 643; *State* v. *Osborne*, 54 Kan. 473; *State* v. *Brown*, 181 Mo. 192; *Johnson* v. *State*, 53 Neb. 103; *State* v. *Pancoast*, 5 No. Dak. 516; *Hammond* v. *State*, 3 Wash. 171. See also on waiver of informalities *Garland* v. *State* of *Washington*, 232 U.S. 642.

Judgment affirmed.

SIMPSON v. UNITED STATES

(Circuit Court of Appeals, Sixth Circuit, May 8, 1917)

241 Fed. 841; N.J. No. 5526

Error to the District Court for the Northern District of Ohio. Judgment affirmed.[1]

Before KNAPPEN and DENISON, Circuit Judges, and SATER, District Judge.

KNAPPEN, *Circuit Judge.* Plaintiff in error was convicted, upon trial by jury, under an information charging the interstate shipment of certain drugs in violation of the Food and Drugs Act, June 30, 1906, ch. 3915, 34 Stat. 768, as amended by act of August 23, 1912, ch. 352, 37 Stat. 416, alleged to be misbranded in that the label of the carton or package containing the drug (as well as a circular therein) contained false and fraudulent statements regarding the curative or therapeutic effect of the drugs. But two grounds for reversal are presented.

1. The first ground is that the information was insufficient in law. It was accompanied by affidavits of four persons relating in part to the actual shipment of the offending articles and the presence in the enclosed packages of the label and circular referred to, and in part to the chemical analysis of the drugs and the alleged falsity of the claims made as to their therapeutic effect.

---

[1] Affirming *United States* v. *Simpson*, p. 700, *ante*.

The information was not sworn to, but states that the court was "given to understand and be informed upon the oaths of * * * whose affidavits are hereto attached and made a part hereof, as follows, to wit." Two of the affidavits were sworn to before notaries public. It is urged that the information was insufficient because not upon the oath of the prosecuting officer but solely upon oaths of the witnesses by affidavit, and that oaths taken before notaries public were invalid.

We need not consider whether the objection would have been good had it been made in the court below. Defendant in fact pleaded not guilty to the information, without demurring or moving to quash, and the record does not indicate that the attention of the district court was ever directed to the alleged insufficiency of the information. Unless it was void, the question presented cannot for the first time be raised in the appellate court, unless a refusal to so consider it would shock the judicial conscience. *Keliher* v. *United States* (C.C.A. 1), 193 Fed. 8, 10. Had there been no affidavit of witnesses, the information would not have been void for lack of the oath of the prosecuting counsel (*Weeks* v. *United States* [C.C.A. 2], 216 Fed. 292); and we do not regard the information as showing that it was filed without investigation by the district attorney. See *Frank* v. *United States* (C.C.A. 6), 192 Fed. 864, 867. The objection is purely technical and without merit, and was waived by pleading to the information without raising objection. *People* v. *Harris*, 103 Mich. 473; *People* v. *Turner*, 116 Michigan 390; *Bartlett* v. *State*, 28 Ohio St. 669.

It is also urged that the information does not charge defendant with knowledge of the alleged false and fraudulent character of the representations made. We assume, for the purposes of this opinion, that such allegation is necessary. The gist of these representations, so far as need now be stated, is that the article was "a valuable remedy for lost nervous strength and treatment of all diseases which are really the result of diseases of the brain, spinal cord, medulla oblongata and the nerves given off from each of them." The information alleged that these representations were (omitting the words we have bracketed) "false and fraudulent in this, that the same were applied [by defendant] to said article knowingly, and in reckless and wanton disregard [on defendant's part] of their truth or falsity, so as to represent falsely and fraudulently to the purchaser thereof, and create in the minds of purchasers thereof an impression and belief that it was", etc.

The criticism we are now considering would be fully met had the information actually contained (as it did not) the words above brackets. But the defect was not substantial; it was only formal. The information charged that the shipment was made by defendant "trading as Dr. C. M. Simpson's Medical Institute", and that the name of the article given on the label of the carton was "Dr. C. M. Simpson's Cerebro-Spinal Nerve Compound." The natural construction would be that it was defendant whose knowledge and reckless and wanton disregard of the truth was intended to be charged. The Federal statute (Rev. Stat. 1025) expressly provides that an

indictment shall not be affected "by reason of any defect or imperfection in matter or form only which shall not tend to the prejudice of the defendant." *Rosen* v. *United States*, 161 U.S. 29; *Price* v. *United States*, 165 U.S. 311; *Tyomies Pub. Co.* v. *United States* (C.C.A. 6), 211 Fed. 385, 389. The rule applicable to an information is no less liberal. Its averment of facts constituting the offense need be only so certain and specific as fairly to inform defendant of the crime intended to be alleged, and as to make the judgment of conviction or acquittal thereon a complete defense to a second prosecution of the defendant for the same offense. *United States* v. *Hess*, 124 U.S. 483, 486, 487; *Stokes* v. *United States*, 157 U.S. 187; *Bennett* v. *United States* (C.C.A. 6), 194 Fed. 630, 632; *Hocking Valley R.R. Co.* v. *United States*, 210 Fed. 735. It is clear the information fulfilled these requirements.

That the criticism urged is purely technical and without merit, in that defendant understood that his own intent was in issue, is affirmatively shown by the fact that, at the opening of the trial, defendant admitted that he made the shipment in question; that it contained the cartons, bottles, and wrappers exhibited in court, and that he was the proprietor and sole owner of the "Dr. C. M. Simpson Institute"; and by the fact that as a witness in his own behalf, and under examination by his own counsel, he testified directly to the absence of intentional false branding and fraudulent intent.

It is finally urged that the information does not show that the alleged misrepresentations were in the "ultimate container," that is to say, in the package as it reaches the consumer *McDermott* v. *Wisconsin*, 228 U.S. 115, 130. This objection, as well as the preceding ones, must be considered in the light of the fact that the question was not raised below. We think the information should fairly be interpreted to mean that the misrepresentations were intended to accompany the bottles into the hands of the consumers. It is alleged that the shipment consisted of "certain packages", and that the packages contained the circular or pamphlet later described therein; that one of the alleged misrepresentations appeared "on the label of the carton aforesaid", and that the other was "included in the circular or pamphlet aforesaid." It is a matter of common knowledge that proprietary medicines in bottles are usually sold to the consumer in cartons, and that the latter usually contain circulars or other advertising matter. We are not impressed with the suggestion that the circular was charged to have been inside "the article of drugs."

2. The remaining complaint is addressed to the denial of the defendant's motion to direct verdict in his favor. We think the motion was properly denied. It seems unnecessary to set out in full the exact language of the representations alleged to be contained in the packages. It seems enough to say that defendant's compound was not only represented generally to be a valuable remedy for the treatment of all diseases "resulting from diseases of the brain, spinal cord, and medulla oblongata, and the nerves given off from each", "a remarkable discovery for the treatment of all nervous diseases", but also a "remarkable discovery for heart troubles", as well as a "most valuable remedy for nervous prostration, mania,

melancholia, and neurasthenia." There was substantial testimony from competent medical witnesses that there was no remedy applicable to all the diseases mentioned; that medical science and medical experience furnish no support for the broad claims made for defendant's remedy; that "there is no one medicine that will prove a valuable remedy for all" the diseases enumerated. There was further substantial testimony from competent witnesses that bromides, which constitute a prominent ingredient in defendant's remedy, are sedative in their nature and in ordinary doses, not stimulating; that while thus helpful in quieting an exalted or excited state of the nerves, as in many cases, including some cases of mania, they are not only not helpful, but are positively injurious in depressed conditions, as in melancholia; that there is no one remedy for all spinal diseases, nor for all cases of neurasthenia, or heart trouble, nor for all cases of melancholia or of mania; that some diseases of the heart require sedatives, others stimulants; that the same is the case with neurasthenia and certain other nervous diseases mentioned; and that in some cases of nervous prostration and other nervous affections the administering of sedatives or depressants is harmful; that bromides are not suitable to the treatment of the mentally and physically depressed. There was further testimony to the same effect as to others of the diseases included, either specifically or by general description, in the claims made for the remedy; also that defendant's compound was dangerous to instrust to the hands of a layman. Aside from defendant's own testimony, there was no competent medical testimony in opposition to that presented by the Government, to the effect that the claims made for the medicine were contrary to all medical science. The defendant's proposition that the presence of ammonium carbonate neutralized the effect of the bromides as depressants was denied by medical witnesses for the Government. True, it appeared beyond dispute that bromides are beneficial, at least as a palliative in quieting the nerves and inducing sleep, in ordinary cases of nervous excitability; and there was testimony on the part of the defense that several persons had received benefit—indeed, many of them claimed to have been cured—by the use of defendant's remedy. But such testimony, at the most, bore only upon the question of fact whether the alleged representations were, as made, false and fraudulent. There was still room for a conclusion that substantial mischief resided in the claim of a universally efficacious remedy for the numerous and widely prevalent maladies; for the term "remedy" must at least imply a curative tendency, although not of course guaranteeing a cure. The defendant was a graduate physician and the jury were justified, under all the evidence in the case, in presuming that he knew the falsity of the broad claim made for his compound.

The brief of defendant's counsel criticizes the admission of certain testimony, although we do not understand that such admission is relied on for reversal. We may say, however, that we have examined all the criticisms which are made the subject of either exception or assignment, and find no error.

The judgment of the district court is accordingly affirmed.

UNITED STATES v. NATURA COMPANY

(District Court N.D. California, May 9, 1917)

N.J. No. 5552

Information alleging violation of section 2 of the Food and Drugs Act. Trial before the court. Judgment of not guilty.

Dooling, *District Judge.* The defendant is charged with a violation of the Food and Drugs Act in misbranding a certain article of medicine sold by it and known as Akoz. To fall within the statute the package or label must bear or contain some statement, design, or device regarding the curative or therapeutic effect of the article, or some ingredient or substance contained therein, which is false and fraudulent. No purpose would be served here in reviewing the testimony. It may be said in a general way that the testimony of the Government was chiefly " expert " testimony; that is to say, testimony of skilled persons as to the possible effect of the use of Akoz. None of them had ever experimented with it, or tried it either on themselves or others, nor had any of them ever had the opportunity to observe any results from its use. The testimony for the defendant was given by witnesses, physicians, and others who had used the medicine themselves, or had observed its effect on others, and all testified to its beneficial effects.

The misbranding claimed in the indictment is the statement that Akoz is a natural remedy for certain specified diseases, and that it had proved effective in the treatment of such diseases and others named.

The Government insists that the word " remedy " is synonymous with " cure " and cites a definition from Webster's International Dictionary as follows:

" Remedy: that which cures a disease ", but the real definition found in that dictionary is the following: " Remedy: that which relieves or cures a disease." The Standard Dictionary gives the following definition: " Remedy: that which is used in any way for the cure or relief of bodily disease; a medicine; also remedial treatment."

It cannot therefore in this criminal action be concluded that when the defendant used the word " remedy " it used it as synonymous with " cure ", nor can it be concluded that the word would be understood by the public to mean " cure."

There is testimony that Akoz has relieved all the diseases specified and that the proprietors were informed of that fact.

The court is not endorsing Akoz as a curative or remedial agent. But this is a criminal case where the guilt of the defendant must be established beyond a reasonable doubt, and the Government must show beyond such doubt that the statements made were both false and fraudulent. It has not done so, and a judgment will be entered finding the defendant not guilty.

UNITED STATES v. WATSON-DURAND-KASPER GROCERY CO.

(District Court, D. Kansas, May 17, 1917)

251 Fed. 310; N.J. No. 5543

Information alleging violation of section 2 of the Food and Drugs Act. Hearing by the court on demurrer and stipulation of facts. Judgment of conviction.

POLLOCK, *District Judge.* The Government filed an information in this case against defendant, charging it in seven counts with as many violations of what is commonly known as the Food and Drugs Act of June 30, 1906 (34 Stat. 768), in the shipment from the city of Salina, this State, to the city of Denver, in the State of Colorado, of 250 pails of "confectionery," commonly called candy, consigned to one A. Lang, all as evidenced by two freight bills of the Union Pacific Railway Company, copies of which are attached to the complaint. To this complaint, and each and every count thereof, defendant interposes a general demurrer. The defendant further pleading not guilty, a trial by jury was waived, and the entire controversy submitted on stipulated facts. The case thus comes on for decision.

Two questions are presented for determination, viz: (1) Conceding the facts pleaded in the several counts of the information sufficient to charge defendant with the commission of one or more public offenses under the terms of the act, and the stipulated facts sufficient to clearly show the guilt of defendant, does the evidence found in the stipulated facts show defendant guilty of more than one offending against the law or amenable to more than a single punishment? (2) It being admitted by the evidence the product offered for interstate shipment, and so shipped by defendant, was "confectionery," commonly called candy, and the charge made, as the information pleaded, being such product was adulterated, in that it contained in whole or in part a "filthy, decomposed, and putrid vegetable substance," does the information, or either count thereof, sufficiently charge defendant with adulteration of "confectionery," in violation of the act? As the case stands submitted on both the demurrer to the information and each count thereof, and on the stipulated facts, and as resort must be had to the facts of the case to get at the true nature of the transaction, I deem it the better practice to treat the demurrer as having been waived by the submission of the case on its merits, or at least to overrule the demurrer and consider the questions presented by a consideration of the case on its merits.

It appears, as was admitted at the trial, defendant company is a wholesale grocery company doing business in the city of Salina, this State. In the conduct of its said business it handles "confectionery", commonly called candy, in wholesale quantities. On or about the 1st day of February, 1915, in the conduct of its said wholesale candy business, there had accumulated in the possession of defendant a very considerable quantity of old, stale, unsalable rem-

nants of candy. The consignee named in the bills of lading, A. Lang, applied to and purchased this candy from defendant, giving instructions to ship the same to him at the city of Denver, Colo. What purpose the buyer had in making the purchase or what use was intended by the purchaser to be made of the candy the evidence does not show. In pursuance of said shipping instructions, defendant delivered the candy in pails to the Union Pacific Railway Company, and did cause the same to be shipped to the purchaser at the city of Denver, Colo. That the purchase and sale thus made in bulk, or at wholesale, by defendant constituted but one transaction is apparent. While the railway company issued two freight bills covering the entire shipment, yet it is equally clear but a single shipment of the candy was made. In such case may the Government carve out of the single transaction of sale, purchase, and shipment more than one offense under the terms of the act?

Looking, now, to the provisions of the act, it is seen to be its purpose, by section 1, to prohibit within territory under the jurisdiction of the United States the manufacture or misbranding of foods and drugs; by section 2 of the act to prohibit the shipment or offer for shipment in interstate commerce of adulterated or misbranded food or drug products. Conceding, therefore, the candy complained of in this case was adulterated in violation of the act, yet, as there was but a single sale, purchase, and shipment of the adulterated product, as the entire matter charged grew out of a single transaction and a single shipment, it must follow the plaintiff can carve out of this single transaction but a single offense. Although there were 250 pails of the candy shipped, yet here, as under the provisions of the Twenty-eight Hour Law (act June 29, 1906, ch. 3594, 34 Stat. 607), the shipment made or offered by defendant must be taken as the unit, although it may consist of many parcels. No greater reason appears for dividing the shipment in question under the Food and Drug Act, all being comprehended under the general term "confectionery", into different lots or parcels than would appear for making the many different head or cars of stock a separate violation of the Twenty-Eight Hour Law. *B. & O. Southwestern R.R.* v. *United States*, 220 U.S. 94, 31 Sup. Ct. 368, 55 L.Ed. 384.

Coming, now, to the remaining question, defendant contends, although the adulterated product charged to have been shipped in interstate commerce is pleaded to have been a food product, as the evidence discloses it to have been "confectionery," commonly called candy, and as the act by its terms defines in what the adulteration of "confectionery" consists, namely, "if it contains terra alba, barytes, talc, chrome yellow, or other mineral substance or poisonous color, or flavor," and as the adulteration here charged is not by the use of a mineral but of a vegetable substance, therefore, applying the rule of ejusdem generis, the act does not, by the addition of the phrase "or other ingredient deleterious or detrimental to health," cover a case in which the substance, deleterious or detrimental to health ingredient, is of a vegetable and not a mineral substance.

From a careful reading of the act I cannot give my assent to this construction for this reason: Conceding candy to fall under the general classification of "confectionery"; further conceding Congress has by the terms of the act specified what constitutes an adulteration

of "confectionery", all as by defendant contended, yet I am of the opinion the phrase, "or other ingredient deleterious or detrimental to health", is not limited by or restricted to the preceding phrase, "or other mineral substance or poisonous color or flavor." On the contrary, I am of the opinion it was the intent of the lawmaking power to provide that "confectionery" may be adulterated in violation of the terms of the act in three distinct and separate manners or ways: (1) By causing it to contain "terra alba, barytes, talc, chrome yellow, or other mineral substance or poisonous color or flavor"; (2) by permitting it to contain or include any "other ingredient deleterious or detrimental to health"; or (3) by the use of "any vinous, malt, or spirituous liquor or compound or narcotic drug."

To my mind, this is the clear, unambiguous intent of the lawmaking power as gathered from the language employed in the act specifying the manners in which "confectionery" may be said to have been adulterated. It follows from what has been said judgment must go for plaintiff for a single penalty for the violation of the act.

UNITED STATES v. TAYLOR

(District Court, S.D. Illinois, June 7, 1917)

N.J. No. 5623

Informations charging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty in one count; verdict of not guilty in other count.

The United States attorney filed two informations against George C. Taylor, Smithboro, Ill., alleging shipment by said defendant on or about July 10, July 13, and July 14, 1914, and September 8, 1915, from the State of Illinois into the State of Missouri, of quantities of milk which was adulterated.

Adulteration of the article in the shipments of July 10, July 13, and 14, 1914, was alleged in the information for the reason that a certain substance, to wit, water, had been mixed and packed therewith so as to reduce, lower, and injuriously affect its quality and strength. Adulteration of the article in one of two shipments of September 8, 1915, was alleged for the reason that a certain substance, to wit, water, had been mixed and packed therewith so as to reduce, lower, and injuriously affect its quality and strength, and had been substituted in part for milk which the article purported to be; and for the further reason that the article consisted in part of a filthy, putrid, and decomposed animal substance. Adulteration of the article in the other shipment of September 8, 1915, was alleged for the reason that it consisted in part of a filthy, putrid, and decomposed animal substance.

HUMPHREY, *Judge* (charge to jury). Gentlemen of the jury: The United States attorney waives any argument.

The court charges you the matter you are considering is an information in two counts brought against this defendant by the

United States attorney, charging him with a violation of section 2 of the Food and Drugs Act passed by Congress on the 30th of June, 1906. The purpose of that act is to save the people from adulterated food. Congress only has jurisdiction of those matters which go into interstate commerce; therefore, it only becomes a Government case when it passes from one State or Territory to another.

The two counts in this information charge: One, adulteration by the addition of water, and the other by the presence of foreign matter—filthy matter as well.

If you believe from the evidence beyond a reasonable doubt that the defendant at the time and place in question did ship in interstate commerce milk—adulterated, misbranded, as charged in the information—then you will find him guilty in either count of the information.

On the other hand, if you do not believe from the evidence beyond a reasonable doubt that the milk in question did contain foreign matter and the water so testified to by the Government officers, then you will find him not guilty.

The fact of the shipments is not disputed. The sole question is as to the presence of the foreign matter—the water and the filth. The intention of the defendant in the premises is not material. The law does not leave that to be settled by good intentions. I don't know what more I can say to you about it.

You have heard the evidence, the tests made by the officers, and the result of those tests. There is no testimony on the other side.

You have a right to take the information and the exhibits, all of them. There are two cases. They are numbered, respectively 15674 and 15613. Two forms of verdict have been prepared in each case—one finding the defendant guilty, the other finding him not guilty—so you will return two verdicts. Go with the officer and consider of your verdict.

The jury thereupon retired, and after due deliberation returned a verdict of not guilty in one of the cases and a verdict of guilty in the other case, which was based on the shipments made September 8, 1915, and the court imposed a fine of $25 and costs.

UNITED STATES v. HEIMANN

(District Court, E.D. Illinois, Nov. 13, 1917)

N.J. No. 6120

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of not guilty.

The United States attorney filed an information against Herman Heimann, Albers, Ill., alleging shipment by said defendant from the State of Illinois into the State of Missouri of a quantity of milk which was adulterated.

Adulteration of the article was alleged in the information for the reason that a valuable constituent thereof, to wit, butter fat, had been in part abstracted.

The following charge was delivered to the jury by the court:

HUMPHREYS, *District Judge.* This is an information drawn in a single count, charging the defendant with adulterating milk in interstate shipment—the adulteration in point consisting of shipping milk that was illegally low in butter fat. The act is highly meritorious—it seeks to give to the people the natural product of food to which they are entitled.

The evidence shows that not all cows are uniform in the amount of butter fat which their milk contains—whatever it does contain, that the shipper should ship the whole milk without any abstraction of any part of it.

The question you are considering—the only question you have to consider—is if this defendant in question did abstract any essential element of this milk before shipping. You have heard the evidence, the Government officers on one side; the defendant, members of his family, the consignee, Winkler, on the other; and it is for you to say—make up your judgment, giving to the evidence such weight as you may find it to have—as to whether the case has been proven, because it is the burden of the Government to sustain this case, to prove, to convince your mind beyond a reasonable doubt, that this defendant is guilty. The presumptions are in favor of the defendant.

You have nothing to do with the punishment—that is with the court, and, therefore, all your work is to find the defendant guilty or not guilty.

Take the indictment in this case, and this record as part of the evidence, and go with the officer and consider of your verdict.

UNITED STATES v. BETHESDA MINERAL SPRING CO.

(District Court, E.D. Wisconsin, Nov. 26, 1917)

N.J. No. 5906

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against the Bethesda Mineral Spring Co. alleging shipment from the State of Wisconsin into the State of Michigan, of a quantity of an article labeled in part, "Bethesda Natural Mineral Spring Water", which was misbranded.

It was alleged that the article was misbranded for the reason that certain statements appearing on its label falsely and fraudulently represented it as a remedy for all kidney diseases, Bright's disease, diabetes, torpid liver, dyspepsia, insomnia, calculi, and nervous prostration, when, in truth and in fact, it was not.

At the conclusion of the introduction of testimony the following colloquy upon the relevancy of the evidence respecting the radioactivity of the product took place between the court and counsel:

The COURT. The case, in my judgment, is in a narrow compass. I will say to you, freely, the evidence on this radioactivity business is not, in my judgment, relevant to the issues.

Mr. SAWYER. That is my position in the matter.

The COURT. Let us assume that the medical profession has experimented on this phase, the Government is not denying that this water has radioactivity. Let us assume the Government cannot, and does not profess to deny the presence of radioactivity in all waters, and, as the learned gentlemen tell us, it is present almost everywhere.

Mr. JACOBSON. In varying amount.

The COURT. Yes, in varying amount. Now, there is definite testimony respecting the maximum figures of radioactivity in waters. As against that the testimony respecting this particular water shows it to be infinitesimal. Assuming it is more than infinitesimal, when we are speaking of matters measured in very small quantities, it may be larger than that possessed by other waters. There is no testimony here respecting the possession by waters that are radioactive of therapeutic qualities justifying the putting out of the labels.

Mr. JACOBSON. We have not put that on the labels.

The COURT. No; I know you have not. The label here must be justified. When I stated this morning that assuming that the medical profession, by working on this, had some idea there was such a thing as radioactivity, the mere conjectural possibility that that may enter into therapeutic qualities is not sufficient to assert that because of the presence of radioactivity it has those therapeutic qualities justifying the assertion that for that same reason it is curative.

Mr. JACOBSON. I do not contend that.

The COURT. Then it has no place in it.

Mr. JACOBSON. I am not so sure of that.

The COURT. I am quite sure of it. By that I mean the jury here is not at liberty to reach a conclusion that this label squares with the therapeutic fact. That is what this jury must find: That this label squares with a therapeutic fact, and the jury cannot find that merely because of possible conjectures that may be indulged in because of this substance, radioactivity, or this quality, radioactivity.

Mr. JACOBSON. Not that standing alone.

The COURT. That does stand alone.

Mr. JACOBSON. There are other facts in this case.

The COURT. No; there is no suggestion until today of this matter of radioactivity, this phase of radioactivity. There is no suggestion that radioactivity is a quality or a drug or a thing that acts in combination with ordinary known salts producing rather mysterious therapeutic results.

Mr. JACOBSON. There is nothing mysterious, Your Honor, in the fact that the testimony proves conclusively that curves have resulted from the use of this water—nothing conjectural.

The COURT. Nothing mysterious. There may be something about it that would arouse skepticism. The defendant's testimony is entirely reconcilable with the Government's testimony. The defendant's testimony with respect to alleged cures that have been made is not responsible to the Government's case, which is that this label is not a true label. The Government, as I stated informally in the

discussion today, might well concede of this water the medical result that it might concede of a bottle of pure orange juice.

Thereafter, the case having been argued by counsel, the following charge was delivered to the jury by the court.

GEIGER, *District Judge.* Gentlemen of the jury: This case comes before the court upon an information filed by the Government against the defendant corporation, and rests upon what is commonly known as the Pure Food and Drugs Act. That act was passed some years ago and aims to reach the cases of transportation in interstate commerce of adulterated or misbranded foods and drugs. The Government of the United States, in its sovereign field, ordinarily has nothing to do with cases of fraud arising between citizens but, under the Constitution, Congress has the power to pass laws regulating interstate commerce, and this law, speaking generally and broadly, grows out of the exercise of that power on the part of Congress. The law, both as to food and drugs, aims to prohibit the transportation in interstate commerce as to foods, adulterated or misbranded, and as to drugs, those which are misbranded. That is not the whole scope of the law, but it is all we need consider here.

Now, at the outset, gentlemen, it will be well for you to get into your minds the real purpose of this law, and it is, in substance, this: That Congress aims by its provisions to prevent the shipment in interstate commerce of foods or drugs that have been misbranded or adulterated, with the idea that those things, when done, are deceptive and misleading. That is a wholesome policy of this statute, and it is a high purpose which Congress aims to attain through its enactment; and the bounden duty rests upon courts and juries and every administrator of this law to see to it that this high purpose and the integrity of this purpose and the spirit of this purpose is in no essential impeached or impugned.

That you may take, gentlemen, as the background, upon which this evidence that has been introduced here in court may be used for the purpose on your part to paint the real picture of this case, or, putting it in another figurative way, it is the screen upon which the evidence which has been introduced here shall be thrown, with the idea that you can determine what sort of a picture it makes.

It is charged in the case, and that is an admitted fact, that the defendant corporation in July 1916 made a shipment of Bethesda water from Waukesha to Detroit; and it is charged, in substance, that that shipment was a shipment of a drug, or so intended, and that it was misbranded within the meaning of this provision of the Food and Drugs Act relating to what shall mean misbranding as to drugs: "If the package or label or bottle shall contain any statement, design, or device regarding the curative or therapeutic effect of any such articles or any ingredients or substances contained therein which is false and fraudulent."

It is further a conceded fact in the case that the shipment containing many bottles of water was, as to each bottle, accompanied upon the bottle by a label which has been introduced in evidence and frequently referred to, which I will again read to you:

Bethesda: For all kidney diseases, Bright's disease, diabetes, torpid liver, dyspepsia, insomnia, calculi and nervous prostration.

Directions: Drink freely first ten days not less than six glasses per day.

There are certain other matters upon the label that are not for the present, if at all, essential. So the case comes before us as one charging, in substance and briefness, that this operated as a misbranding of the article which was then shipped as was conceded.

At the outset, gentlemen, the question is submitted to you, and it is for your consideration, as has been correctly said, largely in the light of good sense, as to what this label means; and you are to test that out by taking the language of it and imparting to that language the meaning of the words, singly and together, that would be conveyed to you as ordinary men; not as men who are skilled in medical, chemical, or pharmaceutical science, capable of making nice distinctions or nice discriminations, but rather the meaning that comes to you as ordinary men unskilled but seeking, we will assume, some sort of remedy or remedial help for the afflictions that flesh is heir to. Now, in that connection you should examine this language in the light of the purpose of this law, which is to protect humankind against the consequences of human weakness, or human frailty, or human credulity or the disposition to believe, or of human gullibility. You should examine it in the light of the disposition of the ordinary humankind to wish to believe in the potency of remedial agents to relieve them from ills from which they are actually or conceivably suffering.

Now, taking those general guides, ask yourself the question, as men of ordinary sense, well disposed, but disposed in the interests of getting curative agents: What does this label mean? Is it intended to induce and inculcate on the part of one so circumstanced and so disposed the idea that the article to which this is attached is the article which he desires for the purpose for which he desires it? In other words, is this, to the ordinary man, a representation that this, as a drug, will cure these diseases, that it is a drug which he is invited and urged to take for that purpose, and inculcate in him the reasonable belief and the expectation that if taken it will be productive of such results? That is a question addressed to you peculiarly as men of ordinary sense, ordinary affairs of life, men capable of understanding human conduct and the motives which prompt men to believe or to act. In that connection you have the right to take into consideration certain evidence in the case respecting the changes that have been made upon labels used by the defendant in this case. If you find it to be the fact, as I believe you can, that a former label used the word "cure", you have a right to consider why the change was made, and why no other change was made than merely from the word "cure" to the word "for." In other words: Whether that is not merely a colorable change designed for the purpose of leaving the statements at best equivocal, possible of one or two constructions, and upon that determine whether in any event the statement upon the label, the label itself, is not a misleading label. It is my judgment, gentlemen—a judgment which is not binding upon you, but the fact is for you to find—that this label does mean, and is intended to mean, that this article is curative.

The next question which arises in the case is: If you find that to be the meaning of the label, is it false? Putting it in another way: You must answer, upon the testimony in this case, whether or not the label is true in the sense that this article, Bethesda water, is a

cure, one to be accepted by the ordinary man who has the opportunity to purchase it, acting upon his own desire to help himself, whether when he does that he, in fact, is getting a remedy, something that will cure him, upon the basis of probabilities, of the ailment whereof he suffers or conceives himself to suffer.

Now, gentlemen, this branch of the case involves these possibilities, upon the evidence here; I think there is a general concurrence among the witnesses that there are no known drugs which are or can be accepted as cures for these various diseases; and if you agree with that testimony, it is my judgment that you should reach the conclusion, upon this branch of the case, that this is a false label; and that conclusion should not be deterred merely by the possibility upon the evidence that this water, or any water, may be a helpful adjunct in the treating of disease. You, as men of sense, required no testimony from witnesses, expert or otherwise, to reach the conclusion that in the treatment of all diseases, speaking generally, good water is helpful; that it is necessary. But that is a long ways from importing truth into this label as a representation of the virtues of a drug. It has been said here during argument that the mere fact that a professional man, or nonprofessional man, comes here upon the stand and asserts that he used this water and that it cured him does not make a true label out of this. The law exacts, in the carrying on of its high purposes, that the label should square—should cover not only the package but the ascertainable truth respecting its contents; and, as I shall indicate to you later, this law is not to be frustrated or to be made uncertain of application, it is not to be regarded as being without standards, merely because as to any ingredients, food, drugs, liquids, or solids, an individual may be able, truthfully, to say that it was helpful to him. I say to you that if that were so it would be possible at all times to bring into the realm of drugs the commonest foods or liquids, and permit advertising as such. Upon this branch of the case, gentlemen, you are not obliged to take professional opinion upon either side of it. If, for example, the testimony satisfies you that this water, so far as its qualities are ascertainable by scientists, by men who, so far as you and I are concerned, are the only ones that can tell us what is in it, is an article open to everybody, ascertainable, as was said here, by going down to Lake Michigan—you are not required to believe that it is possible to label that as a drug and not offend against the Pure Food and Drugs Act.

There must be to you, as men of sense, if this law is to have any potency, some method of ascertaining, in the light of good sense, as to what the truth is respecting any article which is subject of review under this law; and it is not to be regarded as open to doubt just because there are mere possibilities connected with its use, just because, as a general proposition, the real qualities of the thing are ascertained through use rather than through antecedent analysis. I say that to you in connection with the testimony given on behalf of the defendant to the effect that the curative properties of this water cannot be known except through use. Now, gentlemen, broadly speaking, that is true of any article. There is no way of conjecturing, even 5 minutes ahead, as to what the effect of any article or any movement is going to be in this world. But it does not apply to you, as jurors, as men of good sense, to say, in a case where an article is

shown to have certain definite proportions of a drug, of a chemical, or of a mineral, that you can form no practical idea in advance as to whether it has any curative effect. The illustrations that were given here on the argument are in mind, and they are such as were given by the court during the taking of the testimony, either in your presence or in your absence, as to the proper method of applying the testimony and analyzing it in this case.

The case is one of the misbranding of a drug. The Government is not concerned here with litigating or attempting to litigate the quality of this water as a water. The Government is not concerned in this case with denying, absolutely, that this water may not have some curative effect. That is not in the case at all. It is a case, pure and simple, of determining whether, upon the known facts of this water, respecting it, there is any justification for the breadth of label which appears upon that bottle.

If upon all the consideration you can give to the evidence you reach the conclusion, gentlemen, that this is a true label, that ends this case, and your verdict is for the defendant. But if you find, as in my judgment you should find, upon the evidence here, that it is not a true label, you will advance to the consideration of the question which is in the case as to whether it is a fraudulent label.

It is not easy, gentlemen, to give you a ready definition of what is meant by "fraudulent"; but there are some things that I can say to you by way of guiding you a little bit.

To say that this is a fraudulent label does not mean that the one who put it out, or the defendant corporation, as between itself and the individual who bought a bottle of this water, had a personal malicious scheme or design to get money out of it. It does not mean that at all. It means, in connection with the fact of untruth, one or all of these various things: Did the defendant know that this label was false? Second, if it did know that it was false, did it know that it was not true? And third, in any event was the defendant reckless about this; was the defendant in a position where it said, "I don't know whether it is true or false, but I am going to put it out anyway"? Now, it may cover any one of those situations. It is the idea of practicing a deception through a statement, through a practice, through an act which, in the light of attending circumstances, shows that the one who made the statement or committed the act, ought to have known better, producing damage by deceiving somebody; and therefore a mere open or reckless disregard of the truth may constitute fraud just as much as a personal malicious design to do an act hurts another.

Those, gentlemen, are the three branches of the case. The case is criminal in form, and there is attendant upon the defendant what in other cases I have indicated to you: The presumption of innocence which remains with the defendant until the proof satisfies you beyond a reasonable doubt of the guilt of the accused.

In connection with the matter of a reasonable doubt I deem it my duty upon the evidence here to state to you a little more fully matters that I have referred to in other cases: That that is not a whimsical doubt; it does not mean a doubt which you work yourselves up to believe or to entertain; it does not mean that you recognize, as for example, in this case, the mere possibility that somebody had been

cured, as he believed, by this water. That does not introduce into the case a doubt such as you are bound to entertain. Those are possibilities which would arise under this law if plain water were advertised as having therapeutic qualities; men might believe that plain water, that orange juice, had cured them of diseases, doctors might testify that was true, but that sort of testimony is not binding upon jurors who are called upon to exercise their good sense, who are called upon to recognize, as I think you must, that there is a distinction between things which are drugs and things which are not drugs. Therefore, in the consideration of this case the mere fact that professional men indulge in hypotheses, in conjecture, does not inject a doubt into this case respecting the status of the article which is here for examination solely with a view of ascertaining the one fact, whether the label that is attached to it is a true label.

Now, gentlemen, the case is an important one to the Government in the light of the purposes of this law, because this law, in situations of this kind, must be administered, and the applicability of that law to a set of facts must depend upon the view that 12 men will take of it. It does not in any event prohibit or aim to prohibit the use by any person in interstate commerce of a true label. Upon this question, I will add, respecting the fraudulent character of this label, I think a good way for you to test it out would be this: If you reach the conclusion that the label is false, what opportunity was open [to] the defendant to find out whether he was justified in using this sort of a label? What are the probabilities, had the defendant taken the trouble to do so, to make inquiry generally at those sources where inquiry would be made and probably could be answered, as to whether this sort of a label is justified? On behalf of the defendant, of course, the case is important, and he should not be adjudged guilty of this offense unless the evidence so satisfies you. The case involves nothing respecting the attitude of the Government toward this water, dealing with the water according to its true merit.

Your verdict in the case will be "Guilty" or "Not guilty", as you find the fact to be.

UNITED STATES v. JOHNSON ET AL.

(District Court, E.D. Tennessee, Dec. 10, 1917)

N.J. No. 5982

Information in two counts alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict directed for defendants on one count. Verdict of guilty on one count.

SANFORD, *District Judge.* Gentlemen of the jury: You are, in trying this criminal information, to give the defendant the benefit of the presumption of innocence, just as in trying an indictment. You are to carefully weigh and consider all evidence in the case. If it satisfies you of the guilt of the defendants, or either of them, beyond a reasonable doubt, it would be your duty to bring in a verdict accordingly; if it does not satisfy you of their guilt, or leaves in

your mind a reasonable doubt of their guilt, from the evidence, you should bring in a verdict of not guilty.

As I say, I direct a verdict of not guilty under the first count. I submit to you the question as to whether there is guilt under the second count. Each side, as you have heard, has asked for peremptory instructions in its favor. I have overruled both motions, both of the Government and of the defendants, and submit the matter to be decided by the jury.

This information is based under the Food and Drugs Act; an act passed by Congress for the prevention of the shipment in interstate commerce of adulterated and misbranded foods, drugs, and the like. One provision of this act is that the food shall not be misbranded; that is, it shall not be labeled or branded so as to deceive or mislead the purchaser. Now, it is under this clause of the Food and Drugs Act that the question of the guilt or innocence of these defendants must be determined. A good many of the matters here are admitted and are not in dispute. It is admitted that the defendants were partners and that they shipped the cans of sirup charged in the information, in interstate commerce, from Knoxville, Tennessee, to the State of Georgia. It is conceded that these cans were labeled in the words and figures set forth in the information; and one of the original cans, with the original label, has been exhibited to you in evidence. It is also, as I understand, not disputed that the two defendants had knowledge of the fact that this sirup did not contain any maple and was not maple sirup; and it was stated by their counsel in argument that the only question in the case for the jury's determination is whether or not this sirup was labeled so as to mislead or deceive the purchaser. In other words, the only question is this question of fact as to the label. Now, you have heard the evidence as to this matter. You are to carefully weigh and consider the same. You are to look at the label yourself, which has been introduced in evidence. The label, as you have seen, has the name "Maple" in large letters; the word "Etta" in smaller letters underneath it and to the right, without any hyphen; and the word "Syrup" in a little larger letters than the letters in the word "Maple." Below that are words "Produced by the delicate blending of refined sugar syrup, cane and maple etta syrups." These are in much smaller letters. The word "maple etta" as written in that small type seems to me to be really two words, that is there seems to be a larger space between the two "e's" than between the other letters; I am not sure about that, however. There is no hyphen certainly between the word "maple" and the word "etta." Still further down on the label and in still smaller letters and figures are the words "Over 99% pure." There are other things on the label not necessary to be called to your attention.

Now, the Government insists that, taking that label as a whole, especially considering the way in which the words "Maple" and "Syrup" are printed, with the type and size of the letters, and the way in which the word "Etta" is written underneath the word "Maple", with the design of maple leaves, or something in the nature of maple leaves, around it, deceives and misleads purchasers into the belief that it is maple sirup. That is the issue that is submitted to you. Does that label that you have before you deceive and

mislead; is it so labeled as to so deceive and mislead the purchaser into the belief that he is getting maple sirup? As a matter of fact it is conceded that he is not getting maple sirup. It is not a question as to whether any purchaser has been actually deceived or not; the Government does not have to show that. It is not a question of the actual intention of the defendants to deceive. It is a question simply of whether the label, taken as a whole, as it is upon the can and as offered to the purchaser for sale, is reasonably calculated to deceive and mislead the average purchaser into the belief that he is getting maple sirup. Is that its natural effect? If the natural effect of that label, when you take it as a whole and look at it as the average ordinary purchaser would look at it, is to deceive such an ordinary average purchaser into the belief that he is getting maple sirup, when he is not, then this shipment in interstate commerce was a violation of the act.

Now you have to consider all circumstances in this case, and put yourself, insofar as you can, in the position of an ordinary average purchaser who goes to a store to buy sirup. Now it is not a question of what a very careful man would do about it or would think about it; it is not a question of what a very careless man would think about it; it is a question what the ordinary average purchaser would believe when he saw this label, what he would reasonably be expected to think when he looks at it. You are to determine whether he would read the whole label, read it all, or only the large letters. What would the average ordinary purchaser do; would the average ordinary purchaser be deceived? You are to take into consideration all the circumstances bearing on that question, the label itself, the placing of the letters, and the size of the letters, and determine what would be the natural effect of that label on the ordinary average person.

* * * * * * *

Now then take that label and determine for yourself just how much the ordinary average purchaser would read and how much he would notice about it, and whether that ordinary average purchaser would be led into the belief that he was getting maple sirup, as indicated by the large letters, or would read it all and see other things, and be led into the belief that he was not getting maple sirup? What effect, if read further, would that "Over 99% pure" have on it? Would that lead him still further to believe that he was getting maple sirup? What effect would those other words about how it is produced, blended, etc., have on the ordinary purchaser; would he notice them, would he pay any attention to them, would he read them, and what effect would they have upon him? You have got to put yourself, as I say, in the position of an ordinary average purchaser.

If the label taken as a whole, the words and everything, is reasonably calculated to deceive such an average ordinary purchaser then this shipment in interstate commerce by persons knowing its contents and knowing what sort of label it had would be a violation of the act. If you are satisfied of that, beyond a reasonable doubt, as to either or both of these defendants, it would be your duty to bring in a verdict of guilty. If you are not satisfied, or have a reasonable doubt about it, it would be your duty to acquit.

Take the case, gentlemen.

Thereupon the jury retired, and, after due deliberation returned a verdict of guilty on December 11, 1917, upon the second count of the information. By direction of the court a verdict of not guilty was returned upon the first count of the information charging adulteration of the article.

UNITED STATES v. DR. J. H. McLEAN MEDICINE CO.

(District Court, E.D. Missouri, Dec. 14, 1917)

N.J. No. 6149

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.[2]

The United States attorney filed an information against The Dr. J. H. McLean Medicine Co. alleging shipment from the State of Missouri into the State of Texas, of a quantity of an article labeled in part, "Dr. J. H. McLean's Liver and Kidney Balm", which was misbranded.

It was alleged in substance in the information that the article was misbranded for the reason that certain statements appearing on the label on the bottles and cartons falsely and fraudulently represented it as a remedy for the treatment of diseases and disorders of the liver, kidney, and urinary organs, dropsy, inflammation of the kidneys and bladder, incontinence of urine, bedwetting of children, rheumatism, leucorrhea or whites, irregular menses, weakness in urinary organs, and pains in the back, when, in truth and in fact, it was not. It was alleged in substance that the article was misbranded for the further reason that certain statements included in the circular accompanying the article falsely and fraudulently represented it as a remedy for the treatment of gallstones, diabetes, and Bright's disease, as a remedy for difficulty in passing urine and suppression and retention of urine, as a remedy for the treatment of rheumatism and as a cure for rheumatism, as a remedy for the cure of gout, sciatica, lumbago, and neuralgia, and as a remedy for gravel, and female diseases and disorders, when, in truth and in fact, it was not.

TRIEBER, *District Judge* (charge to jury). Gentlemen of the jury: For the purpose of protecting the health of the people, Congress in its wisdom has seen it proper to enact the law making it an offense for anyone to ship from one State or Territory to another State or Territory within the United States any impure foods or drugs. The act of Congress describes what act shall be deemed a violation of this law, and among others it provides that for the purposes of this act an article shall be deemed to be misbranded if its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effects of such article or any of the ingredients or substances contained therein which is false and fraudulent. The defendant is charged by the information filed in this case with having violated that provision of the act by having sent on July 20, 1916

---

[2] Reversed, *Dr. J. H. McLean Medicine Co.* v. *United States*, p. 907, post.

[July 30, 1915], from the city of St. Louis, in the State of Missouri, to a certain firm which is mentioned in the information, at Dallas, in the State of Texas, twelve bottles of its medicinal preparation which, it is alleged, contained on its label on the cartons in which the bottles were placed, and circulars accompanying them, the statement or claim that the use of this medicine in the manner prescribed therein, the doses, would arrest or retard a large number of diseases which are mentioned therein.

Before going into this particular case I would call your attention to certain general principles of law which apply to every criminal case tried in the court of the United States. The law is merciful, it wants no person or corporation convicted of an offense unless, it says, every material allegation in the indictment or information is established by evidence which satisfies the jury trying the case beyond a reasonable doubt of the truth of these allegations. But I want to say in this connection in order that you may not be misled, that what the law means by a reasonable doubt is a rational doubt arising in the minds of reasonable men from the evidence of the case and which no other evidence removes, or from an insufficiency of the evidence a mere possible doubt which has upset the minds of some men on all occasions, a doubt which may be suggested by the ingenuity of counsel, or a doubt which may suggest itself in the minds of some jurists by reason of sympathy, but which is not warranted by the evidence in the case, is not a reasonable doubt and must not influence your verdict. The law goes further in its mercy. It says not only must these allegations and the guilt of the defendant be proven by the jury beyond a reasonable doubt, but, in order to justify a verdict of guilty, it is necessary for the Government to prove the allegations in the indictment in the manner in which they are charged. Although the evidence may show that a man is guilty of some offense, but if it is not the offense which is charged, or if it was not committed in the manner in which it was charged in the indictment or information, then the law says that the defendant is entitled to a verdict of not guilty. These are the general principles of law which are to govern the juries in the trial of every criminal case of the court of the United States.

Now, the first important question for you to ascertain is: What are the material allegations in this information which must be proven beyond a reasonable doubt by the Government before you can render a verdict of guilty? These material allegations are that the defendant is a corporation existing under the laws of the State of Missouri. At the time charged, in July 1916, it did ship twelve bottles or any number of bottles, the number would be immaterial, from the city of St. Louis, in the State of Missouri, to the person mentioned in the information at Dallas, in the State of Texas, therefore a State other than that where the shipment was made, of this preparation, and that the bottles contained had attached to them a label which contained the claims set out in the information. That they were in cartons which contained the language charged and set out in the information, and also accompanied by circulars containing the language set out in the information. In order to enable you to determine this fact without going into it now, in charging you, the

court will permit you to take with you the information, the labels on the bottles, the cartons in which they were, and also the circulars accompanying them. The Government must further prove that the claims made in these circulars, labels, and cartons were false, and in addition thereto that they were made fraudulently. Now, those are the material allegations in the information, every one of which must be established by the Government beyond a reasonable doubt before a verdict of guilty can be returned by you. Counsel have stipulated as to the truth of some of these allegations so that it was unnecessary to introduce evidence as to them, and you may consider them as having been established beyond a reasonable doubt. Counsel for the defendant agreed that this defendant was at the time a corporation existing under the laws of the State of Missouri. That it did make at the time alleged this shipment of the twelve bottles to the firm mentioned in the information, in the city of Dallas, State of Texas. That these bottles had the labels on them and were put in cartons or boxes and were accompanied by circulars which contained the language set out in the information. Therefore, gentlemen of the jury, the only questions which are submitted to you and which must be determined by you for the purpose of deciding what your verdict shall be are: First, does the language used on the labels, cartons, or circulars accompanying the preparation, giving it such meaning as an ordinary intelligent person reading it would give it, show that the defendant claimed that the use of the preparation in the manner and the doses directed therein would arrest or retard the progress of the diseases which are mentioned therein; second, if it does, then the next question to be determined by you is whether they were false. If you find that they were false, you are next to determine whether they were fraudulent. To justify conviction or a verdict of guilty, you must find all of these three issues for the Government. Otherwise your verdict should be not guilty. For the purpose of determining whether the labels on the bottles and the cartons and the circulars accompanying them contain statements that the use of the medicine in the doses mentioned would arrest or retard all the diseases mentioned therein, you should take into consideration all the language used therein, interpreting it as an ordinary intelligent man would, and from it determine whether it was the intention of the defendant to lead such persons who would read them to believe that the medical preparation, if taken in the manner prescribed in these circulars or labels, would arrest or retard the progress of the numerous diseases mentioned therein, although the language does not in direct terms say so. If you further find that they were false, as I will explain to you later on what is meant by false, insofar as this preparation would not arrest or retard the diseases mentioned therein or any of them as claimed by the defendant, and that these false representations were made by the defendant for the fraudulent purpose of inducing people suffering from any of these diseases to purchase the preparation for the purpose of obtaining relief or a cure, then the defendant would be guilty of this charge. The meaning of the word false in this statute is that a person states that to be true which he knows to be false or which he has no reason or reasonable cause to believe to be true. When a person makes claims of cures or beneficial effects from the use of a certain medicinal prep-

aration, he may be held to good faith in his statements, and if made with actual intent to deceive, an intent which may be derived from the facts and circumstances in the evidence, they are fraudulent. Fraudulent intent, as any other intent, is frequently a matter which cannot be proven by direct or positive testimony. Of course, it is a matter of the mind, a state of mind is itself a fact, and false and fraudulent representations may be made about it, and persons who make substances or compositions alleged to be curative or beneficial are in a position to have superior knowledge, and may be held to good faith in their statements. There is another fact which the parties have agreed on so that it requires no proof. The defendant or his counsel have read to you the ingredients which make up this medicine. There are a large number of ingredients possessing medicinal qualities. The Government has admitted that the preparation is compounded of the materials and in the quantities as stated by Judge Crum when he opened the case. So there is no dispute as to what it contains. Now, the first question, as I stated to you, is what the language is and how it should be interpreted. It is unnecessary, gentlemen of the jury, for me to go into this matter, because I believe you are just as well qualified, perhaps better than I am, to determine what you think the language used in these circulars and labels means. So that will be a matter which the court leaves entirely to you without giving any expression. If you find that a reasonably intelligent person reading them would believe that by the use of these medicines a person suffering from any one of these diseases, and the diseases are quite numerous, which are mentioned therein, for which this medicine might be taken with beneficial effect; diseases of the liver, kidneys, and urinary organs, dropsy, inflammation of the kidneys or bladder, incontinence of urine, bedwetting of children, rheumatism, leucorrhea or whites, irregular menses, weakness in urinary organs, pains in the back, gallstones, diabetes, difficulty in passing urine, suppressing or retention of urine, gout, lumbago, sciatica, neuralgia, gravel, female diseases and disorders. Were these statements false, that is, did the defendant know that it would not cure all of these diseases? And in this connection it is proper for me to say that it is not necessary for the Government to prove, before you can find a verdict, that they are false as to all of these diseases. It is sufficient if you find from the evidence that they are false as to any one or more of these diseases, although they may not be false as to all of them. Now, were they false? As I stated to you before, they may be found to be false if the defendant knew that they would not have the effects claimed for every one of these diseases, or if the statements were made not knowing that they would have that effect. A person who makes a statement which he doesn't know to be true. makes a false statement just as much as a man who makes a statement which he knows to be false.

The Government for the purpose of establishing its case has introduced four physicians. They belong to three different schools of medicine. One of them belongs to the school known as the eclectic school of medicine, one of them belongs to the school known as the homeopathic school of medicine, and two of them to the regular school of medicine, usually spoken of as the allopathic. All of these four found—something unusual, but the doctors seem to

agree in this case—every one of them testified that while the ingredients possess curative properties, yet when compounded, all of them put together, they would not cure, arrest, or retard the progress of a single one of the diseases mentioned therein. That a great many diseases can't be cured at all by any kind of medicine. They testified that almost each one of these diseases may be caused by different causes and from different causes, and until it is ascertained what caused that particular disease, it is impossible to prescribe and tell what medicine should be taken, or what medicine can be of benefit at all. They say that liver diseases, some of them may be tubercular, some of them may be caused from one cause and some from another cause; in fact, they went through every one of these various diseases and showed how different they were. They say as to removing gallstones, if the gallstones happen to be very small, they may be removed, that is, they may by the use of medicine be caused to pass through some of the organs of the body, but at the most severe pain, but if the gallstone is quite a large stone, as is frequently the case, then it is utterly impossible for it to be passed off by the use of medicine, because there is no organ which is large enough to permit it to pass, and that they can only be removed by an operation, or as one of them expressed it, by the use of the knife. I am not going to review all the testimony of these physicians. You have heard it and know just as much about it as I do. There has been no testimony introduced by any other physicians or persons who are qualified to testify as experts to dispute the testimony of these witnesses. But I want to say this to you, gentlemen, that the testimony of experts, even if not contradicted, is not conclusive on the jury. You are the final arbiters to determine the facts, but for the purpose of aiding you, that testimony has been introduced because owing to the fact that these men have received a medical education at well-established medical schools, and have practiced the science of medicine for years, some of them for over 30 years, is a matter to be considered by you for the purpose of determining what weight you shall give to their opinions. Therefore, you should consider what weight you should give it, their knowledge and experience, their manner of testifying, whether they were prejudiced or not. Now, the question was asked some of these expert physicians whether they were not prejudiced against the use of all proprietary medicines. They said, no, but they think that if given indiscriminately without examination of the causes of the disease and especially if they are to be given for a large number of diseases, different entirely from each other, then it is unwise to use them, and, for that reason, they would not advise anyone to use them; or, they say they are prejudiced simply against such medicine as is harmful instead of being beneficial. Now, those matters, gentlemen, are to be considered by you for the purpose of determining what weight you shall give to the testimony.

Now, then, the next question is, Did the defendant know that they were false, or did he not know that they were true. The only evidence that has been introduced on the part of the defendant as to that was the recipe for this medicine was prepared by one Dr. McLean, whose picture was hanging in the office or laboratory of this defendant. Dr. McLean is dead, and the diploma

exhibited here shows that he had been a graduate of a medical school, graduated in the 60's. There is no evidence whether Dr. McLean ever practiced medicine, whether he had any other medical experience or not, and that this medicine is the same that has been made ever since. I want to say to you, gentlemen, that until August 23, 1912, it was not an offense for anyone to send medicine from one State to another, containing labels which were false or fraudulent. It is only since 1912 that the law was passed under which this charge has been brought. Now, the president of this defendant has testified that, but he hasn't said that he knows anything about the medicinal qualities of this preparation. A gentleman who is a chemist has testified that he examines it after it is made, not for the purpose of ascertaining what its medicinal virtues are, what it will cure, but for the purpose of determining the quantity of alcohol which is in it, which under the law must appear on the label. Then another gentleman testified that he has been in the defendant's employ for 32 years, that he mixes this medicine, but he didn't testify that he knew anything about the virtues of the medicine. Now, gentlemen, it is for you to determine whether upon this evidence you believe that they were false within the meaning of the law. If you find these two issues in favor of the Government, then the next issue to be determined is whether it is fraudulent. If a person makes false statements for the purpose of inducing another to purchase such preparations from him in the belief that they will cure or arrest, retard, or relieve him to some extent from the ailment which he suffers, any one of these ailments mentioned, which he didn't know to be true, and therefore were found to be false, then you are justified in finding that it was for the fraudulent purpose of inducing people to buy the medicine from him.

As I stated to you before, gentlemen of the jury, before you find a verdict of guilty, you must find every one of these three issues in favor of the Government. If you don't find them in favor of the Government, if you don't believe that the evidence justified it, or if, as reasonable men, you have a rational doubt in your minds whether any one of these three issues should be found in favor of the defendant, then, gentlemen of the jury, the defendant is entitled to the benefit of that reasonable doubt, and your verdict should be not guilty. If, on the other hand, you have no such doubt and are satisfied beyond a reasonable doubt that the defendant did commit these acts, as charged, and find these three issues, every one of them in favor of the Government, then, gentlemen of the jury, under your oath it is equally your duty to return a verdict of guilty. You may retire, gentlemen, to consider. Take the circulars and cartons with you, gentlemen.

The jury thereupon retired and, after due deliberation, returned into court on May 18, 1917, with a report that they were unable to agree to a verdict, and were thereupon discharged from further consideration of the case.

On December 14, 1917, the case was again brought on for trial before the court and a jury, and after the submission of evidence and arguments by counsel the following charge was delivered to the jury by the court (Dyer, *District Judge*):

Gentlemen of the jury: There are some allegations in this complaint that have been admitted and about which there is no controversy. It is admitted that the defendant is a corporation organized under the laws of the State of Missouri and has its principal business office in the city of St. Louis. It is also admitted that the shipment charged in this information as being shipped to Dallas, Tex., was a shipment in interstate commerce, and was made at the time alleged in the information. It is practically admitted that the compound shipped contained the specific drugs that are mentioned in the complaint. There is no question about that.

On June 30, 1906, Congress passed what is known as the Pure Food and Drugs Act. This act of Congress, like all other acts of Congress, is important, and it is the duty of the court, the duty of the jury, and the duty of everyone to uphold that act. Speaking for myself, I do not believe that Congress ever enacted a more salutary statute than the one under consideration. When it was passed in 1906 that statute contained a provision as follows:

SEC. 8. That the term "misbranded," as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as to the State, Territory, or country in which it is manufactured or produced.

You will see from section 8 of the original act, which I have read, that it treated only of the misbranding of these articles by stating falsely what had entered into the composition of the food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as to the State, Territory, or country in which it was manufactured or produced. If section 8 of the statute, to which I called your attention, were the only provision of the law, then as a matter of course this particular prosecution could not be maintained. However, with a view of meeting cases similar to this, Congress amended that act on August 23, 1912, which amendment, so far as it applies to this case, is as follows:

Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

That was the amendment to the act made in 1912, and it is under the provision of the act as it now stands that the information in this case was lodged. I am not relying alone upon my own judgment or construction of the act as to the effect of this amendment and the character of the amendment, but I rely upon and agree with the declaration of the Supreme Court of the United States as to the scope and extent of this amendment.

As you will remember, the amendment contains these words, "which is false and fraudulent." The allegation must be shown to have been false. It must be shown to have been fraudulent. Of this phrase, "false and fraudulent," the court says as follows:

This phrase must be taken with its accepted legal meaning, and thus it must be found that the statement contained in the package was put there to accompany the goods with actual intent to deceive, an intent which may be

derived from the facts and circumstances, but which must be established. That false and fraudulent representations may be made with respect to the curative effect of substances is obvious. It is said that the owner has a right to give his views regarding the use of his drugs, but state of mind is itself a fact and may be a material fact, and false and fraudulent representations may be made about it, and persons who make or deal in substances or compositions alleged to be curative are in a position to have superior knowledge, and may be held to good faith in their statements.

This information charges, after setting out all that accompanied these bottles, and about which there is no controversy, it being admitted that all that is charged in the information as to certain things that went with the bottle are true, among other things,

> That when shipped and delivered for shipment as aforesaid, said article of drugs was then and there misbranded within the meaning of said act of Congress, as amended, in that the following statements regarding the therapeutic or curative effects thereof appearing on the label, to wit, on carton, "Dr. J. H. McLean's Liver and Kidney Balm * * * For the treatment of diseases and disorders of the liver, kidney and urinary organs." * * *
>
> On bottle "Dr. J. H. McLean's Liver and Kidney Balm * * * For the treatment of dropsy * * * Inflammation of kidneys or bladder, incontinence of urine, * * * bed-wetting of children, rheumatism, leucorrhea or whites, irregular menses, weakness in urinary organs, and pains in the back," were false and fraudulent in this, that the same were applied to said article knowingly and in reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to the purchasers thereof, and create in the minds of purchasers thereof the impression and belief that the article was, in whole or in part, composed of, or contained, ingredients or medicinal agents effective, among other things, as a remedy for the treatment of diseases and disorders of the liver, kidney, and urinary organs, and effective as a remedy for the treatment of dropsy, inflammation of the kidneys and bladder, incontinence of urine, bed-wetting of children, rheumatism, leucorrhea or whites, irregular menses, weakness in urinary organs, and pains in the back, when in truth and in fact, said article was not, in whole or in part, composed of, and did not contain, ingredients or medicinal agents effective, among other things, as a remedy for the treatment of diseases or disorders of the liver, kidney or urinary organs, or effective as a remedy for the treatment of dropsy, inflammation of the kidneys or bladder, incontinence of urine, bed-wetting of children, rheumatism, leucorrhea or whites, irregular menses, weakness in urinary organs, or pains in the back.
>
> That when shipped and delivered for shipment as aforesaid, said article was further misbranded in that the following statements regarding the therapeutic or curative effects thereof, included in the circular aforesaid, to wit:
>
> Gallstones * * * Dr. J. H. McLean's Liver and Kidney Balm will aid in dissolving gallstones so that they may pass away.

That is one of the several things contained in this information. The second is,

> Rheumatism * * * For the treatment of rheumatism take Dr. J. H. McLean's Liver and Kidney Balm. * * * This medicine helps in restoring the kidneys to a healthy condition so that the urine will not contain too much uric acid, and in that way rheumatism is cured.
>
> Gout, sciatica, lumbago and neuralgia * * * The treatment for them should be the same as for rheumatism,

and so on.

You will see what is charged in this complaint. The testimony of the physicians introduced here by the Government. I may say tends to prove in a measure, I do not say it does prove, but the testimony was offered to show that this particular compound containing these particular ingredients would not do what is represented it would do. That was for the purpose of ascertaining, in the first place,

whether the statements made in the circular were false or were true, and that is the matter for you to decide. If you decide they were false, then you have taken one step in disposing of this case. If the statements were true, and the compound will do what the statements claim for it, then that is the end of the case, and your verdict will be for the defendant.

If you find from the testimony that is before you that those statements were false, the next step is to see whether they were fraudulent or not, taking the two, false and fraudulent. If you find that the statements were false and fraudulent, then as a matter of course your verdict will be for the Government. If you find the statements were false but not fraudulent, under that state of fact you would find for the defendant, because you must find the two: In the first place it must be false, and in the next place it must be fradulent. In determining the question as to whether or not the statements were fraudulent you may take into consideration all the facts and circumstances that have been introduced in evidence. You are the judges of the testimony.

There is another well-settled principle involved in this case and in every case, and that is that one who makes a false statement, not knowing whether it is false or true, is as guilty of wrong as the man who makes a false statement knowing it is false. No one may be permitted to make statements recklessly not knowing whether they are true or false, put these statements out, and then say he did not know whether or not it was false.

It is not necessary that the Government should prove that all the statements on the label or in the circular were false and fraudulent. If you believe beyond a reasonable doubt that any one or more statements as to the curative or remedial properties of this medicine was false and fraudulent, and that the defendant knew it was false, you may find the defendant guilty. If you find, as a matter of fact, that the statements were false, and by the defendants known to be false, then your verdict will be for the Government. If you find as a fact that the statements were not false, or, being false, there was no intent, whether actual or implied, upon the part of the defendant to defraud, then your verdict will be for the defendant.

If you believe from the evidence that any one of the claims as to the therapeutic effect of this medicine upon gallstones, diabetes, Bright's disease, gravel, rheumatism, and the other diseases mentioned in the information, was false, and was made by the defendant with a reckless and wanton disregard as to whether it was true or false, you may from that fact, and from other facts connected with the case, find the defendant guilty.

In determining the intent of the defendant take into consideration all the facts and circumstances of the case and determine whether or not it was the intention that this language, interpreting it as ordinary intelligent men would, should convey the impression that the medicine was to cure, or act as a remedy for the diseases or ailments mentioned, even where the language does not directly say so. If it was the intention, so framed or stated, that it convey those impressions, and those statements were false, and known by the defendant to be false, or, if from all the circumstances in the case you

find there was an intention to defraud, then it would be your duty to return a verdict of guilty. If you do not find that intention, of course, you will return a verdict of not guilty.

After the admissions were made in this case as to sending this medicine in interstate commerce to the State of Texas, and after the admission of the other facts that I have mentioned, the Government relied upon the evidence of three physicians. The evidence of those men as experts is to be taken by you as the testimony of expert witnesses, by which you are not necessarily bound. The testimony of experts is not conclusive, even if not contradicted. The evidence was permitted in order to aid the jury in determining the therapeutic value of the compound. These witnesses had nothing to say except to answer questions that were put to them on the subject of the curative properties of this compound, administered as these directions said it should be administered. They are the witnesses who were examined with reference to that. You are to be the judges of all that testimony. The court is not going to interfere with you in that regard.

Counsel alluded to matters that are not in evidence. I interrupted at the time and excluded that matter. Whether it contains anything or not is not for your consideration, because it has been excluded by the court.

Evidence has been introduced here as to the character for honesty and fair dealing of the defendant corporation. That is an element and a fact that may be taken into consideration by you as you would any other proper and legitimate testimony.

This is a criminal prosecution under a statute that makes it a misdemeanor to violate it, and the defendant is entitled to the benefit of any reasonable doubt that may arise out of the testimony in his favor. The presumption of innocence accompanies the defendant company as it would accompany an individual, and that presumption continues until it is shown by the testimony in the case to have been overcome. If you find that the facts and circumstances developed before you are as consistent with the theory of innocence as they are with the theory of guilt, the jury should acquit the defendant.

You will see that you are to decide, first, whether the statements in reference to the curative properties of this medicine were false. If they were false, did the defendant know them to be so, and, if the defendant knew them to be so, were the statements made in such a reckless manner as a reasonable man would not have indulged in. From all the facts and circumstances in the case, you are to say whether the defendant is guilty or not guilty under this charge.

As far as the punishment is concerned, as stated by counsel, that is a matter within the discretion of the court with which you have nothing to do. It is lodged with the court to impose the fine, and not with the jury.

I do not know that I have anything else to say. The form of verdict has been prepared. If you find the defendant guilty sign the verdict as prepared. If you find the defendant not guilty insert the word "not" before the word "guilty" and return your verdict into court.

UNITED STATES v. A. SKARZYNSKI & CO.

(District Court, W.D. New York, Dec. 19, 1917)

N.J. No. 6125

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Mistrial. Defendant later entered plea of guilty.

The United States attorney filed an information against A. Skarzynski & Co., a corporation, Buffalo, N.Y., alleging shipment by said company, from the State of New York into the State of New Jersey, of a quantity of an article labeled in part "Wine of Chenstohow", which was misbranded, in violation of the Food and Drugs Act as amended. It was alleged in substance in the information that the article was misbranded for the reason that certain statements appearing on its label falsely and fraudulently represented it as a remedy for stomach affections, and as a cure for general debility, loss of strength, indigestion, piles, and pains, when, in truth and in fact, it was not. The case having come on for trial before the court and a jury, after the submission of evidence and arguments by counsel, the following charge was delivered to the jury by the court:

HAZEL, *District Judge.* Gentlemen of the jury: An information has been filed in this court by the United States attorney—as he had the right to do—accusing the corporation known as A. Skarzynski & Co., with violating the Sherley Act, so-called, which is an act passed by Congress for the purpose of prohibiting the sale of impure foods and drugs, and forbidding the misbranding of the same. The evidence on both sides is about to be submitted to you for your consideration and decision, and, in many respects, it is not in harmony, and, therefore, I have to remind you that it is your duty to harmonize whatever conflicting testimony there may be, in order to ascertain where the truth rests.

The responsibility of finding the defendant company guilty as charged in the information, or finding it innocent, of course, rests entirely upon you, and my duty is discharged when I have instructed you as to the law applicable to the controversy, leaving you to apply the facts to the law.

As the United States attorney has very properly said, the case does not lack in importance. Although the statute makes such offense as charged in the information a misdemeanor, it is, nevertheless, an important case, in that violators of this statute cannot be permitted to defraud the public by placing upon the market spurious foods or drugs or beverages, or placing upon the market foods or beverages and mislabeling them, to the end that the buying public may be lead to believe that the contents of the package—if the drug or beverage is contained in packages—contains something different from what they intended to purchase.

But the case is also important to the defendant company, for, if you reach the conclusion that there was a misbranding of this commodity, and that the defendant company placed the commodity upon the market with the intention of cheating and defrauding and deceiving the public, then, obviously, the defendant may be somewhat curtailed in its business pursuit, so that you should not lose sight of the fact that the case is not without its importance, and

requires, on account thereof, your most serious and earnest consideration.

There are several questions of fact that arise from this testimony, which you are required to consider, and one of them is as to the meaning of the words contained on the label upon the bottle in which this commodity was enclosed; are the words on the label or wrapper to be taken in a broad or restricted sense? If they are to be taken in the broad sense, the product in question is misbranded, on account of their evident falsity; if the meaning is restricted, as the defendant claims, to conditions of the stomach as distinguished from organic troubles, and such condition is benefited or cured by the product, then the defendant company is not guilty.

There is another question which you are obliged to consider and determine, if you conclude the product was misbranded and that the label and wrapper were false and intended to mislead, before there may be a conviction in this case, and that is whether the defendant company was aware of the falsity of the wording, or knew it was untrue, and used the wording on the label carelessly and recklessly without sufficiently apprising itself of the true facts, and marketing the product with the view of getting money fraudulently from the public for an article which could not give or render a specified result.

Now, gentlemen, the law does not prohibit a true label or wrapper for this commodity; it does not object to the sale of this product, or to the inclusion of the ingredients specified; the law simply requires that the commodity—this wine in question—shall be properly labeled and branded so as not to deceive.

This is a criminal case, and all the essential elements of the offense, as set forth in the information, are required to be established by the Government beyond a reasonable doubt; and, moreover, the defendant is entitled to the presumption of innocence until you gentlemen have determined what the facts are, and until you have reached the conclusion that the defendant is guilty as charged in the information.

There is no question but that the particular shipment to which the Government objected was a shipment in interstate commerce, and, therefore, this court has jurisdiction of the offense.

Before considering any of these matters to which I have preliminarily alluded, I think it is quite necessary that you should understand with some fullness what the object of Congress was in enacting this law.

In the first place, the object was to prevent the sale of commodities in interstate commerce that are harmful to the health of the people, and to prevent them from being defrauded by adulterated foods, drugs, and liquids, also to prevent the misbranding or false labeling of such articles, so that the buyer should know that the article bought by him was what it purported to be.

The information is not that the product was harmful or injurious to health, or that the label contained a false claim in reference to the place of manufacture; there is no objection on the part of the Government, as I understand its claims, to distinguishing or labeling this wine as the Wine of Chenstohow, inasmuch as the label also contains the explanation that it was manufactured in Buffalo; but, I repeat, the Government insists that the bottles, labels, and wrap-

pers contain reckless expressions or wording which tend to mislead the buyer into believing that he is buying a wine, drug, or beverage that is a remedy or cure for the stomach, or certain conditions of the stomach, appearing on the label.

Now, what was the inscription on the label and wrapper? It has several times been drawn to your attention, but it will not be altogether amiss to have me repeat it, so that you will have it clearly in mind. On the label or wrapper with which the bottle was enclosed were the printed words, "Celebrated Curative Wine of Chenstohow" (to which designation the Government does not object). "Medicinal Compound. The Best Remedy for the Stomach," and on the bottle are the words, "Those who suffer from loss of strength, indigestion, piles, pains, etc., should use the Curative Wine of Chenstohow." There are other words appearing on the label, but they are not essential, and therefore we need not direct your attention to them.

As I have already stated, under this statute under which the information is filed, the word "misbranding" applies to foods, drugs, and liquids, and under the Sherley Act a package or label containing words or design or figure regarding the article or ingredients contained therein, which is false or misleading in any particular, is a misbranding thereof, and is a false labeling.

In considering this wording on the label and wrapper, it seems to me, the first question for you to consider and determine is the meaning of those words and what the defendant intended the public should understand thereby. Did it mean to have the public believe that the product would remedy and cure those troubles of the stomach, general debility, piles and pains, due to a diseased condition of the stomach, or did it simply mean that the printed words on the label or wrapper, by themselves, or taken together, should be understood as relieving conditions of the stomach, pains, indigestion, general debility, etc., such as do not arise from a diseased condition, or an organic condition of the stomach?

It is for you to determine what the defendant meant by referring to its product as "Curative Wine," "Medicinal Wine," and "Best Remedy for the Stomach," for the conditions and symptoms specified in the label.

In your efforts to reach a proper conclusion, you must have in mind the purpose of this suit is to safeguard the unwary public from being deceived, and from buying such commodity which would not of itself give the benefit promised by the seller, and as indicated by the labels and wrappers.

You should also have in mind the meaning of the words "remedy" and "cure." Those words are to be taken in their ordinary sense, as people in the ordinary walks of life understand them. It, no doubt, was the intention of the defendant to make representations that the public would understand, and, therefore, it did not address doctors, druggists, and chemists, but ordinary folk. The word "remedy" is known to signify something that cures a disease, something taken internally to alleviate disease and benefit the health. I repeat, did the defendant company mean by the wording of the label that the public should understand that the product would remedy or cure all stomach troubles, in the broad sense, which would include organic troubles of the stomach, or did it simply mean to be under-

stood, and want the public to understand by the label and wrapper that the reference was to temporary or symptomatic conditions of the stomach? That is one of the salient questions submitted to you for your decision.

Gentlemen, if you decide that the wording was misleading, and a person would understand thereby that some stomach troubles generally were meant, then the defendant misbranded this commodity, and if the misbranding was to deceive, then the defendant is guilty as charged; if the defendant did it honestly, believing the product would accomplish those ends specified on the label, then it is not guilty.

The Government is required to prove, not only that the commodity was misbranded, as claimed by it, not only that it was too broad and not limited or restricted in its wording, but that it was the intention of the defendant to deceive the public, and that it knew when the branding was appended to the bottle, that it was false. If it was a true label—and you should reach that conclusion from the evidence—and the defendant in good faith marketed the article believing it would remedy the conditions specified in the label and wrapper, then the company obviously is not guilty, and your verdict must be one of "Not guilty."

Now, gentlemen, considerable dispute arose between the experts—men of medical training—as to the wording on the label and wrapper; the witnesses for the Government, Dr. Stockton, Dr. Otto, and Dr. Leonard, testified substantially that there was nothing in the product that would be useful or beneficial for organic stomach troubles, except perhaps for a laxative, as it contained laxative ingredients; that the product had no curative agency whatever except perhaps as to the symptoms of indigestion, which the alcohol might help, or the wine itself might help; that it would not, in their opinions, help or cure any known stomach disease such as comes from cancer, ulcer, dilitation, or reflexation due to other diseases of the body; while, on the contrary, the testimony of the medical witnesses for the defendant is substantially to the effect that the formula which the defendant's president claimed the defendant used, when the product was administered in specified doses, would afford benefit to the user, and might often remedy the condition of the stomach in their view. I am referring to the testimony of Dr. Marcy and Dr. Heath, that the label does not specify any diseases of the stomach, but merely conditions without the implyment of any organic difficulties, and they testified that this product, which admittedly included some medicinal elements, had a curative or remedial effect on the stomach, although they admitted it would not cure the stomach if the troubles arose from diabetes, ulcers, and cancers, but they seemed to think—at least Dr. Heath seemed to think—the product might in such cases often afford some relief. You will remember the testimony, not only that given on behalf of the defendant, but also the testimony for the Government on that point, and it is your duty to harmonize it, and while it is merely opinion evidence, yet, at the same time, it is the opinion of skilled and trained men—trained physicians—who presumably are aware of the effects of medicines on the stomach, and after an examination of the testimony on both sides, give credence to that testimony which appeals to you most.

Now, treating more especially with the defense in this case, you will bear in mind that the witness Skarzynski, who was the president of the defendant company, desires that you should believe that this commodity was put on the market in absolute good faith, and that he did not intend to deceive the public; indeed, he claims broadly that the commodity is not misbranded, and some testimony in substantiation thereof has been given by the doctors as already stated.

He testified that the Wine of Chenstohow is quite celebrated in Poland; that it was originally manufactured by the Paulist fathers; that he obtained his formula for the wine, tonic, or drug which he subsequently manufactured in Buffalo, from a cousin of his, a doctor of some ability, living in Lemburg, Poland, and that he was told, at the time the formula was delivered to him, that it was a remedy for ailments and indispositions and conditions such as are stated on the label. He testified that he has been manufacturing this product in this community about 14 years; that he never intended that the label should be understood as meaning it to be a remedy for organic troubles such as the Government has specified, and that it was always his idea that the language upon the label should be used in the restricted sense. Of course, it does not matter what his original idea or intention was in that respect; it is for you to determine, from the language itself, what the public would understand by the wording and phrasing contained on the package.

Now, gentlemen, there was some testimony given in reference to a decree that was entered in the United States Court at Chicago, condemning some of the product manufactured by the defendant company, under the Pure Food Law, and a decree was also alluded to in this court, showing or tending to show that the defendant company pleaded guilty here.

The decree of the Illinois court required the defendant to eliminate certain statements from the label, which indicated that the product was a foreign importation, and that it was manufactured by the Paulist fathers. That decree was not a bar to this proceeding; the Government now goes farther than it did before, as it has the right, and says that the labeling was wrong, that it was false, and therefore was a misbranding under the meaning and intendment of the Sherley Act.

There was testimony given by Dr. Hill on behalf of the defendant that the analysis was improper; that it failed to show the various active medicinal agencies contained in the commodity, and Dr. Hill testified that, in his opinion, there was no way of determining what acids there were present in the solution, and that the chemist did not fully determine the total amount of solids that were contained in the preparation.

Gentlemen, these are vital matters that are submitted to you, but, in connection with the testimony of Dr. Hill you, of course, must take into consideration the testimony of Mr. Patton, the chemist, who stated, on rebuttal that the failure to state these various solids made no difference so far the analysis was concerned.

Your attention is also called to the testimony of Dr. Marcy and Dr. Heath—indeed, I have already alluded to it, but it should be considered in connection with the testimony of Dr. Stockton, Dr.

Leonard, and Dr. Otto, all with the view of ascertaining what the truth is as to whether this commodity was misbranded—as to whether the words contained upon the label broadly referred to curing all stomach troubles that the human frame is heir to, or whether they were to be taken in the restricted sense—those matters are to be determined by you from the language itself; you must ascertain what the ordinary significance is of those words.

If you reach the conclusion that there was a misbranding, as I have stated, you must go a step farther, and you must examine the testimony with the view of ascertaining whether there was an intention to deceive the public, and if so, then the defendant is guilty as charged in the information.

On the other hand, if you reach the conclusion that there was a misbranding, but there was no intention to foist upon the public this commodity with the view of gain, then the defendant is entitled to an acquittal on the ground that there was no intention to violate the statute, and without the intention being present there can be no conviction.

Any requests?

Mr. BAIN. No, sir.

Mr. O'DAY. I would like to have the court charge the jury on the question of intent, that wanton and reckless disregard for the truth is equivalent to an intent to do a thing.

The COURT. Yes.

Mr. O'DAY. I ask the court to charge the jury that the state of mind—on the question of the intent of the defendant—the state of mind is itself a fact, and may be a material fact, and false and fraudulent representations may be made about it, bearing on what he thought or knew of the ingredients, and persons who make or deal in substances or compositions alleged to be curative are in a position to have superior knowledge, and may be held to good faith in their statements?

The COURT. Yes; that is a correct statement of the law.

Mr. O'DAY. I ask the court to charge the jury, furthermore, that the article alone is not necessarily the inducement and compensation for its purchase, that it is the use to which it may be put, and the purpose it may serve, and there is a disposition to defraud when the article is not of the character or kind represented, and hence does not serve the purpose.

The COURT. Yes.

Mr. O'DAY. I ask the court to charge the jury that in connection with the word "remedy"—I believe that the court has already charged that the words should be taken in their usual meaning—that the usual meaning of the word "remedy", as a matter of law, is that which cures disease, any medicine, the application of which puts an end to disease and restores health.

The COURT. That is what I said before.

Mr. O'DAY. I ask the court to charge, as a matter of law, that the word "curative" is to be taken in the usual sense, on this bottle and that the usual sense of the word "curative" is that which cures, a remedy.

The COURT. Yes.

Mr. BAIN. In connection with that, I ask Your Honor to charge the jury that another recognized definition of "remedy" is "curative tendency only, and not a guarantee."

The COURT. Yes.

Mr. BAIN. I ask Your Honor to charge the jury that, if upon any reasonable hypothesis they can reconcile the evidence with the defendant's innocence, they should acquit.

The COURT. So charged.

UNITED STATES v. DIRECT SALES CO.

(District Court, W.D. New York, Feb. 5, 1918)

252 Fed. 882; N.J. No. 6193

Information in 14 counts alleging violation of section 2 of the Food and Drugs Act. Fine imposed on each count.

HAZEL, *District Judge.* The information in 14 counts charges the misbranding and adulteration, in violation of the Food and Drugs Act, of each of seven different medicines (acetanilid, calomel, quinine sulphate, salol, sodium salicylate, elixir iron pyro-phosphate, quinine, and strychnine, and hydriodic acid) contained in a single shipment from Buffalo, N. Y., to East Falls Church, Va. Defendant company pleaded guilty, as charged in the indictment, and the question presented is as to the penalty to be imposed, defendant's counsel contending that but one offense is charged and that there should therefore be imposed only a single penalty.

Section 2 of the act in question makes it an offense to transport in interstate commerce any article of food or drugs which is adulterated, stating that:

> Any person who shall ship * * * any such article so adulterated or misbranded * * * shall be guilty of a misdemeanor and for such offense be fined not exceeding $200 for the first offense, and upon conviction for each subsequent offense not exceeding $300 or be imprisoned not exceeding 1 year, or both, at the discretion of the court.

According to this, the article is clearly specified as the unit of the offense, as distinguished from the shipment, and as there were 7 different articles in the shipment and each was both adulterated and misbranded, it would seem that there were 14 separate and distinct violations of the act, for which separate penalties may be imposed. This is the view, I think, quite generally adopted in other Federal districts. The brief of the United States attorney directs attention to a number of cases in other districts in which separate penalties were imposed on different counts of information charging a single shipment of misbranded and adulterated articles. Here the various offenses charged are such that not only is a deception as to money value practiced upon the purchaser, but also as to medicinal value, which may be injurious to the health of the user. The intent undoubtedly was to consider each misbranding and adulteration of an article a violation of the statute, regardless of the number of articles contained in any one shipment.

In opposing the imposition of a penalty in excess of $200, counsel cites Byrne on Criminal Procedure, section 357, to show that separate offenses committed at one and the same time are inspired by one criminal intent and that therefore but one punishment may be imposed; but I think that rule does not strictly apply, as the statute specifically designates the articles as the item, the transportation of which is prohibited. The imposition of a penalty in excess of $200 would not be the imposition of a penalty for a subsequent offense. Each bottle comprised in the shipment contained a different article and the misbranding and adulteration constituted concurrent offenses. The provision for different punishment for subsequent offenses was made in contemplation of violation of the statute subsequent to conviction for similar violations.

A fine of $50 is imposed on each count, amounting in the aggregate to $700.

WEEKS v. UNITED STATES

(Supreme Court of the United States, Feb. 9, 1918)

245 U.S. 618; N.J. No. 6308

Certiorari to the Circuit Court of Appeals for the Second Circuit. Judgment affirmed.[3]

Mr. Justice VAN DEVANTER delivered the opinion of the court.

This was a prosecution under the act of June 30, 1906, ch. 3915, 34 Stat. 768, upon a charge of shipping an article of food in interstate commerce in circumstances making the shipment a violation of the act. The information contained two counts, both charging that the article was misbranded—one because it bore a false and misleading label, and the other because it was offered for sale as lemon oil when in truth it was an imitation thereof containing alcohol and citral derived from lemon grass. In the district court there was a conviction upon both counts, and the Circuit Court of Appeals reversed the conviction as to the first count and affirmed it as to the second (224 Fed. 64). The judgment upon the latter is all that is brought here for review.

The defendant was engaged in making and selling various articles of food used by bakers, confectioners, and ice-cream makers, including the article with which this prosecution is concerned. On the occasion in question he shipped from one State to another a quantity of this article labeled "Special Lemon, Lemon Terpene, and Citral." The printed record, although not purporting to contain all the evidence, shows that there was testimony tending to prove the following facts among others: The shipment was made to fill an order solicited and taken by a traveling salesman in the defendant's employ. The salesman had been supplied by the defendant with a sample bottle of the article which was labeled simply "Special Lemon." In offering the article for sale and soliciting the order the salesman exhibited the sample and represented that the article

[3] Affirming *Weeks* v. *United States*, p. 646, *ante*. For the case in the District Court *Weeks* v. *United States*, *see* p. 519, *ante*.

was pure lemon oil obtained by a second pressing and that this pressing produced a good, if not the best, oil. In truth the article was not lemon oil, but an imitation thereof containing alcohol and citral made from lemon grass. Some of the elements of lemon oil were present in other than the usual proportions and others were entirely wanting.

The testimony respecting the salesman's representations was admitted over the defendant's objection; and later the court denied a request on the part of the defendant that the jury be instructed that this testimony could not be considered, but only the statement appearing on the label when the article was shipped. In that connection the court told the jury that the defendant could not be held responsible criminally by reason of any representations made by the salesman unless it appeared beyond a reasonable doubt that the same were made by the defendant's authority.

The defendant, who is the petitioner here, complains of the admission and consideration of this testimony and insists that under the statute the question whether an article is misbranded turns entirely upon how it is labeled when it is shipped, regardless of any representations made by a salesman, or even the vendor, in offering it for sale.

The statute, in its second section, makes it unlawful to ship or deliver for shipment from one State to another "any article of food or drugs which is adulterated or misbranded within the meaning of this act."

In its eighth section it declares:

> That the term "misbranded," as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as to the State, Territory, or country in which it is manufactured or produced.
>
> That for the purposes of this act an article shall also be deemed to be misbranded:
>
> In the case of drugs:
>
> * * * * * * *
>
> In the case of food:
>
> First. If it be an imitation of or offered for sale under the distinctive name of another article.

This section contains other provisions relating to misbranding, but they are not material here and need not be set forth or specially noticed.

It is apparent that the statute specifies and defines at least two kinds of misbranding—one where the article bears false or misleading label, and the other where it is offered for sale under the distinctive name of another article. The two are quite distinct, a deceptive label being an essential element of one, but not of the other. No doubt both involve a measure of deception, but they differ in respect of the mode in which it is practiced. Evidently each is intended to cover a field of its own, for otherwise there would be no occasion for specifying and defining both. That one article of food may be offered for sale in the distinctive name of another, and the offer accomplish

its purpose, without the aid of a false or misleading label hardly needs statement.

The statute does not attempt to make either kind of misbranding unlawful in itself, but does, as before indicated, make it unlawful to ship or deliver for shipment from one State to another an article of food which is misbranded in either way. That this is a legitimate exertion of the power of Congress to regulate interstate commerce is settled by our decisions. *Hipolite Egg Co.* v. *United States*, 220 U.S. 45; *McDermott* v. *Wisconsin*, 228 U.S. 115, 128; *Seven Cases of Eckman's Alterative* v. *United States*, 239 U.S. 510, 514. It also is settled by our decisions that "the negotiation of sales of goods which are in another State for the purpose of introducing them into the State in which the negotiation is made is interstate commerce." *Robbins* v. *Shelby Taxing District*, 120 U.S. 489, 497; *Crenshaw* v. *Arkansas*, 227 U.S. 389, 396.

It follows that the testimony respecting the representations of the defendant's traveling salesman was rightly admitted in evidence and submitted to the jury. It tended to prove that the order, to fill which the shipment was made, was obtained by offering the article for sale in the distinctive name of another article, and therefore that the article was misbranded within the meaning of the statute. To have confined the jury's attention to the label borne by the article when it was shipped, as was requested by the defendant, would have been to disregard the nature of the charge in the second count and the distinction between the two kinds of misbranding.

In the Circuit Court of Appeals the view was expressed that intent was not an element of the offense charged in the second count, and therefore that it was immaterial whether the representations of the salesman had the sanction of the defendant. Complaint is now made of this. But the question is not in the case, the view expressed by the Circuit Court of Appeals not being essential to an affirmance of the judgment. The district court had expressly instructed the jury that to hold the defendant responsible criminally by reason of such representations it must appear, and appear beyond a reasonable doubt, that they were made by his authority. The record before us does not show that the defendant objected to the submission of this question to the jury in this way, neither does it purport to contain all the evidence. The verdict therefore must be taken as conclusively determining that the representations were made with the defendant's sanction.

UNION DAIRY CO. v. UNITED STATES

(Circuit Court of Appeals, Seventh Circuit, Feb. 20, 1918)

250 Fed. 231; N.J. No. 6142

Error to the District Court of the United States for the Southern District of Illinois. The Union Dairy Company, a corporation, was convicted of violating the Food and Drug Act, and it brings error. Affirmed.

Plaintiff in error is charged with having shipped 75 cans of milk from Troy, Ill., to itself at St. Louis, Mo., which milk was adulterated through the addition of water, and it was further charged that "filth, putrid and decomposed animal substance," was found therein.

Before BAKER, ALSCHULER, and EVANS, Circuit Judges.

EVANS, *Circuit Judge.* Plaintiff in error contends that it was shipping the milk from a receiving station in Illinois to itself in Missouri, there to be treated, impurities removed, and the milk standardized; that while in transit it was not an article of food such as was defined by the Food and Drug Act, and did not become such an article of food until after treatment. Were we to adopt this conclusion, it would do violence to the plain language of section 2 of the act under which prosecution is brought. The first sentence of section 2 reads:

> The introduction into any State or Territory or the District of Columbia, from any other State or Territory of the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded, within the meaning of this act, is hereby prohibited.

Section 6 of the act provides:

> The term "food" as used herein, shall include all articles used for food, drink, confectionery, or condiment by man or other animals whether simple, mixed, or compound.

Our conclusion is strengthened by another section of the act. Section 9 provides:

> No dealer shall be prosecuted under the provisions of this act when he can establish a guaranty signed by the wholesaler, jobber, manufacturer, or other party residing in the United States, from whom he purchases such articles, to the effect that the same is not adulterated or misbranded within the meaning of this act, designating it.

In *Hipolite Egg Co.* v. *United States*, 220 U.S. 45, 31 Sup. Ct. 364, 55 L.Ed. 364, the court said:

> Transportation in interstate commerce is forbidden to them [decayed eggs] and in a sense they are made culpable as well as their shipper. It is clearly the purpose of the statute that they shall not be stealthily put into interstate commerce and be stealthily taken out again * * * at their destination and be given asylum in the mass of property in the State.

In passing this act, Congress was endeavoring to protect the public by keeping out of commerce certain illicit articles, debased by adulteration, and it would be an unjustifiable construction of the act to make liability turn upon a difference in identity of consignor and consignee, or the secret intent with which a shipper made the shipment.

Plaintiff in error further contends that the evidence fails to show any adulteration at all, or such an adulteration as injured the milk as food. We have carefully examined the record, and, giving the stipulation of the parties the fair meaning which we believe was intended, the adulteration was clearly established. It was unnecessary for the court to receive evidence to establish the fact that the addition of water to milk injuriously affected the quality or strength of milk. See section 7 of the act.

UNITED STATES v. 1,038 CASES OF TABASCO FLAVOR CATSUP

(District Court, E.D. Missouri, Feb. 22, 1918)

N.J. No. 6918

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the claimant.

The United States attorney filed a libel for the seizure and condemnation of 1,038 cases of tabasco flavor catsup, alleging that the article had been shipped and transported from the State of Illinois into the State of Missouri and remained unsold in the original unbroken packages, and that it was adulterated in violation of the Food and Drugs Act.

Adulteration of the article was alleged in substance in the libel for the reason that it consisted in whole or in part of a filthy and decomposed vegetable substance.

POLLOCK, *District Judge* (charge to jury). I want to commend you gentlemen for the attention you have paid to this case—I might say with the patience and interest you have listened to this trial. Let me say to you again, I cannot impress too strongly the matter on your minds that the Department of Justice, where matters are tried as this matter is tried, the responsibility for the proper administration of justice is equally divided between your body and the court. Courts are mere instruments created by the law for the purpose of doing justice. Under the law we are appointed—by its responsibility. The nature of the service that is to be performed, under the law, by your body and this court is not the same. You know you can follow the law as prepared for you. It is presumed that the court is more familiar—as he should be from long experience with the law—than the jury, who have made some other pursuit in life their life's thought, and for the reason that if any mistake is made in any matter of law, that is a mistake of the court for which the jury is in nowise to blame. On the other hand, the jury—and the jury alone—is the exclusive judge of the weight of the evidence, the credibility of the witnesses, and the facts, just as the jury must come into court to correctly and honestly bear the brunt; just so, the court must instruct the jury to honestly and firmly find the facts in the trial of the case and to enlighten them in the law with the facts just found. Now, to proceed to this present trial, in view of that idea, can we administer justice in any other proper form and with a determination to determine this matter precisely as it should be? Among other duties it is the duty of the court to define the issues in the case; that is, to state so clearly and precisely that the mind of no juror can possibly be mistaken as to the precise thing that is to be determined, and just as the court always desires a jury, where there are controversed questions of fact to be determined in any given case, just so this jury want to indulge and rely upon the court to tell them exactly what it is to determine, and the jury feel the need of that in this case, as you should in every case, and I am going to tell you.

The Government, in this case, comes into court, and through a representative, files a replevin in this case, in libel; that is to say, to have this court determine that this 1,038 cases of tomato catsup made by the Brooks Tomato Products Company of Collinsville, Ill., shipped in interstate commerce into this city—because it is only interstate commerce shipments that the United States has anything to say about—made in violation of the National Food and Drugs Act, and in violation of the sixth paragraph of section seven of that act, because adulterated within the meaning of that act; hence the Government seized this 1,038 cases of tomato catsup, manufactured by this Brooks Tomato Products Company and their property until it became sold to another, in order to prevent it going to the trade, where it would be used. Now, the precise charge made in the complaint for libel in this: That for the purpose of this act, or article in the law—it says to be adulterated, in the case of food; then, paragraph 6—

> If it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is a part of a diseased animal, or one that has died otherwise than by slaughter.

Now, the defendant in the case denies adulteration in the matter charged in this food product, tomato catsup, and thus the matter is fought. At the trial here the real contention and complaint of the Government is, not that there was, in the catsup that was said to be condemned, any putrid matter, because the word putrid, used in this section of the act, has application to animal matter, but it is that the tomatoes that were used by this company in the manufacture of this tomato catsup were decomposed, or rotten, in whole or in part, to such an extent as is violative of this section of the statute. There is no contention made here in this evidence that the plant, or, speaking plainer, this Tomato Products Company, was not kept in a reasonably cleanly condition, or that the vat or pipes through which this food product was passing while it was being manufactured were allowed to become filthy and dirty so as to injure the product in that way, but it is, as I understand the evidence adduced, solely and alone on the facts that there was used in the manufacture of this catsup rotten tomatoes to such an extent as to violate this provision of the act.

Now, gentlemen, that brings us, of necessity, to a determination of what the founders intended by the enaction of this provision. In certain other provisions there is used the term—for instance, in paragraph one of this section: "If any substance has been mixed and packed so as to reduce, lower, or injuriously affect its quality or strength." That is to say the law-making power laid down the test. In another provision, down here, the law-making power placed another test on the matter, that is, "If it contain any added poisonous or other added deleterious ingredient which may render such article injurious to health." So, if this were a proceeding under the fifth paragraph and the inquiry was as to whether there was an adulteration of something else, and in such a manner as to make it deleterious to health—you will notice that the paragraph which we are following lays down no test whatever. Now, let me read it again: "If it consists in whole

or in part of a filthy, decomposed, or putrid animal or vegetable substance." Now, the Congress, in section 6, based a reasonable application of this section to the practical business affairs of life. In such a case the Congress intended that it should apply to the absolute term. For instance, supposing you were manufacturing pepper, and you would add to that pepper something that would not adhere to the pepper grain itself, this would be prohibitive; that is, Congress would make it prohibitive to add ground peas. And Congress assumes here that putrid animal flesh was not healthful and not good, so they prohibited it—the sale of putrid animal matter—and they also prohibited the use of decomposed vegetable matter in the manufacture of food products. Now, of course, if this catsup was manufactured altogether out of rotton tomatoes it would not be regarded as fit for human beings to consumer. If it was some substance that was not inherent to the tomato itself it could be easily prohibited in that case, and the prohibition there be easy. But the word, packages, here, with which we are principally interested in this trial is in its everyday use, and not in the scientific sense. In the scientific sense wine or beer would be absolutely prohibited in this case; as you gentlemen all know the grain with which beer is made and the grapes with which wine is made are fermented.

Again, there are lots of food products—made out of partially decomposed vegetable matter, in some instances at least—that the Congress didn't intend to prohibit. Many of us like a dish called youget that has gone through a process of decomposition. Again, take an article like sauerkraut; there is a certain stage of decomposition reached in there that the Congress did not mean. Again, you take cheese. In the ripening process decomposition has taken place, and the Congress did not mean to prohibit the manufacture of it, or sauerkraut. On the other hand, Congress did not intend to prohibit the manufacture of cider. While it says "in whole or in part decomposed", no man could engage in the manufacture of cider because you might possibly make a bottle of cider or a gallon of cider that no part of it has been decomposed, but you could not engage in the manufacture of cider, because to find perfect apples that are not in part decomposed would be absolutely prohibitive of the making of cider. So, if we had to make tomato catsup out of tomatoes which were not in part decomposed we could never make any tomato catsup, because it would be a matter of impossibility for anyone to engage in the manufacture of catsup, and there would be some decomposed tomato matter going into the product. The care with which you would have to conduct a business of that kind would absolutely prohibit the business. So, what the Congress meant—it meant this: That in the manufacture of tomato catsup, which is the subject of this, that the rule of reason should enter; that is to say, a factory that exercised a reasonable, prudent caution in collecting the tomatoes and assorting those that went into the cylinder so as to cut out any, unreasonably so, of decomposed tomatoes—the manner of a reasonably prudent, careful, and intelligent man, engaging in his affairs, would do—that he be protected under the law, unless he became careless in his business and allowed rotten tomatoes to go in

there in a manner that a reasonable, prudent man, making a product for consumption of his own, would not do.

The burden of proof is on the plaintiff in this case, gentlemen. It is admitted by the intervener that they did make and manufacture the product at their plant. The plaintiff in this case attempts to show that in the selection of the tomato from which this catsup was prepared, in this case, that the reasonable care and caution was not used, to keep out rotten tomatoes, that a man of ordinary care and prudence would use. If the Government has established that, you will then find that it is adulterated, and find for the plaintiff. If the Government has failed to establish that, you will find that it is not adulterated, and find for the claimant.

I have tried to bring the attention of the jury down to what I deem, under this law, a crucial test case, insofar as a substance that might result in adulteration of a food product from the very adherent food product itself. This is the first case that I have known to be tried under the law, and as the law body has not laid down a test, then of necessity the court must make a test, and it is one of the primary rules with all laws, that they must be free, so that is what I am giving you to determine the facts in this case. You, gentlemen, as I say, are the exclusive judges of the weight of the evidence, the credibility of the witnesses, and the facts proven at the trial of this case. There have been certain requests in this case, to instruct to discharge. Insofar as I have not given them, they will be treated as refused. It is a matter of considerable concern to the parties, and you will take it as such and determine from the evidence in the case and the manner I have indicated, whether or not this food product is, or was, decomposed and filthy to an unreasonable extent, or to the extent that a reasonably prudent, cautious, and diligent business man in the manufacture of a product to be consumed by his family would not permit.

We have no general verdicts in a case of this kind. If you find for the plaintiff in this case you will sign the verdict as it is here prepared. In the event that you fail to find, by the greater weight of the evidence in the case that the Government has made out, you will add the word "not" and then sign your verdict.

Mr. Wheeler. I would like to have the jury instructed on account of the law of evidence, that this product described was moving in interstate commerce.

Mr. Lace. The court has already instructed as to that.

Mr. Wheeler. I wish to except to that part which deals with the rule of reason.

The Court. That is, you contend that if there was in this tomato catsup any particle of decomposed matter it must be condemned?

Mr. Cronin. We contend that if there is decomposed matter in the product it be condemned.

The Court. Well, I will tell you, gentlemen of the jury, that it is impossible on this earth to manufacture any product from the tomato without some decomposition. If you arrive at your verdict before 5 o'clock I will receive it, but if you do not arrive at your verdict before 5 o'clock you will seal it and I will receive it in the morning, although it is a holiday.

UNITED STATES v. SCHIDER

(Supreme Court of the United States, Apr. 15, 1918)

246 U.S. 519; N.J. No. 6151

Error to the District Court for the Southern District of New York. Judgment reversed.

Mr. Justice McReynolds delivered the opinion of the Court.

An indictment containing six counts charged defendant, Schider, with violating the Food and Drugs Act of June 30, 1906 (34 Stat. 768), by delivering for shipment in interstate commerce food contained in a bottle plainly labeled as follows: "Compound Ess Grape Jos. L. Schider & Co. 93–95 Maiden Lane, New York."

Each count alleged the article was an imitation of grape essence artificially prepared from alcohol, water, and synthetically produced imitation oils, and contained no product of the grape nor any added poisonous or deleterious ingredient; and that the word, "imitation", nowhere appeared.

The first count further alleged that it was "unlawfully adulterated in that an imitation grape essence artificially prepared from alcohol, water, and synthetically produced imitation essential oils had been wholly substituted for a true grape product, which the article purported to be"; and the second that it was "unlawfully adulterated in that an imitation grape essence artificially prepared from alcohol, water, and synthetically produced imitation essential oils, had been mixed with the said article so as to reduce and lower and injuriously affect the quality and strength of the said article."

The third, fourth, fifth, and sixth counts, in varying ways, further alleged misbranding so as to deceive and mislead in that the label indicated a true grape product, whereas the article was not such but an imitation artificially prepared, one which contained nothing from grapes.

The trial court sustained a demurrer to each count upon the view that, properly construed, the Food and Drugs Act did not apply to facts stated.

Pertinent portions of the act follow:

Sec. 7. That for the purposes of this act an article shall be deemed to be adulterated. * * *

First. If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.

Second. If any substance has been substituted wholly or in part for the article.

Sec. 8. That the term "misbranded", as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as to the State, Territory, or country in which it is manufactured or produced.

That for the purposes of this act an article shall also be deemed to be misbranded: * * *

First. If it be an imitation of or offered for sale under the distinctive name of another article.

Second. If it be labeled or branded so as to deceive or mislead the purchaser, * * *

Fourth. If the package containing it or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein, which statement, design, or device shall be false or misleading in any particular: *Provided*, That an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be adulterated or misbranded in the following cases * * * Second. In the case of articles labeled, branded, or tagged so as to plainly indicate that they are compounds, imitations, or blends, and the word "compound", "imitation", or "blend", as the case may be, is plainly stated on the package in which it is offered for sale: * * * (34 Stat., ch. 3915, pp. 768, 770–771.)

The obvious and undisputed purpose and effect of the label was to declare the bottled article a compound essence of grape. In fact, it contained nothing from grapes and was a mere imitation.

Within the statute's general terms the article must be deemed adulterated since some other substance had been substituted wholly for the one indicated by the label; and, also, it was misbranded, for the label carried a false and misleading statement.

Defendant relies on the proviso in section 8 which declares articles of food shall not be deemed adulterated or misbranded if they are "labeled, branded, or tagged so as to plainly indicate that they are compounds, imitations, or blends, and the word 'compound', 'imitation', or 'blend', as the case may be, is plainly stated on the package in which it is offered for sale." But we are unable to conclude that by simply using "compound" upon his label a dishonest manufacturer exempts his wares from all inhibitions of the statute and obtains full license to befool the public. Such a construction would defeat the highly beneficent end which Congress had in view.

We have heretofore said: "The purpose of the act is to secure the purity of food and drugs and to inform purchasers of what they are buying. Its provisions are directed, to that purpose and must be construed to effect it." *United States* v. *Antikamnia Co.*, 231 U.S. 654, 655. "The legislation, as against misbranding, intended to make it possible that the consumer should know that an article purchased was what it purported to be; that it might be bought for what it really was and not upon misrepresentations as to character and quality." *United States* v. *Lexington Mill Co.*, 232 U.S. 399, 409. And see *United States* v. *Coca Cola Co.*, 241 U. S. 265, 277.

The stuff put into commerce by defendant was an "imitation", and if so labeled purchasers would have had some notice. To call it "compound essence of grape" certainly did not suggest a mere imitation, but on the contrary falsely indicated that it contained something derived from grapes. See *Frank* v. *United States*, 192 Fed. 864. The statute enjoins truth; this label exhales deceit.

The trial court erred in sustaining the demurrer. Its judgment is reversed and the cause remanded for further proceedings in accordance with this opinion.

UNITED STATES v. 720 CASES OF TOMATO CATSUP

(District Court, E.D. New York, Apr. 27, 1918)

N.J. No. 6192

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict for claimant.

GARVIN, *District Judge* (charge to jury). Mr. Foreman and gentlemen of the jury: It now devolves upon the court to charge you generally with reference to the law applicable to the case on trial, and before proceeding to discuss the law which is peculiarly applicable to this case, it is my duty to charge you generally with respect to the duties that devolve upon juries irrespective of the character of the case on trial.

In the first place, just as the court is the sole judge of the law which is applicable to the case on trial, so you gentlemen of the jury are the sole judges of the facts, and that means that you are to decide this case upon the evidence, and you are to disregard entirely statements of counsel made during the trial, because that is not evidence. You are further to disregard any opinion that you think the court may entertain as to the merits of either side in this controversy, because the function of the court has nothing to do with determining the facts. That, gentlemen, is a duty which the law imposes upon you, and it is a duty which you are obliged, by your oath, to face fearlessly. That is to say, that you are to put aside all passion, prejudice, and sympathy and to decide the case according to the evidence in order that justice may be done, and that means that you are to disregard the fact that the United States of America is a party to this proceeding. That should not sway you one way or the other. You are to disregard any consequences that you may think may be directed against the claimant in the event that you decide against the claimant, because that consequence is something with which a jury has nothing to do, and which a jury has no business to consider in reaching its verdict.

As you are to decide this case upon the evidence, I will charge you that you are to take into consideration all the evidence presented, and you are to give it such weight as in your judgment it deserves. In determining whether or not you will accept or reject evidence given by a witness you will take into account the bearing of that witness on the stand, the probability of the story told, and the likelihood of it being true. I charge you that if you find that a witness has willfully misstated a material fact you are at liberty to disregard the entire testimony given by that witness. You are not required to do so, but that is your right. You may disregard it if you so desire.

And now, gentlemen, with respect to the law applicable to the case on trial. The United States of America comes into court and files a process known as a libel, and under that process seizes a quantity of tomato catsup, and then the shipper of that catsup, known here as the claimant, appears in the proceeding and states that the

Government had no right to make the seizure, and the Government had no right to make the seizure unless that seizure was justified by law, and the Government claims that the justification for its action was that an act of Congress known as the Pure Food Law Act had been violated and that law reads in part as follows:

> That for the purpose of this act an article shall be deemed to be adulterated * * * If it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is a product of a diseased animal, or one that has died otherwise than by slaughter.

And so, the part peculiarly applied here is that the Government claims that the goods in question consisted in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance. I charge you in reaching your conclusion as to whether or not the law was violated that you are to accept in the common ordinary everyday sense these words "filthy", "decomposed", and "putrid." There has been considerable expert testimony here, but I charge you it is the law that you are to give to these words the meaning which they are ordinarily given in everyday life. That is to say, filthy is usually considered to be nasty or dirty, and decomposed is usually considered to be rotten, and putrid has a somewhat similar meaning in everyday life—rotten or emitting a vile odor. Just the meaning that you gentlemen would give to those words in your daily life.

Although the United States of America is a party to this proceeding, and although you gentlemen who have sat in criminal prosecutions have found in this court that the United States of America is the plaintiff there, yet this proceeding is not a criminal prosecution, and the reason of that becomes of extreme importance to you because of the fact, as perhaps you know, a different rule of law applies in guiding you in reaching your verdict. If it were a criminal prosecution, the court would charge you that you must be satisfied that the Government made out its case against the defendant beyond a reasonable doubt. Now, this is not a criminal prosecution and if you gentlemen determine that the Government has proved the claims that it makes by a fair preponderance of evidence, then it is your duty to find in favor of the Government. If you are satisfied that a fair preponderance of evidence has been presented by the Government, that makes out the Government's case. If you find that the evidence is evenly balanced between the claimant and the Government, and you are unable to make up your mind in whose favor your verdict would be, in that event you must render your verdict in favor of the claimant.

The Government has charged, and the trial disclosed, that 512 cases of catsup were seized, and the Government claims that by reason of an analysis made of a part of this seizure, and by reason of conditions existing in the factory of the claimant with respect to the manner of sorting tomatoes that this entire lot is so substantially affected with mold as to render it filthy, decomposed, or putrid within the meaning of the Pure Food Law. And if, gentlemen, after considering the evidence you come to the conclusion that the Government has sustained by a preponderance of evidence its contention that a whole or part of this seizure of 512 cases are so affected by mold as to render them filthy, decomposed, or putrid, then your verdict will be in favor of the Government.

The evidence has been so carefully analyzed for the benefit of you gentlemen, by counsel for the claimant and the Government, that the court does not deem it necessary to go over it at length. You have been paying careful attention to its presentation, and the court is of the opinion that you can, without further comment by the court, review the details of the evidence, and give it such weight as in your judgment it requires.

I have been asked by the claimant to make certain specific charges. I will read them to you:

(1) In determining as to whether the catsup seized consists in whole or in part of a filthy, decomposed, or putrid vegetable substance, the jury should consider that the words "filthy", "decomposed", or "putrid" are not used in a purely technical and scientific sense, but in the common, ordinary, everyday sense.

I have endeavored to so charge, and I so charge.

(2) The question for the jury to determine is whether upon all the facts appearing in this case there is such a substantial presence of mold, yeasts and spores, and bacteria as to warrant the finding that the product is filthy, decomposed, and putrid in a natural, practical sense. If the jury find there was not a substantial presence of these molds, yeasts and spores, and bacteria, the verdict must be for the defendant.

I so charge, except I charge you, you are not required to find all four of these products in the material. If you find any one or more of them present in such a substantial degree as to render the product decomposed and putrid in the natural sense, your verdict must be for the Government.

(3) The testimony of the Government's experts as to the percentage of molds, yeasts and spores, and bacteria are only statements of fact as to the counts obtained by them, and the inferences they draw from these facts are opinions which the jury may accept or reject.

I so charge, and let me make it a little plainer to you, gentlemen. The Government experts have testified that they made certain tests, and they found certain percentages of molds as a result of those tests in specimens which they selected from the quantity seized. Now, those statements by the Government experts under oath are positive statements of fact. Then the Government experts went on to say that as a result of the tests made, in their opinion, the balance of the goods seized were in the same condition and had the same relative percentages of mold. Those are mere expressions of opinion, the sort of opinion upon which expert testimony is very largely based, and which the jury may accept or reject according to whether or not they believe that the expert is a man who knows sufficiently about what he is talking to justify giving his opinion some substantial credence.

(4) In determining as to whether the catsup is filthy, decomposed, or putrid, the jury should also consider the testimony as to the quality of fruit used and the process employed by the Garret Bergen Co. in the manufacture thereof.

I so charge. I have endeavored to cover that in my charge to you when I charged you to pay attention to all the evidence presented, and to consider all the evidence. I am requested to charge as to

part of the evidence, and I charge as to that. I charge also that you are to consider all the evidence.

(5) This case involving a forfeiture of property, the Government must establish its case by the preponderance of evidence and if you are in doubt on the whole case as to whether the Government has made a case or not, you must find for the defendant.

I so charge.

(6) The court's denial of the motion made by the defendant's counsel for a dismissal of the libel, in no way indicates any opinion of the court upon the merits of the case. The significance of the denial is that there were questions of fact in the case to be decided by the jury.

I so charge. I endeavored to cover that proposition when I told you if you think the court has any opinion in this matter you must dismiss it from your minds entirely. What the court thinks of the facts is of no significance to you whatever. You are to determine the facts in this case.

(7) No charge is made that the product is filthy or decomposed in a way that makes it injurious to health in the sense of a poison.

I so charge. I charge you further. It is not necessary that the contents, if it consists in whole or in part of a filthy or decomposed vegetable substance, is unfit for food, but if it comes within this prohibition as defined in the statute and explained by the court in its charge, then the claimant has violated the law and your verdict will be accordingly. And so I charge you if, after considering the evidence with the instructions given by the court, you conclude that these 512 cases of catsup, or any part of them, are in such a condition as to have violated this law, then your verdict will be for the Government, indicating the number of 512 cases you believe were in an unfit condition. If you believe that the cases were all in a proper condition and the law was not violated, then your verdict would be for the claimant. Are there any further requests to charge?

Mr. GILPATRIC. None from the claimant.

The COURT. Any from the Government?

Mr. SMITH. I ask the court to charge that if the jury find that the bottles examined by the Government employees as to which the testimony was given by those employees respecting the mold counts are deemed by them to be a fair sample after such examination, they may find that the condition of the entire shipment was the same as that indicated by the examination of those 22 bottles.

The COURT. Do you wish to be heard upon that request?

Mr. GILPATRIC. I should except to that, if Your Honor please.

The COURT. I so charge.

Mr. GILPATRIC. Exception.

Mr. SMITH. I ask Your Honor to charge that it is not necessary for the Government to establish that this product is decomposed and putrid and filthy. It is not necessary for the Government to establish all of these. If it establishes any one of these, it establishes its case.

The COURT. I so charge.

Mr. SMITH. I ask Your Honor to charge the jury, if the jury find that this catsup so seized contained as much as 8 percent of decomposed matter, such as rotted tomatoes, they may find that the statute is violated.

The COURT. I so charge, gentlemen, only, however, if you reach the conclusions that by 8 percent present, there is present a substantial amount of the mold, which in your judgment brings it within the prohibition of law.

Mr. GILPATRIC. I take an exception to that, if Your Honor please. If Your Honor please, I desire to except to so much of your charge in charging the claimant's second request to charge as referred to the presence of yeast and spores, and my exception is on the ground that that is not relevant to the case here, as the whole point of the Government's contention is the presence of rot as indicated by mold.

The COURT. I am very willing to have that taken out. Very well; by consent that will be eliminated and the only question for you to have in mind is the presence or absence of mold.

Mr. SMITH. Of course, what Your Honor charged as to the manner in which the Government experts testified is to be treated as well to the claimant's expert.

The COURT. It does, gentlemen.

UNITED STATES v. JOSLIN-SCHMIDT CO.

(District Court, S.D. Ohio, May 17, 1918)

N.J. No. 6355

Two informations alleging violations of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

The United States attorney filed informations against the Joslin-Schmidt Co., alleging shipment in violation of the Food and Drugs Act from the State of Ohio into the State of Indiana, of quantities of an article labeled in part "The Joslin-Schmidt Company, of Cincinnati, Ohio, Guarantees this 'Abattoir Brand' Digester Tankage to contain not less than * * * 60.0 per cent of crude protein," which was alleged to have been misbranded.

Misbranding of the article in each shipment was alleged in the information for the reason that the label was false and misleading in that it indicated to purchasers thereof that the article contained not less than 60.0 percent of crude protein.

HOLLISTER, *District Judge* (charge to jury). The United States of America charges the Joslin-Schmidt Company, a concern you have heard described, with two offenses against the Food Act, which was passed by the Congress of the United States some time ago. These charges are contained in informations, as they are called, which differ from indictments in that indictments are found by the grand jury and informations are filed by the district attorney. It is immaterial to you whether this is an indictment or information, except that informations usually are filed upon misdemeanors, charging misdemeanors rather than crimes.

There is a difference between a misdemeanor and a crime in this way, if one is guilty, the greater disgrace of the one over the other, the crime having in it the meaning of infamous punishment, that is to say, punishment in the penitentiary. But the charges are criminal charges notwithstanding, and the same degree of proof is required

in order to prove what is alleged in an information as is required to prove what is alleged in an indictment.

The defendant starts out with presumptions in its favor, presumption of innocence, presumption of reputation and of good character. Now, those presumptions are in the nature of evidence. They attend the defendant from the beginning to the end of the case, until the jury shall think, if they should, them to be overcome by testimony and evidence beyond a reasonable doubt.

Now, a reasonable doubt has nothing especially doubtful or subtle in the meaning of it. It is a doubt for which a reason may be given, a reason satisfactory to the jury, and another way to put it is, that if the jury have an abiding conviction amounting to a moral certainty that the charge as made is true, then there is no room for reasonable doubt; and if they have not an abiding conviction amounting to a moral certainty that the charges as made are true, then they have room for reasonable doubt, and having room for a reasonable doubt, the only thing to do under those circumstances is to acquit. But if there is no reasonable doubt, then it is the duty of the jury to find them guilty.

At first the Government started out with one information containing two counts, one covering the case of the shipment to Pearson at Upland, Indiana, and the other to Krum at Milan, Indiana. In the second count, relative to Krum, reference was made to the descriptive parts of the first count and saying that they were incorporated in the second count. The district attorney, having found some mistake had crept into some part of the first count, asked the court to dismiss that count under what is called a *nolle prosequi*, a signification on the part of the Government of unwillingness to prosecute on that first count, and that was granted by the court. That left the second count in as the sole count, the sole charge in that information. While the first count was nolled, dismissed, withdrawn, nevertheless that left the reference in the second count to the descriptive part of the first count standing as a part of the second count; so that the second count of the first information, that having to do with the sale to Pearson, the shipment to Pearson, remains as the sole charge in the first information. Then the district attorney afterwards filed a second information, which contained in substance the same as the first count in the first information but with the mistake corrected. So you have two informations here, each containing one count—I think I have made it clear—one count having to do with the shipment to Pearson and the other count having to do with the shipment to Krum. The shipment in the one case was 500 bags and the other was 100 bags.

Now, what the Government says was an offense against the Food Act in each of these shipments was or is that in the first shipment, that to Pearson, of 500 bags, there was a guaranty on the part of the defendant—and the same guaranty also as to the second shipment, that to Krum—that there was in this shipment 60 percent of protein, a 60 percent content of protein, whereas in fact and in truth, as the information says, or words to that effect, that in the shipment to Pearson the content was only 58.1 percent protein, and in the shipment to Krum 57.3 percent protein content, in the one case a shortage of 1.9 percent and in the other a shortage of 2.7 percent.

The law under which these informations were filed, so far as we are interested in it now, says:

> That it shall be unlawful for any person to manufacture within any Territory or the District of Columbia any article of food or drug which is misbranded, within the meaning of this Act: * * *
>
> That the term "misbranded," as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design or device regarding such article, or the ingredients or substances contained therein, which shall be false or misleading in any particular, and to any food product which is falsely branded as to the State, Territory, or country in which it is manufactured or produced.

Then further along it says it shall be regarded as misbranded "if it be labeled or branded so as to deceive or mislead the purchaser * * * ."

Now, while this language says "misbranded in any particular," yet the charge is that it was misbranded because approximately the amount of protein in each of these packages was in the figures the Government charges. So we must regard this charge in the language in which it was made in the information, together with the meaning and purposes of this act.

Now, if the strict language of the act is followed, if it is misbranded in any particular, it wouldn't do to say it was misbranded approximately, because "approximately" has a different meaning, a different shade of meaning from what an exact figure would be if included within a charge of this kind. The fact of the matter is that the Government, in such a case as this, if we are to follow the testimony, could not make an exact charge, but approximately. So they are bound to say "approximately", if they are to make any charge at all.

Now, these acts are for the protection of the consumer, the public, both in food products and drugs, for humans and animals, and are to be so regarded. But in the interpretation of acts of Congress of this kind the purposes to be accomplished are to be borne in mind, the benefits which the Congress had in mind, and the evils which they sought to remedy. And in determining in this case just what must be established to maintain the offense, those things that I have just said must be borne in mind. Especially is that true when the subject matter of the charges is of such character that it is impossible for the Government or anybody else, according to the testimony, to say exactly what the protein content of food, hog food of this kind, is.

Now, it is conceded by the Government that there is a variation in the results of the tests that are made, even when made with the greatest care, and that those variations may run from four tenths to six tenths of a percent. Now, that being so, it is only fair to say that if the defendant's product had in it—either of these cases or both, giving the defendant the benefit of every doubt—59.40 percent, that it would still come within what the Government would claim as a 60 percent protein content. Then, the Government says that this is short of that, that each of these shipments is short of that, in that in the one there would be, after taking away sixty-one one-hundredths from 1 percent and ninety one-hundredths—you could figure that out—and in the other case more than that—that there was a claimed difference, approximately, of 2.70 percent. The Government must admit that you can still take sixty one-hundredths off of that,

off of the difference in each case, and the Government now says that even with that there is this difference which that subtraction would still leave between a 60 percent protein content less sixty one-hundredths, the 58.1 percent as happened in one case and 57.3 percent in the other, and therefore the defendant has been guilty of making these two shipments with at least that much difference, or substantially that much difference, and therefore the defendant has broken this law.

Now, in that connection, inasmuch as the purposes of all these acts is to protect the public in the purchase of articles of this kind and to prevent deceit, it doesn't make any difference what the intention or purpose of the person charged with the offense is. The manufacturer may be as innocent as an angel, and as little harmful as a lamb—I don't know how I could put it any better than that—that is not the question. It is different from what it is in most criminal cases, in which the intent has to be proven. It does not make any difference in such a case as this what the intention is; the manufacturer may be entirely, absolutely, innocent of any intention to defraud or deceive anybody, and yet under the interpretation of this law which has been made, if the thing does not come up to the representation made, then the manufacturer must be regarded as guilty, whatever his intention or purpose was; even if he had intended to put in more than what he had guaranteed, it would be improper.

So that when you have boiled it all down, there is but one question for the jury to determine, and that is, whether or not, in each one of these shipments, there was a misbranding in that the representation made was of 60 percent and that the protein content actually present was in one case approximately only 58.1 percent and in the other 57.3 percent. Now, how are you going to find that out? You don't know yourselves, unless it be that some of you have had some experience in these matters. You have got to find it out from the testimony of those who have made a study of matters of this kind and have had practical experience in them. Those men are called experts, and a man is entitled to be called an expert when he is expert, and that would depend upon the amount of his knowledge, the care with which he studied, the kind of a man he is, the make-up of his mind as far as you can see it, and his experience, both theoretical and practical. And you will take all of these witnesses on both sides and measure them up and determine which of them is really, on the whole, entitled to be given the greatest credit. I won't say credit in the way of weighing their credibility—they are all presumed to tell the truth and there is no reason, so far as any one can say here, why they should not tell the truth, I will touch on that in a minute—but credit by reason of the fact that they have a knowledge which the ordinary man has not.

All of these men should be given the greatest credit in the testimony they have given to the jury by reason of all of these circumstances which have been before you. Who of these probably knows more about it? Who of these witnesses has probably the greater information than the other, if you find any difference between them at all?

Then, of course, what I said a little while ago when I was talking about credit I did not mean that to apply to credibility, yet that must be taken into consideration also, because when you are determining

what weight to give to the evidence of a witness, if you find any motives of self-interest or desire to see one side or the other victorious, or any motive which you may discover which will tend to color his testimony, either consciously or unconsciously, you must give that weight in determining what weight to give to his testimony.

It is the duty of the jury to reconcile the testimony whenever they can, if the testimony is conflicting. This scientific testing of food products of this kind is not exact; it is not claimed to be; the conditions are such that it is hardly within, if within, human skill and care to make them so that the results may be exact. Theoretically they may be, but practically there are considerations which develop which prevent absolute accuracy.

Now, there is evidence tending to show that there are a number of factors which must be borne in mind when one is considering the accuracy of tests of this kind—the skill of the operator, the assayist; the weather conditions, whether dry or damp; the length of exposure to the atmosphere of the article to be assayed; the purity or want of it of the acids used in the tests; and then—and I don't intend to give them all, you have heard them all and you may remember them better than I do, probably do—but there are reasons why these tests are not absolutely accurate and why they may differ from each other even when the same sample is used, growing out of different conditions, growing out of different skill, growing out of the use of different acids, which may not be equally pure or of equal strength.

There is evidence tending to show that even when the same sample has been subjected to a number of tests, and those by the same person, there is some variance, as you have heard from the testimony.

There is evidence tending to show that in this very sample of material shipped to Pearson there is a difference between the Government assay and the assay made by the chemical department of Indiana, the food department of the State chemist—I don't remember the title exactly—but it may have been 2 points or over; that is to say, 2 percent.

Now, you have got to take the case as you find it; you have got to take the testimony as it is and make up your mind whether these two shipments were short or not in protein content. If they were, the defendant is guilty; if they were not, the defendant is not guilty, and your verdict will be in accordance with the conclusion you reach on that main question.

Now, on the subject of tags, there was no Government requirement that any tags should be on these bags. There was a requirement by the State chemist's department of Indiana, whatever the name of it is, as you have heard, that if a manufacturer of this kind of a product did business in Indiana he must make a certificate to the department stating the amount of protein he proposes the product shall contain; that is to say, he represented that his product would contain in these 2 instances 60 percent of protein, and thereupon the department sends to him—by " him " I mean the manufacturer, the defendant in this case—tags or cards upon which that representation is printed; then when the defendant, or the manufacturer, ships the product into Indiana, for sale there, he is required to attach these cards to each bag of this kind of product. And thereupon there is the representation made, to whomsoever it comes, that each bag contains 60 percent protein content.

Now, you have heard a good deal about the way samples are made for the purposes of chemical analysis. I expect you are as well qualified, after hearing this testimony, to say what a fair sample is as anybody else. Take all the evidence on that subject and make up your mind how to get a fair sample of this kind of product, under all the circumstances. The Government shows that sometimes the way to get a sample is to use the apparatus which you saw and introduce it into the end of a bag, the bag lying down on its side, horizontally, and from the construction of the apparatus they could get a pretty fair representation of what the core is. Another of the Government's witnesses preferred to introduce the apparatus diagonally, as I understood him to say, down to the farther edge of the bag, so that he would get something from the outer part of it and something from the inside, whereas the other way they would get only the inside. Now, Mr. Schmidt has testified that the ingredients of the product are at least three, and that they are of different specific gravity, and that when shaken together the tendency of the particles which are of denser specific gravity is to be thrown off at the side when a pile is made. I gather from what he said that that part which was thus thrown off, and of the heavier or the greater specific gravity, contains a greater part of protein than the other. He says that when the different ingredients are thrown into the hopper the same tendency prevails; that when it is dropped into the bag the same tendency prevails; that the product is let out slowly from the hopper into the bag by some sort of a shut-off—I don't know what to call it, particularly, but you know just what I mean; that after the bag is filled the workman who is doing the work smooths off the top of the bag, and I suppose closes it up. He says the same tendency is found when the product is dropped into the bag, and that the particles of heavier specific gravity would tend to fall to the outside. That is the basis of the claim on the part of the defendant that these samples taken by the Government were not fair samples, in that they—especially in the case of those that were taken by running the apparatus through the middle of the bag, from end to end—would not come in contact to so great a degree with the particles which were of the heavier specific gravity and containing more protein, which would tend to be on the outside of the mass and more nearly within the immediate encircling canvas or burlap of the bag. And the inference is, and the argument is, that the way to get a fair sample is to run the apparatus along the inside edge, just beneath the cover—that is to say, the bag—by doing that you would be more apt to get a greater protein content there than you would in the middle of the bag, or greater than if you ran it diagonally.

All this is for you to consider and debate about, and reach a conclusion upon when you are determining the character of the samples that were obtained, and when you are considering also the way these samples were manipulated afterwards, and whether or not, under all the circumstances, if you shall find the content was short, whether or not, under all the circumstances, with that finding, the sample of two tenths of an ounce, made the way it was, would fairly represent the homogeneity of the contents of 500 bags, in the first instance, of 100 pounds each, and 100 bags in the second instance, of 100 pounds each.

And you are not to go at these matters in a narrow way. It is a large subject; it is a large subject both from the standpoint of the Government and from the standpoint of the manufacturer, and you are to determine from all that you have heard, as well as you can, whether this discrepancy which the Government claims has been proved beyond a reasonable doubt, in each case. If it has, the defendant is guilty; if it has not been so proved, the defendant is not guilty, and your verdict will be in accordance with the conclusion you will reach in each instance. But there are, you will remember, two charges, and your conclusion will be guilty or not guilty to each charge.

Now, gentlemen, I believe I have said all I can or care to, unless you have something to suggest.

Mr. BRUCE. According to the testimony of Mr. Schmidt as to the separation of the particles, will Your Honor also refer to Mr. Proulx's testimony as to their making tests showing differences between the bottom and the top of the sacks?

The COURT. I had overlooked that. Just as Mr. Bruce in substance said, the tests that they had made had shown that it made no difference, as I remember it, when you were considering the question of shipment. Am I right about that?

Mr. BRUCE. Yes, Your Honor; these tests were made after shipment.

The COURT. These tests were made after shipment, and Mr. Proulx did say, if I remember the substance of it—and if I am not [right] I want to be corrected—that the transportation would make no difference in the dispersion of the various particles in a bag, and would not cause—the inference is—would not cause or tend to cause the segregation of one particular kind of element to itself, particles of that kind to themselves. That, I think, is the substance.

Mr. BRUCE. Yes, Your Honor.

Mr. OLIVER. If Your Honor please, I should like to ask whether that testimony wasn't in reference to fertilizer?

Mr. BRUCE. It was as to both. Mr. Proulx testified that they made a test on some 500 shipments of fertilizer containing tankage and dried blood, to find out whether there was any difference in different parts of the sack. He also testified in a large number of cases where the manufacturers complained that their way of taking samples was not fair, that they had had a representative of the manufacturer there and they would take a new sample, using their instrument and withdrawing a core; then they would also dump the sack on the floor and take a sample that way. In those two cases he said they found no appreciable differences.

The COURT. Gentlemen, you have remembered all the testimony, I have no doubt—I hope so—and you will give such weight to it as you think it ought to have, in your judgment.

You may retire to the jury room, elect a foreman, and bring in a verdict in accordance with the law and the testimony, a verdict in each case.

Mr. OLIVER. If Your Honor please, I want to preserve our rights. I wish to except to that last charge as to the testimony of Mr. Proulx. I am informed that his testimony was as to fertilizer. Now, as to fertilizer——

The Court. Just a minute—let me interrupt you. Of course, if that is so, then it was wrong to say what I did to the jury. Now, we must get that right, and the only way to do is to get it right out of what the stenographer has here. Are you going to withdraw what you said about his testimony? Are you going to withdraw what you have just said about that testimony?

Mr. Bruce. I was going to withdraw the statement in this way, that as far as I know it makes no difference to us whether it was fertilizer or tankage. Mr. Smith said tankage and dried blood, Your Honor.

The Court. We want to know what he said.

Mr. Bruce. If Your Honor please, Mr. Smith has said it was a mixture of tankage and dried blood in the fertilizer.

The Court. Are you willing to accept that?

Mr. Oliver. No; that is fertilizer—well, taking what he says now, then the charge, I claim now, is erroneous because a fertilizer is an entirely different thing from a digester tankage. This fertilizer is more or less wet. You can't have the same segregation in it that you would have in a dry product.

The Court. Gentlemen, what I said about the testimony of Mr. Proulx had to do with what he said about fertilizer, and not digester tankage, and therefore the statement to you was incorrect and is withdrawn. I assumed that my young friend over there had it just right.

Mr. Bruce. I thought it was, Your Honor.

The Court. Now you may retire.

UNITED STATES v. 60 DOZEN BOTTLES OF "A TEXAS WONDER"

(District Court, N.D. Texas, July 2, 1918)

N.J. No. 6337

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The following charge was delivered to the jury:

Meek, *District Judge.* Gentlemen of the jury: The United States procured what is termed in law a libel against 60 dozen bottles, more or less, of Texas Wonder, and took such bottles of Texas Wonder into its possession, charging that the statement on the package containing that liquid, which is denominated Texas Wonder, is false and fraudulent. Thereafter a claimant appeared in court, that is, E. W. Hall, claiming this liquid, put up in cartons, and known as Texas Wonder, denying the allegations made by the United States in its libel proceeding to the effect that the allegations or statements on the cartons were false and fraudulent. The issue now on trial before you, and to be determined by the evidence adduced before you from the lips of the witnesses and from the written testimony, in the light of the law applicable to the case, and which is now given you; the issues to be decided by you, first, the evidence and the

facts and circumstances in evidence; and, second, the law applicable to that evidence, and to those facts and circumstances in evidence.

In the libel it is alleged as follows:

> It is further stated that the said property (having reference to the Texas Wonder) is branded and labeled "Texas Wonder, Hall's Great Discovery, contains 43 percent alcohol before diluted, 5 percent after dilution," and "Texas Wonder, Hall's Great Discovery for kidney and bladder troubles, diabetes, weak and lame back, rheumatism, dissolves gravel, regulates bladder trouble in children; one small bottle is two months' treatment, seldom fails to cure any case above mentioned. Dr. E. W. Hall, sole manufacturer, St. Louis, Missouri."

It is further alleged that on the circular it reads:

> For kidney and bladder trouble, rheumatism, kidney diseases; Texas Wonder, Hall's Great Discovery has been employed successfully in rheumatism, diabetes, kidney and bladder troubles, cases of gravel and other kidney diseases appears from the following sworn testimony and evidence.

The claimant of the 60 dozen bottles, more or less, of Texas Wonder alleges that the medicine will in fact do exactly what is represented that it will do, and that it is in no sense misbranded as in said libel charged, and as proof whereof he offers sworn testimony of parties who have taken the same and benefited thereby as to its claim in its brand of which the Government complains.

These, gentlemen, are the issues made by the pleadings in this case, and it is upon these issues which you have heard testimony from the witness stand, and it is from such testimony and evidence and facts and circumstances in evidence that you will reach your conclusion, as I have indicated, being guided and controlled as to the law of the case by the charge of the court.

Section 8 of the Pure Food and Drugs Act, as amended by the act of August 23, 1912, reads in part as follows:

> That the term "misbranded," as used herein, shall apply to all drugs or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular. * * *
>
> That for the purposes of this Act an article shall also be deemed to be misbranded:
>
> In the case of drugs:
>
> Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

That is, the article shall be deemed misbranded under the terms of this law if its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances therein, which is false and fraudulent.

You have heard the evidence in this case, gentlemen; I need not review it before you. You have heard the argument pro and con upon this suit. I will be of what assistance I may in construing this statute and giving it application to the facts as they have been presented to you from the lips of the witnesses on the witness stand. You have heard the witnesses testify as to certain ailments, and to the fact that they have, among other remedies, secured and availed themselves of what is designated as Hall's Great Discovery, Texas Wonder. On the wrapper or carton containing the bottle, which is

the customary method of getting the medicine to the public, is the following:

The Texas Wonder, Hall's Great Discovery for kidney and bladder troubles, diabetes, weak and lame back, rheumatism, dissolves gravel, regulates bladder trouble in children; one small bottle is two months' treatment and seldom fails to cure any case above mentioned.

You have heard from the physicians who have testified before you under oath the various diseases that are met with and commonly affect the kidneys and the bladder; you have heard them testify in regard to weak and lame backs, and it is in the light of their testimony, as well as the testimony of the defendant and the various witnesses introduced by the defendant, that you will determine whether or not the statement which I have read to you from the label is in any particular false and fraudulent; whether or not any part of this label, in the light of the facts adduced from the lips of the witnesses, is in any particular either false or fraudulent.

It is not difficult to grasp the object of our lawmakers in placing this law or enactment upon the statute books. It is for the protection of our citizens, to prevent medicine, through false statements made for the purpose of gain on the part of the person making them, and by which the individual citizen will be mulcted and defrauded by the purchase of goods which are misrepresented to him or to her. At the same time, the law is placed there on the statute books for the benefit and the protection of those who have remedies which they wish to submit to the citizenship of the country through the various channels of trade, and at the same time receive the protection of the law for their candid, true, and straightforward statements with regard to the result to be expected from the use or taking or the application of the medicine, or whatever pursuit it may be.

The evidence before you—I say this, I think, having considered it carefully and deliberately—is not, on the part of either party to this action, of the most convincing nature. It is not of a nature which is calculated to carry conviction to one who is reaching a conclusion on such evidence and facts and circumstances in evidence, about the correctness of which there can be no question whatever. The question is whether or not it is true in each and every particular thereon, every statement thereof. Witnesses have taken the stand and testified that they had weak backs, or testified that they had trouble with their liver or with their kidneys, and that they were benefited thereby. I believe some said that they were cured thereby, but the question is whether or not this treatment, as stated in the advertisement, seldom fails to cure any case above mentioned, which includes a number of cases, and I have reviewed them to you two or more times. The owner is not upon trial for a violation of the law in a criminal sense, but we are here to determine whether or not the original owner, the one who shipped out these cartons, is entitled to their return from the United States; they having been libeled by the United States, because he has been wrong, and because no such misstatement as it is claimed by the United States occurs in this advertising—that is the question. Is there a false and fraudulent misstatement made in the advertisement which I have read to you, and which you have been considering for days, which justifies and warrants the United States in taking hold of and appropriating this 60

dozen bottles of Texas Wonder? Is there such false and fraudulent misrepresentation here as justifies the jury in saying these bottles should be appropriated and set aside, put aside, should not be returned to the owner thereof, who is here in court before you gentlemen claiming them? That is the function which you are to perform, sitting as judges of the facts.

Now, if you believe from the evidence, by a greater weight and preponderance thereof, that the advertisement contained in the paragraphs which I have read to you, is, and the statement contained in such advertisement regarding the curative and therapeutic effect of such article—that is, these bottles of Texas Wonder, or any of the ingredients or substances contained therein, are false and fraudulent—then in that event you will deny the application of the intervener to have these 60 dozen bottles, or thereabouts, returned to him. On the other hand, if you [do not] believe—if you do not find from the evidence and facts and circumstances in evidence, by a preponderance of the evidence—that the statement concerning the therapeutic and curative effect of this remedy was false or misbranded—false and misbranded—then and in that event your verdict will be in favor of the claimant.

There must be in the advertisement or statement concerning drugs contained in the carton a statement made which in its nature is false and which is fraudulently made. Now, then, did it seldom fail to cure any of the ailments stated in the face of the statement, concerning which—concerning the drug, did it or did it not? That is for you, gentlemen, to decide. If it did fail, was the statement falsely placed there?

You gentlemen are the exclusive judges of the witnesses and of the facts proved by the testimony given in evidence. If there is anything about the testimony of a witness that you hesitate about believing, you may take that into consideration. Does he testify fully and frankly, or does he exhibit a desire to see one side rather than be perfectly fair? You gentlemen, not the court, are the exclusive judges of the credibility of the witnesses and the weight to be given to their evidence, and of the facts proved by their evidence.

I believe I have covered in sort of a desultory and rambling way all the issues in this case. You gentlemen will take the case, and if you find against the claimant Hall you will simply say, "We, the jury, find for the United States." If you find for the claimant, your verdict will be, "We, the jury, find claimant entitled to the sixty dozen bottles", or whatever the portion is, "of the Texas Wonder."

Are there any suggestions?

Mr. ATWELL. No suggestions except the formal exception to the refusal of these special charges.

The COURT. I think I have given you this, although I will read it. You are instructed that inasmuch as the Government charged the medicine was falsely and fraudulently branded, it is necessary to prove this allegation, and if you do not find that proven by a preponderance of the testimony, you will find for the claimant.

Now, then, gentlemen, I feel that I should say that evidence pertaining to that is not only—is almost entirely circumstantial evidence, and circumstances which tend, either tend to or do not tend to prove—what were the ingredients of the medicine; what is the

testimony as to whether or not they would cure the different ailments set forth and described in the writing or printing on the carton. Are these true? If not true, why was it put there? Is it false? If you should say, "Yes", then was it fraudulently done? What inspired the fraud, if, perchance, there was fraud? I am simply making these suggestions in order that you may have the views and mind of the court to assist you upon your deliberations. You will retire to your room, gentlemen, select your own foreman, and try to let your verdict reflect the truth of the transaction.

UNITED STATES v. 1,500 CASES OF TOMATO PULP

(District Court, S.D. New York, July 10, 1918)

N.J. No. 6411

Libels under section 2 of the Food and Drugs Act. Motion to release samples of product to claimant granted. Jury trial. Verdict in favor of the United States.

The United States attorney filed two libels for the seizure and condemnation of 1,000 cases and 500 cases, each containing 4 dozen cans of tomato pulp, alleging that the article had been transported from the State of Maryland into the State of New York, and remained unsold in the original unbroken packages, and that it was adulterated in that it consisted in part of a filthy, decomposed, and putrid vegetable substance.

Thereafter the Booth Packing Co., claimant, by its attorney, filed its motion for an order directing the marshal to release to said claimant 20 samples of the product for the purpose of analysis. Said motion was granted upon certain conditions, as will more fully appear from the following opinion of the court (Manton, *District Judge*):

No authorities are cited by counsel, nor do I find any, which require the United States to submit samples of the tomato pulp in question to the claimant's counsel or their experts for analysis and investigation. It is a privilege accorded the claimant by the United States attorney, and the conditions upon which such an examination is allowed in this case are liberal. If a limited number of cans are taken from each and these be deemed representative of the entire shipment, it should be satisfactory to the claimant. The proof will not require examination of each particular can in order to work a forfeiture to the libellant.

The motion will be granted upon these conditions.

The consolidated case then came on for trial before the court and a jury, and the following charge was delivered to the jury:

GRUBB, *District Judge*. Gentlemen of the jury: It is necessary for me in the first place to call your attention to the fact that there are two cases being tried by arrangement, as one case under this testimony, under which separate verdicts are required to be rendered by you, although, of course, the result of the one verdict will be the same as the other; that is, the same evidence applying to each, we will have a verdict of the same kind with reference to both cases.

The first case is 377. In that case the Government of the United States seeks to condemn a shipment of 500 cases of tomato pulp which was seized, as has been described to you. In no. 378, the other case, the Government seeks to condemn 1,000 cases of tomato pulp seized as has been described to you. As I say, those two cases are before you for decision upon the same testimony, but in order to keep the record straight it is necessary for you to render a separate verdict in no. 377, and a separate verdict in no. 378, although the verdict will be of the same tenor and effect in each case, as the evidence is the same, and therefore should produce in your minds the same result in each case.

Now, these are both cases that arise in this way: The Government has seized and by these libels seeks to condemn these shipments of tomato pulp upon the idea that they were shipped in interstate commerce in violation of the Pure Food and Drug Act, passed by Congress. After the seizure of one of the shipments the Booth Packing Company intervened and claimed the shipments, and that makes that litigation, and the controversy between the Government on the one hand, and the claimant, the Booth Packing Company, on the other hand, and the only question involved is whether these shipments are subject to seizure under the Pure Food and Drug Act.

As a condition to any such seizure it is necessary that the seized shipment should travel in interstate commerce, because Congress has no jurisdiction over food products except as they enter into interstate commerce, therefore, the preliminary question would be, except for the concession that I will call your attention to, whether these shipments entered into interstate commerce before their seizure. But it is conceded on the record that the shipments had entered into interstate commerce and were in interstate commerce at the time of the seizure, so you need not trouble yourselves with that question, since it is conceded on both sides that that is the case.

It is further conceded that the samples that have been used; that is, the cans that were used for the purpose of investigation, were parts of the two shipments and were fairly representative of the other cans in the shipments. In other words, to avoid the impossibility of investigating each can, it comes before you that the cans that had been produced are fairly representative of the shipments, and that they were taken from the shipment. Their identity, as far as the shipments are concerned, is conceded, and that they were fairly representative of the shipments is conceded.

Now, the Pure Food and Drug Act affecting interstate shipments prohibits shipments of food products that are either putrid, filthy, or decomposed. In this case the Government lays no stress on the word "putrid." It does claim that this tomato pulp was filthy and decomposed; filthy, as I understand it, because it had sediment in the bottom of it, and decomposed because it was made from what the Government claims was decomposed stock when it was originally made.

Now, those are the questions that are presented for your decision, whether the shipments in question were either filthy or decomposed in the sense claimed. The burden is on the Government to reasonably satisfy you from the evidence, of one of those two propositions, either that they were filthy or that they were decomposed. If

it has reasonably satisfied you of either the one or the other, then the product is subject to condemnation. If it has failed to satisfy you that the product was either filthy or decomposed, in other words, if you do not believe it was filthy, and do not believe it was decomposed, then the claimant is entitled to your verdict.

Now, what "filthy" means outside of its being synonymous with decomposed, is what it means in ordinary use, that is, a product that is unclean, foul, and dirty. Whether you believe that this proof relating to the sediment which has been testified was seen, would bring the product within that description, is for you to say. It must be filthy in the sense I have defined, that is, dirty, unclean, and unfit for use by reason of its uncleanly condition.

Passing from that for a minute, the other thing that the Government lays stress on is that this product was decomposed within the meaning of this law, and decomposed within the meaning of the law means decayed or rotten, using these words in their ordinary acceptation, that is, what you or I would call decayed or rotten in ordinary conversation. That is the significance to be applied to the terms of the statute, and not the scientific meaning of decay or the scientific meaning of decomposition, which means a different thing from what is understood in ordinary conversation.

It is not essential, of course, in order that you should find that the product was decomposed within the meaning of the statute, that the Government should show that it was, by reason of that decomposition, injurious to health, because its shipment in interstate commerce is prohibited if it is decomposed, and that applies without reference to the effect of the decomposition on the health of the consumer. Congress may have intended to conserve the taste of the consumer in preventing shipments of decomposed food products in interstate commerce, that is, it may have been the intention of Congress to preserve the consumer against the use of decayed products from the points of taste rather than from the point of health. However that may be, there is no qualification in the statute which limits the denomination of this class of stuff to such products as injure health. If they are decomposed within the meaning given you, the common acceptation, even if they have no deleterious effect on health, the shipment then comes within the inhibition of the statute.

The Government claims that they were decomposed, because it claims that the product was made from rotten tomatoes, and therefore the result must be that the product itself is rotten. The Government has not, and of course could not, introduce eyewitnesses to testify to the character of stock that went into these particular shipments of tomatoes. It does not ask you to arrive at your conclusions from the testimony given by witnesses who have seen the original tomatoes that made up the product, but they ask you to arrive at your deduction in the reverse way—that is, by determining by analysis what is in the product, and by an inference, which it claims is a legitimate inference, arrive at a conclusion that the stock must have been rotten that went into the product because of the character of the product itself.

The evidence tends to show that there are three things which cause rot in vegetable matter of this kind—bacteria, yeast, and mold.

The Government has placed no reliance on any excess of bacteria or yeast as rot producers in these tomatoes. Dr. Howard testified that his examination developed that there was no excess of bacteria and no excess of yeast, and therefore he made no further examination, and the Government does not rely on either of those as causes of rot, which, it claims, existed in this product. Its reliance is placed on an excess of mold in the product, and it claims the evidence shows that this was produced by rotten tomatoes. As I said, it does not get that conclusion by showing by witnesses what the tomatoes looked like before they went into the product, because that naturally would be impossible, but it claims that you have a right to deduce from the fact that it has shown, as it claims, that there was an excessive mold in the product, and that mold produces rot, that therefore there must have been rot in the tomatoes. This method on arriving at that, as I understand, is designated as the Howard method.

That method is this: A microscopic analysis is made of the product or a sample of the product, and a count of the mold field is made, microscopically, from the specimen of the product. After having arrived at the number of fields shown in the specimen the Government has its first premise. Then, under this method, experiments are made on stock that it actually has seen of sound tomatoes, and partially rotten tomatoes, and wholly rotten tomatoes, and by these experiments the Government seeks to convince you that there is a relation between the mold count and the character of the original stock as to rot. In other words, it has caused experiments to be made in cases where it could see the condition of the stock, and has caused microscopic analyses to be made of the amount of mold in a product where it has seen the stock, and thereby arrive by experiment at what it deems the rule as to the relation between the number of fields showing mold count in the product and the character of the stock in the product. It claims that it shows that there is a relation between the mold count, the fields containing mold, and the character of the stock that entered into the product which was the subject matter of the experiment.

In applying that rule to this case, where it has not seen the stock, they claim that, if it shows a certain number of fields showing mold count in the experiment, they can, by this rule, show the relation between the number of fields showing mold count and the rot in the original stock.

As I understand the contention of the Government's witnesses, it is that a percentage of something like 66 percent of mold count would indicate a percentage of rot in the product of something like 6 percent; that thereafter the percentage of rot rapidly increases; when the mold count increases above 66 percent the percentage of rot in the original product increases rapidly, and for that reason they say that it is fit to use a stock containing less than approximately 6 percent, but have prohibited a stock that contains a greater proportion than 6 percent.

You have heard the testimony of Dr. Howard as to the mold count taken from these shipments, and you have heard the testimony of

the claimant on that subject matter. It is for you first to determine what you believe from the evidence to be the character of this product as to the quantity of mold indicated by this microscopic analysis. Then it is also your duty, having done that, if you can do it, to determine what the proportion of rot in the product would be under that rule, if the rule is the correct one, from the amount of mold you determine the product to contain according to this count by microscope. If, after having done that, you arrive at the conclusion that the product itself is rotten in the sense of the statute, that is, that it was made from rotten stock, and was therefore rotten itself and within the prohibition of the statute, then the Government would prevail. If you are unable to do that, or, if you believe that on the contrary it was not made from rotten stock, then the claimant would prevail.

Of course, your ability to do that and the Government's case depend upon the accuracy of the Howard method and its correct applicability to the specimens in question and to the tomato pulp in question. Each of these matters are questions of conflict in testimony—whether the Howard method is a correct one, and whether it was correctly applied to these specimens. That it is a correct method and was properly applied is asserted by the Government and disputed by the claimant.

In the first place, the claimant contends that the specimens analyzed are not fairly representative of the shipment, not in the sense that the cans from which the drops were taken are not fairly representative, because that is conceded; but the Booth Packing Co. claims that the drops taken from the cans were not properly taken or not properly prepared to make them representative samples of the shipment or the cans from which they came. That is a matter which the Government disputes. The Government contends that they were properly taken and were properly representative of the cans from which they were taken. You have heard the criticisms with reference to that. The claimant's witnesses, or some of them, criticised the kind of instruments used by Dr. Howard. Then, with reference to the shaking, you have heard the criticism of Dr. Brooks that a severe shaking was likely to give inaccurate results, whereas the Government's witnesses testified that that is the only way you can properly prepare a sample to get accurate results. Those are questions of fact in conflict that you are to determine.

Then the claimant contends that the sample itself, or the number of drops, whatever the evidence shows were analyzed under the microscope, were themselves too small a quantity of the original shipment to be fairly representative of the character of the shipment. The Government, on the other hand, claims that they were fairly representative. That is a question for you to determine under the evidence, with the understanding, of course, that you are to do it in the light of science, so far as it relates to the use of the microscope, and not be swayed by reason of any prejudice that you may have against it. You are to look at the matter in the light of science, as arrived at, at the present time. If you find that the method was properly applied, your next inquiry would be whether the method

itself is a correct one in the sense that it gives fairly accurate results, that is, from the mold count you can fairly arrive at the amount of rot in the stock, which, of course, would indicate rot in the product.

Now, the method itself is criticised, on the one hand, by the claimant, and is asserted to be correct by the Government. You have heard the evidence as to the experiment that has been made to support its accuracy, experiments made by the Department of Agriculture for the purpose of arriving at whether an accurate method could be discovered to show the relation between the mold in the product and the rot in the stock. You have heard the testimony of Dr. Howard with relation to the experiments he made, and these other witnesses for the Government, some of them in the Government Department, and some in private business, who testified to the experiments they had made, having seen the stock, and determining the percentage of rot in the stock, then having analyzed the product of tomato pulp after it was made, and having counted the mold field in the product, the percentage of mold fields in the product, and having done that often enough, they contend, to have shown that there was an approximate fixed relation between the number of mold fields in the product and the percentage of rot in the stock. The claimant contends that there is no such relation, and that experiments based on that would be unreliable for that reason; that there is no relation between them which can be determined with any accuracy, between the number of mold fields, as determined by the microscope, in the product, and the percentage of rot as determined by weight or by the eye, or any quantitative way of getting at it, in the stock from which the product was made. In addition to that you have heard discussion pro and con as to the reputation among scientists as to what is called the Howard method, and it is for you to take into consideration that testimony, and make up your minds as to which has the better reason, in your judgment. It is also proper for you to consider the evidence relating to the use of this method by practical canners, as to whether it is general or not, and the weight you will give to the method because of its having been in use by canners as a method of arriving at conditions of the stock from the count of mold fields in the product.

Then the claimant introduces evidence of a chemical analysis as distinguished from a microscopical analysis, and claims that the chemical analysis was in conflict with this Howard method or its application as applied in this case. As against that, the Government contends that the chemical analysis of Dr. Brooks, who was the witness that testified on that subject, was an unreliable one, and that not sufficient time was taken in the way provided by the Government in making that kind of experimental analysis; also the Government's contention is that no chemical analysis can with any reliability show the relation between the rot and the original stock, and the amount of mold as shown by the count of mold fields in the product, or that any chemical analysis of tomato pulp can indicate how much rotten stock was used.

On the one hand the claimant's position is that chemical analysis can do that, while the Government contends that owing to the nature

of the tomato, no chemical analysis of tomato pulp can show with any certainty whether there was rot in the tomatoes or not from which the pulp was made.

Those, as I recall, are the general contentions on the one side and the other, and the answers of each side to the other's contention. Of course those contentions must be supported by the evidence which has been introduced before the jury, and in arriving at which contention to adopt you must look to the evidence as introduced. You should try this case on the evidence and not by any prejudices you may have one way or the other about the matter. Your inquires are restricted to determining which contention is the correct one based on the evidence introduced since this trial began up to the time when both sides rested. That evidence includes the oral testimony of the witnesses, the scientists, the experts, and those who testified to the fact. Also the physical exhibits that have been introduced, the tomatoes themselves, the inspection which you made of them under the microscope, and all the exhibits which have been introduced before you for the purpose of enlightening you as to the correct result. Also the documentary evidence, which includes the scientific pamphlets which have been introduced, upon the idea that men of recognized ability, scientists—that what they write or say about a thing is some evidence, and the jury may look to it as persuasive that what is contained therein is true as a matter of fact.

Then you have a right to look at the evidence as to the conditions in the Booth Packing Company's factory. On the one hand, you have heard the testimony of Dr. Howard, as he says, on August 20, as to the absence of sorting, method of cleaning, etc. The claimant's contention is that on that day they did not make any tomato pulp, and that therefore it was not required to sort, because that was not the practice when tomatoes were canned as whole tomatoes and no pulp made.

You have also heard the description of the premises by the claimant's witnesses as to the character of the machinery, cleanliness, and sanitary methods adopted, and from that and all the other evidence I have mentioned, you are required to make your minds up on this issue, which is the ultimate issue in the case, whether you are reasonably satisfied from the evidence that these shipments were either filthy or decomposed. If you are reasonably satisfied from the evidence that they were either filthy or decomposed, one or the other, in the sense defined to you, and the sense intended by Congress when it enacted this Pure Food and Drug Law, then the Government, as the plaintiff in this case, is entitled to your verdict. If you are not reasonably satisfied from the evidence that they were either filthy or decomposed—that is, if you fail to find that they were filthy and fail to find that they were decomposed, then the claimant is entitled to your verdict. The Government must establish its case by a preponderance of the evidence to your reasonable satisfaction; not beyond a reasonable doubt, because this is a civil case. It simply relates to whether the property, the tomato pulp in question, shall be condemned, and the interest of the claimant divested by your judgment.

UNITED STATES v. 1,300 CASES OF VINEGAR

(District Court, D. Nebraska, July 20, 1918)

N.J. No. 6563

Libel under section 10 of the Food and Drug Act. Trial before the court. Libel dismissed.

The United States attorney filed a libel for the seizure and condemnation of 1,000 cases, and 300 cases, each containing 24 bottles of vinegar, alleging that the article had been shipped and transported from the State of Kentucky into the State of Nebraska, and charging adulteration and misbranding. The article was labeled in part, "Blue Grass Belle Brand * * * Pure Apple Cider Vinegar."

Adulteration of the article was alleged in substance in the libel for the reason that distilled vinegar or added dilute acetic acid and material high in reducing substances had been mixed and packed therewith so as to reduce, lower, and injuriously affect its quality and strength, and had been substituted in part for the article.

Misbranding of the article was alleged for the reason that the statement, to wit, "Pure Apple Cider Vinegar", was false and misleading, and deceived and misled the purchaser into believing that he would be purchasing pure apple cider vinegar, whereas, in truth and in fact, it was not pure apple cider vinegar; and for the further reason that it was an imitation of, and was offered for sale under the distinctive name of, another article.

WOODROUGH, *District Judge.* I am persuaded in this case that there were many suspicious circumstances that fully justified the libel being brought, but I am not persuaded that the evidence is sufficient to justify me in the condemnation of the product.

I find that the testimony of the experts is very persuasive; that their practical experience has shown them that good vinegar ought to have certain properties, that in a wide field of investigation have always shown up, that the particular vinegar in question does not have, but that the reasons why it does not have them are purely conjectural and speculative. So now I am left without any foundation to determine why this particular vinegar does not show the properties that these men, after years of experience, find exists in vinegar in general.

I find that the vinegar is manufactured under circumstances that practically put the seal of secrecy on it. Mr. Blakemore is able to testify only from information and belief. As to the elderly man who does supervise the manufacture of the vinegar, however, his testimony is positive. He says there was no adulteration, and sticks to it through a long cross-examination that there was no adulteration. He speaks of the physical difficulties which, in his mind, make it almost an impossibility that there should be, in any practical way, any adulteration.

I find many suspicious circumstances, however. It seems to me a suspicious circumstance that the chemist of this company should

concern himself so particularly, time after time, in analyzing the product to see whether or not it came up to the standard set forth in circular 19. What did he care about that fact, if it was made out of pure apple cider? He seems to have had some purpose in making these investigations. The circumstance looks suspicious to me; looks as though, if he knew it was made out of pure apple cider he wouldn't be concerned with the analysis, as far as that particular circular is concerned, giving as his only excuse that it was a good feeling to have to find that it happened to tally up with the definition in that circular. That is an analysis that had been made, which is admitted by all parties not to be a true analysis, a complete analysis, of cider vinegar, showing all its component parts, because all the parties here admit that there is another part found in this vinegar, and practically all vinegar, that is made by the fermentation process.

But I am unable to reach a conclusion with a sufficient degree of certainty or positiveness to overcome the positive testimony of the man who made the vinegar in question, and to order its condemnation.

I find plenty of opportunity. I find a good deal of incentive in the business conditions existing, where there was such a great discrepancy between the amount manufactured in this particular year, and the amount in other years, and the difficulty of getting apples this year. Seventy thousand gallons against 250,000 gallons would perhaps offer a great incentive. Ample opportunity in the fact that both kinds, the clear white vinegar and the other, were being made in the same place—undoubtedly ample opportunity—sufficient motive—very persuasive circumstances in the analyses that are made by these men who have devoted years to this study, but a lack of certainty sufficient to justify final condemnation.

Therefore there will be a dismissal of the libel.

UNITED STATES v. KAR-RU CHEMICAL CO.

(District Court, W.D. Washington, July 26, 1918)

N.J. No. 8021

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.[4]

The United States attorney filed an information against the Kar-Ru Chemical Co., alleging shipment from the State of Washington into the State of Oregon of quantities of articles labeled, respectively, "Kar-Ru" and "Gon-Nol", and from the State of Washington into the State of Oregon of quantities of articles labeled, respectively, "Kar-Nitum" and "Kar-Kol", all of which were misbranded.

Misbranding of the article labeled "Kar-Ru" was alleged for the reason that certain statements, appearing on the label of the article, falsely and fraudulently represented it to be effective as a remedy for rheumatism, for kidney, liver, bladder, stomach, and catarrhal troubles, for mental and physical debility, neuritis, eczema, blood

[4] Affirmed, *Kar-Ru Chemical Co.* v. *United States,* p. 970, post.

diseases, irregular menstruation, and the most acute and chronic rheumatic afflictions, when, in truth and in fact, it was not.

Misbranding of the article labeled "Gon-Nol" was alleged for the reason that certain statements, appearing on the label of the article, falsely and fraudulently represented it to be effective as a remedy for gonorrhea, to penetrate the nerve centers to the source of the trouble, to cause a reaction of vital forces, and to stir up latent primary disease due to suppression, and to eradicate from the system the life-destroying gonorrheal germs and their toxins in both the acute and chronic states, when, in truth and in fact, it was not.

Misbranding of the article labeled "Kar-Nitum" was alleged for the reason that certain statements, appearing on the label of the article, falsely and fraudulently represented it to be effective as a remedy for tuberculosis in cattle, for the prevention of tuberculosis in animals, as a relief for tuberculosis in the early stages, to penetrate the nerve centers, to fortify the system against disease germs and their toxins, and to eradicate tuberculosis from the system, when, in truth and in fact, it was not.

Misbranding of the article labeled "Kar-Kol" was alleged for the reason that certain statements, appearing on the label of the article, falsely and fraudulently represented it to be effective as a remedy for cholera in hogs, as a preventive of cholera in hogs, as a relief of cholera in hogs, to fortify the system against disease germs and their toxins, to reach the source of and to eradicate the cholera germ, as a preventive of cholera and other diseases, as a remedy for cholera and diarrhea in man, and as a relief for cholera and diarrhea in man, when, in truth and in fact, it was not.

CUSHMAN, *District Judge* (charge to jury). Gentlemen of the jury: You have had the issues in this case explained to you for several days. I do not deem that it is necessary to outline at any great length the indictment in the case. You will have it with you in the jury room, and it has also been explained to you. These four kinds of medicine here—each kind is made the subject of a different count in the indictment. There are four counts in the indictment, and the defendant company is charged with having moved in interstate commerce, between this State and Oregon, packages of these different remedies named in the different counts in the indictment. It is charged that the labels on these parcels contained representations regarding the curative and therapeutic effect of the substances contained in the packages which were false and fraudulent.

The defendant has entered a plea of not guilty to the information, which places the burden of establishing the truth of every material allegation of at least one count in the indictment upon the prosecution, the burden requiring that they should establish the truth of every material allegation by evidence sufficient to convince you beyond a reasonable doubt before you could return a verdict of guilty. If you have reasonable doubt, taking each count by itself, as though it were a separate indictment, if you have a reasonable doubt concerning any material allegation in each count of this indictment, it would be your duty to return a verdict of not guilty. If you have no reasonable doubt concerning any material allegation in any count of the indictment, it would be your duty to return a verdict of guilty as to that count.

You will understand that these labels that were described in the indictment and that appear upon the exhibits contain representations that the contents would cure a number of diseases, and, of course, it would not be necessary to prove that the entire label, that all of the representations on the label regarding the curative and therapeutic effect of the contents were false and fraudulent; it would be necessary before you could return a verdict of guilty upon any count to find beyond a reasonable doubt that at least there was one representation upon the label regarding the therapeutic and curative effect of the contents that was false and fraudulent.

The defendant, as I understand it, both at the time the admissions were made and from the argument of its counsel, admits a number of matters set out in the indictment; admits that these packages were sent in interstate commerce with the labels upon them as charged; but the gist of the defense, as I understand it, is that the defendant denies either that there was any statement regarding the therapeutic or curative effect of any of these medicines on these labels that was false, and denies that, if any such representations were false, they were fraudulently made; and it seems from the argument and the whole trend of the case that your attention will be narrowed to those two propositions.

It is not required of the court to charge you as to what is false. It is about as simple as the English language can make it; but it is charged not only that these representations were false but that they were fraudulent. Now, a fraudulent representation may be defined about as follows—that is, one man represents to another that something is true. To be a fraud, that representation must be false and the party who makes it must know that it is false; he must make it with the intention that the other party will act upon it, relying upon it as being true, and parts with his money; he must have been injured or defrauded of his money to that extent. That is what is meant by charging that the representations regarding these medicines were fraudulent. To apply it to one of the representations, as I understand it, mentioned in the information and contained in one of these labels, the statement that this Gon-Nol would eradicate the germ of gonorrhea from the human system; that statement, before you could convict upon that alone, would have to have been false—that is, that the medicine would not have had that effect. The defendant company must have made the statement knowing that it was false, or, at any rate, having no ground to believe that it was true, having made it so recklessly and wantonly, with no honest belief that it was true. The representation must have been made in such a way and with the intention that people would purchase the medicine believing it would eradicate from the human system the germ of gonorrhea, and that, acting upon that belief, if any person purchased it acting upon that belief, that person would be swindled out of his money. That would have to be all established so as to convince you beyond a reasonable doubt before you could find that that particular representation was fraudulent.

There is no presumption arises against the defendant by reason of the fact that it has been indicted or placed on trial before you. Every presumption of law favors the innocence of the defendant, and this presumption of innocence continues throughout the trial

until such time as the prosecution has produced evidence sufficient to break down the presumption and overcome it and convince you of the truth of every material allegation in at least one count in the indictment by evidence beyond a reasonable doubt.

Reasonable doubt, as used in the foregoing instruction and as used in the other instructions which I will read to you, means just what the words mean; that is, a doubt that is based upon reason, a doubt for which you can give a reason. It does not mean every possible doubt, because it is almost impossible to establish a particular truth, and especially the truth of the assertions that rest in opinion regarding men's ailments and what cures them to an exact certainty and beyond all possibility of a mistake, but it does mean more than mere probability or mere preponderance of evidence.

Reasonable doubt has sometimes been defined as such a doubt as a man of ordinary prudence, intelligence, and determination would allow to cause him to pause or hesitate in one of the more important transactions connected with his own affairs. If you have such a doubt on a material matter that was disputed in any count of the information, it would be your duty to give the defendant the benefit of that doubt and acquit him; if you have no such doubt, it would be equally your duty to convict.

I will read you certain instructions which I have been requested to give:

This case is a prosecution for violation of that part of the Pure Food and Drugs Act known as the Sherley Amendment. The information sets out four counts, each alleging a distinct and separate offense by appropriate allegations. You will take this information with you to your jury room and may refer to it for specific knowledge of the material allegations therein. The defendant, however, has not required the Government to produce proof of the formal allegations, but has admitted them to be true, but has pleaded not guilty to each and every of the four counts of the information, and this plea raises the issue as to every material allegation in these counts contained, except as the formal allegations are admitted. By these admissions the issues are narrowed substantially to two questions. The first is, Do the several preparations put upon the market in interstate commerce by the defendant in fact contain curative agents for the several ailments set forth upon the labels of these respective preparations? If you find from the evidence that each and every of these preparations do in fact contain such curative agents, your verdict will be not guilty under each and every count of the information. If you find as a fact that one or more of these preparations does not in fact contain such curative agents, then, as to such preparations, it will be necessary to consider the second question in the case, which is: Did the defendant in fact believe that the preparation in question would be effective in alleviating the ailments for which its label says it is intended to be used?

It is not proper in such a case as this to try to rival well-established schools of medicine, and, if you find that the defendant has only used in its several preparations homeopathic remedies for the alleviation of ailments, then your verdict should be not guilty, and you will not be called upon to consider any other question in the case.

If you find, however, as a fact that some or all of the preparations put upon the market by the defendant do not, in fact, contain remedial agents used in any school of medicine for the relief of the ailments for which it is put upon the market, then you will be called upon to consider the second question in the case and that is: Did the defendant honestly believe that such remedy would have a curative effect upon the ailments for which it is offered to the public? The law requires that the Government must prove beyond a reasonable doubt, not only that the statements upon the labels are false, but also that the statements are fraudulent. The statements may be false and not fraudulent. To be considered fraudulent within the meaning of the law requires that the defendant should either know that the remedy which he offers to the public is of no

curative value or that he represents it to be of curative value recklessly and without caring whether it would cure or whether it did not, for the purpose of defrauding his customers and getting their money for an article which he knew in fact, or ought to have known, was of no value. If you find from the evidence that the defendant honestly believed and had reasonable ground to believe that his remedy was of curative value, then your verdict must be not guilty, no matter if in fact the remedies were worthless from a medical point of view.

The other instructions are in a series of four, and the law is stated in a series of four, the first applying to the first count and the same principle of law and the second one applying also to the second count, so they will have a great deal of sameness, but there being four counts in the indictment, I am going to read the law applying to the principle in each count, in series:

Gentlemen of the jury: You will recall that the Government alleges that the following statement in count I as to Kar-Ru was false and fraudulent: "Kar-Ru, The Constitutional Remedy for Rheumatism—it is effective in Kidney, Liver, Bladder, Stomach, and Catarrhal Troubles, Mental and Physical Debility, Neuritis, Eczema, Blood Diseases, Irregular Menstruation, and the most Acute and Chronic Rheumatic Afflictions."

It is unnecessary for the Government to prove that all of these statements were false and fraudulent. If you believe beyond a reasonable doubt that any one statement as to the curative or remedial properties of this medicine was false in fact, and that the defendant knew that it was false, you may find the defendant guilty under count I. If the defendant honestly believed it would have the effect stated, it is not guilty.

The Government alleges that the statement in count II, that Gon-Nol is a remedy for gonorrhea, and that this remedy eradicates from the system the life-destroying gonorrheal germs and their toxins, in both the acute and chronic states, was false and fraudulent.

You are instructed that it is unnecessary for the Government to prove that both of these statements were false and fraudulent. If you believe beyond a reasonable doubt that any one statement as to the curative or remedial effects of this medicine was false in fact, and that the defendant knew that it was false, you may find the defendant guilty under count II. If defendant honestly believed it would have the effect stated, it is not guilty.

The Government alleges that the statements in count III on the label as to Kar-Nitum, in the following language, "Kar-Nitum, Tubercular Remedy for Cattle. Kar-Nitum is a scientifically prepared remedy for the prevention of Tuberculosis in animals and the relief of the disease in the early stages. It penetrates the nerve centers and fortifies the system against disease germs and their toxins—Give until the disease germ is eradicated from the system," were false and fraudulent.

You are instructed that it is unnecessary for the Government to prove that all of these statements are false and fraudulent. If you believe beyond a reasonable doubt that any one statement as to the curative or remedial effects of this medicine was false in fact, and that the defendant knew that it was false, you may find the defendant guilty under count III. If defendant honestly believed it would have the effect stated, it is not guilty.

The Government alleges that the statements in count IV on the label as to Kar-Kol, in the following language, "Kar-Kol, A Remedy for Hog Cholera, Kar-Kol is a scientifically prepared deep-acting remedy for the prevention of cholera in hogs, and the relief of the disease, in the early stages. It penetrates the nerve centers, and causes a reaction of the vital force, produces a proper digestion and assimilation of natural elements and food substances, fortifies the system against disease germs and their toxins. By its broad and deep action, it reaches the source of trouble and eradicates the cholera germ. It acts as a preventive of cholera and other diseases, * * * Good for Humans—For cholera, or diarrhœa in humans, take one half teaspoonful once a day, dry in mouth, and repeat daily until relieved", were false and fraudulent.

You are instructed that it is unnecessary for the Government to prove that all these statements were false and fraudulent. If you believe beyond a reasonable doubt that any one statement as to the curative or remedial effects of this medicine was false in fact, and that the defendant knew that it was false, you

may find the defendant guilty under count IV. If defendant honestly believed it would have the effect stated, it is not guilty.

Here is another series of four:

As to count I, if you believe beyond a reasonable doubt that Kar-Ru is not the constitutional remedy for rheumatism, and is not effective in kidney, liver, bladder, stomach, and catarrhal troubles, mental and physical debility, neuritis, eczema, blood diseases, irregular menstruation, and the most acute and chronic rheumatic afflictions, and that the defendant must have known this, you may find the defendant guilty under count I. If defendant honestly believed that it would have the effect stated, it is not guilty.

As to count II, if you believe beyond a reasonable doubt that Gon-Nol is not a remedy for gonorrhea, and does not eradicate from the system the life-destroying gonorrheal germs and their toxins in both their acute and chronic states, and that the defendant must have known this, you may find the defendant guilty under count II. If defendant honestly believed it would have the effect stated, it is not guilty.

As to count III, if you believe beyond a reasonable doubt that Kar-Nitum is not a scientifically prepared remedy for the prevention of tuberculosis in animals and the relief of the disease in the early stages, and does not penetrate the nerve centers, and fortify the system against disease germs and their toxins, and does not eradicate disease germs from the system, and that the defendant must have known this, you may find the defendant guilty under count III. If defendant honestly believed it would have the effect and was as stated, it is not guilty.

As to count IV, you are instructed that if you find that Kar-Kol is not a remedy for hog cholera, and if you further find that Kar-Kol is not a scientifically prepared, deep-acting remedy for the prevention of cholera in hogs, and the relief of the disease in the early stages, and if you find that it does not penetrate the nerve centers and cause a reaction of the vital force, and does not produce a proper digestion and assimilation of natural elements and food substances, and does not fortify the system against disease germs and their toxins, and by its broad and deep action it does not reach the source of the trouble, and does not eradicate cholera germs, and does not act as a preventive of cholera; and if you further find that Kar-Kol is not good for humans for cholera and diarrhea, and that the defendant must have known this, you may find the defendant guilty under count IV. If defendant honestly believed it would have the effect and was as stated, it is not guilty.

You are instructed that if you find beyond a reasonable doubt that Kar-Ru is worthless for any one of the things for which it is labeled, and that the defendant knew this, you may find the defendant guilty under count I. If it honestly believed it was in all things as stated, it is not guilty.

You are instructed that if you find beyond a reasonable doubt that Gon-Nol is worthless for any one of the things for which it is labeled, and that the defendant knew this, you may find the defendant guilty under count II. If it honestly believed it was in all things as stated, it is not guilty.

You are instructed that if you find beyond a reasonable doubt that Kar-Nitum is worthless for any one of the things for which it is labeled, and that the defendant knew this, you may find the defendant guilty under count III. If it honestly believed it was in all things as stated, it is not guilty.

You are instructed that if you find beyond a reasonable doubt that Kar-Kol is worthless for any one of the things for which it is labeled, and that the defendant knew this, you may find the defendant guilty under count IV. If it honestly believed it was in all things as stated, it is not guilty.

If you find beyond a reasonable doubt that the statement that Kar-Ru is the constitutional remedy for rheumatism, and that it is effective in kidney, liver, bladder, stomach, and catarrhal troubles, mental and physical debility, neuritis, eczema, blood diseases, irregular menstruation, and the most acute and chronic rheumatic afflictions, was absolutely false, and was made by the defendant with a reckless and wanton disregard as to whether it was true or false, you may find the defendant guilty under count I. If it honestly believed it was in all things as stated, it is not guilty.

If you believe beyond a reasonable doubt that the statement that Gon-Nol is a remedy for gonorrhea, and that it eradicates from the system the life-destroying gonorrheal germs and their toxins in both the acute and chronic states, was absolutely false, and was made by the defendant with a reckless and wanton

disregard as to whether it was false or true, you may find the defendant guilty under count II. If it honestly believed it was in all things as stated, it is not guilty.

If you believe beyond reasonable doubt that the statement that Kar-Nitum is a tubercular remedy for cattle and that Kar-Nitum is a scientifically prepared remedy for the prevention of tuberculosis in animals, and the relief of the disease in the early stages, and that it penetrates the nerve centers, and fortifies the system against disease germs and their toxins, was false, and was made by the defendant with a reckless and wanton disregard as to whether it was true or false, you may find the defendant guilty under count III. If it honestly believed it was in all things as stated, it is not guilty.

If you believe beyond a reasonable doubt that the statement that Kar-Kol is a remedy for hog cholera, and that by its broad and deep action it reaches the source of trouble and eradicates the cholera germs, and acts as a preventive of cholera and other diseases, and that it is good for humans for cholera and diarrhea, was false, and was made by the defendant with a reckless and wanton disregard as to whether it was true or false, you may find the defendant guilty under count IV. If it honestly believed it was in all things as stated, it is not guilty.

You will understand that the instructions that I have given you are to be taken as a whole. These written instructions omitted some of the requirements that I stated to you in my oral instructions which were necessary to constitute fraud. You will understand that the written instructions are amended by the oral instructions and that these requirements are necessary in addition to what I read to you.

You are in this case, as in every other case where questions of fact are submitted to you for determination, the sole and exclusive judges of every question of fact in the case, the weight of the evidence, and the credibility of the witnesses. In weighing the evidence and determining the amount of credit that should be given the different witnesses who have come before you and testified it is your duty to take into account their appearance, the appearance of each witness, and the manner, demeanor, and conduct of the witness in giving his or her testimony, whether the witness earnestly appeared to be telling you the exact truth, carefully avoiding saying anything that apparently the witness did not believe and avoiding exaggeration, or whether the witness may not have appeared to you as reluctant, evasive, hesitating, trying to keep from telling you what the witness claimed to know; whether a witness may not have struck you as being too willing, too free, running along and injecting information that the witness claimed to have into the case about which no one had asked; also you will take into consideration the testimony of each witness by itself, whether it appears to be likely, probable, reasonable under all the circumstances, whether it is corroborated by other evidence where you would expect it to be corroborated, if it were true, or whether it is contradicted by other evidence in the case. You will also take into account the situation in which each witness was placed in relation to the things about which he or she testified, as one witness might be much better situated to know the exact facts than another who was equally anxious to tell you the truth. You will also take into account the interest that any witness may be shown to have in the case, either as shown by the manner in which the witness gave his or her testimony or by the relation of the witness to the case. Mr. Hebb, having taken the stand in behalf of the defendant company, of which he is the sole stockholder, you should apply to his testimony the same tests as you do to the testimony of other witnesses, including his natural interest in the case.

DR. J. H. McLEAN MEDICINE CO. v. UNITED STATES

(Circuit Court of Appeals, Eighth Circuit, Oct. 28, 1918)

253 Fed. 694; N.J. No. 6362

In error of the District Court for the Eastern District of Missouri. Judgment reversed.[5]

HOOK and STONE, Circuit Judges, and MUNGER, District Judge.

MUNGER, *District Judge.* The plaintiff in error, hereafter called the defendant, was convicted of a violation of the Food and Drugs Act of June 30, 1906 (34 Stat. 768), as amended by the act of August 23, 1912 (37 Stat. 416), under an information charging an interstate shipment of drugs that were misbranded. The information charged that defendant had shipped an article called "Dr. J. H. McLean's Liver and Kidney Balm," and the misbranding charged was with reference to a number of statements made on the label on the bottle, on the carton in which the bottle was contained, and in circulars enclosed with the bottles regarding the curative or therapeutic effects of the medicine, which statements were alleged to be false and fraudulent.

The first assignment of error argued challenges the overruling of a motion in arrest of judgment. The defendant claims that the information states no offense under the statute because it is not charged that the statements made were known by the defendant to be false and fraudulent. The information alleged that these statements were applied by the defendant to the article knowingly and in reckless and wanton disregard to their truth or falsity. This was a sufficient description as against a motion in arrest of judgment of an intent to deceive which made such statements fraudulent. The allegations of the information need only be so specific as fairly to inform the defendant of the crime intended to be alleged and to make available a plea of former acquittal or conviction if a second prosecution were instituted for the same offense. Rev. St., sec. 1025; *Simpson* v. *United States*, 241 Fed. 841; *Dosset* v. *United States*, 248 Fed. 902.

In the instructions to the jury on the question of the fraudulent character of the statements made by defendant the court inadvertently said, that—

> One who makes a false statement, not knowing whether it is true or false, is as guilty of wrong as the man who makes a false statement knowing it is false.

An exception was saved to this instruction. This portion of the charge was erroneous, as it permitted the jury to find that the false statements were fraudulent, although the defendant honestly believed them to be true. In cases of this character there must be proof of an actual intent to deceive, an intent that may be inferred from facts and circumstances, but which must be proved. *Seven Cases* v. *United States*, 239 U.S. 510; *Eleven Gross Packages, etc.* v. *United States*, 233 Fed. 71; *Samuels* v. *United States*, 232 Fed. 536. Other portions of the charge correctly stated the rule as to the good faith of the defendant, but did not purport to correct the portion of the charge we have

---

[5] Reversing *United States* v. *J. H. McLean Medicine Co.*, p. 850, *ante*.

quoted and did not cure the error, for the jury were at liberty to follow the erroneous portion of the instructions. *Mills* v. *United States*, 164 U.S. 644.

Complaint is made of the refusal of an instruction tendered by defendant to the effect that evidence of the good reputation of the defendant might be considered on the question of its guilt and might alone be sufficient to raise a reasonable doubt of such guilt. The court gave an instruction that this evidence might be taken into consideration with the other testimony. This was the practical equivalent of the instruction requested and was sufficient. *Sandy White* v. *United States*, 164 U.S. 100.

As a part of the Government's case some well qualified physicians were called as witnesses and asked if a drug composed according to the formula used by defendant in preparing this article would, in their opinions, be effective for the treatment of the diseases for which the defendant's labels and statements claimed it was effective treatment, and after answering that it would not be effective, they testified that there was no difference of opinion among medical men on that subject. Objections were made to this testimony, and it is urged that it calls for the opinion of the witnesses, for a conclusion that only the jury could properly make, and that no conviction could be based on such matters of opinion. The testimony that there was a general agreement of medical opinion as to the therapeutic effect of such a preparation and what that general medical opinion was, was properly admitted to show the falsity of the statements made by defendant. *Seven Cases* v. *United States*, *supra; Eleven Gross Packets*, *etc.*, v. *United States*, *supra; Simpson* v. *United States*, *supra; Samuels* v. *United States*, *supra; Moses* v. *United States*, 221 Fed. 863. The testimony of the physicians as to their individual opinions of the efficacy of the preparation would have been properly rejected, if there had been disclosed a difference of medical opinion on the subject, as a conviction could not properly rest upon a claim of fraudulent statements, when they were based upon mere matters of opinion on such debatable subjects; *School of Magnetic Healing* v. *McAnnulty*, 187 U.S. 94; *Bruce* v. *United States*, 202 Fed. 98. But a mere concurrence of such witnesses' opinions with the uniform course of medical opinion was not open to that objection.

To combat the theory of the prosecution that the statements of the defendant as to the therapeutic efficacy of its medicine for certain diseases were not founded in honest belief, the defendant offered in evidence a number of testimonials it had received. The defendant's president testified that he was the manager of its business and had found some of these testimonials in the company's safe when he had taken charge in 1911, and that others came to the company since that time. The Government's counsel objected to the offer because the testimonials had not been shown to be genuine and because the writers were not shown to have been qualified to state the nature of the disease from which they suffered. The court excluded them as not competent nor material. The defendant claims they were admissible to show the good faith of the defendant in preparing its challenged

statements. If these letters had related to the statements made and had been seen by the defendant's manager and he believed them to be genuine and in that belief he had put forth the statements in issue, they would have been admissible on the question of intent without proof of their execution or of the truth of their subject matter. *Harrison* v. *United States*, 200 Fed. 662; 4 Chamb. on Evidence, sec. 2649. As none of the testimonials are contained in the bill of exceptions, we can not say that they were pertinent to the particular statements of defendant in issue, and they were not material in any event on this record, because the witness did not testify that he relied upon them. The only question answered by him as to his faith in the medicine was asked "on the basis of those letters or any other information you had." There is no error shown in the exclusion of this line of evidence.

One other assignment of error relied upon, that the court erred in refusing to direct a verdict for defendant because there was no evidence of a fraudulent statement, requires a brief statement of the charge in the information and of the evidence in its support. The information after alleging a misbranding of defendant's medicine by reason of false statements made in reckless and wanton disregard of their truth or falsity, set forth the statements made relating to the curative or therapeutic effects of the medicine for a very large number of diseases. One of the statements will suffice as an illustration, as follows: "Gall stones—Dr. J. H. McLean's Liver and Kidney Balm will aid in dissolving the gall stones so that they may pass away." The defendant admitted the making of this statement. Competent medical men testified that no known medicine would aid in dissolving gall stones in the human body and that there was no difference in medical opinion on that subject. There was no evidence to the contrary. The president of the company, who had had the management and conduct of the business since 1911, and had dictated its policy in every way, testified that he did not know and had never attempted to learn the therapeutic action of any of the ingredients of defendant's medicine, and that he was neither a druggist nor a doctor. As heretofore indicated, he based his belief in the general efficacy of the medicine on some source which was not definitely disclosed. The defense offered evidence to show that the Secretary of Agriculture, a year and a half before that shipment had notified the defendant that the label on the bottle containing this medicine appeared to be misbranded with reference to the statement about gall stones and about other diseases, because the medicine contained no ingredient capable of producing the therapeutic effects claimed for it. This was sufficient evidence to require the court to submit to the jury the charge made in the information of a reckless disregard of the truth or falsity of the statements. *Eleven Gross Packages* v. *United States*, *supra*; *Samuels* v. *United States*, *supra*; *Moses* v. *United States*, *supra*. Because of the error in the instructions of the court, the judgment is reversed and a new trial awarded.

UNITED STATES v. ONE GROSS PACKAGES OF "A TEXAS WONDER"

(District Court, S.D. Georgia, Jan. 11, 1919)

N.J. No. 7657

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The following charge was delivered to the jury:

EVANS, *District Judge.* This is a proceeding instituted under what is known as the Pure Food and Drugs Act. Congress enacted a statute the purpose of which is to protect from imposition people and the public, against people who wanted to take advantage of the public by imposing upon them deteriorated or misbranded goods.

This proceeding is what is known as a libel in rem, upon information of the district attorney, wherein it is alleged that a certain product, or medicine, known as "A Texas Wonder", in the jurisdiction of this court, had been transported in interstate commerce from the city of St. Louis, Mo., to the city of Macon, Ga., and that this product was misbranded; that the carton, the box in which the product was contained, bore the statement: "A Texas Wonder, Hall's Great Discovery. Contains 43% alcohol, before diluted; 5% after diluted. The Texas Wonder, Hall's Great Discovery, for Kidney and Bladder Troubles, Diabetes, Weak and Lame Backs, Rheumatism, Dissolves Gravel, Regulates Bladder Troubles in Children." The libel alleges that that constituted a misbranding, in that this compound did not have the therapeutic effects that it is represented to have, and that the statement on the carton that it did have such therapeutic effect was false and fraudulent. Now, under this libel, certain quantities of this product were seized; and the originator or manufacturer of the compound has filed a claim. In that claim he traverses the allegations of the Government, and contends that no false statements were contained in the carton. Now that is the issue for you to try.

There is a stipulation between the district attorney and counsel for the claimant, which relieves you of passing upon some questions in the case. It is agreed that the product described in the libel, as amended, was shipped in interstate commerce as set forth in the libel, and that the said product was secured from the consignee as described in said libel by an inspector of the Bureau of Chemistry of the United States Department of Agriculture, and that it was sealed and delivered to an analyst, Nathan K. Nelson, in the identical condition in which it was collected by the inspector.

The issue thus left from the pleadings for you to determine is whether or not the statements on the carton are false and fraudulent. You are instructed that it is necessary for the Government to prove that such statements are false and fraudulent, the burden is upon the Government; and if you do not believe the Government has proved this by a preponderance of the testimony you will find for the claimant.

In passing upon that issue you are the judges of the evidence and the credibility of the witnesses. In determining the credibility of

any witness you may consider his appearance and demeanor upon the stand, his interest or want of interest in the case, his prejudice or bias, if any appears, his means and opportunity of knowing the facts to which he testifies, the reasonableness or unreasonableness of the testimony. All of these matters may be considered by you in determining whether any witness has sworn truly or falsely. You should impute perjury to no witness. If you find there is any conflict in the testimony, determine whether the conflict is real or apparent; if the conflicts are only apparent, it would be your duty to reconcile them; if they are real and irreconcilable, ascertain the truth of the case, and there base your verdict.

The contention of the Government is that this statement is false, and it becomes necessary, in that connection, for me to construe for you the meaning of this statement, the branding on this carton. "A Texas Wonder, Hall's Great Discovery * * * for Kidney and Bladder Troubles, Diabetes, Weak and Lame Backs, Rheumatism", is not a statement that it is a specific for the cure of those diseases, but it is a statement that it is recommended that it would have a therapeutic or curative effect in the treatment of those diseases. The further statement, that it dissolves gravel, is a statement of fact; it is an assertion, an affirmative assertion of the originator of this compound, that it will have the effect, if taken according to directions, of dissolving gravel in the human body; and also that it will have the effect of regulating bladder trouble in children. That is the statement upon this carton. It is recommended that it will have a therapeutic effect in the treatment of kidney and bladder troubles, diabetes, weak and lame backs, and rheumatism; it is a statement of fact that it dissolves gravel and regulates bladder trouble in children.

Now, the first question for you to determine is whether or not that statement is false. The Government has introduced as a witness the chemist, and, according to my recollection of his testimony, he says that this compound or concoction consists of three main ingredients; that is, that he found pine oil and alcohol, and I believe copaiba, and found rhubarb and colchicum in combination. That is simply my recollection; if you differ with me, of course your recollection controls. The chemist says that these are in the proportion that he testified, consisting of a very large percent of alcohol and some water, less than 50 percent of the medicinal ingredients. On that question the claimant joins issue with the Government. He testifies that it contains certain other ingredients, the nature of which he did not disclose; that under the Pure Food and Drugs Act it is improper on the part of the Government to require a disclosure of the contents of his formula. That is one of the questions for you to decide—whether or not that product has been analyzed chemically correct; whether or not the analysis given by the chemist contains, substantially, the medicinal ingredients alleged, or whether he has omitted some important drug which the claimant contends is in it. That is the first question.

In passing upon the question as to the alleged falsity of the statement you may consider the testimony of the doctors, the medical men, brought forward by the Government, as to whether or not a concoction containing the ingredients described by the chemist has any therapeutic effect for the treatment of the diseases named on

this carton. The doctors testify that they have no really curative effect. They say, further, as to some diseases, they are structural and not functional, and that they are incurable by any medicine known to the pharmacopœia; they contend, and they swear, that such diseases as chronic Bright's, or tuberculosis of the kidney or bladder, are incurable by any known medicinal aid. The claimant in this case joins issue with these gentlemen. You are to pass upon that question—as to whether or not those diseases are curable, and whether or not any of them would be remedied or relieved by the use of this medicine. If you believe that the Government has established that it had no curative or therapeutic effect, then that would be a false statement; and then you would go to another phase of the case, which I will charge you further on.

Now, the defendant produces a number of nonprofessional witnesses, who testify that they had on various occasions various disorders, and that they took this compound with beneficial results; and that it had not been misbranded, because in their own experience it had distinctly beneficial therapeutic effects. The Government contends that that testimony is not to be accepted in lieu of the testimony of doctors, professional men, for the reason that these witnesses are nonexperts, and are not supposed to know the anatomy and physiology of the human system; that they are not prepared to say whether the disease was idiopathic, or organic, or whether it was simply a symptom of some diseased condition. For instance, take the disease commonly called dropsy; it is frequently referred to as an independent disease, when it is known that dropsy is one of the symptoms of Bright's disease, and in the last stages of cirrhosis of the liver; and when a man says he has dropsy he would not say whether he had cirrhosis of the liver or Bright's disease. On the other hand, it is contended by the claimant that these witnesses had serious disorders, and that they were manifested by certain symptoms; and that irrespective of their diagnosis, professional diagnosis, that they were suffering from these diseases, and that they were relieved.

You take all this into consideration and determine whether this particular compound has a therapeutic effect in the treatment of these diseases for which it is recommended.

With reference to one of these diseases, it is a statement of fact—that it will have the effect of dissolving gravel. The Government contends that that is a false statement—that there is no formula, no medicine, taken into the human system that will have the effect of dissolving gravel but what would also destroy the tissues of the body, and that that statement is absurd. The claimant denies that contention. That is one of the questions for you to consider, that is, whether that is a false statement. If this compound will not dissolve gravel, then that is a false statement. On the other hand, if it will dissolve gravel, it is not a false statement.

The Government does not charge that colchicum cannot be used as a remedial agency, under certain circumstances; neither does it insist but what rhubarb may have its use in the medical pharmacopœia, but the Government contends that the union of these various ingredients into this product, of the character established—that although they may have a use for some particular purpose, when

brought together, as in this compound, they have no therapeutic effect, as recommended in this label.

If you reach the conclusion on this question that that is a false statement, the next question you would consider is whether or not it was a fraudulent statement.

The word fraudulent means guilty intent; that is, that the claimant intended to defraud those who should buy Hall's Great Discovery, Texas Wonder. If he honestly believed that Texas Wonder would do what he claimed it would do, then it was not fraudulently misbranded, within the terms of the law, and you should find for the claimant. If you should find that it is a false statement, then in passing upon the question as to whether it was also fraudulent, you may take into consideration the chemical contents of the concoction as proven. You may consider also the therapeutic skill and knowledge of the originator of the concoction. The claimant admits that in his early life he was deprived of educational advantages, except in the common school; that he did not attend a medical college; that he is not a doctor. He contends that he stayed with doctors, went around the country with them, rode with them, and associated with them. He contends that he was afflicted with certain disorders of the nature that he recognized this compound to be a beneficial medical agent for; and that experimenting upon himself and upon others he discovered that this union of the ingredients would be beneficial in the treatment of the diseases named on this carton; and that in that way he derived a good technical and medical knowledge of them. You take into consideration the fact as to whether a man without chemical knowledge, without laboratory experience, can medicinally understand the remedial effects of such drugs as this concoction is shown to have had in it; and determine whether or not that testimony is to be relied upon and accepted in preference to the chemist's who made the laboratory test, the chemical analysis.

There is another element that enters into the question of fraudulent intent, and perhaps the controlling element—as to whether or not this claimant honestly believed that this concoction was a cure—not a specific—but would have a remedial, a therapeutic effect upon the persons suffering with the diseases named on the carton. If he believed that, if you find that it was an honest transaction in that respect, then he would not be guilty of fraudulent intent. In passing upon that question you take into consideration all the facts of the case; determine as to whether his knowledge is that of a person who understands the effect of it, or whether or not it is the statement of a mere faker or charlatan who desires to impose upon the public a formula for sale for the making of money.

Other matters may be considered by you in determining as to the fraudulent intent; one matter as to the wording of the statement on the carton. It seems that the claimant has been engaged in the manufacture of this compound for several years, and that, perhaps, there has lately been some change in the carton; at one time he having on the carton "Dr. E. W. Hall." The Government contends that that is a circumstance going to show that he was undertaking to impress people with the fact that he was a doctor; and it seems that that has been taken off. The Government contends further that the marking, "Hall's Great Discovery"—I believe—

has been taken off. The claimant contends that the reason he did that was that he wanted to comply with the demands of one of the Bureaus of Agriculture; and that more recently he has taken off that part of the label which says it will dissolve gravel, although he still firmly believes that it will dissolve gravel; that he removed that from the more recent cartons. You may take all the circumstances, and determine whether or not there was any fraudulent intent, or whether he was putting it out in the honest belief that it would have all the therapeutic effects it is recommended to have.

Now, it is not necessarily a question as to whether this compound would have a harmful or a harmless effect on people who took it. It may be that those ingredients would have no effect at all; or they may have a harmless effect. That is for you to determine; but the main issue is whether or not they would have the therapeutic effect, that is, whether it was a beneficial formula, a medicinal aid, as recommended on this carton—whether or not that is false, and whether or not it was made with the intent to defraud.

There has been some allusion to two former trials, one in St. Louis, Mo., and the other one in Texas. The trial in St. Louis was a criminal case, and in that case the defendant was acquitted under instructions from the court. The trial in Texas was a condemnation proceeding, similar to that engaging the attention of the court at present. In the Dallas, Tex., case the jury condemned this medicine as being contained in a carton, which had on it a false and fraudulent statement. That trial occurred some time in July. Now this shipment which is before you, under investigation, was some months after that, I believe the 24th of August. You may consider that testimony, and the information or knowledge given to the claimant in that case—what he derived from the trial of that case as to the Government's contention as to the actual contents, and if you find the Government's contention true about it, that they had no therapeutic effect for the diseases recommended, then, if after that trial he continued to put it upon the market, you can consider that circumstance as bearing on the question as to whether there was any intent to defraud the people by putting the article on the market.

UNITED STATES v. 1,590 CASES OF TOMATO PULP

(District Court, E.D. Pennsylvania, Jan. 23, 1919)

255 Fed. 228

Proceeding by the United States against 1,590 cases of tomato pulp. On Government's motion for decree for costs. Motion denied.

DICKINSON, *District Judge.* This proceeding is founded upon the Food and Drugs Act of June 30, 1906, ch. 3915, 34 Stat. 768. The record discloses a libel and answer. The issues thus raised were never determined, because of a very practical situation which arose. The obstacle thus presented to the proceedings being pushed to a conclusion was borne of the fact predicament that the expense of the cus-

tody of the things which had been seized exceeded all money value which the questions at issue could possibly have to the respondents. In consequence of this they acquiesced in the Government's securing a successful conclusion of the proceedings. The question of expense had by this time become of such practical importance that the United States now asks for a decree in personam against the respondents for costs, included in the taxation of which is the expense to which reference had been made. The respondents deny such personal liability. A working arrangement was then reached by which the proceedings could terminate in a decree in favor of the United States, with this question of the liability of the respondents reserved to be determined by the court. This presents the question involved in the present motion.

The Food and Drugs Act, among its obvious purposes and objects, has in view the condemnation of food articles, if unfit for consumption as food. The act contemplates the seizure of the articles, and eventually their possible destruction after condemnation. There is a provision for the further possible fact situation that the articles, although properly subject to condemnation because unfit for food, consumption, may have a value for other uses, and any claimant of the articles may have possession of them by giving bond that no future use of them will be made which is prohibited by law. The proceedings are initially by libel, and by the tenth section of the act are required to conform "as near as may be" to proceedings in admiralty. There would seem to be no doubt that the proceeding in the first instance is one in rem. The practice indicates this by the libel being filed wholly against the rem.

The question arising in this case does not ordinarily arise, for the reason that, when a claimant intervenes, he accompanies his intervention with a bond, under the conditions of which he has made himself responsible for costs. His liability is in further consequence a contractual liability, and hence no question of its existence arises. In the present case no such bond was given, and its absence is the absence of contractual liability. The question before us, therefore, is not whether the claimant is liable for costs when he has agreed to be so liable, but whether he is liable without such an agreement; in other words, whether in a proceeding in rem a decree in personam for costs can be entered against him. Notwithstanding that the proceeding in its origin is a proceeding in rem, as under section 10 it is to follow like proceedings in admiralty, and as we have in admiralty practice proceedings both in rem and in personam, and a proceeding which begins as a proceeding in rem may be transformed into a proceeding in personam, the like change may occur in these proceedings.

We thus reach one of the subsidiary questions which arises. The Food and Drugs Act is not only unquestionably a penal statute but it is highly penal. We therefore cannot read into it the imposition of anything which partakes of the nature of punishment which is not to be found in the law. Moreover, in looking for the meaning of the law in the sense of what was intended by Congress, as it is evidently intended that property may be destroyed, and therefore whatever value it has be lost to the owner, it is fair to assume that,

if Congress had intended that, in addition to suffering this loss, the owner should also be at the expense of the proceedings, it would have so enacted in clear terms. It would follow from this that liability for costs, if not to be found directly in the act itself, could not be found by indirect search for it in the admiralty practice.

The Supreme Court has unquestioned statutory authority to enact and promulgate rules to govern admiralty practice. This power it has exercised. A pertinent rule is rule 26 (29 Sup. Ct. xlii). This relates to proceedings in rem. It contemplates that someone may intervene in the person of a claimant of the property libeled, and requires in the making of any such claim that he shall file a stipulation, with sureties, for the payment of costs and expenses, the payment of which by him may ultimately be decreed.

This rule in its terms is of no aid to us, because, in the present case, no such stipulation was entered. Counsel for the United States seem to concede that the liability for costs, if any, rests upon the following propositions: The rules promulgated by the Supreme Court are the equivalent of statutes and have the binding force of such. We are therefore to read into the law the provisions of rule 26. In further consequence a claimant cannot intervene, except upon condition that he stipulates to pay the costs and expenses. When, therefore, he does intervene, he makes this stipulation, and the fact that it is given without sureties, or is not in writing, does not affect the legal result, which is that he has stipulated to pay the costs and expenses.

Aside from the question before suggested of whether a liability which was not in the Food and Drugs Act could be thus inserted into it, the conclusion reached may be characterized as a non sequitur. It is true that the claimant cannot intervene without entering into the stipulation. It is not true, or at least not clear, that if he does intervene he enters into the stipulation. The truth would seem to be that if he does not enter into the stipulation he has not intervened, and if he has not intervened there can be no pretense that he has agreed to pay costs and expenses. The question suggested of what is the real situation may be answered by the test of applying a remedy for the omission. If a petition to intervene be filed without a compliance with rule 26, and a motion were made to strike the petition from the record, or if the claimant should ask leave to withdraw it, such a motion must prevail, and such leave would unquestionably be granted. The latter is in effect just what this claimant has done. He has abandoned his claim and withdrawn it. Had he done this promptly, the question now before us would doubtless not have arisen, and it may be said that leave to withdraw will be granted only on terms. In this view the question would remain. The test would be the same if the motion were to dismiss, and if this prevailed the whole basis for the argument is taken away. We prefer, however, to base the conclusion reached upon the more substantial foundation of the provisions of the Food and Drugs Act itself. As before stated, it has in view the possibility that the thing seized may be sold, and it provides that in such an event the costs and expenses shall be taken out of the proceeds of sale. It also has in view the possibility that the article seized may be decreed to be destroyed, in which event no provision is made for the liability of anyone for the costs and expenses. The decree here was to destroy.

The motion for the decree is denied.

UNITED STATES v. TETZ ET AL.

(District Court, W.D. Washington, Feb. 1, 1919)

N.J. No. 6874

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of not guilty.

The following charge was delivered to the jury:

CUSHMAN, *District Judge.* Gentlemen, you have had the facts thoroughly gone over before you by the arguments of different counsel, and it is the duty of the court before you go out to consider what verdict should be returned to instruct you upon the law.

This information is short. It charges the defendants with having shipped and delivered for shipment at Ridgefield, as I remember the name of the place, in the State of Washington, to be shipped to Portland, in the State of Oregon, a certain number of cans of milk which had been adulterated by having water substituted for the milk, and by having water mixed and packed with the milk, so as to decrease, lower, and injuriously affect the quality and strength of the milk.

To this information the defendants have entered a plea of not guilty. That places the burden upon the prosecution of establishing every material allegation of the information by evidence sufficient to convince you beyond a reasonable doubt. If you have a reasonable doubt concerning any material allegation of the information, it is your duty to give the defendants the benefit of the doubt and acquit them. The defendants you must consider separately; and if you have a reasonable doubt concerning the guilt of either one of the defendants, it would be your duty to give that defendant the benefit of the doubt and acquit him.

This law under which the information is drawn provides that if any person shall ship or deliver for shipment from any State to any other State any adulterated article of food he shall be punished.

Now, as I understand this testimony, there is not any particular dispute but what this milk was shipped and delivered for shipment at Ridgefield to be shipped to Portland, Oreg., that is, in interstate commerce. Of course milk is an article of food. While the defendants having entered a plea of not guilty, it is necessary that all of these things should be established; yet the real dispute in the case, as I understand it, is regarding whether, if this milk had water added to it in such a way as to lower or decrease or injuriously affect its quality and strength, whether the defendants, or any of them, had knowingly caused that to be done. This statute provides that an article of food shall be deemed, for the purpose of this act, to be adulterated if any substance has been substituted for the article. It is also provided that an article of food shall be deemed, for the purpose of this act, to be adulterated if any substance has been mixed and packed with the article so as to decrease, lower, or injuriously affect its quality or strength; and it is under that law that this information is drawn.

There is no presumption arises against the defendants by reason of the fact that this information has been filed and they have been

brought to trial before you. Every presumption of law is in favor of their innocence, and this presumption continues throughout the trial until such time as the evidence produced by the Government breaks down that presumption and overcomes it by establishing the truth of every material allegation beyond a reasonable doubt.

A reasonable doubt as used in this instruction means just what the two words mean. It is a doubt based upon reason; a doubt for which you can give a reason. The law does not require that before a verdict of guilty should be returned every possibility of mistake be eliminated from the case. Such degree of certainty is seldom ever arrived at in human transactions. But it does require that before you can arrive at a verdict of guilty against a defendant something more than a preponderance of the evidence should support the charge. That has been defined as beyond a reasonable doubt. A reasonable doubt has also been defined as being such a doubt as would cause a man of ordinary intelligence, discretion, decision, and sensibility to pause or hesitate in any of the more important transactions connected with his affairs. If you have such a doubt concerning one or more of the material allegations of the information, then you have a reasonable doubt, and it is your duty to give the defendants the benefit of that doubt and acquit. If you have no such doubt, it is your duty to return a verdict of guilty.

The court will read to you certain instructions that are requested [reads]:

The prosecution in this case is under what is known as the Food and Drug Act, and that part of the statute bearing on this case provides that any person who shall ship or deliver for shipment from any State to another State any food adulterated within the meaning of this act shall be guilty; and such food is adulterated within the meaning of the act, first, if any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength; second, if any substance has been substituted wholly or in part for the article.

The Government under this statute has charged that Gustav Tetz, Alfred Tetz, and William Tetz, Jr., trading as Tetz Bros., on the 20th day of February, 1918, unlawfully shipped and delivered for shipment from Ridgefield, Wash., to Portland, Oreg., a number of cans containing milk, and that such milk when shipped and delivered for shipment was adulterated in that water had been mixed and packed with the milk so as to reduce and lower and injuriously affect its quality and strength, and that such milk was further adulterated in that added water had been substituted in part for milk, which the article purported to be. You are instructed that the burden is upon the Government to prove all these allegations beyond a reasonable doubt.

The purpose of this act was to protect purchasers from injurious deceits by the sale of inferior for superior articles, and to protect the health of the people by preventing the sale of normally wholesome articles to which have been added substance poisonous or detrimental to health. Before you can convict the defendants it must be shown both that they intentionally added and mixed water with the milk and that the effect of adding to and mixing water with the milk was to reduce and lower or injuriously affect its quality or

strength, or by such substitution of water for milk they intended to deceive its purchaser into buying an inferior for a superior product. [Ends reading.]

In that connection I will instruct you that all persons are presumed to intend the natural and ordinary consequences of their voluntary acts.

[Resumes reading.] Crime or an unlawful act necessarily implies knowledge and intent. Our mistakes, accidents, and misfortunes carry a sufficient penalty of their own, and the law does not attempt to add additional punishment.

Under the information the Government charges that the Tetz Brothers unlawfully shipped and delivered for shipment from Ridgefield, Wash., to Portland, Oreg., this milk, and that such milk when shipped and delivered for shipment was then and there adulterated. By this language the Government necessarily implies that the milk must have been adulterated before the Tetz Brothers left it at the station for shipment, and the only way the Tetz Brothers could be held responsible for adulteration after its delivery at the station would have been for some third person to adulterate such milk afterwards with the knowledge and consent of said Tetz Brothers. If purposely adulterated by others without their knowledge or by accident they are not guilty.

If you find that some one else without the knowledge or consent of the said Tetz Brothers mixed water with this milk or removed some of the milk from the cans and substituted water therefor, then you must find the defendants not guilty; because the defendants are not responsible for the acts of third persons over whom they have no control.

If you find that the defendants did not adulterate this milk by the addition of water or by removing some of the milk from the cans and substituting water therefor, and that no one else so adulterated such milk with the knowledge and consent of the defendants, then the said defendants are not guilty as charged.

If you find that such tests are below normal and that the lowness of such tests are due to natural and not to any human agency, then such milk would not be adulterated as charged by the information and the defendants are not guilty.

You are instructed that this is not a prosecution of the defendants merely because their milk fell below some particular standard whether fixed by United States regulations or State law, and the fact that on some particular day their milk fell below such standard tests would not make them guilty; but the question for you to determine is whether they, by themselves or through some third person, added artificially water to this milk or shipped it after they knew it had been so watered. [Concludes reading.]

You are in this case, as in every case where questions of fact are submitted to a jury for determination, the sole and exclusive judges of every question of fact, the weight of the evidence, and the credibility of the witnesses. As I have instructed you in other cases, in determining the credit to be given to the different witnesses and in determining what the facts are from the evidence, you should closely heed the different witnesses as they come upon the witness stand, observe their conduct, demeanor, and actions as they give their testi-

mony, whether they impress you as showing by their manner that they were anxious to tell the truth and the whole truth, neither adding to it or taking from it, and whether they may not have impressed you as reluctant and evasive, holding back something and trying to keep from telling you all they claimed to know, or whether they may not have impressed you that they were too willing, running along and injecting something into the case that nobody seemed to care anything about and which they were asked no questions about. You will consider the testimony of each witness as to whether it appears to be unlikely, unreasonable or improbable, and as to whether it is corroborated by other evidence where you would expect it to be corroborated if true, or whether it is contradicted by other evidence. You will also take into consideration the situation in which each witness was placed as to enabling that witness to know the exact facts; as one witness might be much better situated and located to know what the facts were than another witness who was just as anxious to tell the truth. You will also take into account the interest that each witness has in the case, as shown by his manner of testifying or his relation to the case. The defendants having taken the stand in their own behalf, you will weigh their testimony by the same rules as that of other witnesses, including their natural interest in the case.

UNITED STATES v. 275 CASES OF MINERAL WATER

(District Court, W.D. Louisiana, Feb. 20, 1919)

N.J. No. 6623

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.[6]

The following charge was delivered to the jury:

JACK, *District Judge.* This is a suit brought by the United States under what is known as the Pure Food and Drugs Act for the seizure, condemnation and confiscation of 275 cases of Robinson Spring Water shipped from Pocahontas, Miss., to Shreveport, La.

The act makes it an offense to misbrand any drug shipped in interstate commerce. Section 8 of the act, as amended, provides:

SEC. 8. That the term "misbranded", as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as to the State, Territory, or country in which it is manufactured or produced.

That for the purposes of this act an article shall also be deemed to be misbranded:

In case of drugs:

* * * * * * *

Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

[6] Affirmed, *Bradley* v. *United States,* p. 964, *post.*

On the bottles of water are printed labels reading as follows:

Robinson Spring Water. Springs at Pocahontas, Miss. Recommended in the treatment of Bright's Disease, Diabetes, Dropsy, Cystitis, Gout, Rheumatism, Indigestion, Kidney and Bladder Troubles. Robinson Springs and Sanitarium Co., Pocahontas, Miss.

It is not contended that the water contains any deleterious substances, but that it contains no element of a thereapeutic or curative value in the treatment of the diseases for which it is recommended on the labels, and that such statements on the labels are false and fraudulent, knowingly and recklessly made in wanton disregard of their truth or falsity, for the purpose of creating in the minds of prospective purchasers thereof, the impression and belief that the water was in whole or in part composed of ingredients effective as a remedy for Bright's disease, diabetes, dropsy, and the other diseases named, when, in truth and in fact, such water was not capable of producing the therapeutic effects claimed for it.

C. L. Bradley has made an appearance in the suit, claiming the water as his property, admitting the interstate transportation of same, but denying that the bottles are misbranded, or that the labels thereon contain false and fraudulent statements. He avers that many reputable physicians have used the water in the treatment of the diseases named on the labels, and alleges that the same was beneficial in the treatment of such diseases. He especially avers that before putting the water on the market he had it thoroughly tested and made no attempt to sell any of the water until he had been advised by reputable physicians of its therapeutical value in the treatment of the diseases for which he recommends it. He avers that in labeling the bottles he acted in entire good faith and denies that he attempted to perpetrate any fraud or deception upon the public.

Thus by the pleadings the issue is made clear and distinct, and you are to determine under the evidence, first, whether or not the water in question any more than any other pure water is of curative value in the treatment of the diseases enumerated on the label. If you determine that it is, then there is no need for any further inquiry. Defendant would be entitled to judgment rejecting the demands of the Government.

On the contrary, should you find that the water in question was not of medicinal value in the treatment of the diseases named, then your second inquiry would be whether or not the recommendation made by the owner, of the use of the water in the treatment of the diseases named, was fraudulently made. That brings up the question of good faith. Did Bradley, or did he not, knowingly recommend in the treatment of these diseases water which had no medicinal value?

If you find that the water was not of value for the purposes recommended, but that defendant acted in good faith, then there should be a verdict in his favor; but, if you find that the water was not of value for the purposes recommended, to the knowledge of the defendant, and that his purpose was to deceive and impose upon the public, then you should return a verdict for the Government.

You will bear in mind that the Government does not attack the water as bad or unfit for use, but, on the contrary, admits that it is a pure water, good for table use, but denies that it has any value

in the treatment of the diseases for which it is recommended. The purpose of the suit is, therefore, not to suppress the sale of the water but to prevent the advertising and holding out of the water as of value in the treatment of diseases in which the Government claims it is of no benefit.

The Pure Food and Drugs Act is one of the best laws of its character placed on the statute books in many years. It simply means that a man shall correctly brand or label that which he ships in interstate commerce, that the purchaser must be informed of the character of the article bought, and must not be deceived as to its curative properties, in other words, that the drug must not be sold under false representations.

Barnum, the veteran showman, used to say that the American people like to be humbugged. That is, perhaps, more or less true. Consequently, a man who deliberately bets his money on a shell game, or who invests his savings in a gold brick, receives, and is entitled to, little sympathy. There is, however, a class of people, not ordinarily over credulous or gullible in ordinary matters of business, who, when stricken with a fatal malady, like drowning men, grasp at straws, and fall easy victims to quack doctors and patent medicine fakers. Such a man, when told by his physician that his case is hopeless and his days numbered, against his own better judgment, tries one nostrum after another in the desperate hope that he may find a cure. Such a man is the more easily persuaded to buy an alleged remedy whose efficacy he may doubt if he knows that it is at least perfectly harmless. These remarks are made to impress upon your minds the wisdom of the law and the importance of its strict enforcement.

If the water in question has the qualities attributed to it by the owner, it is not only his right to so advertise it but is to the interest of the public that he should do so. On the other hand, if the water has not the qualities ascribed to it, then such false advertising by labels on the bottles should be suppressed, and the deception of the public should be stopped.

These, then, are questions of disputed fact, of which you are the exclusive judges. This is not a criminal prosecution and the Government is not required to make out its case beyond a reasonable doubt. If the evidence establishes to your satisfaction the contentions of the Government, you should return a verdict for plaintiff, otherwise your finding should be for the defendant.

You may retire and consider your verdict.

UNITED STATES v. ITALIAN IMPORTING CO.

(District Court, S.D. New York, June 4, 1919)

N.J. No. 6938

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of not guilty.

The following charge was delivered to the jury:

MANTON, *District Judge*. Gentlemen of the jury: The Congress of the United States, for good and wholesome reasons, passed an act

which we have to do with here, known as the Federal Food and Drugs Act, and it is charged that the defendant violated the provisions of that act.

The grand jury for this district has found an indictment against the defendant, charging them with violations of this act in two counts. The first count of the indictment charges that the defendant shipped olive oil, in tin cans, from the city of New York to the State of Connecticut, and, therefore, that constituted interstate commerce in olive oil.

It is charged that this was delivered to the firm of Calcaterra & Son, Bridgeport, Conn. There was delivered a certain package, containing articles of food; that that package had a label upon it, and that that label, as you see it in the exhibit on the tin can which has been offered in evidence here, among other things it finds the contents was the net contents of 1 quart, but the Government says that that is a misbranding of the contents in that can, and that because it was not in truth and in fact a net contents of 1 quart, the statute has been violated.

It is further charged in the second count of the indictment that this food, contained in cans shipped and delivered as I have described it to you, was misbranded, in that the food in this package and that the quantity of the contents was not plainly and conspicuously marked on the outside of the package; that is to say, that the true quantity was not conspicuously marked on the outside of this package, this tin can.

Now, the term "misbranding" is defined in the statute as applying to all drugs and articles of food, or articles which enter into the composition of food, a package or label which shall bear any statement, design, or device regarding such article or the ingredients or substance contained therein, which shall be false or misleading in any particular.

So you see the question, then, is whether there was a false and misleading or a misbranding of this package, and the package which was shipped to this firm at Bridgeport, Conn., from New York City.

Now, if you find, gentlemen, from the evidence, beyond a reasonable doubt, that there was such a misbranding, that the net contents of the can which was shipped to Calcaterra & Son was not 1 quart, and if you find that the defendant knowingly and willfully placed a lesser quantity of olive oil in those cans, and shipped them in interstate commerce, then that would be a violation of the statute and you would find them guilty.

The second count of the indictment deals with what has been referred to as the amendment of the act. That provides that if it is in a package form and the quantity of the contents be not plainly and conspicuously marked on the outside of the package, in terms of weight, measurement, or numerical count, that is a violation of the act; that is to say, if the true contents of the quantity or measurement is not plainly and legibly found on the outside of the package, then that is a violation of the act.

The Government charges in the first count that they did print it as net contents of 1 quart, and that in truth and in fact it was not 1 quart, and in the second count of the indictment they charge that

the true net content, which the Government says was less than 1 quart, was not plainly and legibly written on the package or printed on the package on its outside.

Now, something has been said here about inadvertence or shortage due to inadvertence in filling the cans. The statute provides that reasonable variations shall be permitted and tolerances, and also exemptions as to small packages shall be established by rules and regulations made in accordance with the provision of section 3 of the act, and that provides for rules and regulations which are made by the Secretary of Agriculture. Now, those rules and regulations permit a certain variation, but, of course, it does not permit willful conduct, or intentional or willful underweighing or undermeasuring of the contents; that is, placing and undermeasuring in the tin can or the package and then misbranding it and saying it is more than in truth and in fact it is, but inadvertence may be of importance in this regard only: If it is done in good faith, without intent to do wrong, without willful design to do wrong in the usual course of its business, in ignorance or in inadvertence filling these cans, and at underweight or undermeasurement, then you can see they would not be guilty, because no man under our law can commit a crime through a mistake. The commission of a crime depends upon a criminal intent. Of course, it is true that the law is that a man is presumed to intend the natural and flowing consequences of his act. So you must find out if this defendant intended to misbrand or misstate in its printing on these tins and packages the true weight or the true contents of the packages in question, and if they did, if you are satisfied of that beyond a reasonable doubt, then you will find them guilty. If you are not satisfied, and you have a reasonable doubt as to their guilt, then you will find them not guilty.

Now, reasonable doubt in the law, gentlemen, is a doubt which means just what that term implies. It means a doubt for which you can ascribe a reason. It is not a guess, a surmise, or a conjecture, or a reluctance to perform what may be an unpleasant duty. It is considering all of the evidence, weighing it, and after an honest, conscientious consideration of it, saying there is a doubt in your mind for which you can ascribe a reason. Then the law says if such doubt exists, you must accord the benefit of that doubt to the case and find the defendant not guilty.

The Government is obliged to prove its case beyond a reasonable doubt, and when it satisfies you of the guilt of this defendant, if it does, beyond a reasonable doubt, then, and then only, can you convict for the charge as specified in the indictment.

I think that covers all of the case, gentlemen. Questions of fact are solely for your determination. The court has no opinion as to questions of fact. I leave that to you. You will find a verdict of either guilty or not guilty, as you think the facts justify under your conscientious judgment.

JUROR No. 3. Can I ask the date of that act?

The COURT. Yes, 1913; the original act was 1909.

Mr. JOYCE. The original act was 1906.

The COURT. The amendment was in 1913.

UNITED STATES v. PARASKEVOPOLUS

(District Court, S.D. New York, June 6, 1919)

N.J. No. 6809

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against Christ Paraskevopolus, alleging shipment by said defendant from the State of New York into the State of Massachusetts, of quantities of an article, labeled in part, respectively, "Finest Quality Olive Oil ¼ Gallon Net," and "Olive Oil Speciality Lucca 1 Gallon Net," which was adulterated and misbranded.

The following charge was delivered to the jury:

KNOX, *District Judge.* Gentlemen of the jury: In this case the defendant, who bears a lengthy Greek name which I shall not attempt to pronounce, is charged with trading and doing business under the name of the National Importing Company; and he is charged here with having sent a quantity of oil, which in fact was cottonseed oil, flavored with olive oil, from the city of New York to Boston, Mass., to a merchant from that city who has testified in court.

The statutes of the United States provide that whoever ships in interstate commerce adulterated food products or who ships food products which are misbranded or who ships food products in interstate commerce containing false and misleading labels, and upon which is not set forth accurately the weight and contents of the package, is guilty of an offense under the Food and Drugs Act.

This defendant is therefore charged by the Government in this case with having shipped adulterated food products; that he has misbranded his food products; that the label does not contain the net weight of the food products contained therein.

It has been argued before you that the Government by regulations that have been established by the Department of Agriculture allows a variation of weight in the contents of food packages; that is, that such an allowance is to be made and is recognized by the Government where the variation was more or less trifling and where the variation of weight of contents is in excess of the weight marked on the package along with instances where it has some with less; that is, that there should be a reasonable variation that would be liable to occur in the ordinary routine of business.

The Government in this case takes the position that there is a shortage running from 5 to 10 percent in each of these shipments of oil that have been called to your attention, and that therefore the defendant comes within the purview of the statute because there is no variation in favor I might say of the public or of the consumer of this oil who purchased it upon the assumption that the contents, either quarts or gallons, is such, as the case may be.

The oil is admittedly 90 percent, approximately, cottonseed oil and is flavored with approximately 10 percent of olive oil. The cans in

which the oil is shipped have been put in evidence before you, and it would appear from these cans, at least it would to me, to have the appearance—that is, the cans—to make you believe—but that of course is for you to determine—that they contained olive oil.

The purpose of the Food and Drugs Act was to protect the public. In the very nature of affairs, when we go to a grocery store to buy food of different sorts and different supplies, we have got to depend more or less upon the representations that are made to us as to the contents of packages of this kind and of course we have to rely upon those more or less, and Congress has assumed that the public relies more or less upon the label upon the container, and consequently has passed this regulation; and its purpose is that the dishonest person shall not deceive the public by their false labels, false notations of weight, or by the sale of adulterated foodstuffs; and in the event that merchants undertake so to deceive, that he who does that subjects himself or themselves to liability under the law.

This law is rather drastic in its terms, insofar as it does not require a specific criminal intent upon the part of the defendant to be shown. All that it is necessary for the Government to do in a prosecution such as this is to show that the person knowingly did or committed the prohibited act. Therefore, did he, the defendant here, ship the goods in question knowing that they were adulterated and containing labels which were calculated to mislead and deceive the public? And did he put upon the cans false weights which did not vary in favor of the public or which were not higher to a greater or less extent than the amount marked on the packages?

If from all the evidence in the case you find that the defendant has made these shipments, and you may so find beyond a reasonable doubt, then your verdict should be guilty. If he did not so make the shipments, your verdict will be not guilty.

You have, however, the evidence in the case here upon the part of the defendant's own witnesses that when this particular order came in, or rather was called to their attention, the order was called to the attention of the defendant, and that therefore his attention was drawn to it and that thereafter this shipment went forward. The defendant seeks to justify what he has done by the assertion that there was pasted across each of these cans a narrow paper strip which contained the statement that the contents of the package was cottonseed oil flavored with olive oil. You have heard the testimony of the Government inspector that when he saw these packages in Boston, there was no such strip upon any of the cans examined by him. You have heard the testimony of the consignee of the packages in question who said that he examined each of the cans and found no such strips upon any of the cans.

Now, even if you should find that the strip in the first instance was placed upon the can, then you can consider whether or not it was done as a mere subterfuge with the expectation and purpose that it would be taken off and that the oil was placed in these cans for the purpose of deceiving and misleading the public in any event. If you feel that the labels are of such a character that such a situation may reasonably be developed and that that situation was in the mind of the shipper so as to ultimately deceive and mislead a person who should ultimately purchase these cans, then you may find the defendant guilty.

He, of course, has the presumption of innocence with him until the evidence adduced in the case has determined in your mind that he is guilty beyond a reasonable doubt. A reasonable doubt is not a capricious doubt, one born of reluctance on the part of a jury to perform an unpleasant task, but is a doubt based upon and growing out of some lack of the evidence which leaves you short of a moral certainty of the defendant's guilt. If you have an abiding conviction of the fact that the defendant did ship the goods in the manner and form as charged by the Government there should be no hesitancy upon your part in returning a verdict of guilty.

Take the case, gentlemen.

Mr. CELLAR. I request Your Honor to charge that if the word "compound" is on the tin it is not necessary to state the proportion of the ingredients.

The COURT. Not necessary to state the proportion of the ingredients, as I understand it.

Mr. CELLAR. I ask Your Honor to charge that the defendant would not be responsible for anything that the Stellar Macaroni Company have done.

The COURT. I instruct them—there you are back to the original proposition—that if it be true that the defendant placed the oil in the cans such as has appeared here, it is a question for them to say what his intent was. You may in that connection consider that letter which went into evidence before you, gentlemen.

Mr. CELLAR. I ask Your Honor to charge that if the jury find that the strips were placed on the can they may further find that those strips may have been, in their mind, a sufficient notice to the consuming public that there was no misbranding.

The COURT. You may consider it, gentlemen. But you may also consider in that connection the narrowness of the strips as they were displayed upon the can.

Mr. CELLAR. I ask Your Honor to charge that the statutes do not prescribe any specified form or manner of misbranding.

The COURT. I believe that is true.

UNITED STATES v. GAMANOS ET AL.

(District Court, S.D. New York, July 16, 1919)

N.J. No. 6893

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against Nicholas Gamanos and George Booskos, alleging shipment from the State of New York into the State of Connecticut, of a quantity of an article, labeled in part "Extra Pure Olive Oil," which was misbranded.

The following charge was delivered to the jury:

KNOX, *District Judge.* Gentlemen of the jury: I will submit to you in this prosecution the charge the Government has made against

the partnership of Gamanos & Booskos in the second count of the information which has been filed against them, which charge is that this firm in February of 1918, to wit, on the 11th day of February, shipped in interstate commerce an article of food which was misbranded within the meaning of the Pure Food Law of the United States.

Counsel this morning in summing up to you said that if this shipment had been to Brooklyn there would have been no offense here, but that it being to Connecticut, there is an offense. If the defendant here, the copartnership, has violated good morals, it would violate them none the less if the shipment was to Brooklyn; but the fact is that the United States court has jurisdiction only of cases of this character where interstate commerce is involved; that, under the Constitution of the United States, Congress has a right to regulate commerce between the States; so that on a shipment to Brooklyn, that being within the State of New York, the Federal Government must leave the matter to the authorities of the State of New York, it being powerless to act in the case by reason of the sovereignty of the State; but where the shipment crosses a State line, then the Government has jurisdiction. I simply mention this to you to make it clear to you as to why there should be a distinction by reason of what the district attorney said to you this morning.

Congress has enacted, in an endeavor to protect the public, the various pure food laws, and it has said that when a man engages in shipping food products or food to be consumed by the general public, those food products must be honestly labeled and branded, because the only thing you and I have to go by when we enter a store is the brand and the representation that is made to us through the labels upon that which we purchase. That is, if I go into a store and want olive oil for my table, I have a right to secure olive oil and not be misled by getting an inferior product and something that is not olive oil.

Of course, it is pretty obvious to us, from our general knowledge, in a case of this character, that olive oil being a foreign product which has been brought over here from Italy or paid a duty, perhaps, and entering into the trade here, must of necessity be of greater value than is corn oil, of which great quantities may be produced in the United States. Consequently it is said that if anyone misbrands and labels a food product in such a manner as to deceive or calculated to deceive the public as to what that food product actually is, the person or persons doing that thing are guilty of an offense under the law, and upon conviction are subjected to a certain punishment. So consequently the case resolves itself into this, as to whether or not this firm did, on the 21st day of February, ship, as has been charged against them, these articles, to wit, six gallon cans of oil labeled and marked so as to deceive the public. You will look at the can, you will see upon it there that it purports to contain olive oil which has come from Sicily; there is a picture of an olive tree with peasants or natives picking olives; and that it is absolutely pure. And you can say what thought or impression is that going to make upon the mind of the purchaser who wants olive oil and sees it? Is that person going to be deceived as to what is in that can?

It has been testified before you here, and indeed it is not disputed, the actual contents of the can was corn oil which had been flavored

with olive oil; that it had present in it more than 50 percent, indeed, I think perhaps 75 percent of the contents of the can was corn oil and not olive oil. Standing alone, if you have found those facts which are not disputed to be true, you would be justified in returning a verdict of guilty against the defendant copartnership.

The copartnership, however, depends upon the ground that it is said they pasted upon this can several labels, one of which has been introduced into evidence before you, wherein it indicates that this can did not contain pure olive oil, but that it contained a compound, that is a mixture of olive oil and of some other oil—corn oil; and they seek to escape liability upon the ground that they have done all that is legally required of them to take them outside of the provisions of the law under which this information has been filed against them. And the law with respect to that is: That in the case of articles labeled, branded, or tagged so as to plainly indicate that they are compounds, imitations, or blends, then they are not guilty of an offense. But you will recall the testimony here that when the inspector saw these cans in the place of business of the merchant up in Connecticut, there were no tags upon the cans; and consequently the question arises as to whether or not those tags were on the cans at the time they were shipped; and even if you should find that the tags or these labels were upon the cans, were those labels honestly put there so as to inform the purchaser of that can as to the actual contents of the can, or were they put there as a mere subterfuge and a device, so that whoever got them, that they might use that as a stepping stone to safety in case the shipment was discovered. And even if they were put there, was that tag or label of such a character as to plainly indicate to the purchaser that that can contained a blend? Now those are questions for your determination. It has been suggested to you that that label might easily be rubbed off; consequently in the first place you will determine whether or not it was put there, and if it was put there, was it put there for the purpose of being rubbed off so that the purchaser would never have any idea as to what the true contents of the can were, save as to the lithographed matter contained upon the can, and that is that it shows that this was olive oil or purported to show that the contents of the can was olive oil from Sicily.

You can also consider in the event that you find that the tags were placed upon the can, as to how conspicuous or effective they would have been to serve the purposes of the law; and, in short, whether it was an honest compliance with the law or whether as I said before it was a mere subterfuge.

The mere fact that one of these partners was down in Camp Gordon does not make it impossible for you to return a verdict of guilty against the partnership here, because during the time he was away from the place of business they are charged with doing business under the name of Gamanos & Booskos. If you find that the firm made the shipment, then it is immaterial whether either of these gentlemen who are here in court as members of the firm were present at that time or not, because the theory of the law is that this partnership constituted a separate entity differing from either of these parties. And as you men know, in your everyday business affairs a partnership does acts every day in which neither of the

partners have any actual positive personal knowledge at the time, the act was done, and the theory of the law is that this being a separate entity, it can act in and of itself, and that the individuals who go to make up the partnership cannot take advantage of what someone in their employ does, and then come into court and escape liability for what may have been done. That is, if you or I set in motion a chain of circumstances, it is incumbent upon us, in good conscience and good law, that we should know what is being done under our authority; and if we do not do that either through negligence, carelessness, or whatnot, then when the law is violated we should not say we would not be hurt upon the ground that we were not there and had no actual knowledge of what transpired. It would be an easy thing for persons to escape liability on such a pretense as that, if clerks were pursuing a certain line of business and then the proprietor of that business would say, "I was absent when this particular shipment went forth; I am not responsible for that."

It is a simple case in the sense that the amount involved is comparatively little, but nevertheless it is important in that we should have the assurance that so far as the law is concerned, we are going to get that which we think we are getting when we go into a store to purchase it.

Now, that is a simple proposition as to whether or not these men have done something or this firm has done something that is calculated to deceive, and to create a misapprehension and misconception in the minds of some one who wants to buy that product. It must be inferred that these men or this copartnership which is manufacturing food products have some idea that somebody is going to buy it, and they are bound to take cognizance of the provisions of the law with respect thereto.

This defendant, the copartnership, is entitled, of course, to the presumption of innocence until the evidence adduced upon the trial convinces you beyond a reasonable doubt that it is not guilty of the offense charged against them. And a reasonable doubt is not a capricious doubt, not a fancied doubt, not a doubt based upon the reluctance upon the part of a jury to perform an unpleasant task, but it is a doubt based upon and growing out of the evidence in the case and such as leaves you short of a moral certainty of the defendant's guilt. If, after an impartial consideration of all the evidence in the case, you do not have an abiding conviction of the defendant's guilt as charged in the information, then you have a reasonable doubt, and it would be your duty to acquit. But if, after such impartial consideration of all the evidence in the case, you do have an abiding conviction of the defendant's guilt, such as you would be willing to act upon in the more important affairs in your own life, that is, that certainty which would cause you to pursue a certain line of conduct, then you have no reasonable doubt with respect to the defendant's guilt and you should rerturn a verdict of guilty.

Gentlemen, you may take the case.

JUROR No. 2. May I ask a question?

THE COURT. Yes.

JUROR No. 2. What is the punishment in case of conviction?

THE COURT. The punishment in the case of conviction of a first offense is a fine.

Mr. WELCH. If Your Honor please, will you entertain these instructions to charge the jury?

The COURT. Yes.

Mr. WELCH. I ask Your Honor to charge the jury first: That a firm or partnership is not a "person" within the meaning of the word as used in the act under which the information is laid.

The COURT. I decline to so charge.

Mr. WELCH. I ask Your Honor to charge the jury that the defendant Nicholas Gamanos did not ship or deliver for shipment this particular lot of goods, and that if he did not do it himself in fact and had no knowledge of it and neither instructed, ratified, or stood by and saw any of his agents or employees do it, that it was not his act.

The COURT. I decline to so charge.

Mr. WELCH. I ask Your Honor to charge the jury that the law does not require any particular form of label or container.

The COURT. No; that is entirely a question or a matter of evidence as to the good faith there and whether or not the label is calculated to deceive or not.

Mr. WELCH. I ask Your Honor to charge the jury that they are only to consider the condition of the container when shipped, and that anything which happens afterward is of no moment.

The COURT. They will take into consideration all the evidence in the case and give to it such weight as they think it is fairly entitled to receive.

Mr. WELCH. I ask Your Honor to charge the jury that under the law it is no offense if the container bears a label which plainly states that it is a corn oil.

The COURT. I have charged the jury on that point. You may retire, gentlemen.

Mr. WELCH. And I take an exception to Your Honor's refusal to charge.

UNITED STATES v. 141 BOTTLES OF DRUG PRODUCTS

(District Court, S.D. Texas, July 16, 1919)

N.J. No. 8360

Libel under section 10 of the Food and Drugs Act. Trial before the Court. Decree in favor of the United States.[6a]

HUTCHESON, *District Judge.* This is a libel brought by the Government of the United States for condemnation of 141 bottles, more or less, of drug products under the act of Congress approved June 30, 1906, as amended by the act of August 23, 1912, chapter 352, and the act of March 3, 1913, chapter 107.

The said 141 bottles contained the preparation known and described as "A Texas Wonder."

[6a] Affirmed, *Hall* v. *United States,* p. 978, *post.*

The libel charged that on the carton enclosing the drug product or medicines in said bottles was printed the following label:

A Texas Wonder, Hall's Great Discovery, Contains 43% alcohol before diluted. 5% after diluted. The Texas Wonder! Hall's Great Discovery, for Kidney and Bladder Troubles, Diabetes, Weak and Lame Backs, Rheumatism, Gravel, Regulates Bladder Trouble in Children. One small bottle is 2 months' treatment. Price $1.25 per bottle. E.W. Hall, Sole Manufacturer, St. Louis, Mo.

That said label on said carton is false and fraudulent in that the drug or medicine contains no ingredient or combination of ingredients capable of producing the curative or therapeutic effects claimed for it, and that the said products are thereby misbranded in violation of law.

To this libel an answer and petition in intervention was filed by E. W. Hall, the person charged in the libel to be the proprietor and distributor of this medicine, claiming therein to be the owner of said property, and among other things pleading *res adjudicata* by reason of a verdict and judgment of "not guilty" in a suit entered and tried in the United States District Court for the Eastern District of Missouri, March term, 1915, of said court, in which the United States Government was plaintiff and the said E. W. Hall was defendant. The answer further denied the allegations in the libel and specifically declared that the medicine was not misbranded, for that it would in fact produce the curative and therapeutic effects when administered as directed, as claimed for it by the defendant. He prays that the articles be released to him, and further that the United States district attorney be enjoined from further levying upon or seizing any of the defendant's goods.

The plea of former judgment is denied, as "an essential element of the offense under this act is the state of mind of defendant, a factor necessarily subject to constant change. To contend that a prosecution or proceeding which turned not as most offenses do on the commission of the overt act, but on the state of mind of the defendant, would constitute a bar to a proceeding based upon the defendant's state of mind at a later date, is essentially unsound."

On the trial of the cause the Government produced an analysis of the contents of the medicine, showing its ingredients as found by the analyst. The defendant denied the correctness of the analysis, claiming that in addition to the ingredients ascertained by the chemist to be in the medicine, there was a further ingredient of sweet spirits of niter, and that in lieu of the spirits of turpentine, as declared by the chemist, the medicine in truth and in fact contained oil of juniper.

The Government made proof by physicians of standing in the community, both upon the nature and the character of the diseases claimed to be cured, and upon the medicinal properties and effects if any of the medicine itself upon such diseases.

The proof establishes very clearly to the mind of the court that there is no medicinal treatment which will aid or relieve cases of diabetes, and that no medicine has properties which will afford relief by dissolving gravel. On these two diseases, for which the carton claims curative properties in the medicine, there can be no shadow of doubt that the entire claim is false. The Government also proved beyond question that no single medicine or combination of medicine

could be helpful for all of the various forms of diseases named on the carton, and that in that respect the claims of it are false.

The evidence further established that the general claim that the medicine had curative properties for kidney and bladder troubles, without limiting the claim to particular kinds of such troubles, made the claim embrace it in certain characters of kidney afflictions, which, under the admission of the defendant himself, the medicine did not have, and could not have any curative effects upon.

The evidence further established that while in some instances a weak or lame back might possibly have its origin or explanation in some derangement of the kidney or bladder, or more properly some disturbance there, that the vast majority of weak and lame backs are ascribable to constipation, to lumbago, and to various muscular conditions having no relation whatever to kidney or bladder troubles, making it clear that the claim of the medicine in the general terms as stated must necessarily be held to be false, since in the very nature of things it was not even claimed by its manufacturer and distributor that the medicine had properties to ease muscular affections. So that it is clear that the carton, as to its curative properties as to weak and lame backs, also is misbranded.

As to rheumatism, much evidence was offered upon the nature and cause of rheumatism, and while it seems clear that at one time rheumatism was associated with kidney troubles, it has now come to be recognized as a specific infection, in no manner related to the kidney and bladder, and it seems also clear as to rheumatism, that the language used in the carton constitutes a case of misbranding.

As to the final claim on the carton, that it regulates bladder trouble in children, the explanation made by the defendant of the scope of that claim, that it refers to bed wetting, indicates plainly that his use of the term is too broad, because it does not exclude other troubles than the one he claims to cure, and would be plainly calculated, therefore, to mislead.

I am therefore of the opinion that every claim made for the medicine on the carton, in the form adopted there, is false, and that a clear and undeniable case of misbranding has been made out. But it is not sufficient in a case of this kind to establish merely the falsity of the claim; it must also appear that this false claim was made fraudulently—that is, either the defendant knew it was false or without knowledge of its truth or falsity made the claim recklessly and without a firm and honest belief in its truth. This feature of the case has given me far more concern than the question of the misbranding itself.

It is clearly settled that a mere difference of medical opinion will not sustain a condemnation. *Magnetic Healing Company* v. *McAnnulty*, 187 U.S. 94; *United States* v. *Johnson*, 221 U.S. 499. It is equally well settled, however, *Seven Cases* v. *United States*, 239 U.S. 517,

that false and fraudulent representations may be made with respect to the curative effect of substances is obvious. It is said that the owner has the right to give his views regarding the effect of his drugs, *but state of mind is itself a fact*, and may be a material fact, and false and fraudulent representations may be made about it; and persons who make or deal in substances, or compositions, alleged to be curative, are in a position to have superior knowledge and may be held in good faith in their statements.

Or, as was stated by Mr. Justice McKenna, in *United States* v. *New South Farm*, 241 U.S. 71:

> An article alone is not necessarily the inducement and compensation for its purchase. It is in the use to which it may be put, the purpose it may serve; and there is deception and fraud when the article is not of the character or kind represented, and hence does not serve the purpose.

The defendant admits that he is not himself a physician, though many of his circulars and advertisements declare him to be "Dr. E. W. Hall", nor does he claim for himself any special medical skill or knowledge. He relies most largely upon the fact of the sales to thousands of purchasers, and the numerous and glowing testimonials about cures, which he no doubt received, as an evidence that he could not be guilty of fraud in the matter. But the slightest reflection upon the well-known fact that persons given to self-medication are credulous and partisan, and prone to deny nature credit for their recovery, and that on this well-known trait of human nature these compounders of specifics and nostrums build their business, deprives this claim of any weighty significance; because it will not do for a person who has been able to prey upon the credulity of a community to escape the consequences of his acts by the very success of his scheme. I think the matter has been excellently put by Judge Dickinson, in *United States* v. *American Laboratories*, 222 Fed. 107:

> The fact that there was a widely spread disposition among people to give credence to the statement because of a superstitious belief in its efficacy, or indeed such a reputation for the remedy itself as to make people prejudiced in its favor, would not diminish, but would increase, the guilt of him who sought to make money by false statements and fraudulent devices. It is difficult, and indeed practically impossible, to draw a line in the abstract other than a broad line between these two things. There would seem to be no other way of dealing with the subject than to submit to the common-sense judgment of a jury to find whether in a given case the acts of a defendant have been honest, however mistaken, or whether they have been false and fraudulent.

Under this view of the matter, this court, sitting as a jury, can reach no reasonable conclusion other than that the defendant, whatever may have been the honesty or innocency of his attitude when the medicine was first put out, now knows, and knowing commits a fraud in his advertisements, that the medicine is not efficacious as a remedy in the form and manner under which it is advertised. It would be sufficient, in my judgment, to sustain the libel, for me to hold that the defendant did not know that his statements were false, but merely made them recklessly and without due regard for that fact. But I think the evidence establishes more, and leaves no doubt that the defendant is seeking by a broad and comprehensive claim for his medicine, to increase its sales, with an absolute knowledge on his part of the falsity of his advertisements, certainly as to a part of the matters claimed for it.

It is due the defendant, however, to say that the evidence establishes without serious dispute that the preparation contains in it no harmful or deleterious drug, nor is it, as compounded, deleterious when used in the manner prescribed. So that, while it is clear to my mind that the defendant has violated the statute by fraudulently misbranding his product, it is equally clear that he does not stand before the court as a person who practices fraud upon the public for the purpose of vending a harmful and deleterious substance.

The danger and injury to the public from this character of advertisement is, however, considerable, in that it induces persons to rely in serious cases, upon a preparation without healing virtue, when [but] for this reliance, they would no doubt secure proper advice and treatment for the ills which affect them.

Entertaining these views, it follows that the prayer of the libel for condemnation must be sustained, and a decree of forfeiture with costs entered, which decree of forfeiture may be, however, avoided by the claimant's paying all costs of this proceeding and making bond in the sum of $250 conditioned as by law, provided that the goods will not be used or handled in violation of law; or the intervenor and claimant may in lieu of bond deposit with the clerk of this court in cash the sum of $250, which said money shall be deposited on the same conditions as the conditions contained in the bond hereinbefore mentioned, and shall be held by the clerk to abide any further orders of this court to be made herein. A decree will therefore be entered in accordance herewith giving the intervener and claimant, E. W. Hall, thirty (30) days after the final judgment in this case, within which to make his bond if he so desires, or deposit the cash as hereinbefore provided in lieu of bond, and it is directed that should the claimant and intervener, E. W. Hall, not make a bond or deposit the cash, as herein provided, within the thirty (30) days allowed, that the 141 bottles of drug compound known as "Texas Wonder, Hall's Great Discovery" be destroyed. The costs of this proceeding are taxed against the claimant, E. W. Hall, and the Southern Drug Company.

UNITED STATES v. MONAHOS

(District Court, S.D. New York, July 24, 1919)

N.J. No. 7046

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The following charge was delivered to the jury:

SMITH, *District Judge.* Gentlemen of the jury: There are two counts and certain charges in the indictment against the defendant, one of which is being tried. The first count charges him with shipping or causing to be shipped, a number of cans of a food article which is alleged to have been adulterated, and the second count charges him with shipping or causing to be shipped from one State to another, an article of food in cans that were misbranded.

The first count charges that on the 23d day of April 1918, he shipped and caused to be shipped from the city of New York, in the State of New York, to the city of New Haven, in the State of Connecticut, a number of cans containing an article of food, to Domenico Sylvestro, and the charge in this count sets out the words and figures with which these cans were branded or marked, and which is in evidence before you.

It is charged in the first count, gentlemen, that the contents of these cans were shipped as pure olive oil, and that they were adulterated

by reason of the fact that they contained cottonseed oil mainly, and that only part of the contents of the can was composed of olive oil. In other words, it was a compound or mixture of olive oil and cottonseed oil.

Now the statute provides that an article of food is adulterated if any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength, or if any substance has been substituted wholly or in part for the article.

If you find from the evidence, gentlemen, that this was shipped as olive oil, and you find that it was made up mainly of cottonseed oil as well as olive oil, the defendant would be guilty of shipping adulterated food, and it would be your duty to find him guilty on the first count.

The second count charges this shipment of cans to have been misbranded. The misbranding charged is that it was branded as olive oil, whereas in fact it was made up largely of cottonseed oil as well, and also that by certain devices on the can, and the wording of the label, taken together, it was misleading, in that it created the impression that it was an imported article from Italy, whereas as a matter of fact it was a domestic product, manufactured in this country, made up of cottonseed oil and olive oil.

Now, gentlemen, if you believe that the defendant shipped or caused to be shipped these cans, or any one of them, and that they were branded, "Olive Oil", and if you find that they were made up of olive oil and cottonseed oil, the defendant would be guilty of shipping misbranded articles of food, and you would find him guilty; or, if you find that the label represented that this was a foreign product, manufactured in and imported from Italy, you will find the defendant guilty because he would in that case be guilty of a misbranding.

On the other hand, gentlemen, if you believe from the evidence before you that the label on the can stated that it was a compound of these two ingredients, olive oil and cottonseed oil, the representation that it was something else than what it was, would not be proven.

In that case you would find the defendant not guilty, unless you believe that it contained a representation that it was an imported article. In that case it would be your duty to find the defendant guilty.

Now, gentlemen, as to the defendant in this case, as to his connection with these transactions, the law is that not only the person who directly commits an act constituting an offense is guilty, but those who aid, abet, counsel, induce, or procure another to commit an offense, are also guilty as if they themselves committed it. If the defendant was the proprietor of the business, engaged in the shipping of these articles, and he was at any time engaged in the business of shipping adulterated or misbranded articles of food, if you should find that from the facts and circumstances before you, and that his employees were specially or generally authorized to do that sort of thing, and in pursuance of that authority that some of his employees, instead of himself, made the shipment here in question, it would be the same as if the defendant himself did it; if it was done under his direction, of course it would be the same as if he did it himself.

Now, gentlemen of the jury, you have heard all the testimony in the case, and I hope I have made the law sufficiently clear to enable you to understand the issues involved in both counts of the indictment. It is for you to say what the facts are, whether or not the defendant is guilty upon the charges contained in these two counts.

A defendant is presumed to be innocent until his guilt is established by the evidence beyond a reasonable doubt. If you have a reasonable doubt, as to his guilt, it would be your duty to acquit him.

JUROR No. 7. Your Honor, will you define the word "shipper" to me? Who is the shipper?

The COURT. A shipper is any person who delivers to a carrier any article to be carried to some consignee and delivered to him, or any person who aids or abets another, or counsels or induces or procures another to do so; he is the shipper.

JUROR No. 7. Then the owner is not the shipper if he directs merchandise to be shipped to a certain point——

The COURT. He is the shipper.

JUROR No. 7. He is the shipper, the owner is the shipper?

The COURT. The owner is the shipper if he participates in it, and the person who actually does it is a shipper. All persons who actually do it, or all persons who direct it to be done, or aid or abet it to be done, or induce it to be done, or participate in it in any way, are shippers.

I do not believe, gentlemen, that I have called your attention to what constitutes a misbranding; I have overlooked that. An article is misbranded if it be labeled or branded so as to deceive or mislead the purchaser, or purport to be a foreign product when not so.

Mr. EILPERIN. May I ask Your Honor to charge the jury that no inference of guilt can arise from the omission of the defendant to testify on his own behalf?

The COURT. How is that? I did not get that.

Mr. EILPERIN. I say, that the failure or omission of the defendant to give testimony on his own behalf, ought not to militate against him or to justify an inference of guilt.

The COURT. The law is, gentlemen, that a defendant in a criminal case may or may not take the stand as a witness; as he chooses.

Mr. EILPERIN. And that his plea of not guilty is a denial of the matters——

The COURT. Just a moment, sir, until I get through with the charge that you requested.

Mr. EILPERIN. I beg your pardon.

The COURT. It is optional with him as to whether or not he will take the stand and testify as a witness. In this case the defendant has not elected to testify; but that fact, gentlemen, should create no presumption against him, and create no prejudice in your minds against him.

Mr. EILPERIN. That the defendant in law is presumed to be of good character, and that in and of itself is sufficient to create a reasonable doubt.

The COURT. Refused.

Mr. EILPERIN. Exception. That if the jury believe that Sylvestro testified falsely in any particular, they are at liberty to disregard his whole testimony.

The COURT. Refused.

Mr. EILPERIN. Exception. That if the jury believe that the defendant shipped cans of oil with the mark or inscription or label of cottonseed oil or compound, that in that circumstance they must return a verdict of not guilty.

The COURT. The jury has been already so instructed.

Mr. EILPERIN. I except to Your Honor's refusal to charge as requested. I ask Your Honor to charge that there is testimony in this case that the defendant did make such a shipment with such an inscription or label, to wit: Compound Cottonseed Oil, and that because of that the jury are required to find the defendant not guilty.

The COURT. Refused.

Mr. EILPERIN. Exception. I ask Your Honor to charge that the denial of the motions heretofore made by counsel, and the refusal of the court to charge as requested, do not create an inference of guilt on the part of the defendant, nor an intimation that the court believes the defendant guilty of the crime charged.

The COURT. Refused. Exception noted.

Mr. EILPERIN. Exception. That if in considering the testimony in this case the jury get to the point where there is a doubt as to whether the defendant did or did not do it, in that circumstance they must acquit him.

The COURT. The jury has been already so instructed.

Mr. EILPERIN. I except to Your Honor's refusal to charge. I ask Your Honor to charge that in considering the guilt or innocence of the defendant, it must be done in the light of this presumption, and in the light of the presumption of good character and innocence.

The COURT. Refused.

Mr. EILPERIN. Exception.

Mr. TAYLOR. If the court please, I would like the court to instruct the jury that as far as the issues in this case are concerned, it is immaterial whether the dealer, Sylvestro, knew what he was buying or not.

The COURT. Gentlemen of the jury, it is not material in this case as to whether or not the purchaser, Sylvestro, was misled or deceived in this transaction. It has nothing whatever to do with the case. The question is, did the defendant ship, from one State to another, adulterated food, or did he ship such food misbranded, under the instructions I have already given you.

UNITED STATES v. 706 BAGS OF ALLEGED MUSTARD SEED

(District Court, N.D. Illinois, Nov. 27, 1919)

N.J. No. 6319

Two libels, each in three counts, under section 10 of the Food and Drugs Act. One count of each libel withdrawn by agreement and one dismissed. Jury trial. Verdict in favor of the United States as to remaining counts. Motion for a new trial granted.

The United States attorney filed libels praying the seizure and condemnation of 405 bags and 301 bags, each containing 160 pounds of alleged mustard seed, alleging that the article had been shipped from the State of California into the State of Illinois, and charging adulteration and misbranding in violation of the Food and Drugs Act. The article was invoiced and sold as mustard seed.

Adulteration of the article in each shipment was alleged for the reason that rapeseed, brown seed, and dirt had been substituted wholly for mustard seed, which the article purported to be.

Misbranding of the article was alleged in the second count of the libels for the reason that it was an imitation of mustard seed in that it consisted wholly of rapeseed, brown seed, and dirt; and in the third count of the libels for the further reason that said article was offered for sale under the distinctive name of another article, to wit, mustard seed.

CARPENTER, *District Judge.* Gentlemen of the jury: There are only two counts in this libel that have been discussed by counsel before you, which are the first and second, the third by agreement has been withdrawn from your consideration, and I will instruct you as a matter of law that you may eliminate the first count, so that the only count that is now presented to you for your consideration is the count which we will designate the misbranding count.

Mr. DICKINSON. Yes.

The COURT. It is not your purpose to—it is not your function rather—to consider whether or not the Pure Food Law is a good law. I charge you that it is the law of this country; it is on our statute books, and in my opinion it is a very wholesome law, and it is for a very useful purpose. The issues in this case are simple, that is, the actual fact that you have to determine is a single fact, it is drawn in a very narrow channel; the evidence which has been presented to you, so that you may make up your mind what that fact is, may have been complicated, it is more or less complicated, it has come from many different sources and involves professional men, botanists, chemists, practical business men in seed lines, and personal tests that you have made and have seen made in open court.

Now, at the outset some general instructions as to the law. The Government in this case has the burden of proof, and that burden rests upon them until they have satisfied you by a clear and convincing preponderance of the evidence, that they have shown that this was not mustard seed. You will have to determine that one question. It is not so important for you to make up your minds whether or not the seed in seizure, as it has been called, is rapeseed. It is proved here in this case that the actual seed as shipped was labeled [invoiced as] mustard seed, and I charge you as a matter of law, that if you find the seed as shipped was not in fact mustard seed, the Government must succeed in this case. Whether it was rapeseed or some other kind of seed is unimportant. The shipment has been identified, and the labels on the bags have been proved, evidence has been offered here to show what they were. It has been conceded they were labeled [invoiced as] mustard seed, therefore, if you find from the evidence in this case, if you find the proof clearly convinces you by a preponderance that this was not mustard seed, in your judgment, your verdict here must be for the Government. And it is

quite as true, that if you find from the evidence on the basis that I have asked you to consider the evidence, if you find that the seed in question is mustard seed, even though it is some species hitherto unknown in this locality here in Chicago, or any other part of this country, still it is your duty in that case to bring in your verdict for the claimant. And to enlarge upon that a little, the question of fact for your determination is whether or not the product in seizure is rapeseed, as that term is understood and applied by the trade in this country or whether the product is a species of mustard seed containing qualities and characteristics substantially similar to the well-known mustard seeds of European and American commerce and in determining this question from the evidence, the jury must use ordinary common sense as reasonable and intelligent men, and if you find from the evidence that the product in question is mustard seed, then you must find your verdict for the claimant.

Bear in mind, gentlemen, it is not my purpose to tell you anything about the facts in this case. It is my duty to advise you what the law is, and it is your duty to determine what the facts are and apply the law as I give it. If I make a mistake as to the law, that is my responsibility, and the court of review will set me right. You have to do only with the questions of fact, and if during the course of this trial the court may have said something which indicated to you that the court has views on the evidence in this case, please dismiss it from your mind. The court had no such intent at any time, and anything that I may have said or anything that you may have thought I said to that end must be disregarded.

I am not here to influence you one way or the other in your determination of whether or not the seed in seizure is mustard seed. That is the only question you have to settle, and that is your responsibility.

Now, some of the witnesses in this case are Government witnesses. The mere fact that they are Government witnesses does not work for or against the case on either side. They are here as individuals, sworn to tell the truth and to advise you so far as they can of their knowledge of the facts being presented to you. A Government witness is not entitled to more credit because he is a Government witness, nor is he entitled to less credit. The professional witnesses, or rather the professional men, are not necessarily professional witnesses, and all of the witnesses that have testified here before you are to be given credence so far as you think their testimony is material.

Now, if you think any witness has deliberately sworn falsely as to any material fact, it is your right and duty to disregard the evidence of that witness, unless it is otherwise corroborated by good and substantial evidence in this case, which you believe. You have seen the witnesses and you have heard them testify, you have seen their demeanor, and you know better than anybody else whether they were telling the truth or not and how much weight should be given to their evidence. If any party has a direct interest in the outcome of the suit, you may take that into consideration. If any of these witnesses are connected with anybody with a direct interest in the outcome of the suit, you may also take that into consideration.

One further thing, you are not to be influenced by anything that you may think is going to happen after your verdict. The verdict in this case will either be for the Government or for the claimant.

What shall be done with the seed, whether under the statute it shall be destroyed, there being no deleterious matter found in it—it would be quite unusual if an order of confiscation or destruction should be entered—but whether it is destroyed or not, or whether given back to the claimant after the payment of the costs in this case, that is none of your business, and I say the word advisedly, gentlemen, not offensively, still the thing you have to determine here is whether or not this is mustard seed, because if it was mustard seed, there is no misbranding, if it was not mustard seed, there was misbranding.

Have you any suggestions, gentlemen?

Mr. DICKINSON. Might preserve an exception to Your Honor's ruling striking out the first specification.

The COURT. Yes.

Mr. DICKINSON. Exception.

Mr. VENT. I think the court should instruct the jury that there is no standard made legal by the Food and Drugs Act on mustard seed, that it is a primary question to be determined.

The COURT. I will instruct the jury so that you may preserve your exception. I think it is immaterial in this case whether the Government has established a standard on what is known as mustard seed or not, the question is, is this mustard seed.

Mr. VENT. That is all I wish, but I thought that it was proper to embody that idea.

The COURT. That will be preserved in the record. Anything further, gentlemen?

Mr. DICKINSON. In order to preserve the record, Your Honor, I don't know what will be the outcome of the case, in order that we may have the questions preserved, I desire to preserve an exception to Your Honor's instruction there, that the Government must prove its case by a clear preponderance of the evidence, or must find, if they do find for the Government, by evidence clear and preponderating.

The COURT. I might enlarge that a little so as to make the position of the court clear. This is not in the opinion of the court a criminal case, but inasmuch as it involves the possibility, on the part of the court, if there is a verdict for the Government, a possibility, I say, of ordering these goods destroyed, or ordering them seized, taken out of commerce, because they are misbranded, that the defendant is deprived of his property as a result of this trial, and so I say, that while it is not a criminal case that it is something more than a civil case, that is to say, the jury must find by a greater preponderance of the evidence than they would in a civil case. In the ordinary case you are told that, as the scale balances, if there is even a slight preponderation one way or the other, so your verdict may be found, but in this case I think before you find the scale drops one way or the other, you should have a clear and convincing proof that the scale does not tip top; that doesn't mean you will find your verdict beyond a reasonable doubt. The law doesn't require that. All it means is that you must have substantial evidence. You are business men and you have come from 12 different walks of life, and you have been in the habit of considering your own affairs in a common sense way. Now, take this case up in a common sense way.

Nobody has tried to stampede you, nobody wants to, nobody has tried to put anything over [on] the jury. All there is to the case, is to take the evidence in this case and if you find there is a preponderance of evidence founded on clear and convincing evidence, satisfactory evidence to you one way or the other, then you may bring in your verdict accordingly. Save your exception, Mr. Dickinson.

Mr. VENT. I wish to note an exception to the ruling of the court.

The COURT. Yes; Mr. Vent's request that the court charge the jury that they must find for the Government, beyond a reasonable doubt, against the defendant beyond a reasonable doubt, before a verdict can be for the Government. That is refused an exception.

Mr. VENT. Then that question in the case to the jury, we would like to preserve the question as to whether or not this is a criminal or civil case.

The COURT. That is the point. The question will be preserved, whether you have put it in the right form or whether the court has. The question is here and we will save it. That all, gentlemen?

Mr. DICKINSON. That is all I have, thank you.

The COURT. I will give you two forms of verdict, gentlemen; if you find for the United States, sign the form which reads, "We, the jury, find the issues for the libellant." If you find for the claimant, sign the form, "We, the jury, find the issues for the claimant."

Now, as to these exhibits. They will all go to the jury room. I will charge the jury further, that when they come to make tests for the prepared product which has been presented here in evidence, you must bear in mind there has been no evidence offered of what the actual ingredients were of the prepared products, further than that it was—a paste of it was made out of the seed in seizure.

Mr. VENT. No, Your Honor, I think that is not exactly accurate, the witness testified it had some vinegar and spices.

The COURT. The proportions, I mean.

Mr. VENT. The proportions were not given, but this, Your Honor, it had no other seed than the seed in question.

The COURT. Yes.

Mr. VENT. This exhibit I would ask the bailiff to handle rather delicately, it is a very delicate thing.

The BAILIFF. I will hand it in.

The COURT. The jury may retire now.

Mr. VENT. If the court please, if the jury desire to make experiments, let them take the mortars with them.

The COURT. The jury can do anything they please with the mortars when they go in the jury room.

Mr. VENT. I think the mortars are all in.

The COURT. Do you want this to go to the jury?

Mr. VENT. Yes, Your Honor.

Mr. DICKINSON. Yes.

Mr. VENT. Can that go in? We read certain sections of Circular 19, regarding rapeseed, yellow, and mustard.

The COURT. It was read to the jury, but not offered in evidence as an exhibit. No, I think not.

Mr. VENT. All right.

UNITED STATES v. 1,246 CASES OF TOMATO CATSUP

(District Court, N.D. Illinois, Dec. 19, 1919)

N.J. No. 6929

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The United States attorney filed a libel for the seizure and condemnation of 1,246 cases, each containing 3 dozen bottles of tomato catsup, alleging that the article had been shipped from the State of Indiana into the State of Illinois, and charging adulteration and misbranding. The article was labeled in part, "Fancy Whole Tomato Catsup."

Adulteration of the article was alleged in the libel for the reason that it consisted in part of a decomposed vegetable substance.

Misbranding of the article was alleged for the reason that the statement borne on the label of the cases, to wit, "Fancy Whole Tomato Catsup," was false and misleading in that it represented to purchasers that the catsup was made from sound, whole tomatoes, and for the reason that it was labeled so as to deceive and mislead the purchaser into the belief that the catsup was made from sound, whole tomatoes, whereas, in truth and in fact, it was made from tomatoes consisting in part of a decomposed vegetable substance.

CARPENTER, *District Judge.* Gentlemen of the jury: The proceeding in this case probably is novel to most of you, although well known in the law. It is in no sense a criminal trial. No one is charged with crime, and the Government does not ask for punishment of any individual, although as a result of your verdict, the property in this case may be ordered destroyed.

By the statutes of the United States certain things are determined to be contraband so far as their transportation in interstate commerce is concerned. There are a great many regulations made for the well-being of the people by the various States of the Union, and the Government of the United States is not concerned, generally speaking, with their enforcement. The Government, however, has a right to settle for itself, within reasonable grounds of course, what may or may not be made the subject of interstate commerce. In other words, controlling interstate commerce, it may forbid the use of the facilities of that commerce to those who do not comply with the stated regulations.

The statute under which this libel is filed is one known as the Food and Drugs Act. Doubtless you have all heard of it or read about it; popularly it is known as the Pure Food Law. It is not necessary for me to impress upon you that the law in question is a wholesome one, passed for the benefit of all the people, to safeguard them in their daily lives, and to the end that the health of the community generally may be conserved and preserved.

The libel in this case is filed under section 7 of that law, and I may say that a libel involves a proceeding against the thing that transgresses the law, and not against the person of its owner. The

Government charges that a certain number of cases of tomato catsup were shipped in interstate commerce, in violation of section 7. The cases of tomato catsup, of course, could not appear in court and make defense. The owner of those cases, however, under the law has a right to intervene and make claim to them. He is therefore designated as the claimant. The claimant's rights in this case have been presented to you by Mr. Hulbert and the Government's side by Mr. Dickinson. The Government, while it represents all of the people in the enforcement of its laws, in a case of this kind is merely a litigant. It has no more rights because it is the Government than the claimant who owns the goods. You must treat this case, therefore, because it is a civil case, exactly as if it were a suit between two individuals.

The Government is not required, as in a criminal case, to prove the essential elements of its case beyond a reasonable doubt. The rule is, however, that in a case of this kind, involving the possible forfeiture of property, the United States must establish its cause of action by a clear and satisfactory preponderance of evidence. By preponderance of evidence ordinarily is meant the side on which the scale bends. It does not have anything to do with the number of witnesses testifying. One side may have 50 witnesses; the other side may have one. It is for you to make up your mind whether the one is not after all telling the truth as against the 50. The evidence does not depend upon the number of the witnesses. And in this case, in determining which way the evidence preponderates, you must disregard the number of witnesses, and focus your minds entirely upon the determination of the true facts.

Now, you have seen the witnesses on the witness stand. You have heard them testify; you know their relations to the Government and to the defense, and you are better able than anyone else to make up your minds where the real truth lies, and whether the facts, as they gave them, are the real facts.

It is unnecessary for me to instruct you in this case that if a witness has sworn falsely to any material fact, you may disregard entirely the evidence of such a witness, save insofar as it is corroborated by other credible evidence.

Now, in considering your verdict, disregard entirely the little tilts between counsel. There may have appeared to you bits of friction from time to time, but as a matter of fact, I think I may assure you that when Mr. Hulbert and Mr. Dickinson get out in the hall, like as not they will go to lunch together. It means nothing outside of the trial; it is not evidence in the case. The little amusing incidents that we had yesterday are diverting, to be sure, but do not let those things take your mind off of the real issue, which is to determine by a clear preponderance of the evidence, that is, clear and satisfactory preponderance of the evidence, whether the Government has proved its case, or failed to prove its case.

The Pure Food Law provides against the shipping in interstate commerce of adulterated food products. That is stating it generally. Section 7, subdivision 6, is as follows: "That for the purposes of this act an article shall be deemed to be adulterated if it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance." Under that section a person becomes subject

to inquiry, and even prosecution, if adulterated matter is transported in interstate commerce. It is stipulated in this case that the subject matter in controversy is a subject of interstate commerce, so that there is nothing left here for you to determine save whether or not this tomato catsup was adulterated, within the congressional definition that I have just quoted to you.

It is also admitted by the Government that the product under consideration was not filthy or putrid, so you have to settle the fact whether or not it was, in whole or in part, decomposed at the time it was shipped.

Now, in reaching your conclusion whether or not this tomato catsup consisted in whole or in part of decomposed matter you are to have recourse to the evidence and exhibits presented at the trial. You must realize, and I so instruct you, that yours alone is the right, power, and duty to determine from the evidence what are the real facts. Mine is the duty to advise you of the law to be applied to those facts. Understand this clearly, that no matter what I may say in these instructions as to the facts or the witnesses, no word of mine is permitted to influence you one way or the other so far as the determination of any material fact is concerned. If, perchance, I have made any reference to the evidence, remember, please, that it is for the sole purpose of enabling you to exercise your best judgment in settling the issues of fact involved. It is your duty to determine what are the facts, uninfluenced by any views which you may think the court has. The court has not given, or intended to give, or even intimate, at any time during this trial, or in these instructions, any view as to what the facts are, or as to what inferences, if any, may be or should be drawn from the facts. I ask you, therefore, to disregard entirely any notion you may entertain as to what my personal views may be as to the evidence or its sufficiency.

To reiterate, the Government has come into court with a process known as a libel and seized 1,200-odd cases of tomato catsup. The proprietor or owner of that catsup, designated in this case as the claimant, rests upon the proposition that the Government had no right to make such seizure; that is to say, that there was no law which justified the action of the Government or the court. On the other hand the Government claims as justification the act of Congress which I have already referred to as the Pure Food Law.

The Government insists that the tomato catsup consisted, in whole or in part, of decomposed animal or vegetable substance. That part of the law which you are especially and particularly interested in here involves a determination of whether or not the tomato catsup consisted in whole or in part of a decomposed animal or vegetable substance. You are not concerned with whether the product was filthy or putrid, but in determining the meaning of Congress in the words used, we are permitted to consider them all. I instruct you that the word "decomposed" was used by Congress in its ordinary sense. In reaching that conclusion I take into consideration the words with which it was associated. The word "filthy" means something more than merely dirty; the word "decomposed" means something more than filthy, and ordinarily is understood to mean rotten. The word "putrid" implies something that is so rotten that it is vile, or stinks. The reason I reach the conclusion that Congress meant the

public to understand the word "decomposed" in its ordinarily accepted sense is because decomposition sets in immediately upon the destruction of life. The instant the fruit is taken from the tree, the instant the corn is taken from the stalk, the instant the life of the tree or plant ceases, decomposition begins and continues to a greater or less extent. The word "decomposed" therefore must be used relatively, because from a technical standpoint it would be impossible to find a fruit or vegetable product that had not at least begun to disintegrate or decompose.

Congress addressed its words, in enacting this law, to all the people, educated, uneducated, professional, scientific; men, women, and children in all walks and classes of life. Therefore the word must be construed in its natural and obvious sense, and you should have no difficulty in making up your minds what the word "decomposed" means. We are concerned not with its scientific definition but with its general definition, and that general definition, one within the mental comprehenson of all, is that it means rotten.

That the Agricultural Department has realized that the word "decomposed" is not to be construed in its technical or scientific sense is illustrated by its various bulletins tolerating a certain degree of decomposure in food products; and therefore I charge you that you have a right to consider that degree of toleration which may be disclosed by the evidence in this case to your satisfaction by a preponderance of the evidence.

In this connection I would discuss briefly the expert testimony which has been adduced both on the part of the Government and on the part of the claimant. The men who have testified here are the leaders of their profession. No question has been made nor can be made as to their honesty of purpose or intelligence. Two schools apparently are represented, the one attacking the proposition from the microscopic standpoint, the other from the chemical standpoint, and this with a little variation of method on the part of the microscopist. Here I will say that it is for you to determine from the evidence whether the method pursued by Dr. Howard, and advised by him, is accurate, or whether it was improved upon by the method adopted by Dr. Brooks and one or two others. That is to say, the examination of 50 or 100 portions of the microscopic drop instead of 35. These scientific gentlemen have testified that they found certain things microscopically and chemically. As to those things, you will determine first whether you find them, by a preponderance of the evidence, to represent the fact. The same scientific gentlemen have drawn certain deductions from their experiments. Those deductions are merely their opinions founded upon their experiments and their experience. You may—you must, give due consideration to their qualifications, but nevertheless it is your duty to make up your own minds as to what deductions shall be made from the facts which you find to be proven in this case. What they found on the microscopic slide or in the crucible was a matter of fact. Their deductions, of course, are matters of opinion. You have as much right to make deductions from the facts as the experts, although you will no doubt give due consideration to their experience and means of knowledge. As I have said, we have heard this proposition of decomposition attacked from two different standpoints, the microscope and the

crucible. The microscopists say that having found a given percentage of mold in the field indicates to them a certain percentage of rot in the raw material. The chemists, on the other hand, say that the appearance of certain acids, and a finding of cell walls, tissues, and the cell content relatively intact, indicated to them a certain other and perhaps lower percentage of decomposition in this particular product. It is for you to consider all of the evidence in this case and make up your minds what the fact is.

I instruct you further that while the act under consideration prohibits interstate shipment of food which consists in whole or in part of decomposed vegetable matter, nevertheless the plaintiff in this case, the Government, in the administration of the law voluntarily modified the strict requirements of the statute, and permitted a certain amount of decomposed matter to enter into the finished product. This was a toleration advertised to all, a toleration which every one might accept of, and the Government may not now complain of the claimant's alleged failure to comply with the strict requirements of the statute, if you find by a preponderance of the evidence that the product seized in this case was within the Government's modification. That is to say, if the degree of decomposition was not in excess of that permitted by the Government in its bulletins, your verdict should be for the claimant.

You are not concerned with the question of bacteria, yeast, or spores, although we have had much interesting evidence with reference to these things. And you are instructed that no claim is made that the catsup is in any way deleterious to health or unfit for human food.

The sole question for you to determine, as a matter of fact, is whether or not the product contained decomposed vegetable matter in excess of the amount designated in the Government's bulletins as tolerable.

Of course in reaching your verdict you must consider all of the evidence, not only that of the scientific men, the experts, but that of the lay people; those who testified as to conditions at the factory where the catsup was made.

There have been several exhibits, photographs, offered in evidence here. They are for the purpose only of illustrating the testimony that the various expert witnesses have given here. They are not evidence of any fact at all. They are, after all, as I say, illustrative of evidence, and are to be used by you for that purpose only.

UNITED STATES v. SCADUTO

(District Court, S.D. New York, Jan. 16, 1920)

N.J. No. 7708

Information in nine counts alleging violation of section 2 of the Food and Drugs Act. Seven counts dismissed. Jury trial. Verdict of guilty on two counts.

The United States attorney filed an information in nine counts against Anthony Scaduto, New York, N.Y., charging violation of the Food and Drugs Act. Counts 1 to 4, inclusive, and 6, 7, and 9 of

said information were dismissed. The two remaining counts, 5 and 8, were tried before the court and a jury.

It was alleged in substance in count 5 of said information that said Scaduto shipped from the State of New York into the State of Maryland a quantity of an article of food contained in cans each labeled, marked, and branded "Fontanella Brand Olio Finissimo * * * Net contents Half Gallon Quest Olio E Garentito Ottimo Per Insalata E Per Cucinore This Oil is Guaranteed to be Excellent for Salad and Cooking", and (in very small type) "Cottonseed oil slightly flavored with pure olive oil"; and that said article was misbranded in that the statements, "Olio Finissimo" (not corrected by the statement, in inconspicuous type, "Cottonseed oil slightly flavored with pure olive oil"), and "Net Contents Half Gallon", borne on the cans containing the article, were false and misleading, and in that said article was labeled so as to deceive and mislead the purchaser, for the reason that said statements and labels represented that the article was olive oil, and that each of said cans contained one half gallon net of the article, whereas in truth and in fact, said article was not olive oil, but was a mixture composed in large part of cottonseed oil, and each of said cans did not contain one half gallon of the article, but did contain a less amount.

It was alleged in substance in count 8 of said information that said Scaduto shipped from the State of New York into the State of Maryland a quantity of an article of food contained in cans labeled, marked, and branded "First Quality Table Oil Tipo Termini Imerese Sicilia—Italia ¼ Gallon Net Guaranteed Absolutely Pure", and (in very small type) "Cottonseed oil slightly flavored with olive oil"; and that said article was misbranded in that the statements, "Finest Quality Table Oil, Guaranteed Absolutely Pure, Tipo Termini Imerese Sicilia—Italia, ¼ Gallon Net", together with designs of natives gathering and packing olives (not corrected by the statement, in inconspicuous type, "Cottonseed oil slightly flavored with olive oil"), borne on the cans containing the article, were false and misleading, and in that said article was labeled so as to deceive and mislead the purchaser, for the reason that said statements and labels represented that the article was olive oil, and that said article was a foreign product, to wit, an olive oil produced in Sicily, in the Kingdom of Italy, and that each of said cans contained one-quarter gallon net of the article, whereas in truth and in fact, said article was not olive oil, but was a mixture composed in large part of cottonseed oil, and said article was not a foreign product, to wit, an olive oil produced in Sicily, in the Kingdom of Italy, but was a domestic product, to wit, an article produced in the United States of America, and each of said cans did not contain one quarter gallon net of the article, but did contain a less amount.

HAND, *District Judge.* Only two counts are for your consideration. The portion of count 5 which alleges that there was a representation on the Fontanella can of an incorrect amount. The so-called Fontanella count says: "Net contents, ½-gallon", and the part of count 5 which you are to pass on which still stands is whether that was a true representation or not.

The other count which you are to pass on is count 8, which represents that the cans of Termini Imerese oil were falsely branded in respect to the representation as to what the oil was and in respect to the amount, which is one-fourth gallon net on the outside of the can

Now, the defendant in the case of both the Fontanella and the Termini Imerese brands insists that this amount represented on the can should be read in connection with the trade custom of 7½ pounds of cottonseed oil to the gallon. He says that based on that trade custom of weight that this representation as to the half gallon and quarter gallon is true.

You are to determine whether in fact the statement on the Fontanella can that it contained a half gallon, in view of all the evidence, was a true statement. It is not a question of the intention of the defendant, but it is a question of what, in view of all the facts shown to you, is the truth. He has no right, whether he is innocent of purpose or not, under the Pure Food Act to make an incorrect representation as to the contents of his can. So that in regard to count 5, the Fontanella can, the only question for you to determine is whether the Government has proved beyond a reasonable doubt whether the statement that the net contents of the can is a half gallon is true or not.

The second question for you to pass on, for both of these misbrandings are alleged in count 8, is whether, as count 8 says, the can was labeled so as to deceive and lead the purchaser into the belief that said article was olive oil and that said article was a foreign product, to wit, an olive oil produced in Sicily in the kingdom of Italy, and that each of said cans, etc.

The question for you to determine as business men, and it is a typical question for a jury of fact based on business experience and common sense, is what would the person, the purchaser, a member of the public getting that kind of a can, upon such examination as they would be likely to give it, say about it? Would they think it was olive oil, or would they think it was cottonseed oil? The defendant says cottonseed oil slightly flavored with olive oil is the compound indicated there, and that it is clearly stated in these letters. The Government says those are the only small letters, except the quarter of a gallon net, on the whole can; and that they do tend to mislead the public and are a false branding. The Government further says: "What could have been the object of putting this tree and the 'Termini Imerese' on?" There is no proof that any cottonseed oil ever came from that part of the world, in Sicily. What would it mean except that this was olive oil.

The question for you to determine on count 8, as in the case of the Fontanella oil in count 5, is, what is the effect of this? What did one fourth of a gallon net mean in view of all the evidence, and was it correct? Next, what is the effect of this description? Is it a misbranding? Is it something calculated to deceive the public or not? If you find on count 5 in respect to the Fontanella oil that the can did not contain a half gallon, and are satisfied beyond a reasonable doubt of that fact, then you will find a verdict for the Government upon count 5.

If you find on count 8 that the Termini Imerese can either did not contain one fourth of a gallon net, or was misbranded in respect to the description of the contents, that is to say, the kind of oil and where it came from, in either of those events, if you find either fact beyond a reasonable doubt, you are to find a verdict for the Government; otherwise for the defendant, who, of course, is entitled, as in all criminal cases, to the presumption of innocence until he is proved guilty beyond a reasonable doubt.

Mr. STANTON (attorney for defendant). If the court please, might I request you to charge the jury that the character of this defendant should be taken into consideration in their deliberations?

The COURT. No; it is a question of what he did, not a question of intent; it is a question, Mr. Stanton, of whether this statement as to what the can contained is correct, and the picture and descriptive words on the other can indicating or not indicating, as the jury may think, origin, whether that is correct. If the defendant's concern put it out and traded in it, even though he did not know it, he has got to know it; it is not a question of a man's motive.

This Pure Food Law, of course, is a very important law. It is for the purpose of protecting people and seeing that the public get fair statements as to weights, origins, and all that sort of thing. It should be administered also, of course, both by the courts and juries, in a rational and sensible way.

The jury thereupon retired, and after due deliberation returned a verdict in favor of the Government on the charges of short measure.

UNITED STATES v. NEWTON TEA & SPICE CO.

(District Court, S.D. Ohio, Jan. 21, 1920)

275 Fed. 394; N.J. No. 9290

Information alleging violation of section 2 of the Food and Drugs Act. Motion to quash overruled. Jury trial. Verdict of guilty.[7]

PECK, *District Judge* (on motion to quash the information). The defendant, upon the filing of the information, voluntarily appeared thereto and moved to quash the same, upon the grounds first, that the information is indefinite and does not apprise the defendant of the facts constituting the alleged crime with such certainty and particularity as to enable the defendant to know what it has to meet; second, the information attempts to charge the defendant with the commission of a crime by way of argument and conclusion; and third, the court has no jurisdiction.

First. The information is brought under the Food and Drugs Act of Congress, June 30, 1906 (34 Stat. L. 768), and charges the defendant with shipping in interstate commerce 50 cases of an article designed for food, known as "Newton's Eggno", which the information alleges was labeled to read:

> An excellent substitute for eggs * * * to be used for baking and cooking purposes * * * an article of real merit and far superior to the usual

[7]Affirmed, *Newton Tea & Spice Co.* v. *United States*, p. 1089, *post*.

egg substitutes on the market. * * * composed of pure materials * * * one even teaspoonful to be used in place of each egg called for in recipes requiring eggs—

with directions for using and place of manufacture. A poster and a circular are alleged to have been enclosed within the package, making like representations; but the contents of these, even if false, cannot be considered as violations of the act. *United States* v. *American Druggists Syndicate*, 186 Fed. 387.

The information further alleges that the aforesaid statements of the label were false and misleading in that they represented to the purchasers that the article was a substitute for eggs and could be used in place of eggs for cooking and baking, whereas, in truth, said article was not then and there a substitute for eggs, nor could the same be used in place of eggs for baking and cooking.

The defendant contends that the information is deficient in that it does not set forth why, or in what manner, the article cannot be used as a substitute for eggs in baking and cooking.

The statements of the label above set forth were evidently designed to lead the ordinary housewife to believe that the contents of the package could be used in substitution for eggs in the ordinary preparation of food. The information expressly negatives the usefulness of the article for that purpose. It would seem, therefore, to be entirely sufficient to draw the issue upon that question, and, therefore, the motion in this respect is not well taken.

This disposes of the first and second grounds assigned.

Third. Defendant contends that the court has no jurisdiction over the subject matter, for the reason that the information does not state an offense within the terms of the act. In support of this contention it is argued that the article comes within the proviso of the fourth subsection of section 8 of the act, by which it is provided that an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be adulterated or misbranded in case, first, of mixtures or compounds which may now, or from time to time hereafter, be known as articles of food under their own distinctive names and not in imitation of, or offered for sale under the distinctive name of, another article if the name be accompanied on the label or brand with a statement of the place where said article has been manufactured or produced; and, second, in the case of articles labeled, branded, or tagged so as to plainly indicate that they are compounds, imitations, or blends. Even though we assume it to be the duty of the pleader under this act to negative the terms of the proviso, or assume that the article in question is shown by the label to be a mixture or compound known as an article of food under its own distinctive name, not alleged to be in imitation of another, nevertheless the protection afforded by this proviso goes only to the branding or name of the article, and does not furnish a refuge for one who has on the label otherwise falsely stated the nature of the contents of the package. It is not against the use of the name of "Eggno" that the information is directed, but against the statement that the contents are useful and fit to be substituted for eggs in ordinary cooking recipes.

In *United States* v. *150 Cases of Fruit Puddine*, 211 Fed. 360, having the subject under consideration, at page 364 the court says:

> It does not seem to me that the proviso in question was intended to except them absolutely from the provisions of the act, and to leave the manufacturers free to make misrepresentations concerning them. Such a construction is out of harmony with all the rest of the statute, and disregards one of the principal purposes of it. It seems to me that the protection afforded by the proviso is limited to the distinctive name; and, as so limited, I have no doubt that the proviso applies to the first paragraph of section 8, and fully protects distinctive names from being misbranding.

It was there accordingly held that the words "Fruit Puddine", being false and misleading with reference to the product known as "Puddine", constituted misbranding within the statute.

It is further contended that the statement, "substitute for eggs in baking and cooking," is not one of fact, but of opinion only, and therefore not, in law, misleading; that the substitution of one thing for another is largely a matter of judgment, and that to call a thing a substitute is not to affirm that it is even similar to the original; that one article of diet may be a substitute for another without any necessary similarity. In this case, however, the defendant chose its own definition for the term "substitute" when it expressed upon the label that the article could be used in place of eggs "in baking and cooking." Nothing else could be inferred but that in ordinary culinary compounds the article in question would produce the same or similar results as the use of eggs. This is a direct affirmance of a fact and a definite description, so far as obtainable results are concerned, of the article sold.

It is further contended that the mere representation as to the results which may be obtained by the use of an article do not constitute misbranding under the act, and reliance is had upon *United States* v. *Johnson*, 221 U.S. 448, where it was held that the curative effect of a medicinal preparation of which the labels stated that the contents were effective in curing cancer, contrary to the fact, was not an offense against the provisions of the act relating to the sale of drugs, as the act then stood. But the terms of the act at that time were very much narrower in scope with regard to drugs than with regard to food. By the amendment of 1912 the prohibition relating to the misbranding of drugs was made to expressly cover any statement regarding the curative effect of the article, and under that amendment it has been held that statements of curative effect in reckless and wanton disregard of their truth come within the act. *Simpson* v. *United States*, 241 Fed. 841. With regard to food, the act makes it an offense if the package containing it, or its label, shall bear any statement, design, or device regarding the ingredients or substances contained therein, which statement, design, or device shall be false and misleading in any particular; and the allegations of the information would seem clearly to bring the statements in question within that category.

The information is not upon oath, and it is contended that the same is therefore violative of the Fourth Amendment, and for that reason the defendant should not be held to answer. But the information is not required to be upon oath; it is only required that the same shall be supported by oath before warrant may be issued thereon. *Weeks* v. *United States*, 216 Fed. 292. As the defendant

has voluntarily appeared and filed the motion now under consideration, no question concerning the validity of a warrant is here.

Motion overruled.

On December 9, 1920, the case having come on for trial before the court and jury after the submission of evidence and arguments by counsel the following charge was delivered to the jury by the court.

PECK, *District Judge* (charge to jury). Gentlemen of the jury: It becomes now my duty to charge you with regard to the law in this case. You are the sole judges of the facts; the facts are entirely within your province. The law you will take from the court, and, applying the law as I shall give it to you to the facts as you shall find them to be, you will reach your conclusion in this case.

The essential elements of this information upon which the defendant is here upon trial are, first, that the defendant did ship in interstate commerce 50 cases of cartons. While the burden of proof is upon the Government to establish this beyond reasonable doubt, the defendant has admitted by a stipulation offered in evidence here that it did ship the 50 cases of cartons in interstate commerce; second, that these cases contained an article designed and intended to be used as an article of food. The burden likewise is upon the Government to establish that beyond reasonable doubt. It is next set forth that these cases were then and there denominated as to the contents thereof, labeled, marked, and branded, as follows:

(On cases) "2 doz. Newton's 25c size Eggno Manufactured by the Newton Tea & Spice Co., Cinti, Ohio;" (on top of carton) "Flat Top Gro. Co. Bluefield, W. Va. Food Products, Prepaid, Pieces 51;" (on carton) "Newton's Eggno Artifically Colored. To be used in place of eggs in baking and cooking 3½ Oz. Net. An Excellent Substitute for Eggs. Eggno is an excellent Substitute for Eggs and is to be used for Baking and Cooking purposes. Splendid for Cookies, Cakes, Muffins, Fried Cakes, Bread Puddings, Gravies. Just the thing for Griddle Cakes, Noodles, etc. Eggno is an article of real merit and is far superior to the usual Egg Substitutes on the market. Eggno contains the constituents that cause fresh eggs to fill such an important place in every kitchen. Eggno is the result of scientific research, is composed of pure materials, is nutritious and is economical, as one even teaspoonful is to be used in place of each egg called for in recipes requiring eggs. This package contains 36 even teaspoonfuls. Guaranteed to conform to the Pure Food Laws. Directions. Dissolve Eggno in lukewarm water or milk by first making a paste then adding the balance of the water or milk. Use a teaspoonful for each egg called for in recipes requiring eggs. In making use a trifle more Baking Powder than if eggs were used. Eggno does not take the place of Baking Powder. Prepared and Guaranteed by The Newton Tea & Spice Co. 12–14–16–18 East Second St., Cincinnati, Ohio."

And while the burden is upon the Government to prove the truth of this labeling beyond reasonable doubt, defendant has filed a stipulation here admitting the facts concerning the labeling as thus set forth.

The next material contained in the information purports to set forth the contents of certain circulars that were contained in these cartons. I have withdrawn that from your consideration and you will pay no attention to it. I have marked it in the margin of the information "Ruled out. Omit", and you will pay no attention to that; likewise the phrase upon the next page, of similar import, is ruled out and withdrawn from your consideration.

The fourth element of the information—and it is around this one that the contest here principally turns—is this: That the article of food was misbranded in that the statements, "to be used in place of eggs in baking and cooking * * * an excellent substitute for eggs * * * to be used for baking and cooking purposes * * * Eggno contains the constituents that cause fresh eggs to fill such an important place * * * one even teaspoonful is to be used in place of each egg called for in recipes * * * use a teaspoonful for each egg called for", were all false and misleading. It is also alleged that the carton contained the phrase, "takes the place of fresh eggs," which was false and misleading; but I am unable to find those words upon an examination of the carton—were all false and misleading, says the information, in that they represented to purchasers of the article that the same was a substitute for eggs and could be used in the place of eggs for baking and cooking purposes, whereas, the Government charges, said article was not then and there a substitute for eggs and could not be used in the place of eggs for baking and cooking, and that it was so labeled to deceive—that being so labeled it would deceive and mislead purchasers into the belief that it was such a substitute for eggs and could be so used. And the question of the truth of this, the fourth element, as I have described it, of the information is the principal question for your determination.

The Government does not claim that the product Eggno is poisonous, deleterious, or injurious to human health. The question, therefore, raised by these allegations of the information, which I have denominated the fourth element, is whether or not these statements were false in the respects charged in the information.

Now, by what rules are you to judge of the truth or falsity of this language? The principal rule is this: You will take this language in the ordinary meaning and significance of the words used; that is, as they would be understood by the ordinary purchaser, of ordinary intelligence, familiar with the English language. The purpose of the label is to truthfully advise the purchaser of the contents. That is the purpose of the label—or should be. It is, as it were, the voice of the manufacturer speaking to the prospective purchaser, as though they had met in person and the manufacturer verbally stated to the customer, "I made this product. It is the result of scientific research. It is an excellent substitute for eggs. It contains the constituents that cause fresh eggs to fill an important place; that is, an important place in every kitchen. An even teaspoonful is to be used in place of each egg called for in the recipe." Now, is this statement false and misleading? That is the essence of the matter. It says "An excellent substitute for eggs." The word "excellent" hardly requires us to go to the dictionary to find its meaning. One meaning is "remarkably good." However, little stress is to be laid upon mere adjectives commendatory of wares; manufacturers and others who sell wares are to be expected, and are generally expected by purchasers, to use such adjectives with regard to the wares that they offer for sale. More important are the words, "substitute for eggs." What does the word "substitute" mean? What does it mean to the ordinary purchaser, the ordinary housewife or householder who goes to a grocery store to buy articles

of this kind—what does it mean to her or to him? One definition found in the dictionary for the word "substitute," and perhaps the one that best gives the meaning of the word as here used, is "a thing serving the purpose of another." The representation, therefore, on this label that the contents are an excellent substitute for eggs may perhaps be taken—may be taken in the ordinary acceptance of the word—to assert to the public that the article therein contained is good for serving the purpose of eggs in baking and in cooking.

Now, it is further asserted on this label that it "contains the constituents." What are constituents? Those things which go to make it up, the components, the elements. "Contains the constituents that cause fresh eggs to fill such an important place"—that is, such an important place in the kitchen. The truth or falsity of that statement is also for you to determine. The label also affirms that one even teaspoonful is to be used in place of each egg called for in the recipe; that is, in the cooking recipe. Is this the equivalent to an assertion that one teaspoonful is equal to an egg in the recipe in cooking and baking?

The information alleges that these statements, taken together, amount to a representation to purchasers that the article was a substitute for eggs and could take the place of eggs in cooking and baking, whereas, in fact and in truth, it was not such, and could not be so used; and that the purchasers thereby—that it was misleading thereby to the purchaser.

Generally speaking, to correctly determine whether a falsehood has been told—that is the essence of this case, that this label told a falsehood to the people; that is what the Government charges in these respects that I have indicated, that this label told a falsehood. Now, to correctly determine whether a falsehood has been told, ordinarily it is first necessary to ascertain just what has been told and then to compare the statement so made with the fact. Concerning the statement made, the label is here; it has been admitted by the stipulation, and there is no contest about what the language was that was used. Now, what are the facts? Does the product contain the constituents which cause fresh eggs to fill an important place in the kitchen? Is the product a substitute for eggs, as that language would be understood by the ordinary purchaser? May one teaspoonful be properly used in cooking recipes in place of each egg called for? The evidence offered by the Government tends to show that the product is inferior to eggs in nutritive value, and of little physical or chemical value in cooking and baking operations. The evidence of the defendant, on the contrary, tends to show that the product has been used with satisfaction and apparently good results by many housewives. If the product is, in fact, well adapted to be used instead of eggs in baking and cooking, if it is in truth genuinely fit to be used in place of eggs in those processes, then the label would seem to me to be not false. On the other hand, if the article is not honestly well fit to be used as a substitute for eggs in baking and cooking, if it is not genuinely well adapted to be used instead of eggs for such purposes, then and under such circumstances the label would seem to be false; but the question of its truth or falsity I leave to you.

The burden of proof is not upon the defendant to prove the label true; the burden of proof is upon the Government to show beyond

reasonable doubt, on consideration of all the evidence, that the label is false and misleading in the respects charged in the information.

Now, the question here is not, on the one hand, whether the product is an absolutely worthless article, or, on the other hand, whether it is a complete and perfect substitute for eggs in all respects; the true question is whether the language of the label complained of in the information is false and misleading to the ordinary purchaser in the respects charged in the information. That is the true question for your determination.

As I have said, you are the sole judges of the facts, gentlemen of the jury.

Now, the presumption is that the defendant is innocent, and this presumption prevails until it is overthrown by evidence of its guilt beyond reasonable doubt. The defendant is to be presumed innocent until it is proven guilty. You will begin your deliberations on that basis. You will remember that the mere fact that an information has here been filed by the district attorney against the defendant, in and of itself, raises no presumption that the defendant is guilty. One charged with the commission of an offense can only be convicted, if convicted at all, upon the evidence produced at his trial. The burden of proof is upon the Government of the United States to prove the offense charged and all its essential elements beyond a reasonable doubt.

What is meant by a reasonable doubt? By a reasonable doubt is meant this: When you lack an abiding conviction to a moral certainty of the truth of the charge, considering all the evidence, then there is a reasonable doubt. A reasonable doubt is an honest uncertainty. If you have an honest uncertainty, then you have a reasonable doubt. It is not a mere captious doubt, a mere ingenious doubt, such as one might, by some process of ingenuity, raise in his mind. To be a reasonable doubt it must be an honest uncertainty.

I shall now state to you under what circumstances you will find a verdict of guilty. If you find that each of the essential elements of this information, as I have defined them to you, has been proven beyond reasonable doubt, then it is your duty to find a verdict of guilty. I shall now state to you under what circumstances you shall find a verdict of not guilty. Unless you do find that each essential element of this information has been proven beyond a reasonable doubt, then it is your duty to find a verdict of not guilty.

You are the sole judges of the credibility of the witnesses. You may consider, in judging of their credibility, their demeanor upon the witness stand; any bias or prejudice that they may have shown in the case, if they have shown any; their interest in the outcome of this trial, if any they have; the probability or reasonableness of their testimony; their intelligence; their means of observation; their knowledge of that whereof they have spoken. You will consider their connection with either party to the case, if any they have; and any and all circumstances which bear, or tend to bear, upon the credibility of the witnesses. And then, having done this, having considered all the testimony bearing upon their credibility, you will give to the testimony of each and every witness such credit as you find it entitled to receive. You are not to reject any of the testimony arbitrarily or without reason. You are not, as a matter of

fact or as a matter of law, bound by the greater number of witnesses, although number is a matter for you to consider.

Certain expert witnesses have testified before you. As to matters of opinion, expert witnesses are permitted to give opinions about matters which are not within the common knowledge of all. As, for instance, the chemical science. We are not, generally speaking, chemists, or familiar with the chemical science; therefore, the law permits witnesses to be called to give an opinion, state to you an opinion, as to matters pertaining to the chemical science. And so, in this science of food known as dietetics, and so of the refinements of the art or the science of cooking, witnesses have been permitted to give their opinions. Now, the opinion of a witness depends not only upon his truthfulness, but upon the amount that he knows about the subject that he is giving an opinion upon. The opinion of one upon chemistry who knew little of chemistry would be of very little value; so that you will see, in considering the value of opinion evidence, it is necessary for you to carefully consider the qualifications of the witnesses to give the opinions which they have given. Opinion evidence is ordinarily not binding upon the jury, but it is to be considered in determining the matters submitted to the jury.

Gentlemen of counsel——

Mr. ROUDEBUSH. Nothing, Your Honor.

Mr. LANNIN. May it please the court, I wish to take exceptions to the failure of the court to instruct the jury that the question of the element of food value and nutritional value of the product involved in this case is not in issue in this case.

And also to the failure of the court to instruct the jury that in determining whether this product is misbranded or not, they must confine their considerations to its use for baking and cooking purposes, and not for its use as an article of food, for food purposes.

And I also save exceptions to the statement of the court to the effect, as near as I can remember now, that the element of nutritive value and food value is involved in this case. I understand Mr. Simmonds has some objections. I don't know just what the rule of this court is, as to whether both of us can save exceptions or not.

The COURT. Yes; I will permit each counsel to take such exceptions as he wishes. Mr. Simmonds——

Mr. SIMMONDS. If Your Honor please, we desire to reserve exceptions to the fact that the court has not charged that it is necessary, in addition to establishing the other charges, to establish that the label was so labeled as to deceive the purchaser.

And likewise to the proposition of the qualitative words, as used by the court in his charge, as to the degree of proficiency that must be reached by the product. We think that——

The COURT. It is not time for argument—just your exceptions. Anything further, gentlemen of counsel? Gentlemen of the jury, you will now retire and deliberate upon your verdict. When you have reached your conclusion you will notify the court.

Mr. KROHN (a juror) (after a portion of the jury had retired from the jury box). I don't understand that charge——

The COURT. If you wish any further instructions the jury will have to return as a whole, Mr. Krohn.

(Thereupon the jury retired from the court room.)

Mr. LANNIN. May the jury not take the exhibits with them to the jury room?

The COURT. The marshal will take all the exhibits to the jury room.

Mr. LANNIN. Take them out of the pans——

Mr. ROUDEBUSH. Is the jury permitted to take the exhibits to the jury room, Your Honor?

The COURT. It will be just exactly as they are. Just pick these tables up and carry these exhibits into the jury room.

Mr. LANNIN. The jury is permitted to eat the cakes?

The COURT. Wait until the jury has retired. Are all the jurors out of the room? Now you ask if the jurors will be permitted to eat these cakes?

Mr. LANNIN. Yes, Your Honor.

The COURT. It seems to me that that should not be so, for this reason: It is undoubtedly the rule that the jurors must receive the evidence in the court room. Is that not the rule? The Constitution requires that no evidence can be taken outside of the court room in a criminal case, and practice so requires. Now, the tasting of these foods would be one way of the juror exercising his senses; it would be one way of his brain receiving information from the evidence, and it seems to me that that might have been done during the taking of the evidence in the court room, and I thought of it and was of a mind to permit it had either side so requested. But now the taking of the evidence has been concluded. Of course, the point is novel; I rule without precedent, so far as I know. But upon general principle it seems to me that the taking of evidence having been concluded, I would have the right to submit to the jury that which their senses have already received—nothing new. And, therefore, the rule will be that the exhibits may all be removed by the marshal to the jury room, as they are.

Mr. ROUDEBUSH. Your Honor, isn't that contrary to the rule that has been heretofore, that any exhibits go to the jury room?

The COURT. No; I have permitted the exhibits to go to the jury room in other cases.

Mr. ROUDEBUSH. In criminal cases?

The COURT. I should not permit the exhibits to go contrary to the objection of the defendant, perhaps, but at the request of the defendant——

Mr. ROUDEBUSH. I want to object to it.

The COURT. I am inclined to send the exhibits to the jury room. It doesn't seem to emphasize the exhibits of either side. Each side has introduced its exhibits of this nature. It is a matter that is discretionary with the court. Where it tends to emphasize the evidence of either side it ought not to be permitted, but here it seems to be about as long as it is broad, and I will let all of the exhibits go to the jury room. That includes all of them, the stipulation and everything else.

Mr. LANNIN. Your Honor, I don't want to take any time, but I might say the only experience I had on the subject was where we had a vast number of food exhibits introduced last winter before Judge Faris in St. Louis; in that case he permitted the jurors to eat the exhibits in the court room.

The COURT. I should have done that.

Mr. LANNIN. And even served drinks with them—coffee and things of that kind. There was no objection to it. I have never had a case under these circumstances.

The COURT. I think you will see, upon reflection, that the eating of the exhibits in the jury room would be the receiving of evidence out of the jury room.

Mr. LANNIN. I might suggest this—I don't want to get the court in bad—that the marshal tell the jury as to the order of the court.

The COURT. No; we will just follow what seems to be the law in the matter. Is the marshal here? Call him. Have you copies of these special charges requested, Mr. Roudebush?

Mr. ROUDEBUSH. Yes, Your Honor.

The COURT. I have refused them and have noted upon them some of the reasons I have for refusing them. You may copy them and then hand them to the other side. [At this point a deputy marshal came into the court room.] Mr. Marshal, please get an assistant and carry all of these exhibits on them to the jury room. All of these exhibits go to the jury room, just as they are.

(Thereupon the court retired from the bench.)

The special charges requested by counsel for defendant, with the notations made thereon by the court, are here set out, by true copy, as follows:

No. 1

The court instructs you that if you find from the evidence that purchasers of Eggno in purchasing the same for baking and cooking purposes, do not have in mind the question as to the food value or nutritive value of the product and are not concerned with whether it has or has not any food value or nutritive value or contains any vitamins or food calories, but are concerned solely with the question as to whether it will produce substantially the same effect as eggs for baking and cooking purposes in the way of a binder for food, a settler of food, or to obtain in food the desired form, fluffiness, or texture, or color as the purchaser may desire, and that Eggno will fairly and reasonably, but not necessarily as perfectly as eggs, perform these functions respectively or collectively to the satisfaction of the average purchaser of ordinary intelligence, then you may disregard all testimony as to food value and nutritional value, the presence or absence of calories and vitamins, and you will return a verdict of not guilty.

Refused. (Signed) Peck, *J.*

No. 2

The court instructs the jury that if you find from all the evidence in this case that there is a well founded difference of opinion, based upon honest covictions, one way or the other, among purchasers and users, of the Eggno involved in this case, as to whether or not the Eggno involved in this case is a substitute for eggs to a fair and reasonable degree for cooking and baking purposes, you will find the defendant not guilty.

And in this connection the court instructs you that you may take into consideration the extent to which such users have used the

product for baking and cooking purposes, the length of time they have used the same, and all other circumstances that would enable such purchasers and users to form a fair opinion on the subject.

Refused. The witnesses have given facts as to its use, not their opinions as to its being a substitute. (Signed) Peck, *J.*

No. 3

The court instructs the jury that there is no question involved in the case of wholesomeness or healthfulness of the product Eggno, or any of its ingredients, there being no claim that it is poisonous, deleterious or injurious to human health (given), and it being admitted by the Government to be a wholesome article.

Refused—tends to exclude the consideration of nutrition—see label " nutritious." (Signed) Peck, *J.*

No. 4

The issue involved in this case is not to be determined by the question as to what persons with lack of familiarity with the product involved herein would understand the label involved in this case to mean, but is to be determined by what idea the label might convey to persons of ordinary intelligence who are conversant with our language.

Refused. (Signed) Peck, *J.*

No. 5

I charge you that if you find from the evidence that it is the consensus of opinion of actual purchasers of Eggno; of ordinary intelligence, for ordinary baking and cooking purposes, that the product is a satisfactory substitute for eggs for baking and cooking purposes and will fairly and reasonably take the place of eggs for such purposes, you will find the defendant not guilty.

And in this connection you will not regard purchasers of the product for technical or scientific purposes as purchasers within the meaning of the law in this case.

Refused on same ground as No. 2. (Signed) Peck, *J.*

No. 6

I charge you, gentlemen of the jury, that the following statements appearing upon the label on the package in this case, to wit, " Eggno is an article of real merit and is far superior to the usual egg substitute on the market. Eggno contains the constituents that cause fresh eggs to fill such an important place in every kitchen. Eggno is the result of scientific research and is composed of pure materials and is economical," are not statements as to the identity of the article or statements of ingredients of the package, but rather are statements commendatory of the article, and are therefore not within the provision of section 8 of the Food and Drugs Act of June 30, 1906, and you will disregard the same in your deliberation as being withdrawn from your consideration. *United States* v. *Johnson*, 221 U.S. 488.

Refused. (Signed) Peck, *J.*

The second sentence quoted is a distinct affirmation of fact concerning the contents.

No. 7

I charge you, gentlemen of the jury, that there is no legal standard provided by law fixing the degree of efficiency which any given article must contain when sold as a substitute and in this case there is no legal standard provided by law fixing the degree of efficiency which the product known as "Eggno" must possess when sold as a substitute for eggs in baking and cooking, when compared with eggs.

Therefore, if you find from the evidence that the article involved in this case, known as "Eggno", was sold as a substitute for eggs in baking and cooking, and that said "Eggno" did have any fair and reasonable degree of efficiency as such a substitute, or was a substitute to a fair and reasonable degree, for eggs for baking and cooking purposes, you will find the defendant not guilty. And in this connection I charge you further that a product sold as a substitute for eggs for baking and cooking purposes is not required to be 100 percent as efficient in all or any respects as eggs, but is only required to be fairly and reasonably as efficient as eggs for the purpose mentioned.

Refused. (Signed) Peck, *J.*

No. 8

The court instructs the jury that the Eggno involved in this case was not sold as a food for its food value, but that the label fairly construed represents the product to be sold as an accessory in baking and cooking, and in that respect as a substitute for eggs. And in considering whether the product is or is not a substitute for eggs for baking and cooking purposes you are only permitted to take into consideration the purposes for which eggs are used in baking and cooking.

Refused—see label "nutritious." (Signed) Peck, *J.*

No. 9

I charge you, gentlemen of the jury, that the basis of the charge in this information is not one of adulteration. The Government undertakes to and must prove beyond a reasonable doubt that the product is so labeled as to deceive the ordinary purchaser of ordinary intelligence purchasing said product for baking and cooking purposes, and if you should find from the evidence herein a reasonable doubt as to whether or not such purchasers in purchasing the product for cooking and baking purposes were so deceived, then your verdict will be not guilty.

Refused—would require Government to establish actual deceit of purchasers. (Signed) Peck, *J.*

No. 10

The court instructs the jury that in considering whether the product involved in this case is or is not a substitute for eggs for baking and cooking purposes, the question as to its own food value, or the

food value (so far as the question of nutrition is concerned) of the finished baked or cooked foods imparted to them by it, is immaterial and you should disregard all testimony relative to the same.

Refused—same ground as No. 8. (Signed) Peck, *J.*

UNITED STATES v. ST. LOUIS DAIRY CO.

(District Court, E.D. Missouri, Feb. 7, 1920)

N.J. No. 11,430

On demurrer to indictment for alleged violations of Food and Drugs Act. Demurrer overruled.

Faris, *Judge.* The defendant has been indicted on eight counts for alleged violations of the act of June 30, 1906, as amended. To this indictment, and to each count thereof, defendant demurs. The ground of demurrer to each of the counts of the indictment is identical; so but one count need be considered.

The indictment contains apt allegations to the effect that heretofore, to wit, in the year 1911, this same defendant was upon its plea of nolo contendere to a criminal information convicted and fined the sum of $50 and costs for a violation of the same act under which defendant here stands charged in the indictment now pending. Toward these allegations of prior conviction the demurrer herein is aimed. Touching the above allegations of the indictment it is strenuously urged in the demurrer that they are impertinent, irrelevant, and that they have no relationship to, or connection with, the offense now charged in the several counts of the instant indictment. After a careful consideration of the point urged I am of the opinion that the demurrer ought to be overruled.

The statute under which the defendant is indicted provides, among other things, that for a first offense thereunder the punishment shall on conviction be a certain minimum in the statute set forth; but that on conviction for a second offense, or any subsequent offenses thereunder, the punishment shall be increased in a certain definite manner in the statute prescribed. Notwithstanding this provision, it is strenuously insisted by defendant that the setting out of such former conviction at length in the indictment is without warrant of law and that the same will be hurtful and prejudicial to it upon its trial.

I have been unable to find any case directly in point upon the question mooted. The Government contends that since it is well settled in the practice in the State courts, under the so-called habitual criminal acts, that former convictions must be set out in the indictment, the decisions so holding, which are numerous (*State* v. *Austin*, 113 Mo., 538; *State* v. *Schumacher*, 12 Mo. App. 569; *Ward* v. *State*, 53 N.Y. 511), are decisive of the point here involved. Against this insistence the defendant contends that there is no analogy existing between the two propositions. This, for the reason that in the State courts (except in a few negligible exceptions) a trial jury both finds the fact of guilt and fixes the punishment, while in the Federal courts the trial jury simply finds the fact of guilt and

leaves it to the court, under the several statutes, to fix the punishment.

I do not think that the reason urged by defendant is conclusive. It is well settled that the indictment is a mere formal charge; that it is not in any way evidentiary. Besides it is difficult to perceive the nature of the procedure which could be invoked, in order to acquaint the court, when fixing the punishment, with the fact that a former conviction, unless such convictions were pleaded. While the court is required to take judicial notice of the whole record in a given case, the court is not required to take judicial notice of the record of one case which is pending, or which has been pending in such court, upon the trial of another and wholly disconnected case, such as two prosecutions, even against the same defendant, would constitute. Therefore absent the pleaded fact of a former conviction, the fact of such conviction would or might easily escape the attention of the court. The fact, therefore, of such former conviction, ought, I think, to be pleaded by the Government, so that the court would have the formal charge thereof before it when it comes to fix the punishment. Moreover, a question of the identity of the defendant upon trial with the person formerly convicted might well arise and become an issue in the case.

Whatever ill effect might accrue to the defendant upon the trial by reason of the recital in the indictment of a former conviction, could, if necessary, be obviated by a proper charge as to the lack of probative effect of the averments of the indictment. For these reasons, as well as others that might be mentioned, it occurs to me that the ills which might accrue to defendant, if charged in the indictment with the fact of former conviction, are more than offset by the harm which would accrue to the Government from the fact that such charge was not contained in the indictment. All these considerations induce me to take the view upon a question which seems to be of first impression under this statute, that the demurrer herein is not well taken. Let it be overruled.

UNITED STATES v. TWO CANS OF OIL OF SWEET BIRCH AND THREE CANS OF OIL OF GAULTHERIA

(District Court, S.D. New York, Mar. 10, 1920)

268 Fed. 866; N.J. No. 7691

Libel under section 10 of the Food and Drugs Act. Motion by claimant for release of product under bond. Motion denied.

The United States attorney filed a libel for the seizure and condemnation of 2 cans, each containing 60 pounds of a product purporting to be oil of sweet birch, and 3 cans, each containing 30 pounds of a product purporting to be oil of gaultheria, charging adulteration and misbranding. The alleged birch oil was labeled in part, "Oil Sweet Birch U.S.P." The alleged oil of gaultheria was invoiced as "Wintergreen Leaf Oil (Gaultheria)."

The claimant by his attorney filed a motion for the release of the product under bond. Said motion was denied.

HAND, *District Judge.* The claimant transported in interstate commerce the above-named merchandise which was misbranded. The articles seized had a much lower market value than the articles which the false labels described. They were branded as oil of birch and wintergreen, which are used in the manufacture of confectionery. The imitation so branded contained but a small percentage of the ingredients and consisted mainly of a chemical of different composition.

The claimant asks to be allowed to furnish a bond and to have the merchandise released so that he can sell it by correct description. It is not denied that the merchandise is not deleterious. The release of these articles after bond is in my opinion discretionary with the court. Section 10 of the Food and Drugs Act provides that any article of food that is adulterated or misbranded and is a subject of interstate commerce "shall be liable to be proceeded against in any district court of the United States within the district where the same is found and seized for confiscation by a process of libel for condemnation."

There follows in a subsequent clause in section 10, supra, a provision empowering "the court by order (to) direct that such articles may be delivered to the owner thereof."

This is not mandatory but clearly permissive. The claimant here has been convicted of a similar offense before and has numerous other proceedings pending against him. I regard the application as addressed wholly to my discretion and I decline to exercise it in favor of the claimant under existing circumstances. The misbranding was fraudulent and injurious to competitors in the trade.

The motion to release on bond is denied.

BRADLEY v. UNITED STATES

(Circuit Court of Appeals, Fifth Circuit, Mar. 18, 1920)

264 Fed. 79; N.J. No. 8701

Appeal from District Court for Western District of Louisiana. Judgment affirmed.[8]

Before WALKER, Circuit Judge, and GRUBB and CALL, District Judges.

CALL, *District Judge.* Libel was filed in the United States District Court for the Western District of Louisiana, against 275 cases of mineral water, praying for confiscation and condemnation of same for having been shipped in interstate commerce in violation of the Food and Drugs Act.

The libel, after alleging the shipment of the cases of mineral water in interstate commerce and the presence of the same within the jurisdiction of the court, alleges that the same were misbranded in the following respects:

That the following statements regarding the therapeutic or curative effects thereof, appearing on the label aforesaid, to wit, "Robinson Springs Water.

[8] Affirming *United States* v. *275 Cases of Mineral Water,* p. 920, *ante.*

Springs at Pocahontas, Miss. Recommended in the treatment of Bright's Disease, Diabetes, Dropsy, Cystitis, Gout, Rheumatism, Indigestion, Kidney, and Bladder troubles. Directions * * * Robinson Springs and Sanitarium Co., Pocahontas, Miss.," were false and fraudulent, in that the same were applied to said articles knowingly and in a reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to the purchaser thereof, and create in the minds of purchasers thereof, the impression and belief that it was in whole or in part composed of or contained ingredients or medical agents effective among other things, as a remedy for Bright's disease, diabetes, dropsy, cystitis, gout, rheumatism, indigestion, kidney and bladder troubles, when in truth and in fact said article was not in whole or in part composed of and did not contain ingredients, nor a combination of ingredients, capable of producing the therapeutic effects claimed on the labels, and therefore not effective as a treatment for said above-mentioned ailments.

C. L. Bradley put in a claim to the water seized by the marshal, and excepted to the libel: (1) That the label does not disclose that the waters contained in the bottles are misbranded, because the label does not claim that the waters contain any ingredients or substance for the cure of any human ailment; (2) the label described in the libel does not pretend that the waters contain medical agents effective as a remedy for human disease; (3) that the labels set out in the libel do not amount in law to a misbranding.

An answer was also filed admitting the shipment in interstate commerce, and the labels as set out in the libel, and were intended for sale as a mineral water recommended to be freely used in the treatment of certain diseases; that the same were in the jurisdiction of the court, but denies that they were misbranded or that the brand was false or fraudulent. The answer then proceeds to allege that before putting the waters upon sale he had the same thoroughly tested and was advised by reputable physicians that the use of said waters were beneficial in the treatment of certain kidney troubles mentioned in the libel; that the water was sold under a guaranty that those not satisfied with the result of the use of the water might have their money back; that said label had been submitted to the proper board in Washington and it expressed itself as having no objection to same; that the labeling was in good faith and not in any attempt to perpetrate a fraud upon the public.

The exceptions were overruled and the cause went to trial before a jury. After the Government case was in, the claimant moved for an instructed verdict. This motion was renewed at the close of the entire evidence. Each of said motions were refused, and the jury returned a verdict in favor of the Government, upon which a judgment was entered condemning said water.

The errors assigned are as follows: (1) The court erred in failing to sustain exceptions to the libel; (2) the court erred in refusing to instruct the jury to find a verdict for claimant; (3) the court erred in refusing the charge that the label on the bottles of water did not violate the act of Congress in that the said label made no statement regarding the therapeutic or curative effect of said waters; (4) the court erred in refusing to grant a new trial.

The first and third assignments raise the same question of law. Does the label as set out in the libel bear the interpretation sought to be placed on it by the Government, i.e., that the words, "Recommended in the treatment of," the diseases named, properly construed, mean that the said water had a curative or therapeutic quality? If

the court could say that they did not have this meaning, then it should have sustained the exceptions and given the charge asked. If it could not, then no error was committed in overruling the exception and refusing to give the charge. The construction of the language used in the label was in the first instance for the court; the falsity or truth and the intent of the claimant were for the jury to find from the testimony before it.

It seems to us that words, "Recommended in the treatment of Bright's disease", etc., "Directions, * * *" could only mean that the use of the water in the treatment of the diseases named would effect a cure or alleviation of such diseases, otherwise why recommend it? Unless this means that the water did contain elements or ingredients which would alleviate or cure the diseases named, when taken according to the directions thereon contained, it was a waste of printers' ink. Would not anyone suffering from any one of the diseases named understand that by the taking of the water his ailment would be alleviated or cured by reason of the ingredients contained in the water? It seems to us that he would. Treatment would only be taken with a view to alleviation or cure, and a water possessing elements or ingredients favorable to that end only would be recommended.

We think this label clearly susceptible of this construction, and that no error was committed either in overruling the exception or refusing the charge.

The contention is made that the water condemned in this case is not a drug within the meaning as used in the act. To confine the meaning of the word "drugs", as used in the third subdivision of section 8, to any definition of drug found in dictionaries or pharmacopœias would in our judgment be entirely too narrow. As Justice Hughes says, in *Seven Cases* v. *United States*, 239 U.S., 517, "That false and fraudulent representations may be made with respect to the curative effect of any substance is obvious", and when so made of water it seems to us it would be trifling to say that water ordinarily is not a drug in the true meaning of the word, and therefore does not fall within the condemnation of the third subdivision of section 8 of the act. If the allegations of the libel are true, the claimant has put the substance, water, in interstate commerce with the recommendation that it possesses certain elements or ingredients which are curative or at least alleviative for the diseases named in the label. He will not be heard now to say the substance recommended is water and not a drug. Such a construction would nullify the act of Congress.

After the Government had closed its case the claimant moved for an instructed verdict, which motion was denied, and this action of the court is assigned as error in the third assignment.

The evidence produced on behalf of the Government tended to show the shipment of the water in interstate commerce, the wording of the label as set out in the libel, the analysis of the water and absence therein of any medicinal ingredients possessing curative or alleviative properties in the treatment of the diseases named in the label, and the position of the claimant in respect to the article.

Under that condition of the proof it seems to us clear that the trial judge would have had no right to withdraw from the jury the determination of the two main questions at issue, namely, whether the claims made in the label were true, and if not true, whether they were made knowingly and fraudulently. The judge is only justified in withdrawing a case from the jury when the testimony is such that no reasonable construction of it would justify a verdict for the plaintiff. "The case should not have been withdrawn from the jury unless the conclusion followed as matter of law, that no recovery could be had upon any view which could be properly taken of the facts the evidence tended to establish." *Texas & Pacific Railway Co.* v. *Cox*, 145 U.S. 606. After a full review of the testimony for the Government we cannot say the testimony is of this character. The jury would have been justified in finding from this testimony, unexplained or uncontradicted, the falsity of the label and the fraudulent intent of the claimant in putting forth the claims made therein.

The motion for an instructed verdict was renewed at the close of the testimony in the entire case and denied by the court. The testimony in its then condition made an issue of fact upon conflicting testimony, which could only be decided by the jury in the case.

The last error assigned is the refusal of the court to grant the motion for a new trial. The refusal or granting of a motion for a new trial is in the sound discretion of the trial judge, and cannot be reviewed upon writ of error or appeal. *Mattox* v. *United States*, 146 U.S. 140.

The case was submitted to the jury by the trial judge in a full and clear-cut charge defining the issues, and the jury found against the claimant.

We find no reversible error in the record, and therefore the judgment of the trial court is affirmed.

UNITED STATES v. 154 CASES OF TOMATOES

(District Court, W.D. Pennsylvania, Mar. 29, 1920)

N.J. No. 8727

Libel under section 10 of the Food and Drugs Act. Motion to dismiss. Motion sustained.

ORR, *District Judge*. This is a proceeding instituted by the United States for the seizure and condemnation of 154 cases of canned tomatoes, upon the ground that they have been adulterated and misbranded, in violation of the Food and Drugs Act. The Phillips Packing Company, which is named in the libel as the shipper, has presented its motion to dismiss the libel for the reason that it does not set forth any facts showing a violation of the act of Congress aforesaid. The libel was signed and filed by the United States attorney. The only affidavit attached to it is by one who says that

he is an "inspector of the Bureau of Chemistry, United States Department of Agriculture; that he has read the foregoing libel and the averments contained therein as to his own knowledge are true, except as to those matters and things stated to be of his information and belief, and as to those matters and things he verily believes them to be true." It is unfortunate that there is such a lack of correlation between the affidavit and the libel, that we cannot tell what averments in the latter are made upon the knowledge of the affiant and what are made upon his information and belief. There is, therefore, a lack of that certainty of allegation which should always be found in a libel before the property of a citizen should be seized. Turning to the libel, we find a representation to the court that the canned tomatoes are labeled, inter alia, as follows: "Castle Haven Brand Tomatoes Our first quality carefully selected Packed for Fine Family Trade Contents weight 2 lbs. Packed by Phillips Packing Co., Cambridge, Md., U. S. A." We find it further represented in the libel "that said article of food as analyzed by the Bureau of Chemistry, Department of Agriculture, United States of America, is shown to be adulterated in violation of said act of Congress commonly known as the Food and Drugs Act, in that tomato pulp has been mixed and packed with and substituted wholly or in part for the article." This is not an averment that tomato pulp has been mixed and packed with and substituted for the article, but is an averment that a certain analysis shows such mixture, packing, and substitution. In other words, there is the averment that a certain analysis will show an adulteration, yet no averment of the fact of such adulteration. Further, it is a matter of common knowledge that tomato pulp is derived from tomatoes, yet there is no averment that canned tomatoes, according to a custom of the trade, are supposed to be free from tomato pulp. It is provided by the act itself that the proceedings in cases like the present shall conform as nearly as may be to the proceedings in admiralty. We find in General Admiralty Rule No. 23 the provision that, "the libel shall also propound and articulate in distinct articles the various allegations of fact upon which the libelant relies in support of its suit, so that the defendant may be enabled to answer distinctly and separately the several matters contained in each article."

There is not the particularity required of the pleader in admiralty which is required of a pleader at law or in equity, yet where there is to be a seizure of the property of a citizen there should be distinct allegations of fact which if provided, would justify the seizure. In *du Pont de Nemours & Company* v. *Vance*, 19 Howard, 162–171 and 172, we find this language in the opinion of the Supreme Court, as delivered by Mr. Justice Curtis:

> The rules of pleading in the admiralty court are exceedingly simple and free from technical requirements. It is incumbent on the libelant to propound with distinctiveness the substantive facts on which he relies, etc.

The same views, although greatly elaborated, are expressed in the earlier case of *The Hoppett and Cargo* v. *United States*, 7 Cranch, 389–393:

> It is not controverted, that in all proceedings in courts of common law, either against the person or the thing, for penalties or forfeitures, the allega-

tions that the act charged was committed in violation of law, or of the provisions of a particular statute will not justify condemnation, unless, independently of this allegation, a case may be stated, which shows that the law has been violated. The reference to the statute may direct the attention of the court and of the accused to the particular statute by which the prosecution is to be sustained, but forms no part of the description of the offense. The importance of this principle to a fair administration of justice, to that certainty introduced and demanded by the free genius of our institutions in all prosecutions for offenses against the laws, is too apparent to require elucidation, and the principle itself is too familiar not to suggest itself to every gentleman of the profession. Does this rule apply to informations in a court of admiralty? It is not contended that all those technical niceties which are unimportant in themselves, and standing only on precedents of which the reason cannot be discerned, should be transplanted from the courts of common law into the courts of admiralty. But a rule so essential to justice and fair proceeding as that which requires a substantial statement of the offense upon which the prosecution is founded, must be the rule of every court where justice is the object, and cannot be satisfied by a general reference to the provisions of a statute. It would require a series of clear and unequivocal precedents, to show that this rule is dispensed with in courts of admiralty, sitting for the trial of offenses against municipal law. It is, upon these and other reasons, the opinion of the court that the information is not made good by the allegation that the offense was committed against the provisions of certain sections of the act of Congress.

Taking up now the charge of misbranding, the representation is made "that said article of food, so designated as aforesaid and analyzed as aforesaid, is also shown to be misbranded in violation of said act of Congress in that labels contain statements 'Tomatoes', and a cut of a ripe tomato, which are false and misleading and deceive and mislead the purchaser." This averment is insufficient to justify the seizure. There is no allegation in the libel that the contents of the cans are not derived from tomatoes, whether ripe or unripe. There is no averment in the libel that they are not tomatoes of the Castle Haven Brand, whatever that may mean, and there is no averment in the libel that the contents of the cans are not of the first quality available to the packer, and that they had not been carefully selected. The picture of a ripe tomato upon a can cannot deceive people into the belief that what is in that can is what is pictured on the label. It indicates merely the source from which the contents of the can may be derived.

The court must reach the conclusion that the libel is insufficient in that it does not contain allegations of substantive facts which clearly show the right of the Government to seize and condemn these canned goods. The great value of the Food and Drugs Act, and its amendments, to the social life of the citizens of the United States must be recognized by all who have given thought to its provisions and its purposes. That value should not be diminished either by obstacles raised to interfere with its enforcement, or by the disregard of the legal requirements which must be followed in order to reach offenders. The property rights of shippers and other citizens cannot be lightly regarded, and before their property can be seized there should be a strict adherence to the provisions of the acts of Congress and to the reasonable rules and regulations to be found in admiralty proceedings.

The motion will be sustained.

KAR-RU CHEMICAL CO. v. UNITED STATES

(Circuit Court of Appeals, Ninth Circuit, May 3, 1920. Rehearing denied. July 6, 1920)

264 Fed. 921; N.J. No. 8021

In error to the District Court for the Western District of Washington. Judgment of conviction affirmed.[9]

Before GILBERT, MORROW, and HUNT, Circuit Judges.

MORROW, *Circuit Judge.* The Food and Drugs Act of June 30, 1900 (34 Stat. 768), provided in section 2 as follows:

> That the introduction into any State * * * from any other State * * * of any article of food or drugs which is * * * misbranded, within the meaning of this Act, is hereby prohibited; and any person who shall ship or deliver for shipment from any State * * * to any other State * * * any such article so * * * misbranded *within the meaning* of this Act, * * * shall be guilty of a misdemeanor.

Section 8 of the act provided:

> That the term "misbranded", as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular.

In *United States* v. *Johnson*, 221 U.S. 488, this act came before the Supreme Court of the United States upon the question as to the meaning of the word "misbranded" as defined in the act with respect to a false statement on the label. The court held "that the phrase is aimed not at all possible false statements, but only at such as determine the identity of the article, possibly including its strength, quality and purity", and not at statements as to curative effect. In that case it was charged that the label stated or implied that its contents were effective in curing cancer, the defendant well knowing that the representations were false. The court held that, even if the statement was misleading, it was not covered by the statute. This decision was rendered in May 1911.

President Taft almost immediately transmitted to Congress a special message calling attention to the necessity of passing at an early date an amendment to the Food and Drugs Act supplementing the existing law to "prevent the shipment in interstate and foreign commerce of worthless nostrums labeled with misstatements of fact as to their physiological action." In the course of the message the President said:

> In my opinion, the sale of dangerously adulterated drugs, or the sale of drugs under knowingly false claims as to their effect in disease, constitutes such an evil and warrants me in calling the matter to the attention of the Congress. Fraudulent misrepresentations of the curative value of nostrums not only operate to defraud purchasers, but are a distinct menace to the public health. There are none so credulous as sufferers from disease. The need is urgent for legislation which will prevent the raising of false hopes of speedy cures of serious ailments by misstatements of fact as to worthless mixtures on which the sick will rely while their diseases progress unchecked. (62d Cong., 1st Sess., vol. 47, Cong. Rec., pt. 3, p. 2379.)

---

[9] Affirming *United States* v. *Kar-Ru Chemical Co.*, p. 900, *ante*.

In response to this message an amendment to the act was introduced in the House, which was explained by Mr. Sherley, its author. In the course of his remarks he referred to the President's message and the decision of the Supreme Court in the *Johnson case*, in which he stated that the court had held:

> That the sections of the Pure Food Law relating to misbranding did not embrace statements as to the curative or therapeutic properties of drugs. There was a very strong dissent handed down by Justice Hughes and concurred in by Justice Day and Justice Harlan, holding that a proper construction of the act would embrace such cases. The majority of the court seem to have gone on the idea that it was not the intention of Congress to enter into the domain of matters in issue between rival schools of medicine, but, as is very clearly set out by the minority in their dissenting opinion, there were great many cases that did not belong in this twilight zone, but represented plain cases of fraud and deceit. In the opinion of the minority of the court, it was the intention of the law to reach such cases, and believing it certainly ought to be the intention of the law to reach them, I introduced the bill now before the House. Just after its introduction, the President called attention to the importance of the decision and the need of a remedy by a special message to Congress. This act has been drawn with some care, and as perfected by the amendments offered will certainly reach these cases of fraud without undertaking to have the Government enter into the disputed domain that lies outside of proper legislation. (62d Cong., 2d Sess., vol. 48, Cong. Rec., pt. 11, p. 11,322.)

The amendment was passed. It provided among other things the addition of a paragraph to section 8 of the act of June 30, 1906, defining misbranding, as follows:

> Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

The information in this case contains four counts. The first count charges the defendant with the unlawful shipment and delivery for shipment via United States mail from the city of Tacoma, State of Washington, to the city of Portland, State of Oregon, consigned to Clarke Woodward Drug Co., a certain package containing three boxes, each box containing an article designed and intended to be used in the cure, prevention, and mitigation of diseases of men. The character and brand of the boxes is set forth, and it is charged:

> That when shipped and delivered for shipment as aforesaid said article of drugs was then and there misbranded within the meaning of the said act of Congress, as amended, in that the following statements regarding the therapeutic or curative effect thereof appearing on the label aforesaid, to wit, "'Kar-Ru,' the constitutional remedy for Rheumatism * * * It is effective in Kidney, Liver, Bladder, Stomach, and Catarrhal Troubles, Mental and Physical Debility, Neuritis, Eczema, Blood Diseases, Irregular menstruation, and the most Acute and Chronic Rheumatic Afflictions," was false and fraudulent in this, that the same was applied to said article unlawfully and in reckless and wanton disregard of its truth or falsity so as to represent falsely and fraudulently to the purchasers thereof and create in the minds of the purchasers thereof the impression and belief that the article was in whole or in part composed of or contained ingredients or medical agents effective among other things as a remedy for rheumatism * * * or effective as a remedy for kidney, liver, bladder, stomach, or catarrhal troubles, or effective as a remedy for mental or physical debility, neuritis, eczema, blood diseases, irregular menstruation, or the most acute and chronic rheumatic afflictions, when in truth and in fact said article was not in whole or in part composed of and did not contain any ingredients or medical agents effective, among other things, as a remedy for rheumatism, or effective as a remedy for kidney, liver, bladder, stomach, or catarrhal troubles or effective as a remedy for mental of physical debility, neuritis, eczema, blood diseases, irregular menstruation, or the most acute or chronic rheumatic afflictions.

The three other counts were identical with the first count, except as to the name of the article shipped, namely, Gon-Nol for diseases of men, Kar-Nitum for diseases of cattle, and Kar-Kol for diseases of man and hogs. Upon the trial of the case before a jury, the corporate capacity, identity, and domicile of the defendant and the shipment of the articles described in the information were admitted. And evidence was introduced in support of the information and for the defendant. The jury found the defendant guilty upon all four counts. The defendant contends that there was no substantial evidence to sustain the charges in the information that the packages in question were misbranded within the meaning of the act of Congress as amended. The claim of the defendant is that this is a controversy relating to the efficacy of homeopathic remedies, and that the theory of the prosecution arises upon the testimony of its medical witnesses that homeopathic remedies were worthless. Assuming that the exceptions reserved by the defendant at the trial were sufficient to raise whatever questions there may be in this contention, the question is: What were the questions of fact submitted to the jury?

The prosecution introduced the testimony of E. O. Eaton, a chemist in the employ of the Government at the San Francisco laboratory, who testified that he had analyzed samples of Kar-Ru which showed sugar 83.4 percent; starch, 12.6 per cent; charcoal, 1.63 percent. He did not find any other active medical ingredient, except one part to a million of arsenic in some of the samples. There was a certain amount of water and a small amount of ash or inorganic salts. When samples were burned, ash was left. Some samples showed ash 0.15 of 1 percent, and all of them mixed together one part arsenic to a million. Alkaloids, chloroform, and ammonium salts were absent, as well as heavy metals, except a trace of iron.

He analyzed samples of Gon-Nol in which he found sugar, 61.75 percent; starch, 30.1 percent; ash, 0.65 percent, consisting of calcium, sodium phosphate, potassium, iron salts, ammonium salts, arsenic one part in a million, charcoal 12 percent, heavy metals, trace of iron.

He analyzed samples of Kar-Nitum and found sugar, 76.7 percent; starch, 15.9 per cent; charcoal, 2.85 percent; ash 0.55 percent; arsenic, five parts to a million.

He analyzed Kar-Kol and found sugar, 81.9 percent; starch, 13.8 percent; charcoal, 215 percent; ash, 3 percent; arsenic, six parts to a million.

On cross-examination this witness testified that he first made a qualitative analysis to find the different ingredients and then a quantitative analysis to find the amount of each. He was asked whether in his tests he could have caught small quantities of certain elements such as ammonium salts, ferric chlorid, and iodin. He thought he could have detected any small amount, but could not say whether he would have detected a quarter of a grain of ammonium salts. He knew he could have detected a half grain. With respect to ferric chlorid and iodin he could have caught one tenth of a grain, but could not say if he would have detected minute parts or indeterminable quantities. He made a test for nitric acid. He would have detected probably a drop in a gallon. He found one part in a million of arsenic.

The prosecution called Calvin S. White, a major in the Medical Reserve Corps of the United States Army, educated in the University

of Pennsylvania and Oregon. Analysis of the elements in Kar-Ru was submitted to the witness, and he testified that it would be worthless in the cure of any disease. "It is all inert, and there is nothing there which could possibly be a curative agent in any disease. It is not possible to get any one medicine which will cure all of the different diseases enumerated." The analysis of the elements of Gon-Nol was submitted to the witness, and he testified that "it would have no effect at all. It would do neither harm nor good." On cross-examination the witness testified that he had informed himself of the practice of the homeopathic school of medicine. "There is no school which teaches the use of those things for rheumatism" (referring to pulsatilla and lycopodium). The homeopaths did not recognize arsenic as a remedy for chronic rheumatism.

J. B. McNerthney, a witness for the prosecution, testified that he had been practicing medicine for 16 or 17 years. That he had a medical education in the University of Minnesota and New York and a postgraduate at Berlin and Vienna. The synoptical analysis of the formula of Kar-Ru was submitted to him. He testified that "It would have no medical value. * * * Absolutely no school of medicine would recognize it as a remedy."

The synoptical analysis of Gon-Nol was submitted to him. He said it appeared to contain no medical qualities and was absolutely worthless as a cure for gonorrhea. In his opinion, it would not be recognized in any school of medicine.

From an examination of the synoptical analysis of the formula of Kar-Kol, he testified that it appeared to contain no drugs of medical value and was absolutely worthless in the treatment of cholera or diarrhea in human beings. It would not be considered a remedy in any recognized school of medicine. That the medicine contains six parts in a million of arsenic would not give it any medical value. The addition of lycopodium, pulsatilla, sulphur, nitric acid, and thuja in such small quantities as not to be discovered by the chemist would be worthless in the cure of any disease.

Chester H. Woolsey, for the prosecution, testified that he had studied medicine at the University of California, took a postgraduate course at Cornell, did some work at Columbia, and was then an instructor at Stanford University.

From what the analysis of Gon-Nol shows, it would not have the least effect and would be absolutely worthless in any form of gonorrhea. It would do more harm than good, because the patient would be wasting time with the useless remedy while the disease would be getting a firmer hold on him. The formula which the analysis disclosed would not be recognized by any school of medicine that I know of as a remedy for gonorrhea. From the examination of the synoptical formula of the analysis of Kar-Ru, I would say that Kar-Ru is absolutely worthless as a remedy for rheumatism, kidney, liver, stomach, and catarrhal troubles, mental and physical debility, neuritis, eczema, blood diseases, irregular menstruation, and the most acute and chronic rheumatic afflictions.

H. K. Faber, a graduate of medicine from the University of Michigan and associate professor of medicine at Stanford University, at that time in the base hospital at Camp Lewis; P. B. Swearingen, a graduate of the St. Louis University, had taken a special postgraduate course in New York and Chicago and had been a practicing physician for 26 years; and Royal M. Gove, who had been practicing medicine in Tacoma for 28 years, were called as witnesses for the

prosecution and all testified to substantially the same effect as the preceding witnesses.

H. J. Shore, holding a veterinary degree and employed as a bacteriologist by the United States Department of Agriculture; N. A. Madsen, a graduate of Iowa State College and Veterinarian College of Copenhagen, employed by the United States Department of Agriculture as meat inspector; and Samuel B. Foster, a graduate of the Washington State College for Veterinary Medicine and employed by the United States Government in the tuberculosis eradication work in Washington and Oregon, testified for the prosecution that from the analysis of Kar-Nitum the preparation would not be a remedy for tuberculosis or relief of the disease at any stage.

At this point the prosecution rested its case. The defendant did not move for an instructed verdict in its favor, but proceeded to introduce evidence for its defense.

P. H. Hebb was called and testified that he was the president, manager, and practically the only stockholder of the defendant corporation; that he was not a medical man by profession, but for 7 or 8 years had been reading and studying medicine, particularly homeopathic medicine; that they put upon the market some medicines for common ailments, both for man and beasts; that he wrote the labels for Kar-Ru, Gon-Nol, Kar-Nitum, and Kar-Kol, and in so doing he used common and accepted terms rather than medical terms; that they all contained medical curative agents; all are made on a base of triturated sugar, carbo-vegetalis, commonly known as charcoal. This base merely carries the medical agents and is similar in purpose to the half glass of water in which medicine is often administered. The witness was asked on cross-examination how much tuberculinum is there in Kar-Nitum? His counsel objected to this question on the ground that the witness could not be compelled to disclose to the public his trade secrets. It was sufficient, he contended, to meet the charge in the information, to show that the remedies contained curative agents, even one curative agent, in quantity sufficient to act medicinally as recognized and practiced by any school of medical practitioners. The objection was overruled, and the witness answered: "In the sixth potency." How much that was he could not say; it was less than one in a thousand. The witness was asked the potencies of arsenic and pulsatilla in Kar-Ru. He replied that he used the sixth potency of arsenic; from the seventh up of pulsatilla; thuja, the eighth; nitric acid, the ninth; lycopodium, tenth; sulphur, eleventh. In Gon-Nol he used the following potencies: Medorrhinum, sixth; sulphur, seventh; arsenicum, eighth; thuja, ninth; lycopodium, tenth; nitric acid, eleventh.

A. H. Grimmer, for the defense, testified that he resided in Chicago; was in general practice as a physician; had been adjunct professor in the Hahnemann Homeopathic Medical College of Chicago for 10 years, and for 12 years had conducted classes in postgraduate work, members of which came from all over the world—many from Europe, particularly from the London Homeopathic Hospital. That homeopathy is an organized system of medicine which maintains colleges and hospitals, has its county and State medical associations, is recognized in every State in the Union, and in Michigan, Iowa, and California has homeopathic departments in the State

universities, maintained at State expense. Potencies are in general use in the homeopathic practice. The degree varies with the individual practitioner. That homeopathy, as other schools of medicine, seeks to diagnose a case before prescribing. He testified as to the potencies of the remedies used for the diseases mentioned on the labels attached to the packages in controversy. That the remedies would contain curative agents for such ailments. The witness was the father-in-law of Mr. Hebb, the president, manager, and practically the only stockholder of the defendant corporation.

Upon this evidence it was clearly a question of fact for the jury to determine whether the preparations offered to the public by the defendant and described in the information were in fact misbranded in the statements regarding their therapeutic or curative effect and whether such statements were false and fraudulent. The defendant having defended on the ground that the preparations were remedies in accordance with the theory and practice of homeopathy, that question also became a question of fact for the jury, to be determined under proper instruction from the court. Upon this issue the court instructed the jury as follows:

> Do the several preparations put upon the market in interstate commerce by the defendant in fact contain curative agents for the several ailments set forth upon the labels of these respective preparations? If you find from the evidence that each and every of these preparations do in fact contain such curative agents, your verdict will be not guilty under each and every count of the information. If you find as a fact that one or more of these preparations does not in fact contain such curative agents, then, as to such preparations, it will be necessary to consider the second question in the case which is: Did the defendant in fact believe that the preparation in question would be effective in alleviating the ailments for which its label says it is intended to be used?
>
> It is not proper in such a case as this to try rival well-established schools of medicine, and if you find that the defendant has only used in its several preparations homeopathic remedies for the alleviation of ailments then your verdict should be not guilty, and you will not be called upon to consider any other question in the case.
>
> If you find, however, as a fact, that some or all of the preparations put upon the market by the defendant do not in fact contain remedial agents used in any school of medicine for the relief of the ailments for which it is put upon the market, then you will be called upon to consider the second question in the case, and that is: Did the defendant honestly believe that such remedy would have a curative effect upon the ailments for which it is offered to the public? The law requires that the Government must prove beyond a reasonable doubt, not only that the statements upon the labels are false, but also that the statements are fraudulent. The statements may be false and not fraudulent. To be considered fraudulent within the meaning of the law requires that the defendant should either know that the remedy which he offers to the public is of no curative value or that he represents to be of curative value recklessly and without caring whether it would cure or whether it did not, for the purpose of defrauding his customers and getting their money for an article which he knew in fact, or ought to have known, was of no value. If you find from the evidence that the defendant honestly believed and had reasonable ground to believe that his remedy was of curative value, then your verdict must be not guilty, no matter if in fact the remedies were worthless from a medicinal point of view.

These instructions were in accordance with the law as declared by the Supreme Court in *Seven Cases of Eckman's Alterative* v. *United States*, 239 U.S., 510–517–518, where the court excluded the field where there might be differences of opinion between schools and

practitioners, and explained the words "false" and "fraudulent" to conform to such exclusions.

The court said:

> It can not be said, for example, that one should put inert matter or a worthless composition in the channels of trade, labeled or described in an accompanying circular as a cure for disease when he knows it is not, is beyond the reach of the lawmaking power. Congress recognized that there was a wide field in which assertions as a curative effect are in no sense honest expressions of opinion but constitute absolute falsehoods and in the nature of the case can be deemed to have been made only with fraudulent purpose. The amendment of 1912 applies to this field and we have no doubt of its validity.

It is objected that the court allowed Dr. White, a witness for the prosecution, to testify that the preparations which had been analyzed by the chemist, Eaton, and shown to the witness were absolutely worthless and had no food, curative, or medical value. The testimony was clearly admissible. In the case just cited, the court held that the law does reach one who puts inert matter or a worthless composition in the channels of trade labeled as a cure for disease when he knows it is not.

The remaining errors assigned relate to the action of the board in overruling objections to questions put to witnesses as to the curative value of arsenic in a portion of one part to a thousand; as to whether there was any known medicine that would cure kidney, bladder, liver, stomach, catarrhal troubles, mental and physical debility, neuritis, eczema, blood diseases, irregular menstruation, and the most acute and chronic rheumatic afflictions, gonorrhea, cholera, and diarrhea in human beings. The objection was overruled and the witness answered, "Why, no", and then said ,"I might modify that by "——. The court said: "You have answered the question. Is there anything further?" The objection was the use of the word "cure." In support of the objection it was said:

> There is no representation by the defendant that the medicines will "cure" any of these diseases or that he has any one medicine which is a remedial agent for all of them.

On the cross-examination of the witness, which immediately followed his answer, he said:

> Medicines might be combined so that the combinations would have a beneficial effect upon persons suffering from one or more of the diseases enumerated. For instance, if a man were suffering from kidney disease or Bright's disease the physician would have to make a diagnosis of Bright's disease and then select the drug, and then he would have to have some dosage. Then, if a man had stone in the bladder, or some bladder trouble, you would have to make a diagnosis first and select a drug and have a proper dosage, a dosage strong enough to dissolve or neutralize whatever acid there was in the kidney or bladder; but first you would have to diagnose it. Then you would use a medicine just the same as you would use a knife, to remove it, and it must be in a sufficiently powerful dose to work. That is my method of practicing medicine, and there are no other methods which are any good, that I know of.

In view of the fact that no exception was taken to the answer of the witness, his proposed modification, and modification on cross-examination, we do not see that the defendant was prejudiced by the question.

With respect to the remaining objections as to whether the remedies contain any alkaloids, mercury, salicylates, arsenic, or other medicines of a similar nature; as to the effect of giving Kar-Nitum

to certain cattle; as to the food value of the sugar, starch, etc., found in Kar-Ru and Kar-Kol; as to the classification of various diseases; the cost of homeopathic remedies; the exclusion of a letter written by someone in New Jersey addressed to Mr. Hebb concerning the administration of Kar-Kol to hogs; and as to the potency of certain of the remedies in some of the articles mentioned, we find no substantial error on the part of the court in its ruling upon these questions. The testimony was admitted under well-known rules of evidence or was without prejudice to the defendant.

The judgment of the court below is affirmed.

UNITED STATES v. GINGEROLE CO.

(District Court, W.D.Pennsylvania, June 10, 1920)

N.J. No. 8720

Information alleging violation of section 2 of the Food and Drugs Act. Trial before the court. Judgment of not guilty.

The United States attorney filed an information against the Gingerole Co., a corporation, Washington, Pa., alleging shipment by said company from the State of Pennsylvania into the State of Maryland of a quantity of an article labeled in part "Gingerole" which was alleged to be misbranded. It was alleged, in substance, in the information that the article was misbranded for the reason that certain statements regarding the therapeutic and curative effects thereof, appearing on the labels of the jars and cartons containing said article, falsely and fraudulently represented it to be effective as a treatment, remedy, and cure for pneumonia, rheumatism, neuralgia, pleurisy, croup, and asthma, when, in truth and in fact, it was not.

ORR, *District Judge.* Inasmuch as the court will enter at the time of filing this opinion a general finding that the defendant is not guilty, it is proper that the court give some reason therefor lest the inference be drawn that by such finding there is an indorsement of the defendant's product. The real reason for entering such judgment is because the court has not been convinced that the defendant is guilty under the statute. This is a proceeding under the Food and Drugs Act (34 Stat. 768), as amended by act of August 23, 1912 (37 Stat. 416), which, among other things, provides a drug shall be deemed to be misbranded—

> If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein which is false and fraudulent.

The drug in this case is a drug called "Gingerole," which word appears therefrom to be a trade-mark. The carton contains the statement "Will not blister," a statement also of the place of manufacture and by whom it is manufactured. It contains directions "Do not apply to open sores"; "Apply to parts affected"; "For pneumonia or cold in chest apply to chest and cover with flannel

cloth"; "For rheumatism, neuralgia, sore or stiff joints, apply by rubbing ointment in well"; and it contains in addition the words "For pneumonia, cold in chest, croup, rheumatism, sore or stiff joints, neuralgia, pleurisy, asthma." The label on the jar contains directions: "Apply to parts affected. When applied to children use sparingly", and also "Do not bind." From all that appears upon the carton and jar, the drug is intended for external use only, and in order to produce a secondary irritation. I am satisfied from the evidence that it is a counterirritant, notwithstanding the testimony of certain physicians who had applied some to their hands while preparing to testify in the case. It is a matter of common knowledge that the old-fashioned mustard plaster was prepared by hand and that it took considerable time before it had produced any effect upon the more tender skin of other parts of the body. I am satisfied that the drug in question would not be of any substantial value in the cure of some of the diseases above mentioned, but I am not satisfied that the officers of the defendant company do not believe that their drug would be of benefit to a patient who was suffering from any one of the diseases mentioned. The label may be false in its suggestiveness, but in the absence of a positive statement, which would never be made without some positive belief in its truth, I cannot find that there is anything on the carton or the label which is fraudulent within the meaning of the act of Congress. The statement, design, or device regarding the curative [or] therapeutic effect of the drug must be both *false and fraudulent*.

This phrase must be taken with its accepted legal meaning, and thus it must be found that the statement contained in the package was put there to accompany the goods with actual intent to deceive—an intent which may be derived from the facts and circumstances, but which must be established. (*Seven Cases* v. *United States*, 239 U.S. 510–517.)

I am unable to find under the evidence in this case that any such statement upon carton or jar is both false and fraudulent. It is not necessary to determine which, if any, of the various statements may be false, because that would not be sufficient to establish the guilt of the defendant.

HALL v. UNITED STATES

(Circuit Court of Appeals, Fifth Circuit, July 16, 1920)

267 Fed. 795; N.J. No. 8360

In error to the District Court for the Southern District of Texas. Judgment of condemnation affirmed.[10]

Before WALKER, Circuit Judge, and FOSTER and CALL, District Judges.

WALKER, *Circuit Judge.* This was a libel by the United States praying that 141 bottles, more or less, of described drug products or medicine be seized for condemnation, and be condemned and sold

[10]Affirming *United States* v. *141 Bottles of Drug Products*, p. 931, *ante*.

or destroyed. The libel contained allegations to the following effect: Each bottle mentioned was encased by a carton with the following printing or label thereon, to wit:

A Texas Wonder, Hall's Great Discovery, Contains 43% alcohol before diluted. 5% after diluted. The Texas Wonder! Hall's Great Discovery, for Kidney and Bladder Trouble, Diabetes, Weak and Lame Backs, Rheumatism, Gravel, Regulates Bladder Trouble in Children. One small bottle is 2 months' treatment. Price $1.25 per bottle. E. W. Hall, Sole Manufacturer, St. Louis, Mo.

There was enclosed in each of the cartons a circular containing the following:

Louis A. Portner * * * testified he began using the Texas Wonder for stone in the kidneys * * * and tuberculosis of the kidneys as diagnosed by his physician * * *. He was still using the medicine with wonderful results, and his weight had increased.

That said label and the said carton, and the circular contained in each of said cartons, regarding the curative or therapeutic effect of the said drug or medicine are false and fraudulent, in that the said drug or medicine contains no ingredient or combination of ingredients capable of producing the curative or therapeutic effects claimed for it as set forth by the printed matter on said carton, and thereby the said products are misbranded in violation of paragraph 3 of section 8 of the Food and Drugs Act of June 30, 1906, and the amendments thereof. Said bottles were shipped in interstate commerce in a way described, and, as a result of such shipment, were, at the time of the filing of the libel, in the possession of a named party in the district in which the proceeding was instituted. The plaintiff in error intervened, claimed the bottles proceeded against, and by answer put in issue material averments of the libel. Pursuant to a stipulation of the parties waiving a trial by jury, the case was tried by the court without the intervention of a jury. The court made findings of fact to the effect that the articles libeled were transported in interstate commerce in cartons labeled as alleged, that every claim made for the medicine on the cartons was false, and that the medicine as compounded has not and could not have the curative properties claimed for it; that the defendant-intervener made the claims shown on the carton recklessly and without a sincere belief in their truth, and that he had actual knowledge that the claims as made were false; and that, in so far as the question of false and fraudulent misbranding is a question of fact, the medicine as distributed was misbranded falsely and fraudulently. Based upon such findings of fact the court concluded, as a matter of law, that the bottles of medicine libeled were falsely and fraudulently misbranded within the meaning of the statute, and because thereof were subject to forfeiting and condemnation. There was a judgment in pursuance of such findings of fact and conclusion of law. The case is here on exceptions to the last-mentioned action of the court, and to rulings on objections to evidence in the course of trial.

Counsel for plaintiff in error in argument made objection to the consideration by this court of the part of the opinion rendered in the case by the district judge, which was quoted in the brief filed by the counsel for the defendant in error. This objection is based,

not on a claim that there was any inaccuracy in the quotation, but on the ground that the opinion of the trial judge is not properly a part of the record to be considered by this court. If a provision of a rule of this court (rule 14) had been complied with, a copy of that opinion would have been a part of the record before us. The objection on the ground stated is without merit. Certainly it is not an obstacle to a proper consideration of a case by an appellate court, for it to be authentically informed by an opinion of the trial judge of the manner in which the evidence adduced was considered by him and of the reasons relied on to support the conclusions he reached.

Language used in the label is to be given the meaning ordinarily conveyed by it to those to whom it was addressed. When so read and construed it amounted to an assertion that the article referred to, if used as directed, might be expected to have a curative or alleviating effect on the classes of ailments mentioned. There was no indication of an intention to except any ailment embraced in those classes. Evidence adduced showed what were the ingredients of the article called "A Texas Wonder," and that those ingredients could not, singly or in combination, have any remedial or beneficial effect on any ailment of the kinds mentioned in the label. The plaintiff in error, the claimant below, the manufacturer and distributor of the article, was a witness in his own behalf. Admissions made by him showed that he was fully aware that his product did not, and could not, have any remedial effect on certain well-known kinds of kidney trouble. Evidence disclosed that it was bought and used as a remedy for ailments as to which admittedly it was wholly ineffective. It cannot with any plausability be contended that there was an absence of evidence to support a finding that the plaintiff in error put the articles in question into the channels of interstate trade, labeled as a cure or remedy for stated classes of ailments, when he knew that it was ineffective as to an ailment or ailments embraced in those classes, and that this was done with actual intent to deceive buyers and users of the article. Such a finding was enough to support the further conclusion that the alleged label contained a statement as to the curative or therapeutic effect of the article referred to which was false and fraudlent within the meaning of the statute. 37 Stat. 416; *Seven Cases* v. *United States*, 239 U.S. 510.

It is urged in argument that there should be a reversal because of the overruling of objections to the following questions propounded by the court to a physician who was a witness for the claimant:

> I will ask you whether or not such a combination as has been read to you as contained in this bottle is recognized by the medical profession generally, or any portion of it, as a specific for either kidney or bladder troubles, diabetes, weak and lame back, rheumatism or gravel?
>
> I will ask you whether any physician that you know of would advise, and I am not speaking with reference to any particular person, but whether the medical opinion crystallized by discussion and exchange of views, would recommend for treatment to a person afflicted with kidney trouble, as a great discovery or solvent of that trouble, this thing?
>
> Would it be considered good or bad practice for a physician to give it to a man from the standpoint of protecting a man's health?

The asking of the first-quoted question was justifiable by the circumstance that the witness, at a preceding stage of his examination,

had made a statement to the effect that the combination of ingredients which evidence had showed constituted the article in question would have a definite and specific effect on the various organs of the body. Certainly it was not improper for the court to seek to ascertain from the witness what he meant by that statement. The negative answer given by the witness to the question made it plain that he was not to be understood as asserting that the combination in question was regarded as a specific for the class of ailments for which the label suggested its use; in other words, that it was specially adapted to have a beneficial effect with reference to such ailments.

The action of the court in overruling objections to the other questions above set out was treated in argument in behalf of the plaintiff in error as showing or indicating that the case was tried on the erroneous theory that condemnation of the articles proceeded against could be based on opinions of physicians that those articles did not possess the remedial qualities claimed for them. That the court in asking the questions and in overruling objections to them was not influenced by any such erroneous theory is made plain by the opinion rendered. That opinion discloses that it was recognized that the condemnation sought could not be adjudged unless the evidence adduced proved (1) that the label's statement in regard to curative or therapeutic effect was false; and (2) that such statement was fraudulently made. Falsity in the label's statement of remedial effect being one of the elements required to be proved, it was not improper to admit expert evidence on that issue. On such an issue, the opinions of persons whose occupation, training, and experience are such as to make them acquainted with the qualities of the ingredients of the article in question is admissible. And it is permissible to prove that these comprising such a class generally regard the ingredients of an article in question as ineffective, singly or in combination, in the treatment of ailments mentioned, and would in practice refrain from using it in such treatment because of the recognized futility of doing so. It may be assumed that if the issues of fact had been tried by a jury the objections to one or more of the questions asked might properly have been sustained as a means of keeping the jury from being confused or misled into basing their verdict on legally insufficient evidence. But when the issues were tried by the court without a jury, and there was evidence tending to prove all that was required to be proved to support the judgment rendered, and findings were made in pursuance of such evidence, and it is disclosed that the court correctly apprehended what was required to be found to support its judgment, that judgment is not to be disturbed in the absence of the record clearly showing erroneous action prejudicially affecting the substantial rights of the party seeking a reversal.

The conclusion is that the record does not show any reversible error. The judgment is affirmed.

UNITED STATES v. 100 CASES OF CANNED RED KIDNEY BEANS

(District Court, W.D. Kentucky, Nov. 8, 1920)

N.J. No. 9794

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The United States attorney filed a libel for the seizure and condemnation of 100 cases, more or less, each containing two dozen cans, of so-called red kidney beans, alleging that the article had been shipped and transported from the State of Iowa into the State of Kentucky and remained unsold in the original unbroken packages, and that the article was adulterated and misbranded in violation of the Food and Drugs Act.

Adulteration of the article was alleged in the libel for the reason that long cranberry beans had been mixed and packed with, and had been substituted wholly or in part for, the article. Misbranding was alleged in substance for the reason that the statement "Red Kidney Beans", and the design of a dish containing red beans, appearing on the label of the cans containing the article, were false and misleading and deceived and misled the purchaser, when applied to the article consisting of long cranberry beans, and for the further reason that the said article was an imitation of, and was sold under the distinctive name of, another article.

The court charged the jury as follows:

Evans, *District Judge*. Gentlemen of the jury: This is a suit by the United States in the form of what lawyers call a libel for a judgment against certain packages of beans which you have heard described many times today. The pleadings of the United States on which these packages are seized are of such a character as to permit an inquiry which will be left to the jury and the only thing is this: Was the label on these cans and on the packages that contained these cans misleading in that the statement was that they were red beans and the design on the can contained red beans; whether that was false and misleading and tended to deceive and mislead the purchaser when applied to this product consisting of what the label says and charged were long cranberry beans. The pleadings of the United States are of such a character as to exclude from your consideration, in my judgment, any other feature in the case, and this alone is the claim on which the United States bases its prayer for a judgment of condemnation of this property in this suit, that is, that the statement "Red Kidney Beans" and the design containing red beans are false and misleading and deceived and misled the purchasers when applied to this product. That is a very simple statement—that they are misleading and deceived and misled the purchasers when applied to this product. The defendants have denied all of those charges and put them in direct issue, and it is for you, gentlemen, to say from all the evidence as to whether that was the purpose of these cans and of the packages that contained them, that is, that the purchasers were misled and deceived.

You are the sole judge of the weight and credibility of this testimony. It is for you to say what the evidence leads you to conclude about the facts.

This is not a criminal case. This is a case at law where the preponderance of the evidence is submitted to you to pass conclusion upon. You have heard it all, and as there is a great deal of it, it will probably be a little hard to remember it in all of its details, but you must do the best you can.

The statute upon which this prosecution is based is called the Pure Food and Drugs Act. The Congress thought it was necessary to protect food, but Congress did not have in mind, I have no idea, certainly it did not say so, that you should prevent people from getting cheaper food. I believe it is a pretty good idea these days if you can get something cheaper. I doubt if Congress intended by this act anything like upholding high prices of food. They are very much reduced here from the testimony here. That may or may not be important in your consideration of this case, but certainly vast quantities of beans have been sold, according to the testimony, many millions of cans of these beans. In this case they were beans that came into this country in a dry state and when they got here they were treated by the packers and canner in the way the testimony has shown; and the question for you to determine is whether they put this brand upon them to deceive or mislead the purchaser into buying, and it is for you to say whether there was any testimony to warrant you in believing that. Upon the facts, there is a plain statement that these are red kidney beans. They are kidney beans, though sometimes called by one name and sometimes by another. My bean experience as a farmer did not lead me to think that there could be the number of beans that I have heard testified to here. But at all events these were beans that were brought into this country and only used for a food product, and the question for you to determine is whether these beans were colored in such a way when cooked as to deceive the purchaser. It is said the boiling brought out the color, but it is for you to say whether that did make the beans red. They were beans in great quantities and they were sold, and the question is: Was it the purpose of the defendant to mislead the public or was it to give the public a good bean at a cheap price? If it was to deceive the public, they brought themselves within the law. Otherwise, I cannot say they did under the testimony.

It is a very simple thing. There are only two alternatives; one is to find for the United States, that is the plaintiff, and to do that you must believe from the preponderance of the evidence that this branding on the can and package was made for the purpose of deceiving the public and in that event you should say, "We the jury find for the United States." That is all. If on the contrary you do not believe that and cannot find that this branding was done in this way for the purpose of deceiving—and it might be very strong testimony—it would have been a very strong suggestion but no evidence is here to prove by any purchasers that anybody was deceived. But whether that is so or not, that is not the thing in the case. It might be a circumstance for you to consider. But if you should find from a preponderance of the testimony in this case that this

branding was for the purpose of deceiving the purchasers, you should find for the United States; but if upon the other hand you should find that the contrary is the fact, you should say, "We the jury find for the claimant."

Take the papers and retire to the jury room, gentlemen, and see if you can reach a verdict.

UNITED STATES v. GANDARA

(District Court, District of New Mexico, Nov. 23, 1920)

N.J. No. 9008

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The jury was charged as follows:

NEBLETT, *District Judge*. The defendant is being tried under the provisions of what is known as the Pure Food and Drugs Act. For your information I will read the law applicable to this case:

> The introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded, within the meaning of this Act, is hereby prohibited.
>
> * * * * * * *
>
> The term "misbranded", as used herein, shall apply to all drugs * * * the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular.
>
> * * * * * * *
>
> That for the purposes of this Act an article shall also be deemed to be misbranded if its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

In the first and second counts of the information you must determine whether or not the defendant shipped the bottles of medicine described in the information and introduced in evidence in this case in interstate commerce; that is, in the first count, whether or not he did ship from Albuquerque, in the State of New Mexico, to Imperial, in the State of California, addressed to Belen Sandoval, a box containing one bottle of medicine mentioned in the first count of the information and the evidence.

In the second count, that he did ship 1 box containing 2 bottles of medicine from Albuquerque, in the State of New Mexico, to Gila Bend, in the State of Arizona, addressed to Anita R. Alvizo, you will first determine whether or not the allegations that he shipped this medicine in interstate commerce is true or not.

It is essential for the Government to establish these facts by the evidence to your satisfaction beyond a reasonable doubt, for the reason that this court would have no jurisdiction to try this defendant on the charges he is now being tried on unless the articles were shipped in interstate commerce. The sending or shipping of any articles by mail from a point in one State to a point in another State constitutes an interstate shipment.

The material allegations of the first count of the information which must be established by the evidence to your satisfaction beyond a reasonable doubt are as follows:

That the defendant did, on July 30, 1920, ship from Albuquerque, in the State of New Mexico, to Imperial, in the State of California, a box containing 1 bottle; that said bottle contained an article designed and intended to be used as a cure, prevention, and mitigation of diseases of man; that the bottle was marked, labeled, and branded and contained the statement regarding its therapeutic and curative effects, the English translation of which is as follows:

LA NOBLEZA

Directions: This is for the blood, scrofula, for curing cancer of the blood; cures leprosy and syphilis and cures tuberculosis of the blood; is good for all impurities of the blood; is good for producing noble blood. This preparation contains Sarsaparilla root, juniper, Cascara Sagrada, Cascara Copalquin (Mexican Cinchona) Anise, Vanilla, sugar and sufficient alcohol to preserve. Every person who uses this remedy until he is cured will be sure of not having any contagious diseases; even a year old child can use it, because its components are vegetable and it cannot harm anybody. Adults should take a spoonful every 3 hours; boys and girls from 20 to 15 years should take a spoonful every 4 hours; boys and girls from 14 to 8 years should take a teaspoonful every 3 hours; children from 7 to 4 years should take a teaspoonful every 5 hours; from one to 3 years they can take a teaspoonful every 6 hours; this medicine does not require any diet, and can be bought of Don Juan Gandara, 518 W. Marquette Avenue, Albuquerque, N. M. Price $6.20.

That the statements on the label, mark, or brand placed upon the bottles were false and fraudulent; that the defendant knew that the statements on the label on said bottle were false or fraudulent, or that he made a wanton and reckless statement in said label, not knowing whether it was true or false. That said label did falsely and fraudulently represent to purchasers and create in their minds the impression and belief that the article contained in the bottle was composed of ingredients or medicinal agents which would cure scrofula, cancer, tuberculosis, leprosy, syphilis, and all impurities of the blood and was effective as a preventive for all contagious diseases. That in truth and in fact said article was not composed and did not contain ingredients or medicinal agents effective as a cure for scrofula, cancer, leprosy, syphilis, tuberculosis, and all impurities of the blood, and was not effective as a preventive for all contagious diseases.

If each and every one of the foregoing material allegations are established by the evidence to your satisfaction beyond a reasonable doubt, then you will find the defendant guilty as charged in the first count of the information.

The material allegations of the second count of the information which must be established by the evidence to your satisfaction beyond reasonable doubt are:

That the defendant on July 30, 1920, shipped from Albuquerque, in the State of New Mexico, to Gila Bend, in the State of Arizona, addressed to Anita R. Alvizo, 1 box containing 2 bottles containing an article designed and intended to be used in the cure, prevention, and mitigation of disease.

That the bottles contained in the box shipped were labeled, marked, and branded, the English translation of which is as follows:

SIN IGUAL (Without Equal)

Directions: This remedy is for curing the kidneys. It cures the liver, cures gravel of the kidneys, cures the bladder, cures suffocation of the chest. It is good for diseases of the urine, cures retention of the urine, cures stone in the bladder, puts the kidneys in order, cures jaundice, and is good for yellow fever. This remedy does not contain alcohol, it is a pure vegetable curative. This medicine contains Althea Root, Cascara of Copalquin (Mexican Cinchona), Mexican barley, licorice and Cascara Sagrada. Adults should take a spoonful of this remedy in 4 spoonfuls of warm water every hour. Boys and girls 15 years of age should take a spoonful every 2 hours, under the same conditions. Boys and girls 10 years of age should take a teaspoonful of this remedy and 4 of warm water every hour. From 5 to 3 years, they should take a teaspoonful of this remedy in 4 teaspoonfuls of warm water every 2 hours. When this remedy is taken, do not eat chillies, nor meat, nor use coffee nor liquors nor cold things. Hot food is most favorable and hot water also. Guard against air and cold; not much exercise should be taken. This remedy is on sale at 518 W. Marquette Avenue, Albuquerque, New Mexico, Mexican Herb Remedy Company, Don Juan Gandara, Proprietor.

That the label or brand appearing on the bottles so shipped were false and fraudulent; that the same were applied by the defendant to the medicine in the bottle, knowing the same to be false, or in reckless and wanton disregard of the truth or falsity of the same, so as to create in the minds of purchasers thereof the impression and belief that the article was composed of and contained ingredients or medicinal agents effective as a cure for diseases of the liver, bladder, for gravel, suffocation of the chest, retention of urine, stone in the bladder, yellow fever, and jaundice. That the statements on the bottles so shipped were not true; that is, the bottles upon which said labels were placed did not contain ingredients or medicinal agents which were a cure for diseases of the liver, and bladder, gravel, suffocation of the chest, retention of the urine, stone in bladder, yellow fever, and jaundice.

If each and every one of the foregoing material allegations above mentioned are established to your satisfaction beyond a reasonable doubt, you will find the defendant guilty as charged in the second count of the information.

It is sufficient if you believe from the evidence that one or more of such statements as to the curative powers of this medicine are false, provided you find the other material allegations as stated above.

If you believe from the evidence that the medicine called La Nobleza is composed of the ingredients named on the label thereon, viz, sarsaparilla root, juniper, cascara sagrada, cascara copalquin or Mexican cinchona, anise, vanilla, sugar, and sufficient alcohol to preserve it, and that such preparation is made in such a way [that] it is [a] remedy for tuberculosis, scrofula, cancer, leprosy, syphilis, and all impurities of the blood, and is effective as a preventive for contagious diseases, then such a label is not false or fraudulent; and if the jury further believes that the medicine or preparation called Sin Igual is composed of the ingredients named in the libel thereon, viz, althea root, cascara of copalquin or Mexican cinchona, Mexican barley, licorice, and cascara sagrada, and that such preparation is made in such a way that it is a cure for the liver, gravel of the kidneys, bladder, suffocation of the chest, disease of the urine, retention of the urine, stone in the bladder, kidneys, jaundice,

and yellow fever, then such label is not false or fraudulent, and it will be your duty to find the defendant not guilty.

You are instructed that in determining the truth or falsity of the preparation called La Nobleza and the preparation called Sin Igual, you are to take into consideration all of the evidence relative to their curative effects as testified to by all of the witnesses in the case, both those on behalf of the Government and those on behalf of the defendant, and if from all of the evidence in the case, you entertain a reasonable doubt as to the falsity of such statements, and as to their being fraudulent, then it will be your duty to resolve such doubt in favor of the defendant. In this case, there appeared some doctors. These witnesses are known as expert witnesses, and as to them I instruct you that one who testifies as an expert witness must possess special knowledge or skill necessary to make his opinion or judgment a fact of pertinent value, and the value of such expert's testimony depends largely on the extent of the experience and study of the witness. It is not whether the subject matter of his testimony is common or uncommon, but whether the witness offered as an expert has any peculiar knowledge of the subject matter of the inquiry not common to the world, which renders his opinion an aid to the jury in determining the questions at issue.

So far as the expert testimony is concerned, you will consider that and treat it as you would any of the other testimony in the case; the simple fact that it was offered by an expert should not be given preference over the other testimony in the case, and everything else being equal, has the same weight as that of any other witness. Under the law the opinion of an expert witness is admissable in evidence and is to be given such weight and value as the jury thinks proper. The value of expert opinion is to be determined not only from the qualification and experience of the witness, but must be considered in connection with the facts upon which he bases his opinion, which facts must be established by the evidence the same as any other material fact in the case, and the jury must look to see that the facts are established by the proof or not. You cannot take the assumed facts upon which such expert testimony is based as proven, but you will look to the proofs to determine whether such facts are proven or not in considering such expert testimony.

In this case the element of good faith on the part of the defendant in placing the label upon the bottles of medicine made by him, and which, it is claimed by the Government, he shipped in interstate commerce, is a question for you to determine. The defendant claims that the medicine placed by him in the bottles which have been introduced in evidence would cure the diseases mentioned and described on the label of the bottle. If you believe from the evidence that the defendant shipped in interstate commerce the drugs or medicine mentioned in the information and in the evidence, and further believe that the representations on the labels were false, but further find that the defendant honestly believed, at the time he placed the labels on the bottles and shipped them in interstate commerce, that the medicine contained in the bottles would do just what he claims on the label it would, that is, it would cure each of

the diseases he claims on the label it would cure, then it would be your duty to return a verdict in favor of the defendant. On the other hand, if you believe from the evidence that the defendant knew that the medicine in the bottles would not cure all of the diseases mentioned in the label, or that he made the statements wantonly and recklessly, not knowing whether such statements were true or false, and the other elements of crime are established, then you will find the defendant guilty.

The third count in the information charges that the defendant was, on July 22, 1920, convicted in the United States District Court for the District of New Mexico of a violation of the provisions of the Pure Food and Drugs Act, the law under which the present prosecution is brought against him. The court may impose a greater penalty for the second offense, and that is why this has come to you consideration. If you believe from the evidence that the defendant shipped in interstate commerce boxes containing bottles of misbranded drugs, to wit, La Nobleza and Sin Igual, the contents of which and the labels thereon being identical with the contents and labels of the misbranded drugs shipped and delivered for shipment as hereinbefore in the first and second counts hereof set forth; that such proceedings were had upon such information and that said Juan Gandara pleaded guilty to the said information so filed in the District Court of the United States, for the District of New Mexico, then you will find the defendant guilty as charged in the third count of the information.

You are the sole judges in this case of the credibility of the witnesses and the weight to be given to their testimony. And for that purpose you may consider the fairness or the unfairness, the prejudice, bias, or interest in the result of your verdict, if any, of any witness who has testified before you, his demeanor while testifying, his apparent carefulness and fairness on the stand, his opportunity to know and correctly relate the facts, and whether his testimony is positive or negative in character, and determine, from the whole of the evidence, where the truth in the case lies.

The defendant is presumed to be innocent until his guilt is established by the evidence beyond a reasonable doubt; to the benefit of this presumption the defendant in this case is entitled, and it stands as his sufficient protection until the same has been removed by evidence establishing his guilt beyond a reasonable doubt.

A reasonable doubt is such a doubt as would cause a reasonable and prudent man, in the graver and more important affairs of life, to pause and hesitate to act upon the truth of the matter charged. But a reasonable doubt is not a mere possibility of innocence, nor a caprice, shadow, or speculation as to the innocence not arising out of the evidence or the want of it. The jury should patiently and dispassionately weigh and consider the testimony and bring to bear upon it the exercise of common sense and judgment as reasonable men. And if, after considering the evidence, you can say that you have an abiding conviction of the truth of the charge then you are satisfied beyond a reasonable doubt.

The jury thereupon retired and after due deliberation returned a verdict of guilty, whereupon the court sentenced the defendant to serve one year in jail and to pay the costs of the proceedings.

UNITED STATES v. LONG

(District Court, W.D. Oklahoma, Feb. 1, 1921)

N.J. No. 9614

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The jury was charged as follows:

WADE, *District Judge.* Gentlemen of the jury: This is a simple case. I don't want you to become confused and wander off into fields of speculation suggested by counsel in the arguments or in the opening statements, including Christian Science, prejudice of doctors, the origin of the medical profession, and all that sort of thing. Get down to the thing to be tried. What is it?

This man here is sending out some medicine which he solemnly represents will do certain things. The question here is whether it is true. If not true, it was sent out with the purpose to defraud.

Don't get a notion that this law was made by somebody to do something to help somebody that is not entitled to help, because this law was made by the people of the United States. They make the laws in this country. And this law was made in the same spirit in which they have here in Oklahoma, and in every other State in the Union, a law providing that no man can practice medicine unless he has taken a certain course of study or is a graduate from certain institutions, and in the same spirit in which the people of every State spend thousands of dollars every year to enable men to become qualified to practice medicine for us, because it is the only source of aid which we have when sickness comes.

Now let's get away from some of these suggestions that have been made.

In addition to providing a bar against the attempted practice of medicine by persons who know nothing about the human body or its elements, they passed a law providing that if persons are selling food, it shall not be adulterated; if they are selling drugs or medicine, they shall not misbrand it. That is all. No law prohibits a man from making any medicine he wants to and selling it to the people if he tells the truth about it. Anybody in this country has the right to buy any medicine that he wants to buy if he knows what it is.

The law which punishes men for misbranding drugs and medicines is the same law which is enforced every term of court for misbranding food, for shipping eggs that are rotten when they are represented to be fresh, all of those things for the protection of the people against things which would defraud them or endanger their lives or health, or get their money for something without getting value received.

What is charged here? It is charged here that this product made of vinegar and berries—and there is no dispute upon that point—was sent out under a certain brand and a certain label. Now, in order that we may thoroughly understand what is before the jury, let us look at this label:

World's Greatest Kidney and Bladder Remedy. The greatest discovery of medical science for Kidney and Bladder Trouble. Removes Gravel, dissolves

and passes it away without the aid of the knife. Speedy relief for Bright's Disease, Diabetes, Bed Wetting, Female Weakness, Sugared Urine, Rheumatism, and all Uric Acid Troubles. Removes all impurities and infections from bad blood in a few days after Doctors give you up. Don't let them use the knife, come and get well. Don't take poisonous drugs and opiates, when nature, in her great laboratory, in the forest, has prepared the remedy. The Almighty saw clear down to the end of time and provided a remedy for all diseases. The Medicine Man of the wild tribes handed down these formulas from father to son and never used the surgeon's knife or poisons, but dug the roots and herbs nature provided, and kept the secret, but of late a few of these formulas have been obtained at a high price to be kept inviolate, and we are able today to compound and distribute to suffering humanity, the World's Greatest Kidney and Bladder Remedy. We have living testimonials that foiled the Medical Profession that are now well. This remedy has been used successfully in Pellagra cases. Directions: Adults, one tablespoonful before meals, three times a day. Children, teaspoonful three times a day. Guaranteed Under Pure Food and Drugs Act, June 30, 1906. Price $2.00 per bottle. William T. Long Medicine Co., 208 West Washington Street, Oklahoma City, Okla. Trial Package, Three bottles for $5.00.

The Government charges that those representations were false. The defendant denies the charge that they were false, and denies the charge that there was any fraud in the label.

In this case, as in every case, the burden is upon the Government to prove beyond a reasonable doubt the charge it makes, that this medicine was falsely and fraudulently labeled, and unless it is established here beyond a reasonable doubt that that is true, of course you must acquit.

What is a reasonable doubt? I have explained it to you so often you thoroughly understand it now. It means a doubt which naturally arises in your minds, not being sought after or conjured up, but one which naturally arises in your minds after a full, fair, and honest consideration of all of the evidence. If your mind wavers and oscillates, so to speak, between guilt and innocence, then the law requires you to give the benefit of that state of mind to the defendant. But if there is no reasonable doubt in your mind as to the truth of the charge made, you will convict.

Now, then, does this proof require that the Government prove that all of the representations were untrue? Not at all. Not at all. If any one of them is untrue and fraudulent, that is sufficient. In other words, if the representation as to the effect of his medicine on Bright's disease is false and fraudulent, the defendant is guilty. If the representation is untrue and fraudulent as to diabetes, he is guilty. If the charge is true as to any of them, he is guilty.

In other words, you can plainly see that the defendant has the right to make any representations he wants to so long as they are true. A man might represent that a certain medicine would cure coughs and colds, and that might be substantially true, but if he went further and said coughs and colds and tuberculosis, you know that the representation is false because humanity has not yet found a drug that is a cure for tuberculosis. Therefore, if he had stopped at the coughs and colds he might be within the proper bounds, but he steps outside when he represents that it will cure something that is incurable through any drug medium.

So in this case if the representation here had been that it would cure frequent urination, and stopped at that, then we would have same evidence here to which he could point as establishing the proof of the thing that he represented. But, of course, under the un-

contradicted evidence here, frequent urination is not proof of Bright's disease, nor of diabetes. If he had represented that it aided painful menstruation there might be some proof here that it had afforded some relief in such cases. If he had stopped with saying that it would cure bed wetting, there might be proof here upon which he could rely and ask you to believe that the representation was true.

But, of course, under the uncontradicted evidence in this case, there is no case of Bright's disease or diabetes before this jury where any witness testified that the medicine was taken and that it effected in any manner a cure. Nobody claims that there is any such proof. Both sides have been heard, and outside of gossip or suggestions of persons suffering from something of the kind above stated, nobody could tell—from the description and from the method of determining diseases of that type—no one could tell you that we have any proof with reference to any Bright's disease or diabetes in this case—under the uncontradicted evidence in this case. You are the final judges of the evidence. Nobody claims in this case that this medicine would cure Bright's disease or diabetes, and we are dealing in scientific matters about which the average man has no knowledge. When it comes to finding the truth, we cannot set up our judgment without experience and education against the statements of men who devote their lives to these studies. We must accept the word of science in these things, except insofar as we, with our limited vision, can see and thus judge what the truth is. The uniform testimony in this case is that in a case of Bright's disease there is no drug cure at all, and that the thing here before the court would not affect it in any way. That in diabetes there is no drug cure, and that this remedy would not cure it. There is no evidence to the contrary so far as Bright's disease and diabetes is concerned. If the representations were false as to these, and fraudulent, he is guilty. Now, I think it is perfectly safe to say that, under the uncontradicted evidence in this case, while you are the judges of the matter finally and of this man's guilt, I can see no possible conflict in the evidence here that these representations were false. There don't seem to be any evidence to the contrary. But you are the judges of that matter. I can recall no evidence in conflict in the case.

Several witnesses testify that this thing is not a cure for Bright's disease or diabetes. Nobody claims that it is, the defendant's claim being that he knew nothing about what these persons were suffering from except what they told him, and those people probably knew no more about it than the average person who, when he gets sick, often imagines a name for the disease which he has. But what the people told this defendant would be hearsay. It would not be competent proof that the person had such a disease.

So, gentlemen, if these representations are false, there is only one other thing to consider in this case, and that is whether they were fraudulent, the statute providing that the branding must be false and fraudulent before you can convict.

Well, what does fraudulent mean? A representation is fraudulent, of course, when a man knows that it is not true. Nobody would dispute that. Fraudulent means, with reference to representations,

things that are said or represented to somebody when the person making the representation knows that that representation is not true. It don't make so much difference what his purpose is providing it is a serious purpose of getting one to part with his money or property, or something of that kind. That, of course, would be fraudulent. But other things are fraudulent besides that. The man who has no knowledge of a thing, and knowing that he has no knowledge, represents as a fact that a certain thing is true, in the hope that the person to whom the representations are made will rely upon it and accept his statement, that man is committing a fraud. His representation is fraudulent. If he knows, now, that he doesn't know, and he represents to a man a fact which he knows he doesn't know expecting the other man to rely upon it, that is a fraud because there is fraud in the assumption of knowledge when he knows he hasn't got it. It is generally true that any representation which is made in reckless and wanton disregard of whether it is true or false constitutes a fraudulent intent and purpose.

So, gentlemen, taking these things and these definitions into consideration, if you determine beyond a reasonable doubt that the evidence here establishes that these representations, or some of these representations, were false, were they fraudulent within the meaning of the rule I have stated?

Now, it is not a question, gentlemen, of how much money he was making. I think counsel suggested something about those coming to him and having treatment, whether they had money or not. There isn't any evidence of that in this case. Just stick to the evidence, gentlemen.

Now, don't be misled or carried away by the suggestions that this wouldn't hurt anybody. The people when they enacted this law didn't say, "If a person misrepresents a medicine or drug which hurt somebody." They said that anybody who misrepresented any drug, medicine, anything of that kind, and sends it through interstate commerce, should be punished. A person should not thus be induced to part with his money, no matter how small it may be, nor should a person be thus led to believe and rely upon a certain thing as a cure for a dangerous and deadly disease, and thus perhaps be led to defer consultation or inquiry which might help him if taken in time, and which might not help him later. I only refer to those things because of the things suggested here in the argument of the case.

It is a question of whether or not this man has sent misbranded medicine through interstate commerce, that is what gives this court jurisdiction. If it didn't get out of the State it would have to be tried in the State court. But where a man falsely represents in the label statements in connection with medicine, and that false statement is made fraudulently within the meaning of what I have said to you, the man is guilty, even though the price is made low and it would harm no one.

So, gentlemen, taking all these considerations together, look at the evidence in this case, frankly without any feeling of prejudice, and determine whether or not, beyond a reasonable doubt, any of the representations on this label were false, and if so, if they were also

fraudulent, and shipped into Iowa, and if you find beyond a reasonable doubt that they were, you will find this man guilty. If you do not find they were false and fraudulent, either in whole or in part, you will find a verdict of not guilty.

UNITED STATES v. KRUMM

(District Court, E.D. Pennsylvania, Feb. 8, 1921)

269 Fed. 848; N.J. No. 9292

Information alleging violation of section 2 of the Food and Drugs Act. Demurrer by defendant. Demurrer sustained.

THOMPSON, *District Judge.* The United States attorney filed an information against the defendant charging violation of the Food and Drugs Act in shipping and delivering from Philadelphia, Pa., to Baltimore, Md., a number of packages, each containing an article of food labeled, marked, and branded as "Krumm's Macaroni." The first count charged that the article of food was adulterated "in that a substance, to wit, a product prepared from flour, had been substituted in whole or in part for macaroni, to wit, a product prepared from semolina, which the article purported to be." The second count charged that the article of food was misbranded in that the word "macaroni" "was false and misleading in this, that it represented that said article was macaroni, to wit, a product made from semolina, whereas, in truth and in fact, said article was not macaroni, to wit, a product made from semolina, but was a product made from flour."

The defendant demurs upon the ground that the information does not set out any offense against the United States; that it is not averred that the packages were original unbroken packages; that it is not averred that semolina is not flour or a product made from flour; that it is not averred that macaroni is a product wholly prepared from semolina; that the definition of the word "macaroni," as given in the information, is not in consonance with its meaning as accepted by the general public; and that it is not set forth that the article of food contained in the packages was dangerous to the health or welfare of the people, or intended to deceive the purchaser.

The first ground of demurrer may be dismissed for the reason that while the Food and Drugs Act prohibits shipping or delivering for shipment in interstate or foreign commerce any article of food which is adulterated or misbranded, it does not restrict the offense of shipping or delivering for shipment to articles in original unbroken packages, the restriction to original unbroken packages applying only to those who receive in interstate commerce and, having received, deliver in original unbroken packages any adulterated or misbranded articles.

As to the averments in relation to the substance contained in the packages, I think they are lacking in that particularity in both counts which should be observed to inform the defendant with certainty of the charge he is to meet at the trial. The offense under the first

count, adulteration, arises in the case of food, "if any substance has been substituted wholly or in part for the article", and the offense of misbranding arises "if the packages containing it or its label shall bear any statement, design, or device regarding the ingredients or substance contained therein, which statement, design, or device shall be false or misleading in any particular." According to the Century Dictionary, macaroni is a paste or dough prepared originally and chiefly in Italy from the glutinous granular flour of a hard variety of wheat. According to the Standard Dictionary, it is an Italian paste made into slender tubes from the flour of hard glutinous wheat mixed with water. Semolina is defined to be the hard grains retained in the bolting machine after the fine flour has passed through.

If the article in question, as averred in the first count, was prepared from flour, or, as averred in the second count, was made from flour, it was apparently macaroni. But if it is intended to charge that macaroni is not made from the whole of the flour which comes from the mill, but in order to be macaroni must be made from the large, hard grains retained in the bolting machine after the fine flour had passed through, the counts are lacking in averments that semolina is not a part of the substance known as flour. Flour may be fine or coarse, it may be made from the whole grains of the wheat, as, "whole-wheat flour", or it may be the fine bolted flour. If it is meant by the indictment to charge that in order for a substance to be macaroni, it must be made wholly from semolina and not contain any of the fine flour which leaves a residuum of semolina, the information should plainly so state. It is of vast importance to the public that foodstuffs shall be what they purport to be through the labels, marks, and brands upon the packages. It is a matter of common knowledge that in the fine wheat flour of commerce much of the nutritive property of the grain is absent which remains in "whole-wheat flour." A purchaser of an article labeled "whole-wheat flour" is entitled to receive what he is led to believe he is purchasing from what appears upon the label. Similarly, one who is purchasing an article labeled "macaroni" is entitled to receive the article containing nutritive ingredients which genuine macaroni is known to contain. Otherwise the party substituting some other substance for the proper ingredients or designating it by names which falsely represent the contents or mislead the public is liable to the penalties of the act. If, however, one is charged under the act with adulteration and misbranding, he must be informed with sufficient particularity and certainty of the charge against him to enable him to prepare his defense. This particularity and certainty are obviously lacking in the information filed.

It may be that in the course of manufacture, trade, and public use the name "macaroni" has come to mean an article made from flour without regard to its containing semolina alone, and it may be that the word as accepted by the general public is not consonant with what was intended to be set out in the information. These, however, are trial questions.

As to the remaining ground of demurrer, it is not necessary under the Pure Food and Drugs Act that an article in order to be unlawfully adulterated or misbranded must be dangerous to the health of the people.

Demurrer sustained.

UNITED STATES v. 1,459 CASES OF CANNED SALMON

(District Court, W.D. Washington, Apr. 12, 1921)

N.J. No. 10512

Two libels under section 10 of the Food and Drugs Act. Trial before the court. Decree for the United States in one case, for claimant in the other.

The United States attorney filed libels for the seizure and condemnation of 80 cases of canned salmon, labeled in part "Medium Red Salmon * * * Lionax Brand Cohoe Sockeye Salmon", and 1,379 cases of canned salmon labeled in part "Northern Brand Pink Alaska Salmon Packed by Northern Packing Co., Juneau, Alaska", alleging that the article had been shipped and transported from the Territory of Alaska into the State of Washington, and charging adulteration with respect to both consignments and misbranding with respect to the 80-case consignment of Lionax Brand salmon.

Adulteration of the article was alleged in the libels for the reason that it consisted wholly or in part of a filthy, decomposed, and putrid animal substance.

Misbranding of the Lionax Brand consignment was alleged for the reason that the word "sockeye," appearing only partly obliterated on a portion of the label of the article, was false and misleading and deceived and misled the purchaser by representing the article as sockeye salmon, when it was not.

CUSHMAN, *District Judge*. I have too many matters under advisement now, and I am not going to take this matter under advisement.

So far as the misbranding is concerned, I hold with the Government. I think, according to the decisions which you read, that it is not whether the brand is going to deceive the jobbers and wholesalers and retailers and people who trade in these things, but whether it is liable to deceive the consuming public. I am very much like Miss Kolmitz—I never heard of the word "Cohoe" until this case began, and if I saw it on a can of salmon I was about to buy, I would not know whether it referred to canner or the fish or what it referred to. I have lived here almost 30 years and eaten canned salmon most of the time, so I presume I am an average specimen of the public. I take it everyone in this country is familiar with the word "sockeye", and finding it on a can of salmon not completely obliterated, but with this fancy stamp on there, more or less ornamental, would tend to deceive. I think a purchaser going into a retail store to buy a can of salmon would reasonably conclude that that was intended to be a part of the label and might very easily be misled. The decree that is appropriate for forfeiture in that case will be prepared and submitted to the court.

As regards the other lot of salmon, and so far as the 80 cases are concerned also, the court is inclined to agree with Judge Sessions, that this act certainly does require definition. Where the Government asks for forfeiture—where the rules of strict construction obtain—the law should be brief and as clear as it is possible to make it.

Now, that word "article"—Judge Sessions found some trouble in construing "consists of" or "consists"—that word "article", I find fully as much trouble with it as Judge Sessions did the other. Now,

salmon is an article of food, but because some cans of salmon are found to be putrid does not warrant the entire salmon output being condemned. A can of salmon is an article, but is the output of one cannery for a season an article, or is a shipload of salmon an article, or half of the output of a cannery an article? I can't agree with any such construction. It would be reasonable to conclude, in the light or the purview of this act—possibly you could construe the output of a cannery to be an article if the evidence showed that all of the output of the cannery was subjected to those conditions that rendered the part that you found to be putrid or filthy, but it seems like instead of this being in part putrid or filthy that a part of it is [not] putrid or filthy. If a very small percentage of the contents of each can was filthy, even a very, very small portion of it, that would condemn the whole lot, but because part of the cans are found to be filthy and putrid, I am unable to conclude that the court would be warranted in condemning the entire lot of these cases of salmon. Now, if Congress does intend that the courts should give that construction to this law, a definition would clear the matter up.

Now, I find that instead of the entire output of this cannery having been subjected to conditions that caused this putrescence—this filth in certain of the cans—it is more reasonable to conclude that these old salmon that got into this pack were the salmon, as pointed out by the prosecutor, that they picked up locally when they were short of fish to complete the day's output or whatever reason there was, without knowing their age, and not those that Mr. Hanson went out to the fishing grounds and got from the purse seiners. That being true, why, the output of the cannery for those days on which they purchased these old fish would contain putrid fish. If you are going to construe "article" as limited to the condition that created the putrescence, why, then you are going to limit it to those days and the output on those days when they did buy such fish, and not the whole season's pack. If the department wants to make rules that these salmon canners shall can and keep their cans separate, and put one day's pack up separate from another, and not mix up the cans of the separate days' pack and thereby render—put themselves in the position to test and sample cases canned on a particular day when they might bring in a scowload of old fish, why, the public would be protected, and the commercial end of it would not be jeopardized by incurring the destruction of a large amount of fish that might have been canned on days when they were getting perfectly fresh fish. I can see very easily how one scowload of fish, if it was canned and thrown into a shipload and brought in from Bering Sea and samples were taken from that one scowload all canned on one day, would show up a percentage high enough to condemn the whole shipload if we are going to adopt that rule and enforce it that the Government seems to ask in this case.

Miss KOLMITZ. Your Honor, may I interrupt?

The COURT. No.

Now, this statute does not give the court any warrant or does not give the department, so far as I see, any warrant to fix a proper percentage of filth. It says "in part." One decision you read said that meant substantial part, and if it was where human excrement entered into oysters that I take it must have been taken up from the

mouth of a sewer some place, so small a percentage as could only be detected by a microscope, I believe, would be a very substantial portion. But I don't find any warrant under a forfeiture—how would anyone instruct a jury where your articles, like cans of salmon, are separate? They are separate articles; the cases are separate.

So far as health and comfort are concerned—that part of the law regarding misbranding is to prevent fraud being committed upon the consuming public—but the other part, keeping filth and putrescence out of it, that was not to prevent a fraud; that was to protect the public in the matter of its comfort if not health; and the more rotten salmon was, the less liable you would be or the more liable you would be to be disgusted by it as a food, because you would be warned in the kitchen before you ever got it to the table; but a very small bit, the smaller the portion of putrescence, the more likely you would be to get it on your table.

I would think that also in sampling there might have been something satisfactory worked out here, and possibly something could be worked out yet, if I am right in my conclusion that the putrid salmon found in fact was caused by these old fish that were bought occasionally. It is only reasonable to presume that in those cans there would be a greater percentage of putrid fish; that is, in handling them, it would only be natural that they would find their way into particular cases scattered through the entire pack. It would seem to me in careful sampling, not only the cans should be marked but the cases in which they were taken, and where a putrid can was found, there should be some further test made of that case, if I am right in my assumption that the cans that are canned on a particular day are liable to find themselves—liable to be put up in—limited to the cases in which they appear and are not scattered through the entire pack.

The court finds not only on the law, but the facts as well, that there has not been sufficient evidence here to convince the court to that degree that is required in forfeiture cases to warrant a decree for the Government, both as to the 1,379 cases and the 80-case lot.

Mr. RYAN. What is that?

The COURT. I find against the Government in both cases on the law and the facts insofar as the charge is that these were adulterated.

Miss KOLMITZ. The Government desires to except to the court's instruction that the Government should make regulations that each batch be labeled. The law is now that the claimant may separate the good from the bad.

The COURT. What is that you are excepting to?

Miss KOLMITZ. That the Government make regulations that the batches be labeled—each day's canning.

The COURT. That is only a suggestion. Of course, it would be a burden put on the salmon canners, but it would be one way to keep these things separate and not condemn a whole lot.

Miss KOLMITZ. The law now allows the claimant to separate the good from the bad. And the Government excepts to the court's definition of an article of food——

The COURT. Exception allowed.

Miss KOLMITZ. And the Government excepts to every ruling of the court upon the question of adulteration.

UNITED STATES v. 186 BOTTLES OF TRATAMIENTO ZENDEJAS

(District Court, District of Arizona, Mar. 21, 1921)

N.J. No. 9433

Libels under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

The United States attorney filed libels for the seizure and condemnation of 6 bottles and 180 bottles, more or less, respectively, of Tratamiento Zendejas, alleging that the article had been shipped from the State of California into the State of Arizona, and remained in the original unbroken packages at Tucson and Phoenix, Ariz., respectively, and charging misbranding in violation of the Food and Drugs Act, as amended.

Misbranding of the article was alleged for the reason that the following statements, regarding the curative and therapeutic effects of the said article, appearing on the label attached to the bottles, on the wrapper around the said bottles, and in accompanying folders, to wit:

(Bottle, in Spanish) "Tratamiento Zendejas A Strong Purifier of the Blood For Rheumatism, Constipation, Kidney Troubles, Eczema," (in English) "A Blood Repurator For Rheumatism, Constipation, Kidney Troubles, Eczema," (sticker on wrapper) "Diabetic patients will have to take the medicine straight or with the amount of sugar prescribed by their doctor," (light gray folder, in Spanish) "Zendejas Treatment for Men, Women and Children. Strong purifier of the blood * * * Patients suffering from tumors, ulcers, eruptions and all kinds of suppurated manifestations * * * those who suffer from suppurations whether tumors, scrofulas, wounds, fistulas, etc., etc. * * * the Zendejas Treatment removes all these impurities from the blood * * * During the treatment with Zendejas Treatment no other medicine should be taken * * * To those suffering from rheumatism * * * pains will disappear in the first days not to appear again * * * If the teeth have become loose on account of mercury taken by the patient * * * As * * * the Treatment works with such rapidity that their pains disappear * * * they should not believe * * * they are already safe but should continue the treatment until a cure is obtained. The treatment to be complete should be * * * without interruption until 10, 12, or 15 bottles have been taken * * * If the disease * * * is paralysis, loss of sight, chronic rheumatism, or extremely large or deep ulcers, a greater number of bottles should be taken," (light green folder, in Spanish) "Zendejas Treatment Strong Purifier of the Blood. For all sexes For all ages. * * * is notably antagonistic to some germs * * * it makes it unnecessary for the patients to incur the expense of consulting physicians * * * No disturbance of the digestion and no loss of appetite * * * the Zendejas Treatment has the same effect on the blood as a purgative or laxative on the digestion. On account of its composition the Zendejas Treatment acts as a very strong purifier of the blood; as the most active regenerator of the nutritive fluid, as the most energetic reconstituent which may create well being and hope in a large number of patients whose depressed and sad appearance is a sure sign of constant disturbances in the digestive apparatus, impoverishment of blood and lack of nervous energy * * * the most assimilable and eliminable medicine for all impurities of the blood * * * the inventor is able to recommend this medicine with so much confidence being convinced that so far none has given such good results with blood diseases of all kinds and diseases of secondary order such as anemia, chlorisis, jaundice and some skin diseases * * * diseases originating from impurity of the blood * * * pimples, headache (acute pain in head), dyspepsia, intestinal irregularities produced by the use of mercury, eczema, epilepsy or fits, insomnia, sores, lack of respiration, memory, sleep, and appetite, poor digestion, consti-

pation, seasickness, neurasthenia, rheumatism, suppuration of the eyes or ears, tumors, scrofula, fatigue caused by overwork, wounds, suppurating fistulas and tumors which do not heal, some diseases of the sight, nervous affections, paralysis, lack of blood circulation, sleeping of the arms, legs or other parts of the body * * * the cause of all these diseases is a single one * * * the cause of the diseases for which the Zendejas Treatment is used is impurity of the blood; the effects are the diseases mentioned. If the blood is purified, all these diseases will disappear,"

were false and fraudulent in that the article contained no ingredient or combination of ingredients capable of producing the curative and therapeutic effects claimed.

The case against the 6 bottles of the product, at Tucson, came on for trial, the claimant, Panfilo Zendejas, Los Angeles, Calif., having entered into a stipulation with the Government that the decision in this case should also be the decision in the case against the 180 bottles at Phoenix.

SAWTELLE, *District Judge.* In this case the Government seeks to condemn 6 bottles of Tratamiento Zendejas, and the libel alleges that the same were branded and shipped by the claimant herein in interstate commerce in violation of the act of June 30th, 1906, as amended by the act of August 23d, 1912. This act provided:

That for the purpose of this Act an article shall be deemed to be misbranded: In case of drugs: * * *

Third. If its package or label shall bear or contain any statements, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

The claimant admits that he printed and published the statements contained in the circular and labels and also admits the interstate shipment, but expressly denies that such statements were false and fraudulent.

A careful reading of the evidence convinces me that the statements which accompanied the packages in question were made and published by the claimant with the intent to deceive and that the representations therein made with respect to the curative or therapeutic effects of the mixture contained in the bottles and packages were knowingly false and fraudulent. *United States* v. *Eckman's*, 239 U.S. 510; *Bradley* v. *United States*, 264 Fed. 799, C.C.A.; *McLean Medicine Co.* v. *United States*, 263 Fed. 694. A judgment may be entered for the libelant.

UNITED STATES v. WILSON & CO.

(District Court, Kansas, Apr. 13, 1921)

N.J. No. 9615

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

The United States attorney filed an information against Wilson & Co., a corporation, Kansas City, Kans., alleging shipment by said company, from the State of Kansas into the State of Missouri, of a

quantity of shell eggs which were adulterated, in violation of the Food and Drugs Act. Adulteration of the article was alleged in the information for the reason that it consisted in whole or in part of a filthy, decomposed, and putrid animal substance.

The case having come on for trial before the court and a jury, after the submission of evidence and arguments by counsel the court delivered the following charge to the jury.

POLLOCK, *District Judge.* In this case Wilson & Co. are charged on the information of the Government, prepared by the district attorney, with the offense of violating what is known as the Pure Food and Drugs Act of the country. The precise offense that is charged against Wilson & Co. is that they shipped in interstate commerce (and you understand, gentlemen of the jury, it is only because these eggs were carried in interstate commerce here that the Government has any control of the matter at all), but that Wilson & Co., the defendant in that case, shipped in interstate commerce, that is, from Kansas City, Kans., into Kansas City, in the State of Missouri, 10 dozen of eggs; that these eggs were spoiled or decayed at the time they were shipped to such an extent that they were unfit for human use or food.

The defendant, Wilson & Co., denies this. From all the evidence in the case the defendant admits it did transport these eggs in interstate commerce about the 23d day of October last year, but says at the time that they were transported they were not in this spoiled or decayed condition.

This is a criminal case. It is a prosecution of Wilson & Co. by the information of the district attorney for a violation of a criminal law. And so it is, that the defendant in law, in your mind, is presumed to be entirely innocent of the offense charged against it, or of any wrongdoing whatever so far as this case is concerned, until the Government shall have proven beyond a reasonable doubt that it is guilty of the offense charged against it.

Now, lest you may have any misunderstanding what I mean by that term "reasonable doubt", I say to you, it means exactly what it says, a reasonable doubt. On the one hand, it does not mean the mere possibility of innocence, because almost anything is possible in this world. It does mean such a substantial doubt in the mind as will require a man of reasonable prudence and caution to pause or hesitate before engaging in the graver affairs of life. Whenever a juror, taking all the facts and circumstances in evidence in a case, there is produced by that evidence, taking it in all its various lights, an abiding conviction that the defendant must be guilty, then there is no longer a reasonable doubt in the mind. But until that point is reached, being a criminal case, the defendant is entitled to a verdict at your hands of not guilty.

Now, this presumption of innocence attends the defendant in this case until that point is reached, if it ever is reached, that the offense charged has been proven beyond a reasonable doubt.

Now, as I remember the evidence, these eggs were transported, 10 cases of them, on the 23d day of October and delivered to this grocery man who testified here. He placed them in an ice box, and so far as the Government's evidence goes there is no evidence whatever as to the condition of these eggs until the 8th and 10th days of Novem-

ber. So, the condition of the eggs on the 8th and 10th days of November was shown for the purpose of showing, or tending to show, if it does, the condition of the eggs, not at that time, at all, but on the 23d day of October at the time they were shipped. Now, for example, in this case, gentlemen, suppose these eggs were spoiled as badly as the Government contends on the 8th and 10th days of November; yet, unless that proves to your minds beyond a reasonable doubt the condition of these eggs at the time they were shipped over there on the 23d day of October, and convinces your minds beyond a reasonable doubt that they were decayed at that time and unfit for use, then the Government has not discharged the obligation it must discharge before it asks a verdict at your hand. If the evidence does convince your minds beyond a reasonable doubt, as I have defined that term, that these eggs were decayed, as claimed by the Government, at the time Wilson & Co. had the car in interstate commerce over in Kansas City, Mo., then your verdict would be for the Government. Failing to so find, and that must be found beyond a reasonable doubt, and from the evidence in the case, or the only other thing you can do in doing justice, is to return a verdict of not guilty.

You, gentlemen of the jury, are the exclusive judges of the weight of the evidence; and by that I mean what the evidence proves; the credibility of the witnesses, and what facts are established by this evidence beyond a reasonable doubt. So that is the case.

Two forms of verdict will [be] handed to you in this case. You will retire and consider your verdict.

UNITED STATES v. 426 BAGS OF ECONOMY SPECIAL HOG FEED

(District Court, W.D. Michigan, May 6, 1921)

N.J. No. 9478

Libel under section 10 of the Food and Drugs Act. Motion by United States attorney to strike claimant's answer from files and for decree of condemnation, granted.

Sessions, *District Judge*. This is a proceeding under section 10 of the Food and Drugs Act of 1906 to condemn 426 bags of feed owned by claimant and, under its direction, shipped and transported in interstate commerce from Milford, Ind., to Augusta, Mich. At the time of the shipment and transportation and of the seizure the feed was misbranded in that the labels upon the bags contained false and misleading statements as to percentages of its ingredients. Claimant faintly urges that such false statements in the labels did not constitute misbranding within the meaning of the act of Congress; but this insistence is so plainly without foundation as not to require discussion. Claimant was the original manufacturer of the feed in question and had sold and shipped it to one of its customers at Milford, Ind. Upon being notified that the feed did not contain the percentages of ingredients stated and set forth in the labels, claimant instructed and directed its customer to reship the feed to

Augusta, Mich., in order that it might be remanufactured, or remixed, and thus made to conform to the statements in the labels. The shipment and transportation of the feed from Indiana to Michigan was not for sale. At the time the libel in this case was filed and the seizure made, the transportation of the feed in interstate commerce had been completed, but the feed still remained in the possession of claimant and in the original unbroken packages.

The principal contention of claimant is that the feed in question is not subject to seizure and forfeiture because the purpose of the transportation thereof from Indiana to Michigan was not for sale. The question thus presented was settled adversely to claimant by the Supreme Court in the case of *Hipolite Egg Co.* v. *United States*, 220 U.S. 45, and is not now an open one. In that case the decisions of the lower courts, upon which claimant relies, were mentioned and briefly discussed, but not approved; indeed, the result reached was a distinct disapproval. The prohibition of the statute is directed against the transportation in interstate commerce of misbranded and adulterated articles of food alike. Some of the later cases directly in point are the following: *United States* v. *12 Crates of Frozen Eggs*, 208 Fed. Rep. 950; 215 Fed. Rep. 584 and 585; *Philadelphia Pickling Co.* v. *United States*, 202 Fed. Rep. 150; *United States* v. *9 Barrels of Butter*, 241 Fed. Rep. 499; *United States* v. *2 Barrels of Desiccated Eggs*, 125 Fed. Rep. 302; *United States* v. *300 Cans of Frozen Eggs*, 189 Fed. Rep., 351; *Weigle* v. *Curtice Bros Co.*, 248 U.S. 285–287; *Weeks* v. *United States*, 245 U.S. 618–622. Since the Hipolite case, above cited, there have been no decisions to the contrary.

The motion to strike claimant's answer from the files and for a decree of condemnation will be granted.

UNITED STATES v. W. B. WOOD MANUFACTURING CO.

(District Court, E.D. Missouri, May 12, 1921)

N.J. No. 10371

Information in 14 counts alleging violation of section 2 of the Food and Drug Act. Jury trial. Directed verdict for defendant on four counts. Verdict of guilty on ten counts.[11]

During the progress of the trial, upon objection by counsel for the defendant to the Government's offer to introduce in evidence certified copies of certain regulations under the Food and Drugs Act, the court ruled as follows:

FARIS, *District Judge.* I think the question is a fairly simple one, gentlemen. You must bear in mind that you are offering this not as the law of the case but as a part of the evidence in the case. It is evidentiary, almost conclusively so, upon the testimony already adduced, of the guilt of the defendant, if I allow it to come in. This board, or the various officers mentioned in the statute, in making these regulations that fix certain arbitrary rules, or prescribe certain

[11]Affirmed, *W. B. Wood Manufacturing Co.* v. *United States*, p. 1098, *post.*

arbitrary colors that shall enter into arbitary things; that shall enter into as constituent parts, as the various parts of colors for food purposes. If they can do that, that, of course, ends this case.

I do not gather from the statute that Congress meant to confer upon these gentlemen so thoroughgoing a power. There might be some serious question in it as to its constitutionality, as to the right to delegate the power to the legislature. Congress can perhaps say what constituent elements shall go into divers colors that are to be used in component parts of foods and drinks, but I seriously question whether they can give that power to anybody else. There may be, really, some question as to the right of Congress to do it arbitrarily.

Now, the only case that you have called my attention to does not treat the matter as one of fact, and you are urging the court to treat it as one of fact, to treat the matter as evidentiary, to consider the finding of these gentlemen and their regulations and prescriptions as being evidence.

Naturally, as I said a while ago, in the nature of most cases, it would be conclusive evidence, it would absolutely settle the case; it would settle this case, beyond any question. But, Judge Orr, in the case you called my attention to, I repeat, did not use it as evidentiary matter at all. He used it as a question of law. He adopted the finding and regulations of those gentlemen as the view which the court itself took of the meaning of that statute, because he said, "We refer to the rules adopted not as controlling this court by way of construing the act but as being a reasonable construction which the court might adopt if it sees proper, and perhaps is the construction that is being placed by the rule which is provided for in the act itself."

That is clear, that so far as Judge Orr used that, in the only case you call my attention to, he used that as being persuasive to the court of the law in the case, and not as being evidence. You are offering this as evidence.

I have no doubt (and this conforms with the view already held by the court) that Congress has not given these gentlemen the power to establish evidence of guilt in these cases.

I sustain the objection.

After further submission of evidence and arguments by counsel the following charge was delivered to the jury by the court:

FARIS, *District Judge.* Gentlemen of the jury: Now, at the close of the evidence and of the arguments of counsel on both sides, to which the jury has listened and to which the jury has paid attention in a most commendable way, it becomes the duty of the court to give you in charge the law which ought to govern you in your deliberations upon your verdict.

This is a duty which falls upon the court. It is the court's duty to declare the law and it is the duty of the jurors, under their oaths of office, to abide by the law as the court shall declare it to them. Touching the evidence, however, and the credibility of the witnesses, the rule is wholly different. You as jurors are the sole judges of the credibility of the witnesses and of the weight and value to be accorded to their testimony.

In reaching a conclusion as to the weight and value that you ought to give to the testimony of any witness, you are warranted in taking into consideration the manner and appearance of the witness upon the witness stand, his manner of testifying, the probability or improbability of the testimony that he gives, his disclosed relations to, or feelings for, the two parties to the litigation. Taking into consideration these several facts, it is your privilege to accord to each and every witness such weight and value as you may deem his testimony entitled to.

If you shall find that any witness has willfully sworn falsely as to any material fact involved in the controversy, it is your privilege to believe or disbelieve the whole or any part of such witness's testimony. By "material fact" is meant any fact which tends to prove or disprove the guilt or innocence of the defendant.

This case, gentlemen, notwithstanding it is a prosecution by the Government of the United States, or by the United States of America, against the defendant, a corporation, is, nevertheless, a criminal proceeding; it has been brought by a criminal information. It is, therefore, to be considered by you, and dealt with by the court, according to the rules which hedge about criminal trials. In this connection, I charge you that the information in this case is nothing but a mere formal charge. It is no evidence whatever of the guilt of the defendant. It has no probative value; it is merely a part of the legal machinery, or, rather, the legal procedure, by which the defendant is brought to answer before a jury of the country. You are, therefore, not to accord to the fact that there has been an information filed any credence or weight whatever.

The charge here as contained in the information is in 14 counts, 14 separate and distinct counts. Each of those 14 represents an alleged violation of the law. Seven of these violations occur with regard to adulteration, and seven of them occur with regard to misbranding of the identical shipments; in other words, there are seven shipments alone involved. Touching those seven shipments two separate alleged violations of the law are charged: One is that a given shipment—take the one contained in the first count, for example—was adulterated; the other is, that that identical shipment (the one in the first count) was misbranded. The same thing is true of all the remaining counts.

In this connection, I would as well say to you now, that in my view, for reasons that I need not now take up your time to call your attention to, your verdict and finding ought to be on counts 5 and 6, 13 and 14, for the defendant. I think the Government has not made out sufficient facts by the evidence adduced, to permit those four counts to go to you. Therefore, the court charges you, as a matter of law, that your finding on those four counts ought to be for the defendant. The other ten counts I am going to submit to you, as to whether your finding shall be for plaintiff, that is, the Government, or for the defendant.

The information, which is of great length, was read to you. I shall not at this time, and on this day of the week, take up your time with again reading it. I shall simply say as to the first count and as to the second count, which are types of all the rest, what they substantially charge.

The first count, substantially and in plain and ordinary language, charges that a shipment of certain colors made by defendant to the Robeson Soda Water Co., in the city of Lumberton, State of North Carolina, was adulterated.

Now, you need not trouble yourselves about whether the shipment was made; whether it was an interstate shipment, and whether the defendant is a corporation. Those three facts have been admitted, so you need not bother yourselves about them. You can devote your attention to the other questions. To repeat, I say, it is charged that a certain shipment of red color was adulterated within the meaning of the act of Congress which I shall presently call your attention to, in that Ponceau 6R, Fast Red A, Bordeaux B, sodium chlorid, sodium sulphate, and arsenic had been mixed and packed with this color so as to lower and reduce and injuriously affect its quality and strength; and that it was also adulterated in that Ponceau 6R, Fast Red A, and Bordeaux B, sodium chlorid (or common salt), sodium sulphate, and arsenic had been substituted in part for the red color which the article purported to be.

Touching that point in this, as well as all the other charges, I shall have something further to say.

It has been also charged that an added, a poisonous and deleterious, ingredient, to wit, arsenic, had been added. That charge occurs in all of the seven counts. You need pay no attention to it, because there is no proof in the case that arsenic, in the quantities which the proof shows were contained in these colors, is, in fact, poisonous, hurtful, or injurious to health. That point goes out of the case and you need not trouble yourselves further about it.

Substantially, then, that is the charge in the first count, third count, fifth count, seventh count, ninth count, eleventh count, and thirteenth count; in the odd-numbered counts. The fifth one however, of those odd-numbered counts, and the thirteenth of those odd-numbered counts I have already told you to disregard and find thereon for the defendant.

Now, the even-numbered counts deal with the same identical shipments that the odd-numbered counts deal with, and charge, in simple language or, rather, the charge when reduced to simple language means, that that color so shipped was misbranded within the meaning of the act of Congress, in that the statement "Red Color" borne on the label was false and misleading for the reason that the statement that it was red color and consisted wholly of red color was false, because it did not consist altogether of red color, but did consist in part of Ponceau 6R, Fast Red A, Bordeaux B, sodium chlorid, sodium sulphate, and arsenic.

It is also charged that it was so labeled so as to deceive and mislead the purchaser into the belief that it did consist wholly of red color, when, in truth and in fact, it was a combination of red color with these other things which I have mentioned.

The charges as to the other eight counts which I am permitting to go to you are similar to the charges in the two counts that I have just read to you. I read those two as types, and explained those two as types of the other eight.

Now, the statute, gentlemen, which is involved in this case is an act of Congress, which provides:

That the introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded, within the meaning of this Act is hereby prohibited; and any person who shall ship or deliver for shipment from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, or to a foreign country, or who shall receive in any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or foreign country, and having so received, shall deliver, in original unbroken packages, for pay or otherwise, or offer to deliver to any other person, any such article so adulterated or misbranded within the meaning of this Act, or any person who shall sell or offer for sale in the District of Columbia or the Territories of the United States any such adulterated or misbranded foods or drugs, or export or offer to export the same to any foreign country, shall be guilty of a misdemeanor, and for such offense be fined not exceeding two hundred dollars for the first offense.

There are additional punishments for second offenses, but those are not involved here.

Some of this statute is not pertinent to this case. I think you will, however, be able readily to pick out those parts which are pertinent.

It is further provided by this act of Congress:

That for the purposes of this Act an article shall be deemed to be adulterated:

In the case of food:

First. If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.

Second. If any substance has been substituted wholly or in part for the article.

And another proviso which is in the information, but which is not now in this case, is that which has reference to an added poisonous ingredient. I have taken that from you so you need not trouble yourselves, I repeat, about that.

So the two questions, then, gentlemen, upon this statute, so far as pertains to the odd-numbered counts, are, whether there has been mixed and packed with these colors any substance which has reduced or served to reduce or lower or injuriously affect the quality or strength of that color; and, second, if any substance has been substituted wholly or in part for that color.

Now, on the second count, the statute provides as to misbranding (and you will already know that the statute which I first read to you forbade misbranding) that:

The term "misbranded", as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, * * *.

That for the purposes of this act an article shall also be deemed to be misbranded:

In the case of food:

First. If it be an imitation of or offered for sale under the distinctive name of, another article.

Second. If it be labeled or branded so as to deceive or mislead the purchaser, * * *.

Those, I think, are the statutes, gentlemen, which are involved in this case upon the charges which I have read. Of course, the purpose of this act of Congress was to prevent deceit and false pretenses in

the sale of food or drugs, and to protect the customer or buyer in his right to receive what he orders, what he buys, and what he desires to receive. It was also for the prevention of fraud and deception to the end that I have mentioned; that is, so that the purchaser should get the thing that he had a right to suppose he was getting.

Taking the first count (and what I shall say applies to all the odd-numbered counts that I am permitting to go to you), if you shall find and believe that the can of red color shipped to the Robeson Soda Water Co. by the defendant in this case, when shipped, or delivered for shipment, contained Ponceau 6R, Fast Red A, Bordeaux B, sodium chlorid, sodium sulphate, and arsenic, and that the effect of these articles was to adulterate it; that is, that they were adulterants, and that being adulterants, the effect of them was to lower and reduce and injuriously affect the quality and strength of that color, you will be warranted in finding the defendant guilty. If you find the converse of that, you ought to find the defendant not guilty; or, if you shall find that this red color was adulterated in that Ponceau 6R, Fast Red A, Bordeaux B, sodium chlorid, sodium sulphate, and arsenic, or any of them, had been substituted in part for red color, which the article purported to be, then, other things being equal, you ought to find the defendant guilty. If you shall find the converse of that, you will find the defendant not guilty.

Upon the second count and upon all the even-numbered counts which I am permitting to go to you, if you shall find that a can of red color was shipped to the Robeson Soda Water Co., at Lumberton, N.C. (and those things are admitted), and that the can or container in which this red color was contained bore the words "Red Color," but, in truth and in fact, this article did not consist entirely of red color, but did consist in part of Ponceau 6R, Fast Red A, and Bordeaux B, sodium chlorid, sodium sulphate, and arsenic, and that those things were not on the brand (and, of course, there is no question about that, that they were not on there), and that the effect of the putting into his can that color, and failing to designate on that can these several things which I have enumerated, was to deceive and mislead the purchaser into the belief that the contents of this can was wholly a red color, then you ought to find the defendant guilty. If you shall find the converse of that, you ought to find the defendant not guilty.

These are types of all of the counts. What I have said as to the two of them (because there are only two questions) applies to all of them. I cannot take up your time with going over all of them.

What I have said as [to] the presence of Bordeaux B, Fast Red A, and Ponceau 6R in the several articles in which it is charged these things were used, so far as counts 1, 2, and 3 are concerned, you cannot consider them as adulterants under these counts; and the fact that they were used in making the article described in count 4 cannot be considered as tending to prove that these articles were misbranded as charged in that count; and the same thing is true as to the use of the word "Orange" in counts 11 and 12.

I say this to you particularly, you will see, as to count 1, which mentions a red color, because Bordeaux B, Fast Red A, and Ponceau 6R are all red colors, but, of course, this does not include sodium sul-

phate, sodium chlorid, or arsenic, if you find those things were in those colors.

Now, gentlemen, I charge you as a matter of law that, in order to find the defendant guilty of the alleged adulteration, or of the alleged misbranding, it is not incumbent on the Government to show that the defendant in this case consciously or willfully put this substance, or these substances, into these colors (if you find they were in there) with the intent to deceive the purchaser with respect to them, but if you shall find that they were in there, and that they were an adulteration within the statute and the law which I declare to you; and upon the question of misbranding, if you shall find that the effect of the label on the cans, when read by a person of ordinary intelligence, creates, or created, a false impression regarding the character and contents of this can, you may find that the can was misbranded. If you find, as I said a while ago, that these things were adulterants, then you may also find that it was adulterated.

The statute provides a way here by which the defendant in the case could have escaped liability; it did not pursue that way and, of course, other things being equal, in finding these other facts, it cannot escape liability on the sole ground in this case that it bought this stuff in New York in bulk, I take it, had it shipped here, put it in cans, or put its own label on those cans and sent it out to be sold to all and sundry who might desire to purchase it. So that question need not be considered by you. You need not consider the intent nor, in other words, if it was consciously done. The law penalizes carelessness and negligence and inattention in these cases, because, as I said a while ago, the intent of the law was to protect the public, and if a man were to be permitted to say that he did not know that he was putting up carbolic acid as glucose, it would be the end of the law.

This is a criminal case, gentlemen, and the burden of proof is upon the Government to make out its case beyond a reasonable doubt. This burden the Government assumes in the beginning and bears throughout the case. The defendant is presumed to be innocent, and this presumption attends and protects the defendant throughout the trial, until it is met and overcome by evidence which proves the guilt of defendant beyond a reasonable doubt. This presumption is raised by defendant's plea of not guilty in this case, so unless you find that the Government has made out the guilt of defendant beyond a reasonable doubt you ought to find the defendant not guilty.

A reasonable doubt is a doubt which has a reason for its basis, which arises from the consideration of all the evidence in the case. It is not, however, a mere possibility of the defendant's innocence.

Some evidence has come into the case from expert witnesses; in fact, a large part of the evidence came from expert witnesses. Touching this sort of evidence I charge you that it is competent for chemists, and other gentlemen who are learned in that art, to give their expert opinion relative to matters within the scope and range and learning of that art, but such expert opinions are not binding upon you and are to be received by you as advisory only. Generally speaking, you are to consider the expert witnesses by the same general rules that you consider other witnesses, and to weigh their credibility by those rules; but touching the expert opinions which they

give you are, I repeat, to consider them as advisory only, and you are permitted to consider them in the light of human experience. In determining their weight and value, and in reaching a conclusion as to their probative effect, it is your privilege to accept or reject such evidence in whole or in part, according as you may believe or disbelieve it, when you have applied to it the test that I have mentioned.

Now, gentlemen, the questions before you have been greatly shortened by the candid admissions of the defendant in this case, that the shipments mentioned in the information were made as described therein; that it is a corporation; that the samples analyzed by the witness, Jablonski, and offered in evidence, were parts of and made from the identical shipments charged in the information, and that these shipments were shipped and sold by the defendant with the knowledge on its part, that the colors were intended as components of food. Of course, nobody claims that these colors have any food value; they are merely colors, but they are, within the meaning of the statute, components of food, and so far as that is concerned are to be regarded as to their effect on the things that they go into, just as if they were food.

Coming down to a little bit of the evidence, in order that I may help you (charging you, however, to bear in mind that you, and not the court, are the sole judges of the evidence and the credibility of the witnesses, and any comment that I may make is not binding on you, you are to disregard it if it does not agree with your views), I might say that the Government in this case has offered proof as to the contents of these seven shipments and there has been no countervailing proof about that matter. The witness, Jablonski, testified as to what were the component elements of Bordeaux B, Ponceau 6R, Fast Red A, sodium sulphate, sodium chloride, arsenic, and so on. He told you not only what were the component parts of all these cans, but he told you the percentages thereof. Those percentages varied largely. They ran, I believe, in salt from perhaps eleven and a fraction to perhaps sixty-three and a fraction. If I should mistake them your better recollections will control and govern. Of course, if you shall believe as to the sodium sulphate and the sodium chloride, that it was present in these colors (and I do not think you can believe anything else, because the uncontradicted proof shows it; no proof has been offered here as to any different analysis than that testified by Jablonski); if you shall find, I repeat, that common salt and sodium sulphate are usually and generally present in substantially, or about, the quantities shown in the evidence, when these colors are manufactured in the usual and ordinary way that reasonably competent men manufacture them, when using reasonable care and skill, then I charge you that the presence of salt does not create either an adulteration or misbranding within the purview of the charge here, and of the statute. But, if you should find the converse of this, that in this sort of manufacture the quantities shown by the uncontradicted evidence ought not appear, then you may consider that an adulteration; in other words, if the party who made these colors made them with reasonable care and skill, and in the reasonably approved method then existing, and this salt got in there in the process of manufacture, then the defendant ought to be found

not guilty. Of course, there is proof here that the defendant did not put any salt, as such, in these colors; that it was in there when he got the colors; that he took nothing from it and added nothing to it. He merely took it out of bulk, put it into cans, and put his labels on those cans and shipped it. But if it was there in forbidden quantities, as I have tried to describe that to you, then the fact that the defendant did not put it there would not protect the defendant.

I do not think of anything else, gentlemen, except the formal charge.

Mr. WHEELER. In regard to punishment, the jury has nothing to do with that.

The COURT. I will cover that.

Mr. WHEELER. Secondly, the jury can acquit or convict on any count, or all counts.

The COURT. Very well.

Mr. Cullen, have you anything to say?

Mr. CULLEN. We desire to except to that part of Your Honor's charge which submits to the jury the question whether or not the presence of arsenic constitutes an adulteration, or an element of misbranding.

The COURT. I will charge the jury upon that, that the presence of arsenic did not amount to an adulteration unless you should find the same thing with regard to arsenic that I have charged touching sodium chlorid and sodium sulphate, because arsenic might be there. You will use the same test in deciding as to whether it was there or not, that has already been testified to in an uncontradicted way, by the witness, Jablonski, and you will consider whether it was a usual and ordinary, and I might say, a necessary, result of the manufacture.

Is that all, gentlemen?

Mr. CULLEN. That is all.

The COURT. Now, gentlemen, with regard to your verdict, I have caused to be prepared for you a blank form of verdict. If you find the defendant guilty on the counts that I have let go to you, one of your number will sign this as it stands, as foreman. If you find defendant not guilty you will add the word "not" in the form that I have prepared for you. You may find defendant guilty on any one, two, or three, or more counts, and not guilty upon the others. You may find defendant not guilty upon all, or you may find defendant guilty upon all counts, according as you may find the facts to be. Your verdict, of course, must be unanimous. You have nothing to do with fixing the punishment. You merely find defendant guilty or not guilty, and so say by your verdict, and the court fixes the punishment.

I shall let you return a sealed verdict. When you have agreed upon a verdict you may enclose it in an envelop and hand it to the clerk, and on Monday morning at 10 o'clock you will return and I shall open the verdict and it will be read.

The jury then retired and after due deliberation returned a verdict of guilty, on May 16, 1921, on counts 1, 2, 3, 4, 7, 8, 9, 10, 11, and 12. As will appear from the above-quoted charge to the jury, the court directed a verdict for the defendant with respect to counts 5 and 6, involving the product invoiced as "Amaranth," and counts 13 and 14, involving the product invoiced and labeled as Caramella."

UNITED STATES v. 36 BOTTLES OF CRAB ORCHARD MINERAL WATER

(District Court, S.D. Ohio, May 17, 1921)

N.J. No. 10172

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States. Motion for a new trial denied.

The following charge was delivered to the jury:

PECK, *District Judge.* This is an action, gentlemen of the jury, brought by the Government of the United States for the purpose of effecting the seizure and condemnation of 36 bottles, more or less, of Crab Orchard concentrated mineral water. It is brought under what is known as the Pure Food and Drugs Law. The pertinent parts of the law are that if a package or label shall contain or bear any statement regarding the curvative or therapeutic effect of a drug, the contents of the package, which statement is false and fraudulent in any particular, then the package is misbranded. And if, being misbranded, it is transported in interstate commerce for the purpose of sale, the Government of the United States may proceed against it. It may be seized and confiscated and condemned, either to be destroyed or sold, the proceeds to be turned into the Treasury of the United States, as the court may order, unless the owners, the claimants, give bond and pay the costs—give bond that they will not dispose of it contrary to law; that is to say, upon giving bond it may be retaken by the owners, to be disposed of under a proper label. The purpose of the act is to insure the truthful and proper labeling of drugs; it is to prevent the false or fraudulent labeling of drugs; it is to protect the public against being misled as to the curative properties of drugs and substances that are offered for sale. The action is not an action to prevent the future sale of Crab Orchard water, either in its natural state or concentrated; the Government proceeds upon the theory that this package of Crab Orchard water is a misbranded package. It is not claimed for the Government that this Crab Orchard water shall not be sold under a proper branding, but what the Government claims is that it is now being sold and disposed of to the public under an improper branding.

Now, the essential elements of the pleading which the Government has filed, which in this form of action is called a libel, are that this water, these packages of water, were transported in interstate commerce. That is admitted by the answer of the defendants. That they were transported within this district and are held for sale—that is admitted by the defendants. That they were misbranded in the particulars set forth in the libel—this is denied by the defendants. And the burden of proof is upon the Government of the United States to establish—to show, I should say, rather than establish—to show by clear and convincing evidence, by a preponderance of the evidence which is clear and convincing, that this branding is false and fraudulent in some one or more of the statements contained upon the label. It is not necessary that the Government show,

to entitle it to a verdict, that all of these statements are false and fraudulent. It is only necessary that the Government show that some one or more of these statements is false and fraudulent. Thus, if the libel be true, in all respects except as to typhoid fever, for instance, but false and fraudulent as to typhoid fever, then the package is misbranded. To be truthfully branded there must be no false and fraudulent statement contained thereon. If false and fraudulent in any particular with regard to any one statement thereon made, or any one disease thereon stated, it is misbranded.

The statements of which the Government particularly complains are as follows:

The World's Greatest Remedy For The Following Ailments In Their Most Chronic Forms: Rheumatism, Constipation, Kidney Diseases, Liver Complaints, Dyspepsia, Biliousness, Sick and Nervous Headache, Scrofula, Malarial Fever, Hay Fever, Typhoid Fever, Lumbago, Sleeplessness, Vertigo, Piles, Skin Disorders, Indigestion, Jaundice, Flatulency, Female Complaint, Neuralgia, Colds, La Grippe, Palpitation of the Heart, Disordered Nerves, Dysentery, Gout, Bilious Colic, Stomach and Bowel Troubles, Loss of Appetite, Catarrh in All Forms, Gall Stones, Dropsy, Bladder Troubles And All Diseases Arising From a Disordered Liver, Kidneys, Stomach and Impure Blood. A Mild Aperient Tonic And A Perfect System Regulator. Sold only by Authorized Agents.

Now, I say to you that if any one of those statements are false and fraudulent the product is misbranded.

I say to you that the burden of proof is upon the Government of the United States to establish by a preponderance of the evidence which is clear and convincing that one or more of those statements is false and fraudulent. It is not enough, gentlemen of the jury, for the Government to show that one of those statements is in fact untrue. There are differences between scientific men; there are differences between medical men as to the therapeutic effect of medicines. That is well known to all. What the Government must show is that one or more of these statements is false and fraudulent. By false is meant untrue in fact; by fraudulent is meant a statement which the makers knew to be untrue when it was made, or a statement which was made in reckless and wanton disregard of the truth. If one puts out a package of drugs with a statement thereon that it will cure this and that and the other, and that statement is recklessly made, in disregard of the truth, not knowing whether it be in fact truthful or false, it is within the meaning of this act just as much a misbranding as if the maker of the statement knew that it was false. So that I say to you fraudulent means either that the maker of the statement knew the statement to be untrue when he made it, or that he made it in reckless disregard of the truth.

Now, let us apply that to some of these statements upon this carton. We will take typhoid fever, for example. Is is true that this water is a remedy for typhoid fever? If you find that that be true, that is the end of it, so far as typhoid fever is concerned. But assume you find that that is false, that this water is no remedy for typhoid fever, then your next consideration will be whether that statement is fraudulent. Did the makers of that statement, when they placed it upon this carton and placed this carton upon the market, know that statement to be false? Or was that statement made in reckless disregard of the truth; that is to say, was it made wantonly and recklessly, with a wanton and reckless disregard as to

whether it was true or not? When these cartons are placed upon the market with these statements upon them and offered to the public, it is just as though the manufacturer were standing there in person and had this package in his hand and said orally to the prospective purchaser, "I offer to sell you this. This is a remedy for typhoid fever," and as though the other parted with his money upon the faith of that statement. Now, if the statement was true, or the maker of the statement believed it to be true, obviously it would not be false and fraudulent; but if the statement was untrue, and the maker knew it to be untrue, or, being untrue, he made it in reckless and wanton disregard of whether it was true or false, then obviously that statement would be a fraudulent statement.

Gentlemen of the jury, in construing the language upon this carton you are to interpret it as the ordinary man, the purchaser of ordinary intelligence, would interpret it. That is, "The World's Greatest Remedy For The Following Ailments In Their Most Chronic Forms"—then follows the diseases—in considering what those words mean you are to take those words just as the ordinarily intelligent purchaser would understand them if he were to go into a drug store or other store and were about to buy this carton, it having been placed in his hand for examination.

You are the sole judges of the evidence, gentlemen of the jury, and you are likewise the sole judges of the credibility of the witnesses. You will consider their affiliation with the case, their interest in its outcome, their connection with either one party or the other party, any bias or prejudice that they may have shown upon the witness stand. You will consider all facts relating to or bearing upon the credibility of the witnesses. The greater number of witnesses is not necessarily the true test as to where the preponderance lies. The question is, what is the convincing force and effect of what the witnesses say to you?

Now, there has been necessarily in this case offered that which is known as opinion evidence. If one were to testify to you "The contents of this bottle came from the Crab Orchard Springs," that would be evidence as to a fact, something that is capable of definite ascertainment; but if one were to say to you from the witness stand, "The contents of this bottle, in my judgment, based upon my learning and experience, are of no value in the cure of rheumatism or typhoid fever or gall stones, or any other diseases", that would be an expression of opinion. Opinion evidence is not binding upon you, but it is to be given consideration, as other evidence. The value of opinion evidence evidently depends upon, first, the truth and honesty of the witnesses, whether or not it is the true and honest opinion of the man who states it to you. Of course, if it is not his true and honest opinion, it is of no value. Secondly, it depends upon the amount that he knows about the subject that he speaks of, his intelligence, his opportunity for observation, his study, his research, the soundness of his judgment; all of those things will be taken into consideration by you in determining what effect you will give to the opinion of a witness who has testified as to his opinion.

So, gentlemen of the jury, you will take in consideration all of the evidence carefully of both the plaintiff and defendant, that is to say, both the Government and the respondents, and if you find from the

evidence that this carton contains statements of which the Government complains in the libel which are both false and fraudulent, it is your duty to find a verdict for the plaintiff, the Government of the United States. If, on the other hand, you do not find that the statements are shown by the evidence—that the statements, or some of them, are shown by the evidence to be false and fraudulent, then it is your duty to find a verdict for the defendants.

Gentlemen of the jury, you will now take the case, retire and deliberate upon your verdict, and when you have reached it, report it to the court.

UNITED STATES v. ALBAN

(District Court, S.D. New York, Nov. 3, 1921)

N.J. No. 10046

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The jury was charged as follows:

Van Fleet, *District Judge.* Gentlemen, the law under which this prosecution is brought is the act known as the Federal Food and Drugs Act of June 30, 1906.

As far as it is pertinent to this case it provides that it shall be unlawful for any person to manufacture within any territory or the District of Columbia any article of food or drug which is adulterated or misbranded within the meaning of this act; and provides that any person who shall violate any provision of this act shall be guilty of misdemeanor, and fixes the punishment.

It further provides that the introduction within any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia of any article of food or drugs which is adulterated or misbranded within the meaning of this act is hereby prohibited, a violation of which is made an offense under the act.

It further provides that, for the purposes of this act, an article shall be deemed to be adulterated, in the case of food:

First: If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.

Second: If it be mixed, colored, powdered, coated, or stained in a manner whereby damage or inferiority is concealed.

And, then, it provides something which is not claimed in this case, that it is also against the act to put in any poisonous or any deleterious ingredient which may render any such article injurious to health.

The claim here is that the article of food is adulterated, and for the purposes of this act, an article shall be deemed to be misbranded in the case of food:

First: If it be an imitation of, or offered for sale under the name of, another article.

Second: If it be labeled or branded so as to deceive or mislead the purchaser, or purport to be a foreign product when not so, or if

the contents of the package as originally put up shall have been removed in whole or in part, and other contents shall have been placed in such package, or if it fails to bear the statement on the label of the quantity or proportions of any mixture or deleterious substance mixed therein.

Now, the information which has been filed by the district attorney against this defendant contains two counts, the first of which charges that heretofore, to wit, on the 28th day of July in the year one thousand nine hundred and twenty, at the Southern District of New York, and within the jurisdiction of this court, John A. Alban, trading as John A. Alban & Co., Inc., at the City of New York, State of New York, did ship and deliver for shipment from the City of New York, State of New York, to the City of Lowell, State of Massachusetts, consigned to Klerhos Dimitrakoulakus, certain packages, to wit, a number of cans, each can containing an article of food, which said cans were labeled, marked, and branded as follows, to wit; and then, it gives the legend upon the brand, which is precisely in accord with the exhibit that was put in before you, and which I need not repeat, because it is presented to you for your examination; that said article of food, shipped as aforesaid, was then and there adulterated in that a substance, to wit, cottonseed oil, had been mixed and packed with the article so as to lower and reduce and injuriously affect its quality and strength. Said article was further adulterated in that a substance, to wit, cottonseed oil, had been substituted in part for pure olive oil, which the article purported to be; against the peace and dignity, and so forth, of the United States.

The second count alleges that on the same date, and within this district, and within the jurisdiction of this court, John A. Alban, trading as John A. Alban & Co., Inc., at the City of New York, State of New York, did ship and deliver for shipment from the City of New York, State of New York, to the City of Lowell, State of Massachusetts, consigned to the same individual named in the first count, certain packages, to wit, and then describing them precisely as at first, marked and branded, as more fully described in the first count of this information, and which said description of the first count is, by reference, hereby incorporated in this count, which said article, shipped as aforesaid was misbranded in that the statements, to wit, "Prodotti Italiana", "Pure Olive Oil", "Lucca", and "Italia", together with the design and device of woman draped in Italian flag holding Italian shield, borne on the can containing the article, regarding the article and the ingredients and substances contained therein, were false and misleading in this, that they represented that said article was pure olive oil, that said article was a foreign product, to wit, an olive oil produced in the Kingdom of Italy, whereas, in truth and in fact, said article was not pure olive oil but was a mixture composed in part of cottonseed oil; said article was not a foreign product, to wit, olive oil produced in the Kingdom of Italy, but was a domestic product, to wit, an article produced in the United States of America. Said article was further misbranded in that it was a mixture composed in part of cottonseed oil prepared in imitation of pure olive oil and was offered for sale and sold under the distinctive name of another article, to wit, pure olive

oil. Said article was further misbranded in that it was labeled as aforesaid so as to deceive and mislead the purchaser into the belief that it was pure olive oil and that it was a foreign product, to wit, olive oil produced in the Kingdom of Italy; whereas, in truth and in fact, it was not pure olive oil but was a mixture composed in part of cottonseed oil; said article was not a foreign product, to wit, an olive oil produced in the Kingdom of Italy, but was a domestic product, to wit, an article produced in the United States of America.

And it is alleged that said article was further misbranded in that the label aforesaid purported said article to be a foreign product when not so, against the peace of the United States, and the dignity of the United States.

Now, the defendant has interposed a plea of not guilty to that information, and it being a criminal charge, that of a misdemeanor, his plea puts in issue the averments upon which the Government asks a verdict.

Of course, the rule in criminal cases is one which you well understand. The burden of a plea of not guilty casts upon the Government the necessity of showing by what the law terms a proof beyond a reasonable doubt as to the guilt of the defendant before he can be convicted.

Now, the term reasonable doubt can hardly be defined to you in any clearer manner than those very terms import. It means that the guilt of the defendant must be shown by proof that leaves no reasonable doubt upon the mind of the jurors. There is nothing technical about it at all. It means a substantial doubt, a doubt which would cause a juror to hesitate in an important transaction in his own life. It means that state of the case which satisfies you to a moral certainty of the truth of the charge.

Of course, unless it does this, it is not sufficient upon which to pass a conviction in the case, but it does not mean anything but what it says. It does not mean anything but a reasonable doubt. A reasonable doubt in the sense in which it is used in the law must be a doubt arising upon the evidence in the case, or from a lack of it, and not be the subject matter of mere surmise or conjecture, or some fanciful idea of the jury that greater proof might have been offered.

If the proof in the case is such that it satisfies the minds of the jurors as practical, everyday business men to an extent which would induce them to act upon it if it related to an important affair of their own, then the law deems it proved beyond reasonable doubt, which justifies them in passing upon it, a conviction in a criminal case, and you are not permitted to go outside of the evidence, conjecture something upon which to hang or base a doubt, but you are confined, as I say, to a consideration of it.

Now, the law, as it has been said, does not make the intent with which the thing is done an ingredient. It is like many other statutory offenses. It denounces the act, and it places upon the individual committing the act the necessity of knowing that he is not violating that statute.

In this instance, whether the defendant knew that the article that he was shipping, which he admits having shipped, was not what it was reputed to be by the labels upon the cans, whether he knew that or not, would be no protection against this prosecution, or against

his guilt, because the law has denounced the act of shipping in interstate commerce, a misbranded or adulterated article of food.

It is like, precisely like, the proposition that it will not avail a man charged with crime to say that he did not know that such was the law, because it is axiomatic that ignorance of the law does not excuse, and that is because under a Government of laws such as ours, we are all bound, as far as we are all bound as citizens, to know what the law is, at our peril.

You cannot go out and take the life of a man, and say that you did not know it was a crime to do so. The law will not tolerate that. No one can be convicted of crime under such a system, and so with this statutory offense, the matter of intent is not made an ingredient in the offense. Of course, it very frequently arises in cases of this character that the intent can be very easily seen, that of evading the law, but it is not essential that the defendant should have knowledge of the character of thing that he was shipping, if he did, in fact, violate this statute.

Now, that is really the whole question. Was this article, when shipped, of the character that has been testified to by the Government witnesses? Of course, as has been argued by defendant's counsel, if the contents of these cans, or of this particular can which was appropriated and purchased by this officer of the State of Massachusetts, and who subsequently turned its contents over to the Federal authorities, if those contents were changed after it had left the hands of the defendant, if the contents were not obnoxious under the law when it left defendant's hands, and were changed afterwards, of course, the defendant would not be responsible; but, gentlemen, the jury is not permitted to speculate or conjecture as to what might have been done. The question, whether under the evidence, it has to satisfy your minds that this article that was found by the chemist to be adulterated, and found by the chemist to be not what it was reputed to be on the labels at the time it left the defendant's hands, why, of course, this defendant would be guilty.

This law is made for the protection of the public. It is not a law which represents private rights at all. The public, generally speaking, through Congress, has been given the benefit of this protective statute in order that the people shall not have foisted upon them, under misleading labels, and put up in a misleading form, articles of food which are not what they are reputed to be, and which may or may not be deleterious to health, because it makes no difference so far as this particular charge is concerned, that cottonseed oil, the article alleged to have been mixed with the pure olive oil, may not be deleterious. We all know that it is not necessarily so at all, but it is in many respects nutritious, but that does not affect the question at all, if the fact is that this article was shipped as a mixture of olive oil and cottonseed oil without distinctly branding it as such.

It is not an offense under this statute to mix ingredients that are not deleterious to health. It is not an offense under the statute as to that, but you must represent to the public what you are doing in that respect, that is where the public has got to be protected. You go into a place of business and seek to purchase a particular article, and you have handed to you the thing which is represented to be what you want, and you buy it as such, and in fact, it is not such, and you

have been misled into its purchase by a misrepresentation contained in its label. You have been deceived, and you may have been deceived according to the character of the article to your injury by getting something deleterious for that which you sought as nutritious.

Now that is the purpose of the act, to protect the public against that sort of thing.

I think that is all, unless counsel wish to suggest something.

Mr. RISELY: I ask Your Honor to charge the jury that good character alone, in conjunction with other evidence, may raise a reasonable doubt in the minds of the jurors.

The COURT: Well, that is true. It must be taken in a reasonable sense. Good character is no defense to crime at all. Good character, however, is an element which may be laid before a jury, together with all the evidence in the case, from which they will determine the guilt or innocence of the defendant, and it is an ingredient which does go to make in favor of innocence, more or less according to the circumstances, because the law assumes, and it is a perfectly natural reasonable presumption, and you will find that all rules of law that we have to deal with have their origin in reason, in common sense. The law presumes that a man of good character in the trade involved is not as likely to engage in a criminal enterprise, or an enterprise involving an infraction of the law, as a man of bad character. A man shown to have indulged in that sort of thing before—but there is always a point at which bad conduct commences. We are not all born like Richard don't you know, with teeth, and we are not bad at our birth. It is a growth, and there is always a point where we depart from the part of rectitude. If we are guilty of doing so and so, good character, to the extent I have indicated, is a factor to be considered by you in passing upon the defendant's guilt.

Mr. MCCOY: I think the jury would be interested in the penalty attached to this offense.

Mr. RISELY: I object to that, Your Honor.

The COURT: I do not think it is anything that the jury have anything to do with. The jury is entitled to know that it is announced by the statute as a misdemeanor, but the penalty is something within the limitation of the statute.

Mr. MCCOY: The statute specifically limits the penalty for a first offender. This defendant was a first offender.

The COURT: I did not notice that, but it would not make any difference, Mr. District Attorney. It is not a thing with which the jurors are concerned, and I cannot imagine that the jury will permit themselves to be influenced to find a man guilty because there was a light punishment, but not guilty if it was a heavy punishment. It is something with which they have nothing to do. It is not a matter of evidence, and, therefore, it is not for their consideration. Is there anything else that counsel wish?

Mr. RISELY: That is all.

Mr. MCCOY: That is all.

The COURT: Now, gentlemen, you will take this case. It is a very simple one upon the evidence. Disabuse your mind of any consideration excepting that which arises from a consideration of the evidence from the stand, and do not indulge in any conjecture as to what the

fact might have been, because the facts upon which a man's cause must rest are those that are produced actually in court, and must not be the subject matter of speculation in the minds of the jury. It does not make any difference with you at all what the consequences of [to] the defendant will be. If you are not satisfied of his guilt beyond a reasonable doubt as I have intimated, it is your duty to find him not guilty. If you are satisfied that it is equally imperative, it is your duty to find him guilty.

UNITED STATES v. ONE POUND CAN COAL-TAR COLOR

(District Court, E.D. Illinois, Nov. 10, 1921)

N.J. No. 12652

Libel under section 10 of the Food and Drugs Act. Trial before the court. Judgment in favor of the United States.[12]

English, *District Judge*. This suit was instituted by the Government by filing a libel charging that the particular can of coal-tar color which is libeled was shipped or transported in interstate commerce and that it remained unsold and in the original package as shipped at the time it was seized by the officers of the Government.

It further charges that the color contained in this can was packed with or had mixed with it salt, sodium chloride, and sodium sulphate, so as to lower and reduce and injuriously affect the quality and strength of the coloring matter contained in the can. It also charges that the sodium chloride and sodium sulphate had been substituted wholly or in part for the coloring matter and that the label was not correct according to the composition of the contents of the can. It also charges that this can of coal-tar color contained an added poisonous and deleterious ingredient, arsenic, which rendered it injurious or may have rendered it injurious to health. The libel further alleges that the statement or label borne on the can was false and misleading so as to deceive and mislead the purchaser or one seeking to buy it for use.

This in effect states the entire charge or charges contained in the libel. This libel is based upon the statute of the United States commonly known as the food and drugs statute, and the particular section of the statute covering the questions raised and disputed in the libel are sections 8723 and 8724 of the General Statutes of the United States.

It is shown by testimony and admitted by counsel that this particular can was put upon the market and offered for sale and purchased by the purchaser in this case for the purpose of using it in his confectionery for the coloring of ice cream, soda water, lemonades, and candy and cakes, etc; therefore, it comes under the first division referred to, which reads as follows as pertaining to coal-tar or other coloring matters for confectionery purposes:

> If it contain * * * poisonous color * * * or other ingredient deleterious or detrimental to health, or any vinous, malt, or spirituous liquor or compound or narcotic drug.

---

[12]Affirmed, *W. B. Wood Mfg. Co.* v. *United States*, p. 1070, *post*.

As to foodstuffs, the same section of the statute provides:

First. If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.

These two quotations are the ones that affect the questions relative to the deterioration and also the adding of a poisonous or deleterious substance so as to make a compound that may be injurious to health. The deleterious feature in this substance appeals more strongly to the court than any other feature in the libel and upon that question I have given more thought and more attention and investigation.

The Government introduced the parties who know how this substance is prepared or how it may be prepared, this coloring matter, and gave the court some technical information along that line and in addition introduced Dr. Boos, one of the noted specialists, both as a physician and as a chemist and a man of research, as to the feature of the alleged poisonous character of the substance found in this can. Dr. Boos appealed to the court most strongly from a practical and technical point of view, more so than any of the witnesses offered on behalf of the respondent upon this question, for the reason that the physicians who were called by the respondent testified from their observation as practicing physicians called in to administer to a patient in cases of emergency.

I find by consulting some of the few most noted of the writers on this subject that I have been able to find, that poisonous substances of the kind here charged in this libel, to wit, arsenic, is administered as of and out of necessity in cases of emergency, as perhaps all poisonous drugs and narcotics are, for the purpose of obtaining immediate results, and unless immediate results are had the one administering this poison draws the conclusion that there has been no effect produced at all upon the patient, but the same writers conclude that the necessary elements to be consumed by the human body contain all the various substances and poisons that would necessarily at some time or other, unless otherwise overcome, impair the vitality of the patient. The weight of opinion of these authorities appears to be that the human body already contains substantially all of the poisons of various kinds that our present state of longevity will permit and that anything of a poisonous character added to it becomes more or less deleterious to health or in effect tends to destroy or decrease the vitality of the human body. This evidently is the feature that Dr. Boos was discussing in his testimony, and we find [that] the definition given to the term deleterious not a new word. It is an old word and is taken in its ordinary meaning. I think Congress understood what it was passing upon, and that is the understanding this court has in passing upon the word deleterious. It may not be deleterious to the extent that its effect would be apparent immediately upon the one taking this substance into the system. The term deleterious means to hurt or damage, and anything that is deleterious is harmful and destroying. It is taken from the Latin word *delere*, which means to destroy; that is where we get the word deleterious—from the word destroy. A substance, therefore, that is deleterious has a tendency to destroy; if it is poisonous, it is harmful if permitted to be taken into the human body and while it is often administered by those called to relieve the sick in distress for the purpose of receiving immediate effect, such use is permitted only in emergency; otherwise

Congress wouldn't deal with that feature of deleterious substances that might be utilized in coloring matter in foodstuffs. Dr. Boos says this may be deleterious, not that it will have immediate effect, but that the tendency is that it will and may have, added to the other poisons in the system of the same character, and have effect upon the human body whereby it would decrease longevity.

There is no reason why at this time of our great mental and physical development we need to add to our system unnecessarily more poisons than we already necessarily possess. The very air that we breathe is shown to be charged with a noxious poison known as arsenic; ofttimes the water we drink is charged with the same kind of a poison. Various other things that are necessary to be taken into the human body to sustain life are charged with similar poisons.

This particular article about which Congress has legislated is that character of poison or character of confection or foodstuffs that are in the category pure and simple of luxuries. Congress might have had the power to have said that these confections or foodstuffs should possess absolutely no arsenic; it is shown in the evidence here that this particular color could have had extracted from it practically all of the poisonous substance contained therein that has been permitted by the department in putting out its regulations. It seems to me the department has allowed just about the maximum that should be permitted. It requires the poisonous substance to be reduced to the minimum amount that is practicable, but the amount contained in this particular can of preparation exceeded by far the amount the Government chemists have decided was best for the human system, and this they call permissible. It is true, as contended by counsel for the respondent, that the requirements put out by the Department of Agriculture upon this question are not the law, but they are a mighty good index for the court in passing upon these technical questions, especially so when they are of the importance and assume the dangerous magnitude that this particular preparation could reach if permitted to go unmolested.

I am satisfied that the contention in the libel that this has in it stuff added that is deleterious, and that it is injurious or may be injurious to health when taken in the form of confections or foodstuffs, is well founded. It is not important and it is not really any of the court's business how that stuff came in there. It is argued by counsel both as to the charge of poisons contained in this preparation and the salt as well that they were necessarily used in the manufacture of this particular can of color and that, therefore, it has not been added. Now that might be true and yet this law is violated in the preparation of this particular can of color. Upon the question of the charge that this paint or coloring matter contains salt that destroys the effect or lessens the power or the efficiency of the coloring matter, it is argued by counsel for the respondent that this salt that is alleged to have been added or packed with the coloring matter was utilized for the purpose of precipitating the coloring matter that was in the liquid, so as it could be separated; that is, by putting salt into the liquid in which this coloring matter was formed or contained, brought about by a mixture of certain acids, this salt caused this coloring matter to go to the bottom of the vessel in which the liquid was found and then was separated and the salt remained in the color.

As I recall the evidence given by men who testified upon the necessity of the use of salt, 30 percent was about the maximum amount that any of them were willing to admit was necessary to the proper precipitation of the coloring matter in this liquid. The record in this case shows that there was salt to an amount of 43 percent, which is something like 12 or 13 percent in excess of the necessary amount. Now the court is not adopting the rule that 30 percent salt would not be a violation of this law, but 30 percent being the largest amount necessary to bring about the precipitation and being 12 or 13 percent less than the amount of salt found in this particular can, necessarily leads to the conclusion that there was more salt in it than was reasonably necessary and therefore that much was added to it, and the only logical conclusion is that it destroys or lessens the efficiency or the power of this color to produce its effect when mixed with other liquids.

The demonstrations that were made before the court would teach that if we didn't already know it. Salt might be necessary to an extent, and salt as coloring matter to an extent is tolerated by the Government department, but that simply is for the purpose of permitting these men to engage in business, and it is not a guaranty, it is not a violation of the law. We do have to have a standard to determine just how much or how little salt may be added to this same coloring matter and how much higher quality of coloring matter can be produced without any salt whatever; testimony shows simply by the cooling or freezing process when it is frozen or the temperature is lowered, coloring matter goes to the bottom of the container and is more easily separated and there is no salt necessary in cases of that sort.

The opinion of the court is that the brand or label upon this particular can was not such a branding as would advise the public or those seeking to purchase it as is required by law as to what its contents might be. The wording of this particular brand seems to be rather technical in a way and designed for the purpose of evading the spirit of this law as to branding of color. There is nothing in the law that prescribes just what the wording of the brands must be, but the spirit of the law is that goods when permitted to go on the market must be branded in a way that will not be misleading. The particular brand in this case was: "Warranted Complies with all requirements Quality Color." As to "all requirements," it was argued very strenuously that such requirements meant the requirements of the statute of the United States. Maybe it did; nevertheless that might be misleading because, as the court has indicated, it is a false brand. If it is the law of the United States, the requirements that are to be met by this brand, then this can of composition is misbranded, because it is not what it purports to be as set forth upon the brand. It appears from the evidence here that the purchaser generally knew or understood that the requirements meant the requirements of the department and not the requirements by the statute. They were buying it according to the requirements put forth in the circulars of the department.

Therefore, the opinion of the court is:

(1) That the can of coal-tar color libeled in this case passed in interstate commerce and remained within the jurisdiction of this court unsold and in the original and unbroken package.

(2) That sodium chloride and sodium sulphate had been mixed and packed with the coloring matter in said can so as to lower and reduce and injuriously affect its quality and strength.

(3) That sodium chloride and sodium sulphate had been substituted wholly or in part for quality color, which the label on the can purported the article to be.

(4) That the can of coal-tar color libeled contained an added poisonous or deleterious ingredient, to wit, arsenic, which may render said article injurious to health.

(5) That the statement borne on the label of the can, to wit, "Warranted Complies with all requirements Quality Color", is false and misleading and labeled so as to deceive and mislead the purchaser.

The judgment of the court is that this can is liable to seizure, and the order of court is that it be seized, condemned, and confiscated in accordance with the provisions of section 10 of the Food and Drugs Act.

UNITED STATES v. 9 CASES OF SPARKLING WHITE SEAL

(District Court, E.D. Pennsylvania, Nov. 15, 1921)

N.J. No. 11,712

Two libels under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States. Motion for a new trial denied.[13]

THOMPSON, *District Judge* (charge to jury). Members of the jury: This proceeding is brought by the United States for the seizure and forfeiture of nine cases of Sparkling White Seal. The proceeding is brought under what is known as the Pure Food and Drugs Act. That act was passed about fifteen years ago, and had for its purpose the prevention of transportation in interstate commerce, going from State to State, of articles of foods and drugs that were adulterated or misbranded. In this case we are not concerned with drugs, we are not concerned with adulteration, but we are merely concerned with the alleged misbranding of an article which comes under the class of foods; that is to say, under this act articles fit for use as drinks are included as foods under the terms of the act.

The law provides that if any misbranded articles are being transported in interstate commerce, from one State to another, they may be seized, and the district attorney on behalf of the Government brings a proceeding to forfeit those articles. That is how this suit began.

The particular paragraph of the act under which the Government is proceeding in this case is the one which provides that an article shall be deemed misbranded, in the case of food,

> If the package containing it or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein, which statement, design, or device shall be false or misleading in any particular.

---

[13] Affirmed, *Duffy-Mott Co.* v. *United States*, p. 1078, *post*.

So that in considering this case you are to consider whether the package or its label bears any statement, design, or device regarding the contents of the bottle, which are false or misleading.

The test of the question as to whether a statement is misleading, or whether a design or device is misleading, is as to whether it would deceive a person of ordinary intelligence in purchasing the package.

The Government contends in this case that because the package was marked "Sparkling White Seal", it was misleading to the ordinary purchaser in that he would think that he was buying White Seal champagne, and it is contended that not only the statement itself is to be taken into consideration, but the manner in which the product is put up and bottled and the manner of the dress of the bottle, which counsel on both sides have referred to.

On the question of the shape of the bottle, or a sort of cork or wiring with which the bottle is prepared, a bottler has a perfect right to use any shape bottle which suits his fancy, and he has a perfect right to use any sort of cork and wiring for that bottle. So that those things in themselves intrinsically have nothing to do with this case. It is only in the relation that they bear to the effect on the public of whatever is contained on the label or the design or the device regarding the contents. A cork is not a device regarding the contents; neither is a wire; neither is the shape of the bottle. It is only when what is actually contained on the label itself or when any device or design on the label regarding the contents are so associated with the shape of the bottle or manner in which it is put up that they can be taken into consideration.

The label on the bottle calls this "Sparkling White Seal." The owner or the bottler of the beverage has a perfect right, ordinarily, to use any name that suits his fancy for the beverage which he is selling to the public. He can call it "Sparkling White Seal" or he can call it "Coca-Cola" or he may call it whatever name suits his fancy so far as the purpose of this act is concerned, unless the name on the label is such as to mislead the public into thinking that it is something else than it is. So that is the point of view from which it is the duty of the jurors to consider the evidence in this case.

There has been considerable evidence here on the part of men who are wholesale distributors and retailers as to whether or not the words, "Sparkling White Seal," put on a bottle fixed up as this bottle is, would mislead a person into thinking that it was champagne. There seems to be no dispute in the case that a dealer would necessarily not be deceived or misled into the belief that a bottle containing the words, "Sparkling White Seal," is champagne. If he did he would know, of course, that the man who was selling it to him had no right to sell him "Sparkling Champagne" or "White Seal Champagne," and I think it is generally conceded in the case that dealers who have their eyes open would not be deceived at all. So that the only question for you to determine is whether a consumer would be deceived into thinking that the contents of this bottle was champagne. It is a question for the jurors to consider as a question that might be put up to them or put up to people whom you know are ordinarily intelligent. Would they be misled by the words, "Sparkling White Seal," into thinking that they were getting champagne? That is the point of view from which the jury will have to determine this case.

Take into consideration the fact that there is such a product as White Seal champagne; that incidently it has been unlawful to sell that, except under orders of a physician, since February 20, 1920; and that the article in this case, as I recall the evidence—the fact is for you to determine—first came out under this label since that time. It is for you to consider, therefore, whether the statement, "Sparkling White Seal", is sufficient in connection with the shape of the bottle, the style of the cork, the wrapping, the tin foil, and so on, taken in connection with everything else that is on the bottle, to lead anyone of ordinary intelligence to think that he was getting champagne when he asked for Sparkling White Seal. A man may call his beverage "sparkling" if it is sparkling. That is no fraud on the public. He may call it White Seal and adopt that as his name for the article if that suits his fancy, and if he happens to infringe on someone else's trade-mark, that is a matter between him and the party having the trade-mark, a matter with which we are not concerned in this case insofar as it will affect the public who are buying the article.

If the jury believe that the use of the words, "Sparkling White Seal", taken in connection with the way the bottle is put up, is a misleading statement, and taken in connection with everything else that is contained on the label, the jury believe that the public generally would be deceived into thinking that they were buying champagne when in fact they were getting carbonated apple juice, with some capsicum in it, then the Government has made out its case.

A statement may be misleading in many respects. It may be misleading by what it says. It may be misleading by what it fails to say. Under the charge in this case, you must find, if you find in favor of the Government, that it was misleading in the sense that it would be mistaken for champagne. The fact that it does not show it is apple juice, or it does not show that it has capsicum in it, or that it does not show that it is carbonated,—those are matters of no consideration at all unless they deceive a person into thinking that it is what the Government says that its label in this case would deceive a person into thinking it was. In other words, the Government has stood on the charge of similarity in labels. The jury must find not that they might think it was some other kind of apple juice, or they might think it was some other kind of beverage, but they must think it was champagne. If the public is not deceived into thinking it is champagne, then the Government has failed to make out a case.

The burden is on the Government in this case to satisfy the jury by a preponderance of the evidence that the charge against this particular article is made out. If the Government has failed to convince you that the public generally would be misled, then your verdict should be for the defendant. If the Government has produced sufficient evidence from which you believe that the ordinary purchaser would be misled into supposing that he was buying champagne when in fact he was getting this other article, then your verdict should be for the Government.

The defendant has offered in evidence other bottles containing apple juice cider and other things of the same shape. So that it is apparent, that evidence being uncontradicted, that the same shape

of bottle has been used for other things than champagne for a considerable time. Therefore, if you find from the evidence that it would be a mere mistake of the purchaser, supposing he was getting one sort of apple juice when he was getting another, he would not be misled within the pleadings in this case. The Government has got to make out its case as it has alleged it.

The district attorney has asked me to charge you on certain points in the case. The first point is declined.

The second point reads as follows:

2. You may consider whether the words, "White Seal," is [are] sufficiently known in connection with White Seal champagne as to be misleading when used in connection with an article of the style and general make-up and labeling of this article.

That point is affirmed.

The third point is declined.

4. If you find that the package containing the article or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein, which statement, design, or device shall be false or misleading in any particular your verdict must be for the Government.

That point is affirmed.

The fifth point is declined. This is not a trade-mark case.

The defendant has asked me to charge you on certain points.

1. There is no claim by the Government that the contents of the bottles, which the the subject matter of this suit, are in any way injurious to public health. The only complaint against the said bottles is that they are misbranded, in that the public is deceived into the belief that the contents are champagne.

That point is affirmed.

If you find that there is no misbranding of the contents, then your verdict should be for the defendant.

That is part of the same point, and it is affirmed.

The second point is declined. I am declining these points because they contain a long recital of the contention of counsel for the defendant, which, in my opinion, is no part of the charge.

The third point is declined.

4. It has not been shown by the Government that these bottles have been sold as containing champagne, but even were this so, it might be an offense upon the part of the vendor who misrepresented the goods, but unless the bottles themselves are branded in such a way as to deceive the public, the fact that someone misrepresented their contents would have no effect upon the situation, and if you find that there was no misbranding, then your verdict should be for the defendant.

That point is affirmed.

The fifth point is declined.

6. There is no provision under the laws of the United States which in any way seeks to prevent the use by vendors of a trade name or title upon the packages containing the goods which they sell, and I charge you that so far as the words, "Sparkling White Seal," are concerned, that was a perfectly legal phrase to be used upon the bottles which are the subject of this suit, provided you find that the use of this phrase was not a statement, design, or device, regarding the article contained in the bottles or the ingredients or substances contained therein, which was false and misleading, and that this branding of this name is of such a character as to deceive or mislead the purchaser into believing that he or she was purchasing champagne. If you find, therefore, the use of this phrase or the branding of the bottle shown was not of such a character as to deceive or mislead purchasers, then your verdict should be for the defendants.

That point is affirmed.

7. The Government does not claim that anyone was deceived in the purchase of this product by supposing that they were obtaining champagne excepting those who were thus participating in a sale which would have been illegal if it had been champagne. I charge you, therefore, that the Food and Drugs Act was not enacted to protect those engaged in violating the law. If you find that none others were so deceived, your verdict should be for the defendant.

After reading that point, I conclude to decline it. Parties purchasing champagne under a physician's prescription are entitled to protection.

8. By the Service and Regulatory Announcement 366 in S.R.A., Chem. 26, issued December 30, 1920, by the United States Government, the following appears as a statement of the decision of the Government in reference to the use of the word "sparkling": "As a result of prohibition legislation conditions have now changed to such an extent that the use of the term 'sparkling' on fruit juices, which are unfermented, is no longer regarded as deception or misleading." As the plaintiffs in this case, therefore, do not claim that the use of the word "sparkling" on fruit juices of the character contained in the bottles which are the subject of this suit is illegal, and if you find that the use of that word is the basis for the claim that these bottles are calculated to deceive or mislead the public, your verdict should be for the defendant.

That point is affirmed. It only applies in case you find that the sole charge of misbranding is based on the use of the word "sparkling."

9. The Government is bound to convince you by a fair preponderance of evidence that the markings on these bottles which are the subject of the suit are of such a character as to deceive and mislead purchasers thereof into a belief that they are buying champagne, and if the Government has failed to so convince you, then your verdict should be for the defendants. In a case of this character, the burden is on the United States to satisfy you that the branding is of such a character as will deceive the public.

That point is affirmed.

The tenth point is declined.

The plaintiff's first point, which was declined by the court, reads as follows:

1. You may consider whether the style of dress and general make-up of this bottle containing this article, without any word or words plainly descriptive of the article, is misleading.

The plaintiff's third point, which was declined by the court, reads as follows:

3. I charge you that the purpose of a label is to truthfully advise the purchaser of its contents. This is the purpose of the label or should be.

The plaintiff's fifth point, which was declined by the court, reads as follows:

5. A trade mark is not by itself such property as can be transferred, and the right to use it cannot be assigned except as incidental to the transfer of the business or property in connection with which it has been used. A transfer of the right to use it in connection with a different article, or one of a different manufacture, would result in deceiving the public as to the article or its origin, which it is the sole legitimate purpose of a trade mark to present.

Defendant's second point, which was declined by the court, reads as follows:

2. It is necessary that the Government should establish to your satisfaction that the bottles which are the subject of this suit are branded in such a way

as to deceive the purchasers of the same, in that they are induced to believe that the contents of the bottles consist of champagne. It is contended by the defendants that no such deceit can possibly arise by reason of the fact that there is no mark or indication upon the bottles that the same contain champagne, and that there is no champagne in existence which has been sold under the name of "Sparkling White Seal"; there is or was a champagne known by the name of "White Seal" but the word "sparkling" was not attached to the same, and the bottle of this champagne which has been offered in evidence does not bear either labels or marks which in any way resemble the bottles which are the subject of this suit. It is necessary for you to find that these bottles about which complaint is made are marked and dressed in such a way as would deceive the public into believing that they were buying champagne, and unless you can find that the marking and dressing of the bottles is of such a character as would so deceive the public, your verdict should be for the defendants.

Defendant's third point, which was declined by the court, reads as follows:

3. It is contended by the defendants that no purchaser could be deceived by the marking or dressing of the bottles which are the subject of this suit by a belief that he or she was purchasing champagne. Since the prohibition law went into effect it is illegal or criminal for anyone to sell champagne excepting under the orders of a physician and, as the vendors and purchasers of drinks at the present time are presumed to be innocent of any intent to break the laws of their country, it is contended by the defendants that there is a presumption which applies to both vendor and purchaser of drinks that neither of them will violate the law and that this presumption enters into the question of deceit as regards these bottles, since no person can be accused without evidence of intending to violate the law by the purchase of an unlawful drink, and if you find this to be the condition you may presume that neither the vendors or the purchasers of these bottles could be deceived into believing that they were purchasing champagne, and if you so find, your verdict should be for the defendants.

Defendant's fifth point, which was declined by the court, reads as follows:

5. It is further contended that those who are familiar with champagne could not by any possibility be deceived into purchasing the contents of those bottles as champagne, since there is no name upon them which refers to the contents as being champagne and the bottles themselves are marked and dressed in a manner entirely different from any bottles containing champagne which have been produced by the Government. It is contended that those who do not use champagne could not be deceived for they would not purchase these goods as champagne, and those who are familiar with champagne would not purchase the goods because they would be certain from their experience that they were not getting champagne in a bottle marked and dressed as these bottles are.

Defendant's seventh point, which was declined by the court, reads as follows:

7. The Government does not claim that anyone was deceived in the purchase of this product by supposing that they were obtaining champagne excepting those who were thus participating in a sale which would have been illegal if it had been champagne. I charge you, therefore, that the Food and Drugs Act was not enacted to protect those engaged in violating the law. If you find that none others were so deceived your verdict should be for the defendant.

Defendant's tenth point, which was refused by the court, reads as follows:

10. Under all the evidence in this case, your verdict should be for the defendant.

The COURT. I will say to the jury in this case that your verdict must either be for the plaintiff or for the defendant. There will be no damages of any sort. It will be merely a verdict for the plaintiff or for the defendant.

UNITED STATES v. 65 BARRELS OF VINEGAR

(District Court, E.D. Wisconsin, Dec. 8, 1921)

N.J. No. 11326

Libel under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

The United States attorney filed a libel praying seizure and condemnation of 65 barrels of vinegar, alleging that the article had been shipped and transported from the State of New York into the State of Wisconsin, and remained unsold in the original unbroken packages, and that it was adulterated and misbranded, in violation of the Food and Drugs Act.

Adulteration of the article was alleged in the libel as amended for the reason that the said article was made from evaporated or dried apple products and had been mixed and packed with and substituted wholly or in part for cider vinegar, which the said article purported to be.

Misbranding was alleged in substance for the reason that the labels upon the casks or barrels containing the article bore the following statements regarding the said article, "Apple Cider Vinegar Made From Selected Apples * * * Guaranteed To Comply With All Pure Food Laws," which statements were false and misleading, and deceived and misled the purchaser, in that they created the impression that the said article was pure cider vinegar, whereas, in truth and in fact, it was not pure cider vinegar but was vinegar made from evaporated and dried apple products. Misbranding was alleged for the further reason that the article was an imitation of and was offered for sale under the distinctive name of cider vinegar.

On December 7, 1921, the case came on for trial before the court on an agreed stipulation of facts between the Government and the claimant. After the submission of evidence and arguments by counsel, the court on December 8, 1921, handed down the following decision:

GEIGER, *District Judge.* I may say preliminarily that the jurisdiction exercised by the Federal Government under the Pure Food Act, of course, arises out of the grant of power to Congress to regulate interstate commerce, and it may be that in the enforcement of the act the Federal courts need not go to the extent that the State sovereignties go in enforcing or interpreting pure food laws, but I have always felt that the law, after all, was one, notwithstanding the basis of the power, which aimed at just what the title discloses. It certainly has something to do with pure foods and correct labeling. The facts in this case, so far as they are relevant, are, in my judgment, not open to serious controversy. As I intimated during the discussion, and I say this freely, I was impressed, upon the conclusion of the opening statements made by counsel for the respective parties, with the idea that if the facts were stipulated as subsequently disclosed, it was a very nice question whether the case could not have been disposed of upon the stipulation, plus matters which are within judicial cognizance. Now, I do not mean by that that the case could

have been disposed of because the particular judge thought he knew something about the art pertaining to cider and vinegar, because, if that were true in some cases, it would not be claimed here. But, in the enforcement of this law, there comes a time when, in administering executively or judicially that part of it dealing with labels, with branding, with the holding out of goods, some executive or judicial officer must exercise the power of definition; and that brings with it the query: To what may recourse be had as executive or judicial aid, administrative aid, in the exercise of that power of definition? Now, passing from that to the means afforded in this case for the answer, I can only say that the means were right at hand here through the lips and tongues of those who could speak, in virtue of their experience, to that subject.

The Government challenges the right of the claimant and respondent to use in interstate commerce upon the product made, as it says it is made, the label, "Apple Cider Vinegar", and that of course brings with it the query: What is vinegar, what is cider vinegar, what is apple cider vinegar? And notwithstanding all that is said here—and that was urged rather earnestly—respecting the attitude of the executive and the court to countenance growth commercially, and all that sort of thing, the testimony in this case, it seems to me, affords the very strongest support to the notion that this case, to quite an extent, could have been disposed of by taking into consideration the matters as matters of judicial cognizance. Nobody will doubt that in the progress of the arts, as they enter into manufacturing and commerce, things are done which are at variance with the manner in which they were originally done. It may be conceded that a method has been developed for making cider, which, being put out as "apple cider" successfully fools. Now, coming directly to this matter of definition, how did the idea of apple cider vinegar ever arise? There must be a reason for what has rather conclusively appeared in this case, that it is universally regarded as a mighty good name for something. Men in manufacturing and commerce can, upon their choice, select names which will be representative of ingredients, or which will be purely arbitrary names—trade names. But this is true, the term "apple cider vinegar" grew out of habits of people in making vinegar. It was a homely designation of processes and products made originally and to some extent probably still made in a homely way, but in a way—and this is the point—that gave to the people making it and getting it an absolutely satisfactory consciousness as to the merit of what they had made and made in the way that they made it. That is why people ask for "apple cider vinegar." They have that consciousness. That is why jobbers are anxious to sell what they believe may truthfully be called "apple cider vinegar." That is why manufacturers are glad and anxious to put as apple cider vinegar the things they put out. Now, is the law and its tribunal mistaken in exercising this power of definition, especially when it is fortified in the manner that it has been in this case, in saying that is the legal definition of apple cider vinegar? That is what this case comes down to. And I have felt throughout the case that sight should not be lost of a very good test to which subject any situation of labeling, any situation of holding out something to be something, and that test is this—why object to a full disclosure of the facts—is

there any doubt, whether we take the term "apple cider vinegar" or the more restricted term "apple cider", the one referring, of course, to the one thing and the other to the other, that these initially and accurately reflect a conception on the part of the public respecting the identity of the thing, its identity being in mind not disconnectedly from the manner in which it was made? Is there any doubt at all but that, if the facts were stated in connection with the two articles, the public would act upon their native conception not only as to what a thing is but certainly upon their conception as to what they want? And as I indicated this morning, this law and no pure food law, so far as it deals with labeling is concerned, is expected to endow judicial or executive officials with the necessity of trying to extract and explain as to why the public act that way. The fact is to be found from their attitude, from their conduct, from their conception, as the court may well glean it from the testimony of witnesses.

Now, to carry that a little bit further, take the testimony of men who have come here into court, representatives of brokerage interests in Chicago, representatives of large wholesale grocery interests in Chicago and Milwaukee, and without the slightest hesitation, without equivocation, without an attempt at the slightest limitation upon the meaning of the word, they aim to speak out of their comprehensive observation and experience upon this vital matter as to what is meant by the term "apple cider vinegar", men who would be interested very much, if they could, to have the product which is here in court square up with that definition. Most of them undoubtedly have handled this sort of a product, labeled in this way—maybe all of them have some in stock now—and yet they come here with the idea that the court may thereby be enabled to discharge the function committed to its charge, the duty committed to it of determining whether this is a true label; and of course they approach it from the angle suggested by the question: What does the public understand by those terms? And as I said a moment ago, without any hesitation they all say, "Why, it means cider vinegar made from apple cider", comprehending the native juices of the fresh apple. And I shall not forego the opportunity to refer to the single witness who stood out in rather bold relief against that entire concurrence on the part of the Government's testimony. That is the witness, Mr. Somebody (McCord) from Des Moines, Iowa, a manufacturer. The same question being put to him, he seemed to have a perfectly clear appreciation of the possibilities of dividing his responsibility between the two views. He seemed to think at first that the question might be answered from the manufacturer's standpoint, and I assume that he wanted to answer it his way there. He suggested that it depended on whether it was to be answered from the jobber's or from the consumer's standpoint and finally said that there seemed to be no particular conception as to the meaning. That answer was afterwards changed, and when the court interrogated him upon the more limited question as to his conception of the meaning of the term "apple cider", why, he was content to leave the stand saying that in his own mind and in the minds of the people of Iowa, one was just as good as the other, that they had never seen fit to make any distinction. Now, with due respect to that witness, he appreciated the ground that he,

as a manufacturer, was on. It cuts no figure that, as he says, both are permitted in Iowa. It cuts no figure in this case that the various representatives of the Department of Agriculture have gone first one way and then another way, if that is true, or have made all sorts of tracks on this proposition. That is not relevant to the question that is here before us, the very narrow question respecting the truth of this label.

Now, it would be rather odd if, upon the testimony as it is here presented, the court should incline to or adopt the conclusion that because there is a suggestion here of chemical identity, that because there is a taking of apples which have been dried or dehydrated and subsequently water is added and some sort of a mixture is withdrawn, that that after all, because it is apple juice, is cider in the sense in which this entire trade uses that term. It is a question of the interpretation of the statute respecting truth of labels, which advances, as it did in this case, to the question of determining, as a matter of law, what is true and what is not true in point of definition. Now, grant that the claimant here is making a good vinegar, for some reason or other there is not a willingness that the public should be told, in the same detail in which for ages the public has had a conception of the facts respecting apple cider vinegar—the public should not be told in that same detail the facts respecting this particular so-called "apple cider vinegar." Now, of course manufacturers know, every representative of the great jobbing interests that was here on the stand knows, and every retail grocer knows that as between the two possibilities, assuming that the one kind is to compete against the other, disclosure is forbidden. Assuming that the two are to be put up together, it would not do to tell the public: "Why, you have got the old-fashioned notion about apples and apple cider; we have a new scheme here now whereby the water is withdrawn and the dehydrated apples and chops and leavings are passed into catacombs and allowed to remain in the mummified of [or] somnolescent state until withdrawn, whereupon we are going to get something that is just as good." It would not do to tell it. That answers the question in this case; and the law aims not that there must be that degree of disclosure, but that the disclosure or claim on a label, whatever it be, be truthful. The law does not say you must tell all about this thing. So far as this case is concerned the law does say: "You cannot use a label which leads the public to think that there is something here which has not been done and is not here." And that is the function of this court in this case to declare, and I do so declare, that this shipment of vinegar was misbranded within the meaning of the law. I indicated that upon the issue of adulteration the court is not required to find adulteration—I don't think it is supported by the evidence here—and that count will be dismissed, and upon the other count there will be a decree in the ordinary form of condemnation.

On December 26, 1922, the court having found that the allegations as to the misbranding of the product were true and correct but that the allegations as to the adulteration were unsupported, judgment was entered declaring the product to be misbranded and ordering its condemnation and forfeiture.

UNITED STATES v. GOLDEN & CO.

(Police Court, District of Columbia, Jan. 12, 1922)

N.J. No. 10395

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The jury was charged as follows:

HARDISON, *Judge.* Gentlemen of the jury: If you believe from this evidence to the exclusion of a reasonable doubt that the defendant, Golden & Co., on the 18th day of January, 1921, within the District of Columbia, did sell to one Robert W. Thompson a certain article of food, to wit, oysters, which said article of food was adulterated, in that a substance, to wit, water, had been mixed and packed with the article so as to lower and reduce and injuriously affect its quality, you should find the defendant guilty as charged. Unless you so believe, you should find the defendant not guilty. The defendant is presumed to be innocent until proven guilty to the exclusion of doubt, and that presumption of innocence accompanies him throughout the trial until overcome by proof satisfactory to you that he is guilty. A reasonable doubt, gentlemen, is a doubt that would influence an ordinary prudent man in some action, and a reasonable doubt is nothing but a doubt, and a reasonable doubt does not allow you to go out and conjecture any more than the law requires you to convict the defendant without evidence that satisfies you of his guilt.

The first proposition to be established by the Government before it can expect a verdict at your hands is that a sale has been made by Golden & Co. The law is that when a man or a corporation does something through another it is responsible for what is done by its agent. If the defendant had an authorized agent out selling this product and he did sell it, it would be its act. The sale by the agent would be the sale by the company.

Now, it is alleged that this commodity was adulterated, and it is alleged here in the information that it was adulterated in several ways. I will read the information. [The court here read the information.] The gist of the offense is, gentlemen, the adulteration of the article, the selling after it had been adulterated, and if it was adulterated in any one of these ways, that would be adulteration. The act here with reference to adulteration provides that adulteration shall consist, first, if a given substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality and strength. That constitutes adulteration. It is not necessary for any individual oyster to be excepted. Each individual oyster might have all of its qualities and properties and virtues in it, although a great quantity of water had been put in a can, a container of oysters; but [if] after taking the given quantity of oysters water had been added to that bulk so as to dilute or make a greater quantity out of it and then sold for a greater quantity, that oyster or those oysters have been adulterated, and that constitutes adulteration. Or if you find that these were adulterated by the

addition of any substance that would lower, reduce, or injuriously affect its quality or strength, that would constitute adulteration; or if any substance had been substituted wholly or in part for the article, that would constitute adulteration. Third: If any valuable constituent of the article had been wholly extracted or partly extracted. Fourth: If they had been colored or mixed with something that would color them. Of course, there is no evidence here tending to show any adulteration in that fourth manner, nor is there any evidence here showing adulteration in the third manner, because there is no contention here on the part of the Government, or any proof, to show that any particular oyster was injured or any properties or qualities had been extracted from it.

The theory of the Government and the proof is that there was an abnormally large quantity of water, a quantity materially in excess of what is ordinary in the run of the business; that is, the packing of oysters in the trade, in this section. It is that an abnormal quantity of liquid existed in this commodity. If that is true then that would constitute adulteration. It would not be anything more than right, I think, to make an allowance for a slight variation because you could not expect every can of oysters to have exactly the same quantity of liquid. You might make some allowance for a slight variation there.

Now, it is not necessary here for the Government to establish its case to show that Golden & Co. had—that Golden & Co. put this water in these oysters. It is not necessary if any water was put in. It is not necessary to show that Golden & Co. had any knowledge that water was put in if any water was put in. Because this law, whether wisely or not—it is not within our province to determine—has required that when a dealer furnishes food products to the public it is up to him to know what they contain and he cannot hide behind ignorance, he cannot say "I did not know" the stuff was adulterated. He must know. And it is immaterial whether he put the water in, if any was put in. It is immaterial whether the company put it in or whether the company was a party to it or not, or whether the company knew it had been done, if it had in fact been done. Any excessive quantity of water, if it had been packed in these oysters, whether Golden & Co. had any knowledge of it or not, and they sold them in that condition, why then that would constitute the offense that is prescribed in this law.

So the case in its last analysis comes down to the proposition whether or not when these oysters were packed, an excessive quantity over and above what was in the run of the business, in the trade here in this section, was put in these oysters at that time. If that was done, whether Golden & Co. knew of it or not, if they handled an oyster in that condition, in which that had been done, then they would be guilty under this law.

I do not know that I could be of any assistance in reviewing the testimony. You heard it and paid careful attention to it. You heard the testimony here of the Government's witness as to the conduct of the employees and as to the taking of the samples. Of course, it is immaterial how big a bulk of oysters was taken, whether a can of oysters containing a gallon, or not, if an excessive amount of water was found in the sample. It is immaterial whether that

was found at the bottom or the top of the can; if an excessive amount of water was in the can either at the top or bottom, that would constitute an adulteration of the oysters.

The question to consider is whether or not when the agent took the sample he got a fair sample of it. It might be if there was any more than a normal quantity of water, more than 6 percent, that greater part was at the top of the can, for it has been shown by demonstration that the water comes to the top of the can. It might be that the sample was taken off the top and when the water had settled there, and that perhaps would not be truly representative of the quantity of liquid in the can, whereas if it had been stirred up before it would not show that excessive quantity. So it is proper for you to consider that in your deliberations. I do not mean to intimate by that that the proof shows that the agent was negligent in taking the sample. I simply mean to call attention to the fact in determining if he got a fair and representative sample, as fair a sample as this can could supply.

It is not necessary for me to say that this defendant stands here like any other defendant. The fact that it is a corporation and handles food products does not put it in a position from any one else, and you ought not to be influenced by the high cost of living or any other consideration. This thing of adulterating food is, of course, a thing that ought not to go on, and wherever guilt is shown you should not hesitate to bring in a verdict of guilt, but still you ought not to be carried away by any hue and cry about the high cost of living, or a large corporation being engaged in the business, or anything like that. But you must go to the actual question, and the question to be determined is, Has this defendant committed this offense? If you are satisfied that he has, you must bring in a verdict against him, but you must be satisfied beyond all reasonable doubt. You should not let the high cost of living influence you. You ought to simply follow the straight edge of reason and logic in this case and decide the case on the evidence and the facts.

UNITED STATES v. 430 CASES OF CANNED SALMON

(District Court, E.D. South Carolina Mar. 3, 1922)

N.J. No. 10499

Libel under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

The United States attorney filed a libel for the seizure and condemnation of 430 cases of canned salmon, alleging that the article had been shipped and transported from the State of Alabama into the State of South Carolina, and remained in the original unbroken packages, and that it was adulterated in that it consisted partly or wholly of a filthy, decomposed, and putrid animal substance.

SMITH, *District Judge.* It appears from the testimony that these 430 cases of salmon consisted of salmon packed apparently prior to the year 1918. It was originally purchased by the United States

Government for army use and stored in a warehouse in the city of Brooklyn and after the signing of the armistice was either sold or turned back to the packers and thereupon passed into commercial shipment. This especial shipment was shipped to Eufaula, Ala. There some question appears to have been made about its condition by the Government, and it was shipped back to the city of Charleston, where, when seized, it was stored apparently under some understanding that it was to be reconditioned. At any rate, it was shipped from Eufaula to the city of Charleston.

According to the testimony for the Government, upon examination of the samples taken from this shipment or lot, after careful examination, twelve percent (12%) of the cans examined were found to be bad, and of the remainder twenty-five or thirty percent (25% or 30%) were found, in the opinion of those examiners, to be stale and questionable. According to the testimony of the claimant, they had a commercial test in the shape of an examination of this lot of salmon in the city of Charleston by three salmon brokers, who found it practically (so far as the number of cans examined by them were concerned) to be in sound and good condition.

In many respects, the examination of the brokers is upon the same method of procedure as the examination by the experts, the principal test being that of smell. The brokers in this case, however, do not any of them assume, so far as chemical or bacteriological matters are concerned, to be experts in making this examination.

Under the order of this court, upon the application of counsel for the claimant, an order was made that samples were to be selected from the cases of not less than one from every forty-three (43) cases, or ten (10) cans in all, to be examined by a chemical expert to be agreed upon in behalf of the Government and the claimant, who should report the result of the examination to the court. This has been done and the 10 cans delivered to the Parker laboratory, and the report of the laboratory upon the examination is that the 10 cans submitted to that laboratory were in good condition and showed no indication of bulging, corrosion, or pitting; that there were no imperfections in the sealing of the cans; that when opened there was no indication of escaping gas or unpleasant odor; that the contents were firm, of good taste and odor, and in good condition; that there was no indication of any substance being mixed or packed to reduce or lower or seriously affect the quality or strength of the contents; nor was there any evidence that the 10 cans examined contained any added poisonous or other deleterious ingredient which might render the article injurious to health; that the contents of the cans were examined microscopically and bacteriologically and found to contain no bacteria nor molds which would tend to bring about decomposition nor organisms resulting from decomposition; that the contents of the cans were sterile, showing that the fish was properly packed and sealed and that there was no decomposition; that the contents of the 10 cans were well packed, of sound quality, and free from adulteration and contamination.

Upon considering the whole testimony, it appears that the number of cans examined from the whole lot on behalf of the United States Department of Agriculture, under the Food and Drugs Act, exceeded

very substantially the proportion of cans examined otherwise—and it also would appear from the testimony that the examination given on behalf of the Department was of a more extended and careful character than that given otherwise. Although it would appear that there is in this entire shipment a very large proportion of cans which from the testimony would appear to be entirely free from any objection on the ground of decomposition or unfit for human food, yet, taking the testimony as a whole it appears to the court and is found as a conclusion of fact that there is an excessive percentage of the shipment which does fall and properly falls under that exception. Although the greater proportion of it may be good, yet in view of the chance of disaster that may result from human use under the risks of such percentage, it would not seem safe to allow it to be dealt in, as an article of human food. It is no doubt correct that in most cases the very odor, upon opening the can, would bring home to the knowledge of any consumer or would-be consumer, the knowledge that the contents of the can were not fit for human use. That, however, depends in a large measure upon the intelligence of the consumer and upon the susceptibility of his organs of smell; and the casualties that might result in case the consumer fails to be properly advised of the danger of its consumption are such, in the opinion of the court, which would not render it proper to be allowed to be used for human consumption.

It is therefore ordered, adjudged, and decreed,

That this lot of cases of salmon so seized does consist in part of a filthy, decomposed, or putrid animal substance to such a percentage in excess of reasonable and salutary requirements as to constitute the shipment misbranded [adulterated] within the prohibition of the act of Congress. * * *.

UNITED STATES v. 1,974 CASES OF CANNED SALMON

(District Court, W.D. Washington, May 20, 1922)

N.J. No. 11442

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict directed in favor of the claimant.[14]

The United States attorney filed a libel praying the seizure and condemnation of 1,974 cases of canned salmon, alleging that the article had been shipped and transported from the Territory of Alaska into the State of Washington and remained in the original unbroken packages, and that it was adulterated, in violation of the Food and Drugs Act, for the reason that it consisted wholly or in part of a filthy, decomposed, and putrid animal substance.

CUSHMAN, *District Judge.* There is little that occurs to me to add to what is said in the opinion of this court in the other case (N.J. 10512).[15] As to the meaning of the statutory words, I find

---

[14] Judgment reversed and cause remanded, *A. O. Andersen & Co.* v. *United States,* p. 1053, *post.* Retrial, *United States* v *1,974 Cases of Canned Salmon,* p. 1108, *post.*

[15] *United States* v. *1,459 Cases of Canned Salmon,* p. 995, *ante.*

nothing in this case or in the argument to change my view expressed therein.

I am convinced that under the showing made here there would be nothing to warrant the court in inferring or acting on the assumption that there was anything in doubt regarding the fairness of the samples taken, about which testimony has been given in this case, but, even so, I see no application either of the candy case, or the sirup case, or the oyster case to this. In the matter of candy, and in the matter of the sirup, and in the matter of the oysters, there was a reasonable presumption of a fact or something in the nature of an issue of fact to submit to the jury. The jury might reasonably conclude that the oysters' feeding ground where the oysters had been gathered, being, as I understand that case, the same feeding ground, that each oyster fed on substantially the same product, and in the samples of the oysters taken each of them showed some varying amount of impurity—the jury would certainly be justified in concluding that all the other oysters, not sampled and not tested, would likewise contain a certain amount of impurity and render them unfit for food under this law. So, in the case of the sirup, where it was labeled " Maple " sirup, the cupidity of the manufacturer having induced him to label as maple sirup certain portions of a shipment that were not in fact maple sirup, the jury would be warranted in applying what they knew about human nature—the doctrine " if false in one false in all "—that if the seller of the maple sirup was cheating and deceiving the public in the cans that were sampled, they would be justified in concluding that in the other cans so labeled but not sampled he was likewise cheating and defrauding the public by misbranding those. I am not entirely clear about the candy case, but I take it that comes under the same rule.

Under the Government's own theory, the salmon were rotten before they were put in the cans. The individual fish, in being caught and transported to the cannery and held awaiting canning in the cannery, are subjected to different conditions—one fish is kept out of water longer than another before it is canned.

I am convinced that the rule that obtains, that is adopted by the Department, has grown out of the inconvenience and impractical nature of the problem of sampling each can. The expense of cutting open the cans and recanning the pure fish is so out of all proportion to the value of the product after it is canned that it becomes impracticable to do so. You cannot test all the cans without destroying all the product tested and, therefore, they have adopted this rule, but it does not change the meaning of the language in the statute.

I still adhere to the view that the " article " of the statute is a single can of salmon just as much so as if you had a herd of cattle, a part of which were tubercular and the rest were not; a single head of stock would be the article; we would not conclude that the entire herd of cattle were to be destroyed because 10 percent or 20 percent of them were tubercular. There you have means of testing the individual animal, but the great inconvenience that arises by reason of the nature of a can of salmon in testing it by any means known has brought about this attempt to fix a standard.

I am impressed with the proposition that the housewife or cook would be able to protect the consumer against impurities of the nature

described in the testimony here. The reason I am convinced of that is that there does not appear to be any substantial or any striking difference between the percentages given by those men who are experienced in examining salmon, who do not resort to chemical tests, and those witnesses who have resorted to chemical tests. The men who are used to examine salmon simply relying on their eyes and their noses, have discarded and found impure practically the same percentage of salmon that those chemically testing it have done; I am not sure but what they have rejected on an average more than those who have chemically tested the salmon.

I do not say that the department, after investigation, where the product was in bulk, where you could treat the bulk as the article, might not reasonably adopt a standard, because there are more or less impurities in all food—it is a common expression that "everyone has to eat his peck of dirt sometime"—and they would be justified in resorting to percentages, but I do not conceive that if you take a number of articles of which you may find 10 percent or 20 percent of the articles impure, that they are justified in condemning or asking the court to condemn the remaining articles that are not impure.

The exigencies of the case, the danger to the public if the impure article is poisonous, might justify the banning of the entire number of articles and give reason and plausibility to a ruling that that was the intent of Congress. I conclude it does not warrant the court in concluding in the absence of positive language leaving no room for doubt, that it was the intent to destroy 1,600 cases of good salmon out of a total of 2,000 cases. So the motion for a directed verdict will be granted. The clerk will prepare the form and the bailiff call the jury in.

UNITED STATES v. 154 SACKS OF OATS

(District Court, W.D. Virginia, Oct. 20, 1922, Dec. 15, 1923)

283 Fed. 985; 294 Fed. 340; N.J.No. 12070

Proceeding for forfeiture by the United States against 154 sacks of oats. Forfeiture ordered.

McDowell, *District Judge.* This is a proceeding for forfeiture of a shipment of sample grade oats, made by the claimants in interstate commerce. The information charges that the oats had been adulterated (1) in that a substance had been mixed with them so as to reduce and injuriously affect their quality; (2) in that wild oats, weed seeds, chaff, and dust were mixed therewith in such manner as that the inferiority of the mixture was concealed; and (3) that the said oats had been misbranded.

The order establishing official grain standards for oats under the Grain Standards Act (see Service and Regulatory Announcements No. 46) contains, inter alia:

Section 1. *Oats.*—Oats shall be any grain which consists of cultivated oats, and not more than twenty-five per centum of foreign material, other grains and wild oats, either singly or in any combination.

By section 13 oats are graded and designated as No. 1, No. 2, No. 3, No. 4, and sample grade. Among other requirements grade No. 1 must contain not less than 98 percent of sound cultivated oats; grade No. 2 not less than 95 percent; No. 3 not less than 90 percent; No. 4 not less than 80 percent. Sample grade " shall be oats which do not come within the requirements of any of the grades from No. 1 to No. 4, inclusive, or which have any commercially objectionable foreign odor, or are sour, heating, hot, infested with live weevils or other insects injurious to stored grain, or are otherwise of distinctive low quality."

The facts have been stipulated, and in the stipulation appears the following:

(10) It is agreed that the article in question contains 77 percent of cultivated oats and 23 percent of material other than cultivated oats. This 23 percent consists of wild oats, other grains, and foreign material, the foreign material consisting of weed seeds, chaff, and dust. A certain percentage of this 23 percent was added by the claimants, the material added being wild oats. It is further agreed that there were present in the wild oats so added a certain percentage of other grains and foreign material, consisting of weed seeds, chaff, and dust, the quantity of said other grains and foreign material being no greater than that found in the average commercial shipment of wild oats.

Generally, oats contain some foreign material as they come naturally from the field, and in the case of sample grade under the Grain Standards Act this amount may be as large as 25 percent. The proportion of foreign material in the wild oats which was added by the claimant in this case was not greater than the proportion of foreign material in the cultivated oats with which they were mixed and the proportion of foreign material, viz, weed seeds, chaff, and dust was not greater in the mixture than the proportion thereof in either of the ingredients.

(11) It is agreed that, based upon the pleadings in this case and the foregoing stipulation of fact, the following question of law is submitted to the court for determination:

Does the shipment in interstate commerce as sample grade oats of an article prepared by the claimant as set forth in No. 10 hereof constitute a violation of the Federal Food and Drugs Act, when such article has been previously graded as sample grade oats by a duly authorized inspector of the Bureau of Markets of the United States Department of Agriculture and sold as sample grade oats, a grade of the official grain standards for oats promulgated by the Secretary of Agriculture under the Grain Standards Act?

The Grain Standards Act of August 11, 1916, c. 313 (39 Stats. 446, 482), does not seem to me to show an intent to repeal, alter, or modify the Food and Drugs Act of June 30, 1906, c. 3915 (36 Stats. 768), in any respect; nor an intent to authorize the Secretary of Agriculture so to do. But, if I am wrong in this respect, it seems too clear for argument that the Secretary of Agriculture in promulgating the standards for oats has not undertaken to modify the Food and Drugs Act in the slightest degree. Section 14 of the Service and Regulatory Announcements, No. 46, reads:

Nothing herein shall be construed as authorizing the adulteration of oats by the addition of water, by the admixture of clippings or hulls, decomposed salvage oats, other grains, or any other foreign material, or otherwise, in violation of the Food and Drugs Act of June 30, 1906.

In the ingenious brief for the claimants the foregoing is characterized as a mere expression of opinion on a question of law on the part of the Secretary of Agriculture. It seems to me to be a very clear and explicit statement of the intent of the regulations. In other words, fearful that someone might fall into the error of

thinking that the regulations were intended to modify the Food and Drugs Act, the Secretary expressly and definitely declares that such is not the intent of the regulations. Statements of intent and opinions as to legal effect, respectively, might conceivably be so expressed as to resemble each other, but in this case there is, I think, no room for confusion.

But, quite aside from anything that has been said, the regulations cannot fairly be read as modifying the Food and Drugs Act. Throughout the regulations there is no thought of authorizing such a thing as adulteration of oats. The regulations are drawn in recognition of the fact that some crops of oats, as harvested, contain greater proportions of foreign matter than others. While it is true (section 1) that oats containing more than 25 percent of foreign matter cannot legally be graded as oats at all, there is nothing in the regulations that can fairly be construed as authorizing anyone to adulterate oats. It is also true that oats, as they come in their natural condition from the thresher, are graded as sample oats, whether they contain 21 or 25 percent of foreign material. But this fact would not authorize anyone to add 4 percent of weed seeds to oats that contained in their natural state only 21 percent of foreign matter. And the reason for so saying is that the Food and Drugs Act forbids such adulteration, and neither the Grain Standards Act nor the regulations repeal or modify the Food and Drugs Act.

Even if the regulations were sufficiently ambiguous to be read literally as authorizing anyone to add wild oats and weed seeds to oats, any other fairly possible construction would properly be adopted, because of the wretched impolicy of permitting such an act. The fact that it is lawful to ship in interstate commerce oats containing in the natural state as high as 25 percent of weed seeds affords no sufficient reason for contending that it is also lawful to ship oats that have been artificially brought to this extreme state of impurity. This is so because the old law forbids the addition of impurities to foods, and the new law does not, either literally or in intention, repeal the old law.

It is argued that there is of necessity admixture in dealers' elevator bins of different carloads of "sample oats", of varying degrees of impurity. For instance, if a small car of oats containing as the oats came from the thresher 21 percent of foreign matter goes first into the empty bin, and next a small car of oats in like state containing 25 percent of foreign matter goes into the same bin, on drawing out a large carload from such bin the contents of the car will necessarily be an admixture, to some extent, of both the 21 percent and the 25 percent oats. And the infusion of the more impure oats will have been the result of an artificial mixing of the two lots of oats. However, this is not forbidden by the Food and Drugs Act. Both of the first two carloads put into the bin consist of sample grade oats; both are "articles of food." Neither carload is a "substance" within the meaning of section 7 of the Food and Drugs Act. The only clause of section 7 that could even seemingly apply here is:

> * * * An article shall be deemed to be adulterated: * * * In the case of food: If any *substance* has been mixed or packed with *it* so as to reduce or lower or injuriously affect its quality or strength.

But obviously this language does not apply to the case supposed. The car which is 21 percent impure may legally be transported in interstate commerce; the car which is 25 percent impure may also be legally so transported; and no possible reason suggests itself for an intent to forbid the transportation of an admixture of the two, if sold for what it is. The result of a perfect admixture of 1,000 bushels of oats which are 21 percent impure and of 1,000 bushels of oats which are 25 percent impure would be 2,000 bushels of oats which are 23 percent impure. As each of the two ingredients is an article of food, no other "substance" has been mixed with an article of food. The reduction in the quality of one half of the mixture has been accompanied by an exactly corresponding increase of the quality of the other half of the mixture. I can see no reason why any one should purposely make such a mixture, nor do I see why any one should be injured thereby. The difference between such mixture of two articles of food and a mixture of foreign matter (wild oats, weed seeds, chaff, and dust) with food is very clear. The first is harmlessly mixing two articles of food, the other is mixing a substance which is not a food with a food so as to injuriously affect the quality of the food.

In the case at bar the claimants did not mix two lots of sample oats together. They added wild oats, weed seeds, chaff, and dust to one lot of sample oats. In so doing they unquestionably adulterated a food.

It would, of course, be equally an unlawful adulteration to add wild oats, weed seed, chaff, or dust to oats of any higher grade than sample oats, because it would be adding something that is not a food to a food so as to lower its quality.

It seems unnecessary to discuss at any length mixtures of sample grade oats with oats of higher grade. If a large quantity of sample oats were mixed with a small quantity of No. 1 oats, the result would be merely a food of lower grade than No. 1, and either of sample grade or of some grade between No. 1 and sample. There is no reason why this should not be done, and no reason why the mixture should not be transported in interstate commerce, assuming that it be honestly graded and branded for what it really is. Mixing two different grades of food is not mixing "a substance" with a food so as to lower the quality of the food. One of the ingredients (a food) has been lowered and the other (a food) has been correspondingly raised in quality, and no "substance", within the meaning of the Food and Drugs Act, has been mixed with either of the foods.

Counsel for claimant suggest the case of an admixture, purposely made, of oats and corn. If the corn was before the mixing in its natural condition and of a grade to be transported as a food, and if the oats were in their natural condition and of a grade to be transported as a food, and if the admixture resulted in any lawful grade of either corn or oats, I think that transportation of such mixture would not violate the Food and Drugs Act. If the corn were rotten, it would be a "substance" which could not be mixed with oats; but if the corn were of good food quality, it would be a food, and the mixture would also be a food, and no reason suggests itself for saying that the mixture could not be lawfully transported. As each ingredient separately was lawfully transportable, I see no reason

why the mixture of the two ingredients should not also be lawfully transportable, if branded for what it is.

In the Government brief it is said:

> Of the libel and amended libel filed the department intends to stand upon two principal allegations, to wit: That a substance has been substituted in part for the article, and that the article is misbranded, in that it was sold under the name of another article.

No amended information has been filed or offered. I suppose the intention to file such an amendment has been abandoned; but at any rate I shall not act on an unexecuted intention. As the first ground for forfeiture set up in the only information that has ever been filed is, in my opinion, well taken, it is unnecessary that I consider the other two grounds.

An order declaring forfeiture may be taken.

McDowell, *District Judge.* On October 20, 1922, I made an order condemning the so-called oats here in question, and set forth the reason therefor in a published opinion. (See *U.S.* v. *154 Sacks of Oats*, 283 Fed. 985.) That order has, by joint request of counsel, not been executed; and since it was made an amended information has been filed, and also an additional stipulation, executed July 20, 1923, reading as follows:

> It is hereby stipulated between the parties hereto as follows:
> 1. That the questions presented for decision by the court under the amended information herein filed are (a) whether the article is adulterated in that a substance was substituted in part for the article, and (b) misbranded in that the article was sold under the distinctive name of another article.
> 2. That the allegations of the amended information filed herein shall be wholly disregarded, except insofar as they present the questions set out in 1 above.

The result of filing the amended information and this new stipulation is that the Government abandons any possible grounds for forfeiture except the 2 set out in the above-quoted stipulation.

It will be convenient here to set out a part of the first stipulation of facts:

> " (10) It is agreed that the article in question contains 77 percent of cultivated oats and 23 percent of material other than cultivated oats. This 23 percent consists of wild oats, other grains, and foreign material, the foreign material consisting of weed seeds, chaff, and dust. A certain percentage of this 23 percent was added by the claimants, the material added being wild oats. It is further agreed that there were present in the wild oats so added a certain percentage of other grains and foreign material, consisting of weed seeds, chaff and dust, the quantity of said other grains and foreign material being no greater than that found in the average commercial shipment of wild oats.

As so doing may save labor, I shall consider first the charge of misbranding mentioned as (b) in the new stipulation.

In the above-mentioned opinion I assumed that the dry seeds of wild oats cannot be classed as a food within the meaning of the Food and Drugs Act (34 Stat. 768). I doubt if there is any better source of common knowledge than well-known reference books such as are mentioned below.

In volume 19, Encyclopedia Britannica (11th ed.), page 938, it is said that the grain of the wild oat is " small and worthless."

In 17, New National Encyclopedia (1922), page 327, it is said:

> There are a number of species of but little importance, such as wild oats (*Avena fatua*), which is generally considered as a weed, but has become an abundant and valuable wild pasture grass in California * * *.

In 11, Encyclopedia Americana, under the topic "Oats," it is said:

* * * wild oats (*A. fatua*) valued in some places, for example, California, for pasturage, but generally regarded as a noxious weed.

In 9, Nelson's Encyclopedia, page 119, is the following:

Wild oats (*A. fatua*) are usually classed as weeds, but are used as a pasture grass in certain localities, especially California.

In 8, Universal Cyclopedia (1905), page 542, it is said:

The cultivated oat (*Avena sativa*) is an annual * * *. It is supposed to have developed from *Avena fatua* found growing wild in Europe, where it is considered a weed. It is also wild in California, where it is sometimes cut when green and cured for hay.

In Century Dictionary, [under] "Oats," it is said:

The wild oat of Europe (*A. fatua*) is a weed of cultivation in many places; in California, where it abounds, it is extensively utilized as hay.

While the foregoing authorities show that in California volunteer crops of the wild oat plant, while green, are pastured or cut as hay, they also show that the dried wild oat seed cannot be considered as a food. And it may be added that the foregoing quotations further show it is a matter of common knowledge that generally the wild oat plant is regarded as a weed, in the sense that it is highly undesirable vegetation.

It is true that in the first stipulation there is mention of commercial shipments of wild oats. But it does not follow that the seed of the wild oat is ever shipped in commerce except to grain dealers for use as a food adulterant, or by grain dealers after admixture with cultivated oats, as in the case at bar.

While I remain of opinion that it is common knowledge that the seed of the wild oat is not a food, still in discussing the clause of the food act now in question, this fact is of no importance. If it be assumed that the wild oat seed is a food, yet the mixture here sought to be condemned may have been misbranded, because offered for sale under the distinctive name of another article.

How the wild oats, weed seed, and chaff (which the claimants here mixed with the cultivated oats) were obtained by the claimants does not appear. Under the regulations (Service and Regulatory Announcements No. 46) authorized by the Grain Standards Act (39 U.S. Stat. 446, 482) a consignment of cultivated oats containing more than 25 percent of wild oats or other foreign matter cannot legally be graded as oats at all. If such a consignment (having been sold for what it is) be received by a grain dealer, I see no reason why he may not legally winnow out enough of the wild oats and other weed seeds to bring the remainder of the consignment to a sufficient state of purity to be sold as oats of some legal grade. And in time great quantities of such winnowings may be accumulated by grain dealers.

Again, it could be, and I assume it is, a fact that in growing wheat in the West and Northwest a considerable area of some huge wheat field may be so thick with volunteer wild oats that it would be disastrous to the farmer to allow the gatherings from such part of the field to be mixed with the purer wheat from the remainder of the field. To avoid such mixing, the farmer may, and I assume does,

keep the crop on the affected part of the field separate. It may be threshed separately, and the grain (wild oats and a modicum of wheat) thus obtained may be sold for what it is.

But, however obtained by the grain dealer, the question here is as to the right to make a mixture of the winnowings, or of the wheat field offal, with cultivated oats and to offer such mixture for sale under the name of sample grade oats.

As has been shown, the wild oat is a highly undesirable plant in much the greater part of the United States. Grain, containing wild oats and weed seed, although sold to be used as a food for domestic animals, may be used as seed for voluntary planting. Grain, containing wild oats and weed seed, fed to domestic animals may, and sometimes is, along with the manure, involuntarily planted, and there is thus a propagation of undesirable and harmful vegetation.

The mixture of weed seed and wild oats with cultivated oats, as taken from the field, may conveniently and properly be spoken of as a natural mixture. It is natural in the sense that it may be practically unavoidable. A mixture made by purposely and voluntarily mingling winnowings from one lot of oats with another lot of oats, or by voluntarily mingling what I have spoken of as wheat field offal with cultivated oats, may properly be spoken of as an artificial mixture.

Planting a bushel of oats containing naturally 25 percent of impurities and planting another bushel of oats containing artificially 25 percent of the same kind of impurities, may produce exactly the same evil results. But if the artificial and intentional addition of impurities to oats be permitted and practiced, the number of bushels of impure oats in existence will undoubtably be unnecessarily increased. And in equal degree the probability of a propagation of undesirable vegetation will be increased. To unnecessarily increase the production of a weed or a pest, such as wild oats, is unwise and hurtful and could have been within the intent of the statute. And when a dealer purposely makes such an artificial mixture and offers it for sale as sample grade oats, he is using a name, properly applied to a natural product, as the designation of an artificial product.

As, of course, the intent of the food act is the same now that it was when that statute was enacted. Whether or not offering for sale an artificial mixture of cultivated oats and wild oats as sample grade oats, after the food act and before the Grain Standards Act had been enacted, would have been a violation of the clause of the food act now in question may be doubtful; but I assume that it would not have been. However, paradoxical though it may be, so doing can be a violation of that clause now. It seems too plain to require discussion that there is nothing in the Grain Standards Act and nothing in the regulations thereunder which contemplate or authorize shipping a purposed, artificial mixture of cultivated oats and wild oats as sample grade oats, or as oats of any grade. The unbelievable folly involved in authorizing a vast and wholly unnecessary increase in the diffusion of the seed of such a pest as the wild oat is in much the greater part of the United States, is I think a sufficient reason for saying that the regulations refer to and contemplate only what I have called a natural mixture of wild oats and cultivated oats. It follows that the designation "sample grade oats" is authorized as

applied to natural mixtures of certain proportions of wild and cultivated oats, and is not authorized as a designation of an artificial mixture of the same proportions of wild and cultivated oats. And offering for sale such artificial mixtures under a name which is authorized as the designation only of a natural mixture violates the clause in question of the food act for two reasons.

(1) The use of the name "sample grade" will almost inevitably deceive some purchaser, either immediate or remote, as to the manner of production of the mixture. And I conceive that many persons, who would buy the naturally produced mixture which is properly designated as sample grade oats, would refuse to knowingly buy an artificial mixture of the same proportions of wild and cultivated oats. Either a desire to discourage a vicious practice, or a public-spirited desire to avoid the danger of unnecessarily spreading an agricultural pest, or both, would, I am satisfied, prevent many persons from buying the artificial mixture unless deceived into the belief that they were buying the practically unavoidable natural mixture.

I am unable to concede that the case of *95 Barrels, Etc.* v. *U.S.* (289 Fed. 181) militates against the foregoing reasoning. The essence of that ruling is that the act of the manufacturer there in question did not mislead the public to its harm or induce the purchase of a different article from that intended to be purchased. (See 289 Fed. 186.) The act of the claimants in the case at bar is certainly calculated to do both.

(2) Further, I am unable to hold that the only purpose of the particular clause of the food now in question is to prevent deception:

> That for the purposes of this act an article shall also be deemed to be misbranded * * * In the case of food: First. If it be an an imitation of or offered for sale under the distinctive name of another article. Second. If it be labeled or branded so as to deceive or mislead the purchaser * * *.

The wording of this second paragraph does not comport with a theory that the sole and only intent of the first paragraph was to prevent deception of the purchaser. Hence, as the act done by the claimants, even if not deceptive, is one that is impolitic and harmful to the public, and could have been intended to be forbidden, it seems sufficient to say, "Thus is the law written." "Sample grade oats" is the distinctive name of a natural mixture of cultivated oats, and certain impurities. Offering for sale (to the public detriment) a purposed, artificial mixture of cultivated oats and the same impurities is, I think, offering an article for sale under the distinctive name of another article.

The first stipulation shows that the mixture in question was shipped under the name of "sample grade star oats." It is seemingly contended that the addition of the word "star" to the designation of the mixture alters the result. But there is nothing in the record to indicate that the word conveyed to the purchaser knowledge that the mixture was an artificial one. The word has to the uninitiated no such significance, and if it did have some agreed meaning to the purchaser, this fact was peculiarly within the knowledge of the claimants, and should have been proved by them.

In the first stipulation is the following:

> The oats were inspected by a licensed Government inspector at the point of shipment and certified and graded by him as sample grade, and were sample grade.

Counsel for both parties have written me that the last four words of the foregoing stipulation were not intended as an agreement that the designation "sample grade oats" was intended by the regulations to include an artificial and purposed mixture of cultivated and wild oats.

However, the claimants do insist that the fact that an inspector, licensed by the Government, certified the grain in question as sample grade oats, entitled them to a judgment in their favor. I cannot agree to this. It does not appear that the inspector knew that the grain was an artificial mixture. But in any event, I do not see why the principle that the Government is not estopped by the defaults of its agents does not make discussion of this point unnecessary. (See *Utah Power, etc., Co.* v. *U.S.*, 243 U.S. 389, 408–9.)

From what has been said it seems to me to follow that the claimants misbranded an article of food, consisting of an artificial mixture of a food (cultivated oats) and another food, or a food adulterant (wild oat seed), in that they offered for sale the said article under the distinctive name of another article, to wit, a natural mixture of cultivated and wild oats.

It further follows that it is unnecessary to form an opinion in respect to the charge of adulteration by substitution.

An order reciting the fact that by agreement the former order has not been executed and condemning the oats under seizure may be now taken. (Dec. 14, 1923.)

UNITED STATES v. 95 BARRELS, MORE OR LESS, ALLEGED APPLE CIDER VINEGAR

(District Court, N.D. Ohio, Nov. 1, 1922)

N.J. No. 12367

Libel under section 10 of the Food and Drugs Act. Demurrer overruled. Trial before the court on an agreed statement of facts. Decree in favor of the United States.[15a]

WESTENHAVER, *District Judge.* The Government has seized and libeled, and now seeks to condemn 95 barrels of vinegar shipped in interstate commerce, on the ground that this vinegar is adulterated and misbranded. The shipper, Douglas Packing Company, has appeared and claimed the vinegar, and makes defense. A jury trial has been waived in writing, and the case tried to the court on an agreed statement of facts.

None of the material facts is in dispute. The vinegar is labeled:

Excelsior Brand Apple Cider Vinegar Made from Selected Apples Reduced to four per centum. Guaranteed to comply with all Pure Food Laws.

This vinegar is not made from the expressed juice of fresh apples as pure cider vinegar is commonly understood to be made, but is made from evaporated apples. Claimant, it is agreed, selects mature, sound fruit, free from rot and ferment, and dehydrates

[15a] Reversed 95 Barrels, More or Less, Apple Cider Vinegar v. *United States*, p. 1079. *post.* Judgment of Circuit Court of Appeals reversed by Supreme Court, *United States* v. *95 Barrels, More or Less, Alleged Apple Cider Vinegar*, p. 1118, *post.*

same by the most approved processes. In the process of dehydrating small quantities of sulphur fumes are used to prevent rot and fermentation and subsequent discoloration. The principal result of dehydration is the removal of about 80 per cent of the water content of the apples. Whether in dehydration any other constituents of the apple are removed, is not beyond controversy, as in the present state of chemical science no accepted test or method of analysis is known to the parties for determining that problem. In manufacturing vinegar from apples thus evaporated, claimant places in a suitable receptacle a given quantity of evaporated apples, to which is then added an amount of pure water substantially equal to the amount previously removed by evaporation. Pressure is applied at the top of this mass, and a stream of water under sufficient head is introduced at the top through a pipe and is applied until the liquid released through a vent at the bottom has carried off in solution such constituents of the evaporated apples as are soluble in cold water and useful in the manufacture of vinegar. The liquid product thus obtained, it is agreed, is substantially equal in quantity to that which would have been obtained had fresh apples been used. This liquid carries a small and entirely harmless quantity of sulphur dioxide, which is removed later in the process of fining and filtration by the addition of barium carbonate or some other proper chemical agent which by precipitation eliminates the sulphur compound. The liquid, after this treatment, gives, upon chemical analysis, results similar to those obtained by the chemical analysis of apple cider made from fresh apples, except that it contains a trace of barium. No claim is made that this trace of barium renders the product deleterious or injurious to health. The subsequent process of alcoholic and acetic fermentation is the same as that commonly followed in making vinegar from the expressed juice of fresh apples. The vinegar thus made is similar in taste and composition to the vinegar made in the usual way from fresh apples, except that it contains a trace of barium. No claim is made that this trace of barium renders the product deleterious or injurious to health. Claimant uses in making vinegar in this way, the same receptacles, equipment, and process as is used in making cider and vinegar from unevaporated apples. It has been making and selling apple cider and apple cider vinegar thus produced, continuously from a period antedating January 1, 1906. Other cider and vinegar makers have been doing the same. The total amount thus produced and sold has been and is very large. The United States Department of Agriculture has, however, never sanctioned such labeling, and its attitude with respect thereto is evidenced by circulars 13, 17, 19, and 136, and Food Inspection Decision 140. Exhibit samples of cider fermented and unfermented, made from fresh and evaporated apples, and vinegar made from both kinds of cider, have been submitted and were personally examined by me. There are slight differences in appearance and taste, but all have the appearance and taste of cider and vinegar. The foregoing are all the facts material to the determination of this controversy.

The Government claims that the vinegar in question thus manufactured is adulterated in that there is substituted for genuine apple cider vinegar a manufactured product from evaporated apples, in

violation of paragraphs 1 and 2, section 7, Food and Drug[s] Act, June 30, 1906; also that it is misbranded, in that the statements on the label, "Apple cider vinegar made from selected apples and guaranteed to comply with all pure food laws," are false and misleading, in violation of general paragraph, section 8, and paragraphs 2 and 4, section 8 of said act; and also that it is misbranded in that it is labeled in imitation of and offered for sale under the distinctive name of another article, to wit, apple cider vinegar, in violation of paragraph 1, section 8 of said act. Claimant vigorously and earnestly disputes each and all of these contentions.

This case has received the careful consideration which the magnitude of the interests and the importance of the question involved have demanded. My conclusion is in accord with the unreported decision of Judge Geiger of the Eastern District of Wisconsin. In my opinion this vinegar is misbranded, if not adulterated, within the meaning of said act.

Vinegar is a food product, as defined in section 6 of said act. It is probably not adulterated within the meaning of paragraph 1, section 7. Whether it is adulterated within the meaning of paragraph 2, section 7, will not be determined by me. The question of whether it is adulterated within the meaning of that paragraph, turns on whether or not vinegar manufactured by the process above described is a substitution in whole or in part of one article for another; that is, a spurious vinegar for apple cider vinegar. Claimant's contention is that apple cider made by expressing the juice of fresh apples, and its liquid product produced as above described from evaporated apples, are both apple cider, and that the difference resolves itself merely to a controversy over the process by which apple cider and apple cider vinegar are made. However, as I am content to dispose of this case upon the question of misbranding alone, no opinion need or should be expressed upon this aspect of the controversy.

The applicable provisions of the Food and Drug[s] Act with respect to misbranding are section 8, general paragraph, and paragraphs 1 and 2 and 4 of section 8. The general paragraph of section 8 provides:

> The term "misbranded", as used herein, shall apply to all * * * articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular.

Thus it appears that the false or misleading statement which is forbidden applies as much to the food article as to the ingredients or substances of which it is made; hence any statement regarding the article which is false or misleading is within the definition of "misbranding." Paragraph 2 provides that, in case of foods, an article shall be deemed to be misbranded "if it be labeled or branded so as to deceive or mislead the purchaser." Paragraph 4 says it shall be deemed to be misbranded "if the package containing it, or its labels, shall bear any statement, design, or device regarding the ingredients or the substance contained therein, which statement, design, or device shall be false or misleading in any particular." In this paragraph the false or misleading statement applies only to

the ingredients or substance of the article, but the language used emphasizes that the object of the law was to prevent the purchasing public from being misled or deceived in the sale and distribution of food products. Paragraph 1 says an article shall be deemed to be misbranded "if it be an imitation of or offered for sale under the distinctive name of another article." The general purpose, as well as the explicit prohibitions of the law, is to be determined from these statutory provisions.

These provisions have been often considered by the courts. The Food and Drugs Act, although penal in its nature, is not given a strict construction but one which will reasonably tend to accomplish its general object and purposes. *U.S.* v. *Antikamia Co.*, 231 U.S. 654, 665, 666; *Frank* v. *U.S.* (6 C.C.A.), 192 Fed. 866, 869–70. All the words and terms used therein should be given their proper and usual signification and effect. *U.S.* v. *Lexington Mill Co.*, 232 U.S. 399, 409–10. The courts take judicial notice of the usual meaning and definition of familiar words. *Nix* v. *Hedden*, 149 U.S. 304. As regards misbranding, Mr. Justice Day, in *U.S.* v. *Lexington Mill Co.*, *supra*, says:

> The legislation, as against misbranding, intended to make it possible that the consumer should know that an article purchased was what it purported to be; that it might be bought for what it really was and not upon misrepresentations as to character and quality.

In *U.S.* v. *Antikamnia Co.*, *supra*, 231 U.S. 654, Mr. Justice McKenna, at page 665, says:

> The purpose of the act is to secure the purity of food and drugs and to inform purchasers of what they are buying. Its provisions are directed to that purpose and must be construed to effect it.

Numerous Circuit Court of Appeals and District Court cases have been decided, declaring the same rules and emphasizing more particularly that the prohibition of misbranding is designed to prevent deceiving or misleading the purchasing public, even though the article sold is in itself equally good or not injurious to health. See *Brina* v. *U.S.* (2 C.C.A.), 179 Fed. 373; *Frank* v. *U.S.* (6 C.C.A.), 192 Fed. 866, 869–70; *U.S.* v. *Tepee Apples* (D.C.), 179 Fed. 985; *U.S.* v. *Scanlon* (D.C.), 180 Fed. 485; *U.S.* v. *10 Barrels of Vinegar* (D.C.), 186 Fed. 399; *U.S.* v. *100 Barrels of Vinegar* (D.C.), 186 Fed. 471. The decisions of State courts under pure food laws of similar character, are to the same effect. See *People* v. *Girard*, 145 N.Y. 105; *People* v. *Niagara Fruit Co.*, 77 N.Y.S. 806, affirmed, 173 N.Y. 629; *People* v. *Douglas Packing Co.*, 194 N.Y.S. 633. Such, in brief outline, are the rules of law applicable to this controversy.

Claimant's label does, in my opinion, tend to mislead and deceive the ordinary purchaser and user of vinegar. Cider is defined by Webster as "the expressed juice of apples." By the word "expressed" is meant expelled or forced out. From time immemorial apple cider has been understood to mean the expressed juice of fresh apples and not of dried apples. Apple vinegar or apple cider vinegar likewise in the popular mind has from time immemorial been understood as meaning vinegar produced from apple cider thus defined. Claimant's label conveys the impression that this vinegar is made from that kind of apple cider and that this apple cider is made in the common and familiar way from fresh or undried apples. The mere fact that the words "apple cider" and "selected apples" are brought

together in the same label, conveys unmistakably this impression and repels any other or different impression. Apple cider is a well-known product. Apples are a well-known fruit. Cider means nothing else to the ordinary mind than the expressed juice of fresh and undried apples. Apples mean nothing else to the ordinary mind than fresh and unevaporated apples. A merchant who advertises and offers apples for sale could not compel a purchaser to accept dried or evaporated apples. The latter are not apples as that word is understood in the trade or by a person of ordinary intelligence, but are a manufactured product, an entirely different article. Nor, in my opinion, could a merchant who offers apple cider for sale, compel a purchaser to accept a liquid made from evaporated apples in the manner above described, even though it does possess substantially the same chemical constituents and has substantially the same taste as the expressed juice of fresh apples. Claimant's label consequently misleads and deceives. It makes a statement with respect to an article of food which conveys the false notion that this article is vinegar made from the expressed juice of fresh apples.

Claimant earnestly contends that its product is vinegar because it conforms to the chemical tests prescribed for vinegar by circulars of the United States Department of Agriculture nos. 13, 17, 19, and 136. It also contends that it is made from apple cider because apple cider is only the juice of apples, and that its process first merely extracts the surplus water, and later restores it, and hence the resulting liquid obtained by pressure is apple juice or apple cider, even if it is not the expressed juice of fresh apples. This being so, it further contends that the Board of Food and Drugs Inspection provided by the Pure Food and Drug[s] Act, have no power under the law to declare, as it did, by Food Inspection Decision 140, that vinegar made from dried or evaporated apples is not entitled to be called vinegar without further designation. It may be admitted that this board has no power to add to or take from the law. It does not, however, follow that the claimant's label is true and does not tend to mislead or deceive, or that what the Government is complaining of is not misbranding but a process of making apple cider and apple cider vinegar. Claimant's argument overlooks certain material and controlling considerations. One is that apple cider as defined in the dictionaries and as commonly and popularly understood, is the expressed juice of fresh apples, and that apple vinegar is commonly and popularly understood to be produced by the alcoholic and acetic fermentation of that kind of cider. Another is that the law was designed to prevent the ordinary purchaser from being deceived and misled as to what he is buying, and that therefore the test of misbranding is the effect of the label or statement upon the ordinary purchaser. A statement that an article is apple cider vinegar made from selected apples, can convey no other idea to such a person in the present state of common knowledge than that the vinegar is made from the expressed juice of fresh apples and not by the manipulation of dried or evaporated apples. If it does, and the ordinary purchaser is or may be thereby misled or deceived, it is no answer to say that he gets a vinegar which is equally good. The object of the law is to let the purchaser know just what he is buying and to let him decide whether he wants it or not. One may not take advantage of his prejudices or

want of information to sell him something different from what he thinks he is buying.

Several authorities have been cited which, while involving facts somewhat different, tend to support my conclusion. Claimant's label was under consideration recently in *People* v. *Douglas Packing Co.*, 194 N.Y.S. 633. The decision was upon demurrer and is not a final adjudication of any point in controversy, but the reasoning of the opinion impresses me as sound. The New York statute defines cider vinegar and apple vinegar as a product made exclusively from the pressed juice of apples, by alcoholic and subsequent acetic fermentation. These terms, it is said, should be taken in their ordinary and familiar meaning. It is further said:

> The statutory definition of "cider vinegar" and "apple vinegar" means by this test vinegar made from apple cider. Even if those terms had been undefined in the statute, they nevertheless would have had in the popular mind a well-defined meaning, in that apple cider is known in every household, and cider vinegar is known to be made from it, though the chemical processes by which the one becomes the other are generally unknown. Other vinegars may be perfectly harmless, chemically undistinguishable, it may be, but calculated to deceive, if marketed under a false label. The popular notion of cider vinegar and the ordinary and obvious meaning attached to the words, exclude the notion of making this common article of domestic use from cider pressed from dried apples. The statute is designed to enable consumers to get what they believe they are getting under the labels "cider vinegar" and "apple vinegar."

In *U.S.* v. *100 cases of Tepee Apples*, McPherson, District Judge, held that canned Arkansas apples and blackberries were misbranded because the label on the cans gave Michigan cities as the place of manufacture, thereby conveying the misleading impression that the apples and blackberries were Michigan fruit. It was contended that Michigan apples and blackberries were superior in quality to the Arkansas fruit, but this consideration was disregarded as immaterial, Judge McPherson saying:

> The other purpose (of the law) was to enable a purchaser to obtain what he called for and was willing to pay for. And under this latter view, it is immaterial whether Michigan fruits are better than those grown in Arkansas. A purchaser of canned goods may prefer Michigan fruits. He may believe them to be better than Arkansas fruits. He has the right to call for them, and when he pays or is debited for them, he has the right to have Michigan fruits. The purchaser has the right to determine for himself which he will buy and which he will receive and which he will eat. The vendor cannot determine that for the purchaser. He, of course, can make his arguments, but they should be fair and honest arguments.

In *Brina* v. *U.S.* (2 C.C.A.), 179 Fed. 373, cottonseed oil was labeled in large Italian letters "oil for salad" and in small English letters "cotton salad oil extra quality"; and this was held to be misbranded. The trial judge, without evidence, charged the jury that "as a notorious fact salad oil prima facie means olive oil" and that misbranding resulted, unless evidence was produced to show a different meaning in the trade. This ruling was assigned as error. In the opinion of the Circuit Court of Appeals it is pointed out that salad oil is defined as olive oil in Worcester's, Stormonth's Imperial Encyclopedia, and Century dictionaries, and that no error was committed in thus charging. Compare *U.S.* v. *10 Barrels of Vinegar* (D.C.), 186 Fed. 399; *U.S.* v. *Scanlon*, 180 Fed. 485; *Frank* v. *U.S.* (6 C.C.A.), 192 Fed. 866, 869–70.

Upon authority as well as upon principle, it must be held that the charge of misbranding is sustained. The label does bear statements

regarding the article and the ingredients or substances thereof which are false and misleading, and the vinegar must be held to be offered for sale under the distinctive name of another article as that name is popularly and commonly understood. Judgment of forfeiture and condemnation will be entered.

A. O. ANDERSEN & CO. v. UNITED STATES

(Circuit Court of Appeals, Ninth Circuit Nov. 11, 1922)

284 Fed. 542; N.J. No. 11442

In error to the District Court for the Western District of Washington. Judgment reversed and case remanded.[16]

This is a proceeding by libel under the Pure Food and Drugs Act (34 Stat. 768) for the condemnation of 1,974 cases of canned salmon. The proceeding is based on the following provision of section 7 of the act: That for the purposes of this act an article shall be deemed to be adulterated: * * * In the case of food: * * * Sixth. If it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal, or one that has died otherwise than by slaughter. The case was tried before a jury on the demand of the Government, as provided in section 10 of the act.

It appeared from the testimony on the part of the Government that 408 cans were selected at random from 408 of the 1,974 cases on three different occasions, 24 cans in the first lot, 192 cans in the second lot, and 192 cans in the third lot. The chemist who made the analysis of the first lot of 24 cans was not available as a witness and there is no evidence in the record as to their quality or condition. One hundred and forty-four cans of the second lot were first analyzed, and these were found to contain 28 putrid or tainted cans and 18 stale cans. The remaining 48 cans of the second lot were later analyzed and found to contain 8 putrid or tainted cans and 1 stale can. The third lot of 192 cans was also analyzed, and was found to contain 35 putrid or tainted cans and 12 stale cans. A putrid or tainted can is one containing rotten and decayed salmon whose odor is offensive to the smell. A stale can is one plainly disclosing the beginning of decomposition, but not in so advanced a stage as the putrid or tainted one. It thus appeared that nearly one fifth of the product analyzed was putrid or tainted and approximately one fourth either putrid or tainted or stale. It further appeared that the condition of the salmon was apparent on ordinary inspection when exposed, and that decayed salmon is not injurious to health. The claimant offered no testimony, and upon its motion the court directed the jury to return a verdict in its favor. From the judgment on the verdict the plaintiff sued out the present writ of error.

RUDKIN, *District Judge* (after stating the facts as above). The court below directed a verdict in favor of the defendant in error upon the ground that the article of food referred to in the statute is the single or individual can of salmon and not the entire case or lot. If this interpretation of the statute is correct, the Government, of course, failed in its proof, and will of necessity meet the same fate in every other case of this kind unless it is able to prove that each and every part and parcel of the food product is adulterated within the meaning of the law. Is this a correct interpretation of the statute?

The ordinary definition of the word "article" is an extremely comprehensive one. In the primary meaning, as given in the dictionaries, it designates

---

[16] Reversing *United States* v. *1,974 Cases of Canned Salmon,* p. 1037, *ante.* Retrial, *United States* v. *1,974 Cases of Canned Salmon,* p. 1108, *post.*

one thing or many, one item of several, a portion of complex whole. The best source, however, to which we should apply to determine the definition of a word used in a statute is the statute itself. (*Junge* v. *Hedden*, 37 Fed. 197; Id., 146 U.S. 233.)

The meaning of the word "article" must therefore be gathered from a consideration of the entire act, and we may add in this connection that the rule of strict construction invoked by the defendant in error has little or no application to statutes designed to promote the public health or public safety. Section 1 of the act prohibits the manufacture within any Territory or the District of Columbia of any article of food or drugs, adulterated or misbranded within the meaning of the act; section 2 prohibits the introduction of any such article into any State or Territory or into the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country; section 6 defines adulteration; and section 10 prescribes the procedure for the condemnation. In all of these sections we are convinced that the word "article" is used in its broad and comprehensive sense, and has reference to the food product, not to the smallest individual container. Any other construction would defeat the entire purpose of the law. If the contention of the defendant in error is sound, it is subject to a fine of not exceeding two hundred dollars for each can of salmon introduced into the State, and to a fine of not exceeding three hundred dollars for each subsequent offense. Against such a claim on the part of the Government or such a construction of the statute, we think the defendant in error would have just and ample grounds for complaint.

The defendant in error seeks to uphold the judgment on other grounds. First, it is urged that decomposition sets in immediately after the death of animals or fish; that a literal construction of the act would exclude from interstate commerce all canned fish and meat products; that for this reason the court must hold that Congress intended to prohibit the introduction into interstate commerce of products containing an unreasonable amount or quantity of decomposed matter only, and that the statute as thus construed is void for uncertainty under the decision in *U.S.* v. *Cohen Grocery Co.*, 255 U.S. 81, and kindred cases. This argument is more specious than sound. Decomposition may begin where life ends, but meat or fish is not decomposed at that early stage. Decomposed means more than the beginning of decomposition; it means a state of decomposition, and the statute must be given a reasonable construction to carry out and effect the legislative policy or intent. Answering as similar contention in *U.S.* v. *Two Hundred Cases of A. T. Catsup*, 211 Fed. 780, the court said:

> It is argued for the claimant that since the presence of bacteria, mold, and yeast in any quantity is evidence of decomposition or the process of decomposition, and there is no fixed standard by which it can be determined when a product has reached such a stage of decomposition as to "consist in whole or in part of filthy, decomposed, or putrid vegetable substance", the Government cannot prevail. I infer from the testimony of the experts that it would be difficult, if not impossible, to fix any arbitrary standard by which the question could be determined, as it depends upon so many contingencies. In any event, no such standard has been fixed, in the absence of which each case must be determined on its own facts, and when it appears as in this case, that the product is so far decomposed as to be unfit for food, it comes within the letter and spirit of the law.

The case answers the further contention on the part of the defendant in error that adulterated salmon is not injurious to health or dangerous to life.

It was also urged that, since there is no proof that the product in question would be injurious to health, a verdict should be ordered in favor of the claimant; but I do not understand that such proof is necessary or required under the provisions of the Food and Drugs Act, on which this proceeding is based.

It appeared from the cross examination of the Government witnesses that they have heretofore suffered canned salmon containing a small percentage of filthy, decomposed, or putrid matter to pass in interstate commerce unchallenged, but there is no room for controversy over percentages under the statute itself, for it excludes all. Of course, where the entire product is not inspected or tested the proof must go far enough to satisfy the court or jury that the adulteration extends to the whole product sought to be condemned. And while a small percentage of adulteration found only in a small percentage of the product might not and would not ordinarily satisfy the court or jury that the whole product is adulterated, yet in a case like this, where the jury might properly infer or find that approximately one-fifth of the entire product was unfit for human consumption and that the adulteration extended to the entire product, no such question can arise.

It is further argued that the court should not destroy 1,600 cases of good salmon because 400 cases of the same lot are found to be adulterated. In answer to this we need only say that destruction does not follow condemnation as a matter of course. Section 10 of the act provides for the restoration of the goods on payment of the costs and the giving of a sufficient bond to the effect that the articles will not be sold or otherwise disposed of contrary to the provisions of the act. Under this provision the defendant in error may, and will doubtless be permitted to, separate the good from the bad, and the burden of so doing should rest upon it, and not upon the Government or the ultimate consumer. If it cannot do this, it is its own misfortune and it must suffer the consequences.

The judgment of the court below is reversed, and the cause is remanded for further proceedings not inconsistent with this opinion.

UNITED STATES v. 22 BOTTLES OF CRAB ORCHARD CONCENTRATED MINERAL WATER

(District Court, S.D. Ohio, Nov. 28, 1922)

N.J. No. 11784

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.[17]

The United States attorney filed a libel praying the seizure and condemnation of 22 bottles of Crab Orchard concentrated mineral

[17] Affirmed, *Goodwin et al.* v. *United States*, p. 1130, *post*. See also *Goodwin et al.* v. *United States*, p. 1107, *post*.

water at Cincinnati, Ohio, consigned by L. H. Goodwin & Co., Crab Orchard, Ky., September 6, 1921, alleging that the article had been transported from the State of Kentucky into the State of Ohio, and charging misbranding in violation of the Food and Drugs Act, as amended. The article was labeled in part:

(Bottle) Beneficial in the Treatment of * * * Rheumatism, Piles, Indigestion, Dyspepsia, Dysentery * * * Headaches, and other Ailments arising from Diseases of the Stomach, Kidneys, Liver and Impure Blood. It is a Remedy * * * to cure or relieve * * * afflicted [of] humanity. * * * possesses the necessary elements for the speedy and permanent restoration to perfect health. It strengthens every fibre of the human system and imparts to the nerves a new force of determined energy. Even the aged find in its [their] healing powers a most reliable remedy for the restoration of failing vitality. * * * At the appearance of indisposition, it proves a most reliable remedy. * * * It is in every way a *health preserver* as well as a *healer*. Where habitually used the physician is a stranger * * *. For the Liver, Kidneys, Rheumatism * * * Dysentery.—One teaspoonful * * * until relieved * * * never should the remedy be entirely discontinued until complete health is restored. * * * It quickly destroys the germs of disease and removes the causes of ailments by purifying the blood and cleansing the entire system of uric acid poisoning and poisonous germs; (carton) Beneficial in Treating * * * Rheumatism Lumbago Loss Of Appetite * * * Headache Vertigo Sleeplessness * * * Bilious Colic Indigestion Dyspepsia Piles Kidney Disease Bladder Trouble Liver Complaint Jaundice Dysentery Catarrh Eczema And All Other Diseases Arising From A Disordered Stomach, Liver * * * And Impure Blood. * * * Tonic And * * * System Regulator.

It was alleged in substance in the libel that the article was misbranded in that the labeling bore the above-quoted statements regarding the curative or therapeutic effect of the said article, which were false and fraudulent in that the article contained no ingredient or combination of ingredients capable of producing the effects claimed, and in that it was insufficient of itself for the successful treatment and cure of the ailments and diseases for which it was prescribed and recommended in said statements.

The case having come on for trial before the court and jury, after the submission of evidence and arguments by counsel the court delivered the following charge to the jury:

PECK, *District Judge*. Gentlemen of the jury: It is now my duty in this, as it is in other cases, to charge you with regard to the law which will govern your deliberations; that is to say, charge you with regard to the law in the case. You are the sole judges of the facts; it is entirely within your province to say what the facts are. It is the duty of the court to declare the law to you, and it is your duty to accept the law as the court declares it and to apply it to the facts as you find them to be, and so reach your verdict and say whether you find that this product is misbranded or is not misbranded; for that is the issue in this case. I say, the issue is whether or not the product is misbranded. The branding consists of all the statements made upon the label and upon the outside of the carton or box in which the bottles are enclosed.

The Government states its case in a paper called a libel, and the libel of the Government charges that this product is misbranded in the following statements: [The court here quoted the foregoing labeling].

Those are the statements which the Government claims constitute the misbranding of this product.

The defendant, or rather, we call the opposite party here the claimant, answers and denies that this product is misbranded. The burden of proof is upon the Government of the United States to prove by a preponderance of evidence which is clear and convincing that this product is misbranded before you can find it misbranded.

In order to prove it misbranded it must be shown that the statements charged as misbranding in the libel, which I have just read to you, are in whole or in some substantial part false and fraudulent. By "false" is meant not true. The term, I think, needs no definition. That which does not square with the truth is false. "Fraudulent" means with deception deliberately practiced with a view of gaining an unfair advantage. If one knowingly makes a false statement for the purpose of gaining an unfair advantage, as an unfair advantage over purchasers—those of the public who may purchase—such false statement is also fraudulent. If one makes a false statement recklessly, that is to say, in reckless disregard of the truth, without taking steps to ascertain whether that which is claimed is true or false, and if the natural effect and consequence will be, if the statement turns out to be false, to take advantage or gain an advantage of the purchaser, then that statement would be a fraudulent statement. If one innocently believing in the truth of what is stated makes a statement concerning that which is contained in the package—not intending to deceive anybody, in good faith and believing in the truth of that which is stated—it cannot be a fraudulent statement even though it turns out to be false in fact. In other words, gentlemen, it comes to this: Was there a false statement made in bad faith or was there not? If false, but made in good faith, the product could not be considered misbranded; if true, the product could not be considered misbranded; but if false and made in bad faith, fraudulently, then the product would be misbranded.

Now I have said this applies to the statements made on the label and on the exterior of the carton, so far as they are set forth in the Government's pleading called the libel, in whole or in part. In other words, if any substantial part of these statements are false and fraudulent or, I should say, if any substantial part of these statements is false and fraudulent, the fact that the remainder may be innocent would not save the package from being misbranded. It is the purpose of the Pure Food and Drugs Act to promote honest dealing between those who sell and those who buy, through the medium of interstate commerce, articles of this kind. It is admitted that these articles were articles that passed through interstate commerce. It is just as though the seller stood face to face with the buyer and said, "I sell you his package. This package contains thus and so. Its qualities are thus and so." These statements are to be treated as though they were made by word of mouth between two people, the purchaser relying and having the right to rely upon what the seller said to him. It is the purpose of the Pure Food and Drugs Act to insist that people deal without fraud in making such statements.

Now the words upon this label and on this carton—I have stated during the course of the trial to you and now briefly repeat—are to be taken in their ordinary sense, as an ordinary purchaser of reasonable intelligence would take them. In judging whether these state-

ments were fraudulent, you may take into consideration all of the surrounding circumstances—everything that had come to the attention and notice of the person who made these statements and put them upon this carton. You may take into consideration the fact, if it be a fact, that under some circumstances and at some times this water had been ordered by a physician to be sold to certain persons; but of course you can only give that such effect as it is reasonably entitled to receive. Having considered all of the surrounding circumstances, you will say to yourselves: Was the maker of this label and this carton justified, that is to say, was the one who put out this product justified in fact in putting these statements on it and putting this product before the public with these statements on it? Was that or was it not an honest act?

You are the sole judges of the credibility of the witnesses, that is to say, the extent to which you will believe the witnesses who have testified before you, and it is your duty to reconcile the conflicting testimony of various witnesses and conflicting statements so far as it may reasonably be done.

Witnesses, those who are supposed to know more than the ordinary person about such subjects, such as chemists and physicians, have been permitted to give their opinions as to various matters. Opinion evidence is not binding upon you, but should be considered in connection with all the other evidence in the case. Should you believe it, you may accept and follow it. By an opinion I mean a statement or a conclusion arrived at by the witness from experience or from knowledge, as distinguished from testimony concerning a direct fact. If I were to say, "That is a stone house across the street that I see", that would be a statement of fact; but were I to say that "My belief is that that house is worth $200,000", that would be merely an opinion as to its value.

Now you are the sole judges of the value of opinion evidence. Of course, an opinion is worthless unless it is the honest opinion of the man who states it. If it is his honest opinion, then its value depends upon how much he knows about the subject concerning which he is testifying. If he is thoroughly experienced, thoroughly grounded in his subject, if his opinion is the result of mature reflection, if he is a man of strong logical intellect, his opinion would be entitled to great value. If, on the other hand, he was incapable of logical thinking, or if he was not well grounded in his subject, not familiar with the facts upon which his conclusion is assumed to be based, then, of course his opinion would be of little or no value; and it is for you to decide what value you will give to the opinion evidence that you have heard.

Now a great deal of the evidence of the witnesses who have testified concerning their own ailments is in the nature of opinion evidence. Those witnesses who testified that they had well-known, easily discernible diseases, or easily told diseases—I will say, such as headache or constipation, or something of that sort—of course there would be very little reason to doubt that they knew what they had. But if one testified that he thought that he had some more obscure disease, more difficult to diagnose, and his diagnosis of what he had depended entirely upon his own opinion and he was unable to make such a diagnosis, his opinion would be of very little value. Those

are matters for you to take into consideration in weighing the testimony of the witnesses.

You may also consider the interest of the witnesses, if they have any, in the outcome of the case—their affiliation with either of the parties, their manner of testifying, their appearance upon the witness stand, whether their testimony was logical or otherwise—these and any or all other subjects touching the credibility of the various witnesses you may take into consideration; and having considered all matters, you will give to the testimony of each and every witness such weight as you find it entitled to receive. That is your province.

And now, gentlemen, if upon a consideration of all the evidence you find that the statements charged in the libel are false and fraudulent in any substantial part, you will find the product to be misbranded. If, on the other hand, you do not find that the statements charged in the libel are false and fraudulent in some substantial particular, then you will find the product to be not misbranded.

UNITED STATES v. ELEVEN PACKAGES OF B. & M. EXTERNAL REMEDY

(District Court, D. New Hampshire, Dec. 19, 1922)

N.J. No. 11671

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of claimant.

MORRIS, *District Judge* (charge to jury). The action which you have been called to try differs somewhat in form from ordinary criminal or civil actions.

It is an action brought by the United States against 11 packages of a drug labeled "B. & M. External Remedy A New Chemical Compound", seeking the forfeiture and condemnation of the 11 packages on the ground that they were misbranded.

It is brought under the Food and Drugs Act, the original of which was passed by Congress, June 30, 1906.

The original act has been twice amended since its passage, viz, August 23, 1912, and March 3, 1915, so that the act or such parts of the act as are applicable to this case reads substantially as follows: The act provides:

> That the introduction into any State * * * from any other State * * * of any article of food or drugs which is * * * misbranded, within the meaning of this Act, is * * * prohibited; and any person who shall ship or deliver for shipment from any State * * * to any other State * * * any such article so * * * misbranded within the meaning of this Act * * * shall be guilty of a misdemeanor.
>
> That the term "misbranded," as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as to the State, Territory, or country in which it is manufactured or produced.

That for the purposes of this Act an article shall also be deemed to be misbranded:

In case of drugs:

Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

The purposes of that part of the act to which reference is made are succinctly stated in a message transmitted to Congress by President Taft, now Chief Justice Taft, in 1911. He said:

In my opinion the sale of dangerously adulterated drugs, or the sale of drugs under knowingly false claims as to their effects in diseases, constitutes such an evil and warrants me in calling the matter to the attention of the Congress. Fraudulent misrepresentations of the curative value of nostrums not only operate to defraud purchasers, but are a distinct menace to public health. There are none so credulous as sufferers from disease. The need is urgent for legislation which will prevent the raising of false hopes of speedy cures of serious ailments by misstatements of fact as to worthless mixtures on which the sick will rely while their diseases progress unchecked.

As a result of this message, Congress passed an amendment to the original Food and Drugs Act, known as the Sherley Amendment, which amendment I have already read to you, but which I will read again, as it is, perhaps, the essential part of the statute applicable to the Government's claims in this action, and it is part of the law which I desire to impress on your minds. The part of the amendment to which I refer reads as follows:

That for the purposes of this Act an article shall also be deemed to be misbranded:

In case of drugs:

Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

The libel or complaint in this case was filed October 14, 1919.

It sets forth, in substance, that on or about September 5, 1919, there was shipped from Boston, Mass., to Concord, N.H., 11 packages which contained a drug designed and intended to be used in the cure, prevention, and mitigation of the diseases of man, bearing statements regarding its curative and therapeutic effects; and the bottles containing said drug were labeled in part: "B. & M. External Remedy A New Chemical Compound."

The libel further alleges that a chemical analysis of a sample of the same drug showed that the product contained in said 11 packages consisted of an emulsion made up essentially of oil of turpentine, ammonia, albumen, formaldehyde, salicylic acid, and other ingredients derived from plant sources, including aconite.

The Government further alleges that said packages were labeled, marked, and branded, as follows:

B. & M. External Remedy For Tuberculosis, Pneumonia, Laryngitis, Bronchitis, Pleurisy, La Grippe, Asthma, Hay Fever, Coughs, Colds, Catarrh, Rheumatism, Lumbago, Neuralgia, Neuritis, Peritonitis, Neurasthenia, Locomotor Ataxia, Varicose Veins, Blood Poisoning, Autointoxication, * * * Sprains, Scalds, Burns, * * * Swellings, Stiff Joints. * * * B. & M. External Remedy, applied to the skin, goes directly to the seat of the trouble * * *. Eradicates Tubercle Bacilli from the Lungs, Glands or Joints. Arrests the work of Pneumonia or La Grippe germs in a few hours. Gives immediate relief in rheumatic fever and puts the patient on his feet within a week or ten days. * * * B. & M. Is a sovereign remedy for Colds and Coughs. It destroys the germs and

prevents the further development of Throat and Lung Troubles. A bottle within easy reach is a perfect safeguard against pneumonia. * * * Will relieve Headache in a few moments.

The label further sets forth the words contained on the bottles and the language of a circular contained in said packages giving directions for the use of the drug in cases of the first onset of influenza and a portion of the language of a booklet also sent within said packages. It is alleged that the labels on the bottles and the wording of the booklet mentions the use of the B. & M. External Remedy in connection with the same diseases already enumerated. The Government further alleges that when shipped as aforesaid, said bottles and cartons were misbranded within the meaning of the Food and Drugs Act, and that the circulars and booklets contained false and fraudulent statements regarding the therapeutic and curative effects of said drug.

After service of the process, the National Remedy Co., a corporation, organized under the laws of Massachusetts, by its treasurer, Frank E. Rollins, appeared as claimant of said 11 packages of drugs and filed an answer in which it admitted that it was the manufacturer and consignor of the 11 packages of B. & M. External Remedy, and that it alone was responsible for any and all representations made upon said packages or contained therein as to the curative and therapeutic effects of said remedy. It further denied the allegations in the Government's petition and prayed that said packages might be delivered to it. This answer was filed November 8, 1919.

For a violation of this statute the law provides two remedies. Section 2 of the act declares that any person who ships any misbranded article in violation of the law in interstate commerce shall be punished upon conviction for the first offense by a fine. That, you will observe, is a prosecution against the individual. Section 10 of the same act declares that when such misbranded food or drugs is shipped in interstate commerce in violation of law, the Government may proceed directly against the article shipped, and not require any process against the individual or manufacturers.

The case which we now have is brought under section 10 of the act. There is no criminal prosecution whatever involved in this proceeding. Neither the National Remedy Co. nor its officers or agents are being proceeded against criminally, and no fine or imprisonment is attached to this proceeding. This is a proceeding against the property itself.

You will notice that the case is entitled "*United States* v. *Eleven Packages B. & M. External Remedy, A New Chemical Compound*", but, as already indicated, the National Remedy Co. has filed as claimant of the property which the Government is seeking to condemn.

This action, therefore, is resolved into an adversary proceeding between the United States, on the one side, and the National Remedy Co., claimant, on the other side, in which the subject matter in dispute is the 11 packages of B. & M. External Remedy.

If those packages are found to be misbranded within the meaning of the Food and Drugs Act, then the Government prevails, and the packages should be destroyed or otherwise disposed of in accordance with law.

If the packages are found not to be misbranded in accordance with the act referred to, then the claimant has prevailed, and the packages will be returned to the National Remedy Co.

The procedure in a case of this kind after a claimant has appeared is to have a trial of the question as to whether the article is misbranded. If it is misbranded, the subsequent proceedings depend upon whether it is injurious to health or not. If it is, it will be destroyed by order of the court. But usually, if misbranded only, where the property is not injurious to health, the law provides that it may be turned over to the claimant upon his paying the cost of suit and upon his giving bonds that he will not sell or dispose of it in violation of any law of the State or of the United States.

In this particular case, if the drug is found to be misbranded, it might be turned over to the claimant, National Remedy Co., upon its giving a proper bond, and it would have to change its advertising matter to accord with the truth when the goods might be sold without violating any statute. The question for you to try is whether or not these goods are in any way misbranded.

The National Remedy Co. is a corporation and as such can only act through its officers and agents. The acts of such officers and agents performed within the scope of their authority are the acts of the corporation. The knowledge of such officers and agents is the knowledge of the corporation and binding on the corporation.

The Government having made the charge that the packages are misbranded, the law casts upon it the burden of proving the charge by a balance of probabilities.

If the evidence is so evenly balanced that you cannot determine whether the Government's charges are true or not, then it has failed to sustain the burden of proof which the law casts upon it, and your verdict should be for the claimant.

Under the act of Congress already read to you, there are three certain essential facts that must be proved before the Government is entitled to a verdict. They are: (1) That the 11 packages of drugs were shipped from Massachusetts to New Hampshire, i.e., that it was an interstate shipment; (2) that the bottles, labels, circulars, or booklets accompanying the shipment contained false representations as to the curative or therapeutic effects of the drug; (3) that the representations were fraudulently made with the intent of deceiving the public or prospective purchasers.

We will consider these three essential facts that must be proven in their order.

The first is as to the interstate character of the shipment. Congress has authority under the Constitution to pass laws regulating interstate commerce. The Food and Drugs Act falls within this class. The shipment of the 11 packages of drugs from Massachusetts to Concord, N.H., was interstate commerce. It was the interstate shipment within the meaning of the first part of the Food and Drugs Act which I have already read to you, which prohibits (to use the language of the act)

> the introduction into any State * * * from any other State * * * of any article of food or drugs which is adulterated or misbranded.

I do not understand that the interstate character of the shipment of the 11 packages of drugs is controverted, so you will have no difficulty with that question.

The packages were shipped from some place in Massachusetts across the State line into New Hampshire. You may, therefore, consider the first essential fact in the Government's case as established.

The second essential question is one of more difficulty. Did the labels on the bottles, or the circulars, cartons, or booklets, accompanying the shipment, contain false statements regarding the curative or therapeutic effects of the drug?

On this point there is much conflict of testimony. When the evidence is conflicting, it is peculiarly the province of the jury to weigh it carefully and determine what is the truth. So in this case, it is for you to carefully consider all the evidence in the case and say whether or not any or all of the statements made accompanying the shipment as to the curative or therapeutic effects of the drug were false or whether they are true. If they were false, it makes no difference whether the statements were printed on the labels on the bottles, on the cartons or containers in which the bottles were shipped, or in circulars, pamphlets, or booklets accompanying the shipment. The statements are equally within the meaning of the act so long as they accompany the shipments and are intended for perusal by prospective purchasers of the drug.

The claimant does not deny but that Government exhibits 1, 2, 3, 4, 5, being the bottle and label, booklet, circular, and carton that contained the bottles and literature, were part of the shipment, and in its answer, it admits responsibility for such statements as are contained therein. You will have these exhibits with you for the purpose of examination when you retire to your jury room.

The statute contains the words "curative or therapeutic effects." The word "curative" is defined in Webster's dictionary as "relating to, or employed in, the cure of diseases." "Therapeutic" is defined as "of, or pertaining to, the healing art."

The latter term, as used in medicine, borders a litle more on the realm of experimentation or discovery than the word "curative." But as used in this statute, "therapeutic effect" is the effect that might with reason be expected to be produced upon the human system by any given drug. If a drug is represented to have a curative effect, while it might not always cure, it must be a drug that either does cure, or such as is generally recognized and employed in the effort to cure a certain disease or certain diseases. If it is represented as a cure for certain diseases, when it will not, and is not recognized as a specific, or a remedy for such diseases, then the representation is false, and if printed on the bottles, circulars, or other literature accompanying an interstate shipment of the medicine or drug, then it is misbranded within the meaning of the statute.

To explain a little more fully my meaning, a man might easily justify advertising the curative effects of a drug which was generally recognized as beneficial in the cure of specified diseases, but if a man puts onto the market a drug which is not so recognized by skilled practitioners, he should be held to a high degree of care in his efforts to ascertain the curative effects of the drug that no mistake be made, because he may be trifling with human life. He must use great care in his advertising matter, and know, or honestly believe, that his

representations are true and are so worded as not to deceive the public.

So in this case, if you believe from the evidence that any of the statements as to the curative or therapeutic effects of the B. & M. Remedy, contained in its accompanying literature of which the Government complains in its libel, are false, or if you find that they are only partly true and are so artfully worded as to convey a meaning which is false, and you find that they are so worded for the purpose of deceiving the public, then the statements are false and fraudulent, and your verdict should be for the Government.

In order to maintain its action, it is not necessary that the Government should show by a balance of proof or that you should find that all of the statements contained in these exhibits are untrue or false. If you find that any of the material and essential statements in the exhibits are false and misleading and are likely to deceive the public or prospective purchasers, then, in that respect, the Government has maintained its case. The statement so made is false within the meaning of the statute. As to whether it is also fraudulent, the third essential fact which the Government must prove, I will explain later.

A number of medical men have testified to the nature and symptoms of various diseases. Most of these diseases are so well understood by those not skilled in medicine as to be easily recognizable. Take, for instance, whooping cough. A mother knows only too well when her child is afflicted with that disease; but, on the other hand, the symptoms of scarlet fever, in its incipient stages, is [are] not so easily recognizable. In the advertising matter accompanying the shipment numerous diseases are mentioned. You will understand those diseases as a layman would understand them from a reading of the carton or booklet, and when witnesses not learned in medicine have used the name of a disease in their testimony, you will understand such disease in accordance with the generally accepted meaning, without attempting to apply the technical medical term which might be given it by one learned in medicine.

So also, all the language used by the claimant is to be given the meaning ordinarily conveyed by it to those to whom it is addressed. In the present case, take for illustration the printed matter on the outside of the yellow carton (exhibit no. 5), it is fair to say that it was placed there in bold type by the claimant with the double object in view of advertising the drug and informing the public, and particularly persons who are unfortunate sufferers from any of the diseases mentioned, of the curative or alleviating effects of the drug upon these diseases. The same may be said of the booklet and other printed matter that accompanied the shipment; or to state the proposition more concretely, the printed matter on the carton and in the literature accompanying the shipment was intended to inform prospective purchasers of the drug of its curative or therapeutic effects.

That was the purpose for which it was intended. As I have said, the language used is to be given its ordinary meaning. The question with reference to each statement is: What would an ordinarily intelligent person suffering from one of the maladies and desirous of being cured of it, or at least desirous of being relieved of some of his suffering from it, understand from reading the printed matter? If

there is any of the language in the exhibits that is open to doubt or question as to the meaning it would convey, it is a question of fact for you to determine.

Some of the language used is not open to such doubt. Take, for instance, the language on the yellow carton which says that the drug "Eradicates, Tubercle Bacilli from Lungs, Glands or Joints." Can there be any doubt as to its meaning? It appears in evidence, undisputed, that tuberculosis, or consumption as it is more commonly known among laymen, is caused by the tubercle bacilli. Tuberculosis is known to be one of the most fatal of the diseases incident to humanity. It is also recognized as one of the most difficult to deal with. The statement on the carton is that the B. & M. External Remedy eradicates the tubercle bacilli from lungs, glands, or joints. To eradicate is to blot out, destroy, or relieve the affected parts from the bacilli. If the active bacilli are eradicated the disease is cured and ultimate recovery of the patient is practically assured if he has in his system sufficient recuperative power to mend the injury caused by the ravages of the disease.

There can be no doubt but that the language on the carton with respect to the action of the drug upon the bacilli that causes tuberculosis is intended to inform the public that the drug has a curative effect upon that disease. I have taken this as an illustration. Not all of the language used with respect to the great variety of diseases is equally positive. Some of it may be susceptible of doubt as to what meaning it would convey to the public. In each instance where the language is open to doubt it is for you to say what meaning it conveys.

I think perhaps, that I have sufficiently explained and illustrated the meaning of the word "false" as used in the statute and its application to the instant case. As already said, whether any or all of the statements in the exhibits are false is clearly a question of fact for you to determine. The Government has introduced the testimony of several physicians who have explained to you in detail, and some with great minuteness, the characteristics of some of the diseases mentioned in the exhibit, particularly tuberculosis, pneumonia, locomotor ataxia, and neuritis. They have testified to the recognized treatment among medical men for those several diseases. They have described to you the effect of drugs as used with reference to them. They have also testified to the effect upon the human system of the different substances entering into the composition of the B. & M. External Remedy, and some of them have told you that by no possibility could those drugs, either singly or in a mechanical mixture or chemical compound with the other substances entering into the composition of the B. & M. External Remedy, have the curative or therapeutic effects upon some of the diseases described in the literature. They say that this is the generally recognized opinion of the medical profession.

Some of the physicians who have qualified as experts, perhaps all, have been asked to give their individual opinions as to the efficacy of the preparation and its effect as a curative upon certain of the diseases. They have testified that in their opinion it would not be efficacious. The personal opinion of those physicians would not, standing alone, be sufficient evidence upon which you could find a

verdict or reach a conclusion that the descriptive matter in the circular is false, as it is recognized that there is oftentimes a difference in opinion even among skilled medical men. If the individual opinion of one weighed against the individual opinion of another equally skilled, it could not be said that there was such a balance of probabilities as to permit the jury to determine the question in issue one way or the other. But when the individual opinions of the witnesses is in accord with the generally recognized opinion of medical men skilled in the profession, such opinions may be considered in connection with other evidence. They are an aliquot part of the crystalized opinion of medical men.

As I have already indicated, the important questions in this case arise in connection with the words of the statute, "false and fraudulent." If the question as to whether a statement or a representation is true or not is a matter of opinion so that reasonable men might differ upon that opinion, some men might think one way and some men might think another, then such representation cannot for the purpose of this case be said to be false or fraudulent. A verdict for the Government cannot stand upon a question of opinion between different schools of medicine or upon differing opinion between skilled medical men. In order to be entitled to a verdict the Government must convince you that the statements made in the literature accompanying the shipments are false, and that the drug will not have the curative and therapeutic effects ascribed to it, and not only that the statements are false, but, as I will presently explain, they are fraudulent.

To meet the evidence introduced by the Government, the claimant has called a number of witnesses who have testified that they have been cured by the use of B. & M. External Remedy of diseases from which they have suffered. Claimant has introduced a practicing physician who has testified that he has used B. & M. External Remedy in his practice in certain diseases with beneficial results to his patients.

You have been urged in argument of counsel to find from the evidence of these witnesses that the statements made with respect to the effect of the drug upon the several diseases are true.

The testimony of the Government witnesses including the experts contradicted by the testimony of the witness on behalf of the claimant who have given testimony to the truth of the representations, forms an issue of fact for your determination. You will weigh all the evidence carefully on both sides, considering it with reference to the representations made, and say whether any or all of them are true or false. If you find they are true, then the Government has failed to establish its case, and your verdict must be for the claimant.

If you find that the statements are false and misleading in any material particular, with respect to any one or more of the diseases mentioned in the exhibits, then you will come to your third question, which is: Were the representations fraudulently made with the intent or purpose of deceiving the public or prospective purchasers?

Again calling your attention to the language of the statute and particularly to the words used, "false and fraudulent", it is essential that the Government prove, not only that the statements were untrue, but that they are fraudulent. A statement may be false but not

fraudulent. To illustrate, if a man sells another a horse that is infected with an incurable disease that has not so developed as to be observable, innocently representing to the purchaser that the horse is sound, the statement is false, but it was innocently made, believing it to be true; therefore it was not fraudulent.

The phrase "false and fraudulent" must be taken with its accepted legal meaning and thus it must be found, if the Government is to prevail, that the statements, or some of them, contained in the packages, were put there to accompany the goods with actual intent to deceive—an intent which may be derived from the facts and circumstances but which must be established.

In determining whether or not the representations are fraudulent any or all of them, you should first carefully study the representations themselves, so as to form a correct understanding of the meaning they convey to the public or more particularly to prospective purchasers of the drug.

You will then determine whether this is the meaning intended to be conveyed by the claimant, as the claimant assumes responsibility for the representations made. Going further, you should consider the relation of the claimant to the public. The B. & M. External Remedy being a proprietary medicine, it is proper for you to take into consideration the financial interest the claimant had in so advertising its goods as to increase its sales. Has the desire for financial gain caused the claimant to make extravagant statements as to the curative and therapeutic effects of the remedy, and if such statements are extravagant and grossly exaggerated were they so intended to be, or were the statements made with an honest purpose of informing the public that a remedy had been discovered that was beneficial in a large variety of diseases?

If the claimant honestly believed the statements complained of to be true, the verdict must be for the claimant, and the question is not what a physician or chemist would believe, but it is a question of what the National Remedy Co., acting through its officers and agents did believe.

No law prohibits a man from making any medicine he wants to and selling it to the people if he tells the truth about it.

Anybody in this country has the right to buy any medicine that he wants to buy if he knows what it is and what it is good for.

You are not bound by the theory with regard to diseases advanced by the expert witnesses who have testified. The testimony of experts is to be considered the same as other testimony in the case, for just what it is worth in determining wherein the truth lies. So far as this statute is concerned, a person who honestly believes in another theory with regard to these diseases and ailments and their treatment is entitled to set forth his views in connection with a remedy advertised by him for their treatment; but he must entertain an honest belief that he is right.

A verdict for the Government cannot properly rest upon claims of fraudulent statements when such claims are based upon mere matters of opinion upon debatable subjects.

A verdict for the Government must stand not upon a question of opinion but upon a finding that the remedy is worthless for the uses or some of the uses claimed for it by the National Remedy Co.; or

that the representations or some of the representations as to its curative and therapeutic effects contained in the adverising matter are so grossly exaggerated as to be false and were made with the intent and purpose of deceiving the public. It must be demonstrated that the statements are false and made with a purpose and intent of deceiving the public.

It is for you to determine from all the evidence in the case whether these statements or any of them are false or fraudulent. If you believe that the drug is so absolutely worthless, for example, for tuberculosis, infantile paralysis, locomotor ataxia, or any of the diseases mentioned upon which it is represented to have a curative or therapeutic effect, that the claimant must have known it, then you would be justified in finding that the statement with reference to such disease or diseases is both false and fraudulent.

You should take into consideration the fact that when any individual or company puts out a drug intended for use by persons so credulous as those who are suffering from disease, such individual or company is assuming a great responsibility and extreme caution should be exercised in informing them of the curative or alleviating properties of the drug. Great and lasting injury to the health of individuals may result if misstatements are made as to its curative effects by inducing its use in the incipient stages of diseases upon which it has no effect, which if taken in time, might by proper treatment be cured. Knowing and realizing this as every owner of a proprietary medicine must, if he is a person of intelligence, it is for you to say whether or not he would not, before advertising his medicine, first ascertain just what its curative and therapeutic effect is upon the diseases for which he recommends it.

As bearing upon the knowledge and state of mind of Mr. Rollins who is practically the owner of the National Remedy Co., claimant, you should consider his intelligence and training and say whether or not he did know, when he put out the statements contained in the exhibits, what the curative effects of the B. & M. External Remedy would be upon such diseases as tuberculosis, pneumonia, infantile paralysis, locomotor ataxia, sarcoma, and other diseases specifically mentioned.

These considerations have a bearing upon the question whether or not the statements accompanying the shipments were exaggerated or untrue and were put out with the actual intent to deceive the public.

You should weigh these considerations on one side against the testimony of Mr. Rollins that he entertained an honest belief in the efficacy of his medicine; that his intentions were honest and without intent to deceive. You should take into consideration the evidence bearing upon the efforts he made to ascertain from others what it had done. You should also consider in connection with the claimant's intent the effect he may have actually observed of the use of the remedy upon individuals of his acquaintance. Numerous testimonials have been read, and I must give you a word of caution with respect to them. They are proper for your consideration only as affecting the state of mind and belief of the claimant. They are not to be considered as proof of the effect of the remedy upon the disease mentioned therein. The authors of the testimonials

may have been deceived as to the nature of the disease from which they suffered or as to the effect of the treatment. They may have been on the road to recovery before the remedy was used.

In order to be competent for your consideration that the diseases mentioned in the testimonials have been cured by the use of the B. & M. External Remedy the individuals giving the testimonials would have to be brought into court to testify, subject to cross-examination, so that you might see them and determine for yourselves how much weight should be given the statements they have made. In several instances this has been done. In such instances it is the testimony of the witness and not the language of the testimonial that is competent as bearing upon the truth of the curative and therapeutic effects of the medicine. As I have said, the testimonials are competent only as bearing upon the state of mind of the claimant when he put out the advertising matter with the drug as to whether or not he intended thereby to deceive the public and promote sales.

The shipment of the packages in this case was made September 5, 1919, and in considering the good faith of the claimant in putting out the advertising matter, you should consider only such testimonials as were given prior to the date or the date of the publication of the advertising matter and such facts as were then known to the claimant through its agents, because it is manifest that the claimant's state of mind as reflected in the advertising matter could not be influenced by events happening subsequent to its publication.

There has been introduced in evidence testimony tending to show effective cures of numerous diseases from the use of the remedy since the seizure of these packages by the Government in 1919.

This testimony can have no weight upon the state of mind of the claimant when the literature was published, but it may be considered with reference to the truth or falsity of the statements contained in the advertising matter.

Government Exhibit No. 7 is a circular published by the United States Department of Agriculture, Bureau of Chemistry, intended to inform manufacturers and proprietors of drugs of the Department rulings with reference to that part of the Food and Drugs Act which applies to the misbranding of drugs. This exhibit was admitted for the purpose of showing notice of claimed violation of the act by the claimant. A copy of it was given to the claimant. It is not to be considered by you except for the purpose of showing notice and you will not consider it for any other purpose. It is for the court to construe the law, and you will not consider the printed circular as evidence of any particular construction to be given the statute. I wish to impress on you right in this connection that you are to give the language in the advertising matter its ordinary meaning which it would convey to the public.

You are to be congratulated that the trial of this case is drawing to a close. It has consumed nearly three weeks and necessarily has entailed a large expenditure of money. It is a matter of importance to the claimant and to the Government representing the public. You should give the evidence most careful and thorough consideration that you may arrive at a just and honest conclusion.

You will have with you two verdicts. The first which I happen to pick up reads after entitling the case: "The jury find in favor

of the claimant." If this is the verdict of the jury upon the issues of the case as they have been explained to you, you, Mr. Foreman, will sign that verdict and return it to the court.

The other verdict reads, after entitling the case: "The jury find in favor of the United States." If you find that all or any of the statements complained of are both false and fraudulent, you, Mr. Foreman, will sign that verdict, and in addition to your verdict you will designate in writing such statement or statements as you find to be false and fraudulent so that the claimant may hereafter omit these statements from its advertising matter.

Counsel have agreed that if the verdict is for the Government that this may be done.

The jury will, of course, take up the consideration of the questions involved in this case in a manner that seems most convenient to them; but in hope that it may aid you in your deliberations, the court suggests that you take the booklet and go through it carefully and consider what is said with respect to each disease mentioned, and if you find that any statement is untrue or so exaggerated as to be false, and you find further that such statement or statements are fraudulent within meaning of the terms as I have explained them to you, you will record such statements in connection with your verdict for the Government. If all that is said with reference to any certain disease is found to be both false and fraudulent, you can simply refer to it as such without copying the language. But if you find that some particular sentence or statement is both false and fraudulent, you will then quote it in your verdict. I have only referred to the booklet. In like manner you can go through the list of diseases on the carton and printed on the label on the bottle. In like manner you can consider the influenza circular.

After you have recorded your quotations, you will again sign, Mr. Foreman, at the end of the quotation.

You should weigh all of the competent evidence for and against the claimant upon the question, first, of the truth of the representations in the exhibits accompanying this particular shipment, and, second, upon the claimant's intent to deceive or defraud the public.

These are the two important issues for your determination. When you have reached a just conclusion, you should render your verdict in accordance therewith.

W. B. WOOD MANUFACTURING CO. v. UNITED STATES

(Circuit Court of Appeals, Seventh Circuit, Jan. 2, 1923)

286 Fed. 84; N.J. No. 12652

In error to the District Court for the Eastern District of Illinois. Judgment of condemnation affirmed.[18]

Before Baker, Alschuler, and Evans, Circuit Judges.

Evans, *Circuit Judge.* Judgment was rendered in the district court in favor of the defendant in error, libelant, confiscating certain color-

[18] Affirming *United States* v. *One Pound Can of Coal-Tar Color,* p. 1019, *ante.*

ing material, a product of coal-tar oil, after plaintiff in error had intervened and a trial on the merits had occurred. The issues were very much narrowed by the answer which admitted the manufacture and shipment of the objectionable material. Plaintiff in error denied that that the coloring material was adulterated, denied adding poisonous or other deleterious ingredients injurious to health, and denied any misbranding of the commodity. The controverted issues were resolved in favor of the Government by the trial judge who found:

(1) That the can of coal-tar color libeled in this case passed in interstate commerce and remained within the jurisdiction of this court unsold and in the original and unbroken package.

(2) That sodium chloride and sodium sulphate had been mixed and packed with the coloring matter in said can so as to lower and reduce and injuriously affect its quality and strength.

(3) That sodium chloride and sodium sulphate had been substituted wholly or in part for quality color, which the label on the can purported the article to be.

(4) That the can of coal-tar libeled contained an added poisonous or deleterious ingredient, to wit, arsenic, which may render said article injurious to health.

(5) That the statement borne on the label of the can, to wit, "Warranted comply with all requirements, quality color", is false and misleading and labeled so as to deceive and mislead the purchaser.

The coloring is manufactured for bakers, ice-cream manufacturers, and soft-drink producers, and the Government chemist found it to consist of:

Sodium chloride	39.14%
Sodium sulphate	3.61%
Tartrazine	30.00%
Orange II	16.00%
Arsenic	20 parts per million.
Balance—moisture and heavy metals.	

There are two kinds of color used in food—cochineal, which is rarely used and not here involved, and aniline color, which is the result of chemical combination produced by the mixture of two coal-tar derivatives. In its preparation it is necessary to use sulphanilic acid, which contains more or less arsenic trioxide.

The judgment is predicated on (*a*) the presence of arsenic, (*b*) too much salt, and (*c*) false labeling.

Concerning the presence of the arsenic in the product, plaintiff in error contends that unless the manufacturer adds the ingredient, arsenic, he is not liable under section 7, which provides the test:

Fifth. If it contain any added poisonous or other added deleterious ingredient which may render such article injurious to health.

Because of the word "added", it is urged that the finding should be in favor of plaintiff in error, for at no time was arsenic added to the coloring.

It is further contended that the analysis fails to show arsenic in sufficient amount to render such article injurious to health.

It is established by the evidence that the arsenic in the coloring matter is traced to sulphanilic acid, which was added to the coal-tar derivative, and without this acid there would be no arsenic, or at least none in objectionable quantities. We therefore reject this first contention, for in the manufacture of this food product the manufacturer introduced the sulphanilic acid. In other words, the acid con-

taining the arsenic was added to the coal-tar product and therefore arsenic was "added."

We are not satisfied, however, that arsenic in such quantity as to be injurious to health was present.

The Government recognizes the impossibility of eliminating arsenic entirely. In fact, the testimony shows that the elimination of arsenic would be at most but a matter of degree. The Government certifies color when arsenic is present and when only slightly less than that found in the confiscated product.

The evidence in the case does not present a disputed issue of fact but rather a difference between chemists over the meaning of the words "deleterious ingredient, injurious to health." In recognizing that a small quantity of arsenic is not injurious to health, the Government acknowledges that this term is a relative one. Arsenic is found in infinitesimal quantities in so many articles of food that it has been said that the air we breathe, the water we drink, the smoke and dust we inhale, and all the foods we consume contain arsenic. If the term be an absolute one, then they would all be condemned. The quantity of arsenic found in this coloring material is so infinitesimal that when diluted as it is ordinarily used it would take years to produce "a dose" such as is ordinarily prescribed by physicians, 1/30 grain. In other words, one would be required to drink 150,000 bottles of soda before he would have consumed a quantity of arsenic sufficient to equal the "dose."

It may be true that by further process the amount of this drug may be reduced, but complete elimination is impossible. The Congress has not assumed to define with absolute particularity what is or what is not injurious, and we cannot accept the testimony of the one witness who testified for the Government to the effect that the word "injurious" is an absolute term. Rather do we conclude upon the testimony before us that the arsenic present in the quantity disclosed was not injurious to health.

After mixing the two coal-tar derivatives, to which is added the sulphanilic acid, the manufacturer is confronted with the problem of eliminating the water. This is done either by freezing or by salting, or by both freezing and salting.

As the color is invariably reduced when used, the manufacturer has found the salting method desirable because "up to a certain limit" the addition of salt produces a greater quantity of coloring material. It may be true that the more salt there is added, the less the user will dilute, but otherwise no injury to the product, as such, is occasioned by the presence of salt up to 40 or 50 percent of the gross quantity. The seller gives directions to the purchaser for the dilution, which vary according to the percentage of salt.

To reduce the salt content is expensive, but when it is reduced to a point below 5 percent, it is (other ingredients being satisfactory) properly subject for certification by the Government (F.I.D. No. 77).

The Government contends that shipping this coloring material containing 40 or 50 percent of salt in interstate commerce is a violation of section 7, which reads:

> That for the purposes of this Act an article shall be deemed to be adulterated:
> * * * * * * *

In the case of food:

First. If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.

Second. If any substance has been substituted wholly or in part for the article.

* * * * * * *

Fifth. If it contain any added poisonous or other added deleterious ingredient which may render such article injurious to health.

With this contention we cannot agree, unless, as here, the product is sold under a false label. In other words, we cannot accept the contention of counsel for the Government that the coloring material, weakened (but not injured) by the larger percentage of salt, violates section 7 of the act, so long as it is not labeled or sold as a certified color. In this respect, perhaps, the designation "quality color" is also objectionable and deceptive. In other words, we have presented a case where a food product (coloring material) is made and its lawful sale authorized, which contains an ingredient (salt), which is harmless in itself. The quantity of the ingredient used varies with each manufacturer and the product of each single producer also varies somewhat. Aside from its influence upon the cost of production, the presence of salt has the effect of increasing the quantity of coloring material and, regardless of the percentage used (up to 50 percent at least), it must be very greatly diluted by the user.

Upon these facts we have no hesitancy in saying that the statute does not, nor was it intended to, give the Secretary of Agriculture any authority to fix or establish an arbitrary percent (say 5 percent), beyond which the manufacturer cannot go without violating this section.

While holding that the salt content here shown does not violate section 7 of the act, no support of justification can be found therefrom for the attempt of plaintiff in error to sell its product as a certified coloring material with a salt content less than 5 percent.

The goods as shipped carried a label upon which appeared the following words:

"Warranted. Complies with all requirements. Quality Color. No. 810. Contents yellow."

Section 8 of the Food and Drugs Act reads:

That the term "misbranded," as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article * * * which shall be false or misleading in any particular, * * *.

That for the purposes of this Act an article shall also be deemed to be misbranded: * * *

In the case of food: * * *

Second. If it be labeled or branded so as to deceive or mislead the purchaser, * * *.

Fourth. If the package containing it or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein, which statement, design, or device shall be false or misleading in any particular * * *.

There are certain regulations or requirements of the Department of Agriculture dealing with the use of food coloring, and the Government contends, and we think justly, that the language quoted, "Warranted. Complies with all requirements", was intended, and

would reasonably tend to convey the belief that the color was warranted to comply with the food inspection decisions of the Department of Agriculture. Our attention has not been called to any other explanation that would give effect to the word "requirements." Inasmuch as the color under consideration did not comply with the requirements of the Department of Agriculture for certification, there was a misstatement, a misbranding of the package, which subjected the article to confiscation.

The judgment is affirmed.

UNITED STATES v. BLAZEK

(District Court, District of North Dakota, Jan. 15, 1923)

N.J. No. 11330

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

The jury was charged as follows:

MILLER, *District Judge*. Gentlemen of the jury: You have now heard all the evidence in the case and the views held and entertained by counsel with reference to the evidence introduced. The case is now ready to go to you, gentlemen of the jury, for your final consideration. If the court has at any time shown any anxiety with reference to the progress of the trial in this case, it has been because the court felt that it might possibly have been shortened up some in the trial, not because the court did not consider the case of any importance. It is an important case because Congress has seen fit to enact a law with reference to pure food. The plain purpose and intention of that law is to protect everyone from being compelled to buy or having imposed upon them impure food, and it is the duty of the prosecuting attorneys for the Government to see that that law, as well as all other laws, are enforced; so that it is important from the standpoint of the Government, whose duty it is to protect the people against impure foods, to enforce that law. It is also an important case from the standpoint of the defendant. The defendant stands charged here with having violated that law, violated a law of the United States, and that in itself is a mighty important thing to the defendant, and by that charge he is not only charged with having violated the law of his own Government but is also charged necessarily with unbusinesslike and unfair and unjust practices, so that it is a case that, so far as importance is concerned, well merits your careful consideration.

The law that the defendant is charged with violating is commonly known as the Pure Food and Drugs Act, passed by Congress on June 30, 1906, and that part of the law that is applicable to this case is a follows:

> That the introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated within the meaning of this act,

which is as follows: If it consists in whole or in part of any filthy, decomposed, or putrid animal or vegetable substance so as to be unfit for food.

The information is as follows:

Philip Elliott, assistant attorney for the United States in and for the District of North Dakota, who for the said United States in this behalf prosecutes, in his own proper person comes into court on this 28th day of June, A.D. 1920, and with leave of court first had and obtained, gives the court here to understand and be informed as follows, to wit:

That Charles J. Blazek, trading as Blazek & Novotny, at Pisek, State of North Dakota, did within the Northwestern Division of the Judicial District of North Dakota and within the jurisdiction of this court, on or about the 19th day of July, in the year 1919, then and there in violation of the act of Congress of June 30, 1906, known as the Food and Drugs Act (34 Stat. L., 768), unlawfully ship and deliver for shipment from Pisek, State of North Dakota, to the city of Duluth, State of Minnesota, consigned to Levine Bros. Co., a certain consignment, to wit, a number of cases, each case containing an article of food marked and branded as follows, to wit: "Order of Blazek & Novotny, Pisek, N.Dak." Said article was billed as eggs.

That said article of food when shipped and delivered for shipment as aforesaid was then and there adulterated within the meaning of the said act of Congress in that it consisted in whole or in part of a filthy, putrid, and decomposed animal substance; all of which was and is contrary to the form of the statute in such case made and provided and against the peace and dignity of the United States of America.

Wherefore said attorney, in behalf of the United States, prays the consideration of the court here in the premises and that due process of law may be awarded against the defendant, in this behalf, to make answer to the United States touching and concerning the premises aforesaid. (Sworn to by Philip Elliott.)

Now, of course, you, gentlemen of the jury, will understand that the fact that this defendant was informed against by the United States district attorney as read to you and that pursuant to that information he has been arrested and brought to trial here is not any evidence of his guilt. It is merely the manner and form by which the Government brings to trial a defendant charged with an offense against the laws of the United States; and you are also told that every presumption of law is with the defendant, the presumption being that he is innocent of the crime charged until the Government has proven him guilty of the offense charged beyond a reasonable doubt. That presumption of innocence remains with the defendant during the trial of the case up to the time, if that time comes, when you, gentlemen of the jury, are satisfied beyond a reasonable doubt of his guilt. When that time comes, if it does come, the presumption no longer remains with him.

Before the Government can ask a conviction of the defendant at your hands, the Government must prove beyond a reasonable doubt each and every material allegation in the information, and you are told that the material allegations in this information, which the Government must prove beyond a reasonable doubt before it can ask a conviction at your hands, are three. The first one is that these particular eight cases of eggs were in fact, at or about the time and place mentioned in the information, delivered for shipment or shipped by this defendant. The second one is that they were delivered for shipment or shipped by him in interstate commerce, that is to say, from one State into another State of the United States; and the third material allegation is that the eggs at the time they

were shipped by the defendant, if they were shipped by him, were adulterated within the meaning of this act, and you are told as a matter of law that if at the time they were shipped by the defendant, if they were shipped by him, they were decomposed to such an extent that they were unfit for food, then they are adulterated within the meaning of this act. With reference to the first material allegation mentioned, namely, that you must find beyond a reasonable doubt that the defendant in fact did ship the eight cases of eggs mentioned in the information, the defendant himself on the stand testified that he did ship these eggs and that they were billed and shipped to Levine, at Duluth, in the State of Minnesota. If that is true, then he did ship the eggs, and they were shipped in interstate commerce. I don't think on those two material allegations you will have any trouble. So that brings the remaining material allegation in that information, which the Government must prove beyond a reasonable doubt, to one single fact, namely—at the time the defendant shipped these eggs, were those eggs at that time decomposed to such an extent that they were unfit for food—and that is the only question. You are told that it isn't necessary under this act that the defendant should know at the time he shipped them that they were decomposed to such an extent as to be unfit for food. Under this law he is supposed to know and in law is held to know whether or not the eggs were in fact adulterated, as I have described. So the question, as I said, narrows down to the single proposition—were the eggs at the time of shipment decomposed within the meaning of that act, as I have described to you? That is to be determined by you from all the evidence introduced in this case and all the surrounding circumstances that have been described to you and that come before you, and before you can convict this defendant of the crime charged in this information you must find beyond a reasonable doubt that at the time that he shipped those eggs and delivered them for shipment that they were rotten and decomposed to such an extent that they were unfit for food.

It has been testified in this case, and this court has permitted it to be shown by the Government, that some 12 days later when the Government's representatives examined and candled certain eggs in Duluth, said to be a part of these particular eight cases, that the particular eggs examined by the Government were at that time decomposed. Now you are told that the only purpose for which that testimony was admitted and the only reason it is competent at all is to permit you to say what bearing that fact, if it was a fact, may have on the question whether they were decomposed at the time they were shipped. In other words, the fact that they were decomposed and adulterated within the meaning of the act 12 days later would not make the defendant guilty. It was admitted for the purpose to let you say what evidence such facts were as bearing on the question whether 12 days before when he shipped them they were decomposed and adulterated within the meaning of the act, and the one further purpose whether or not, and that is for you to say, the particular eggs examined by the Government's agent on the 31st day of July at Duluth were in fact eggs shipped by this defendant, and unless you find that the particular eggs examined by the Government at Duluth on the 31st day of July were the identical eggs,

that is among and were the identical eggs shipped by this defendant, then, of course, there is no evidence in this case whatever to show that the eggs shipped by defendant were decomposed within the meaning of the act. So with such instructions on that part of the case I think you have the issues squarely submitted to you.

Now, I have said that you must find these facts beyond a reasonable doubt, and reasonable doubt is not a mere fanciful or capricious notion that a juror might get from some particular piece of evidence that is introduced. It means an honest doubt from all of the evidence introduced in the case and one that is founded in reason itself—a substantial question must arise in your mind whether or not the defendant is guilty. It is such a doubt that would in the more important affairs of your own life cause you to stop and hesitate and say that you were not certain which was right. If, on the whole evidence in this case, such a question and doubt has arisen in your mind as to whether or not the eggs at the time they were shipped and delivered for shipment by the defendant were in fact decomposed and adulterated within the meaning of the act, or if there is such a doubt in your mind with reference to whether the eggs as examined by the Government's agents in Duluth on the 31st day of July were the same eggs that were shipped by this defendant, then you have a reasonable doubt and you should acquit this defendant. If, on the other hand, after fully considering all of the facts and the circumstances in this case, you can say to yourself that you are morally certain, that you have an abiding faith, that these eggs shipped by the defendant on the 19th day of July, 1919, were at that time decomposed and rotten to the extent that they were unfit for use, then you are convinced beyond a reasonable doubt and your verdict should be guilty.

You are the sole judges of the credibility of the witnesses and the weight that should be given their testimony, and in weighing the testimony you should adopt such reasonable tests and standards with reference to the witnesses and the weight to be given their evidence as reasonable, prudent men would use in searching for truth with reference to their own affairs in life. You have a right, of course, to take into consideration the appearance of a witness, what he testified to, his means of knowledge, apparent candor or lack of candor, and all other circumstances that impress you as being worthy of consideration.

The defendant himself is a competent witness in his own behalf; he has testified in this case, and you should weigh his evidence and apply to his testimony the same rules and standards which you do to other witnesses, bearing in mind, of course, that he is the defendant and has some interest in the case. And if you should find and believe from the evidence that any witness has sworn falsely you may disregard his entire testimony or such parts of it as is not corroborated by other creditable evidence or circumstances surrounding the case that give credibility to it.

Now, gentlemen, I have prepared two forms of verdict in this case: One is "We, the jury, find the defendant guilty" and the other is "We, the jury, find the defendant not guilty."

Are there any exceptions?

DUFFY-MOTT CO. v. UNITED STATES

(Circuit Court of Appeals, Third Circuit, Jan. 15, 1923)

285 Fed. 737; N.J. No. 11712

In error to the District Court for the Eastern District of Pennsylvania. Judgment affirmed.[19]

Before BUFFINGTON, WOOLLEY, and DAVIS, Circuit Judges.

BUFFINGTON, *Circuit Judge.* In the court below it appeared that the Government had seized for forfeiture nine cases of Sparkling White Seal, and that the Duffy-Mott Co. appeared and claimed. Thereupon the alleged cause for forfeiture was tried by a jury and a verdict having been found for the Government and judgment entered thereon, claimant brought this writ of error.

The decisive question is the alleged error of the court in refusing claimant's request for binding instructions. After examination of the issue and proofs, we are of opinion the point was properly refused.

The proceeding was under the Pure Food and Drugs Act which provides:

> an article shall [also] be deemed [to be] misbranded: * * * In the case of food: * * * If the package containing it or its label shall bear any statement, design, or device * * * which statement, design, or device shall be false or misleading in any particular.

The proofs show a well known brand of champagne, called White Seal, was sold in a distinctive bottle, the mouth of which was sealed with a white cap or covering. Such champagne could be sold by a druggist on prescription under legal permit. The claimant put carbonated apple juice, with capsicum added, into bottles, which in form and dress bore semblance to the White Seal champagne, and labeled them "Sparkling White Seal."

Referring to some, but not all of the testimony, one witness, experienced in the champagne trade, testified:

> The appearance of the bottle is misleading. At a distance I would think it was a pint of champagne.

The testimony of another experienced witness was:

> Q. In "design" and "device", can you say whether or not that bottle is misleading?
> A. It appears to me from here a bottle of champagne, as I would understand it.
> Q. Can you say whether or not in its general make-up it is misleading?
> A. In its general make-up it is, to my mind.
> Q. In the trade, would it be generally misleading to the trade, to the consuming trade?
> A. It all depends. It would depend on where the goods were sold. If they were sold in a grocery store I do not think so. If in a drug store, they might.
> Q. But I mean in its make-up without respect to where it was sold?
> A. In the style of the package you mean, in other words?
> Q. Yes.
> A. The style of the package is misleading.
> Q. The style of the package is misleading?
> A. Yes, sir.
> * * * * * * *

[19] Affirming *United States* v. *18 Cases of Sparkling White Seal,* p. 1023, *ante.*

Q. And if you could have read the words "Duffy-Mott" from your seat upon the witness stand, you would not have answered, would you, that it looked like champagne?

A. On the table there it looks like a champagne package, and I might say it looks like a bottle of champagne, unless I looked at the bottle closely and saw the label, then I would know it was not.

The court below rightly summed up the substantial question involved in the case in these words:

If the jury believe that the use of the words, "Sparkling White Seal," taken in connection with the way the bottle is put up, is a misleading statement, and taken in connection with everything else that is contained on the label the jury believes that the public generally would be deceived into thinking that they were buying champagne when in fact they were getting carbonated apple juice, with some capsicum in it, then the Government has made out its case. * * * The jury must find not that they might think it was some other kind of apple juice, or they might think it was some other kind of beverage, but they must think it was champagne. If the puplic is not deceived into thinking it is champagne, then the Government has failed to make out a case.

Under such proofs, manifestly the court would have been in error had it withdrawn the case from the jury.

Finding the mode of submission and charge to the jury were fair and without error, the judgment below is affirmed.

NINETY-FIVE BARRELS, MORE OR LESS, APPLE CIDER VINEGAR v. UNITED STATES

(Circuit Court of Appeals, Sixth Circuit, Apr. 3, 1923)

289 Fed. 181; N.J. No. 12367

In error to the District Court for the Northern District of Ohio. Judgment reversed.[20]

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

DONAHUE, *Circuit Judge.* The United States filed a libel in the district court for the seizure and condemnation of 95 barrels of alleged apple cider vinegar, labeled "Excelsior Brand Apple Cider Vinegar made from Selected Apples", charging that this vinegar is both adulterated and misbranded in violation of the Food and Drugs Act of June 30, 1906. The Douglas Packing Company, the manufacturer and owner of this vinegar, intervened and denied that it was either adulterated or misbranded and asked restitution.

A written waiver of trial by jury was filed, and the case was submitted to the court upon an agreed statement of facts. The trial court found that the vinegar was not adulterated, but was misbranded in violation of general paragraph of section 8, and subparagraphs 1, 2, and 4 as to foods of section 8 of the Food and Drugs Act of June 30, 1906, as charged in said libel, and ordered its condemnation and forfeiture as provided by that act.

It appears from the agreed statement of fact that claimant, the Douglas Packing Company, is engaged in the manufacture of apple

---

[20] Reversing *United States* v. *95 Barrels, More or Less, Alleged Apple Cider Vinegar*, p. 1047, *ante*. Judgment of Circuit Court of Appeals reversed by Supreme Court, *United States* v. *95 Barrels, More or Less, Alleged Apple Cider Vinegar*, p. 1118, *post*.

cider and apple cider vinegar; that during the apple season, from about September 25 to December 15 of each year, sound, mature, unevaporated apples are used by it in the manufacture of its products, and for the balance of the year evaporated apples of like quality are used.

The principal result of the evaporation process is the removal of 80 per cent of the water contained in the natural fruit. While it is not admitted that there are no other constituents of the apple removed by this process, yet it is admitted, in effect, that if any other constituents are removed by evaporation, the amount thereof is so negligible that the science of chemistry is unable to determine that fact. When the apple season is over and the evaporated apples are used by the claimant, in the manufacture of its products, substantially the same amount of pure water is added to the evaporated apples that was removed by the evaporating process. In all other respects the claimant employs the same receptacles, equipment, and process as in the manufacture from the unevaporated apple.

In the evaporating process small quantities of sulphur fumes are used to prevent rot, fermentation, and decomposition. This is wholly removed therefrom by the addition of barium carbonate, or some other chemical that eliminates itself and the sulphur compound by precipitation. After fining (clarifying) and filtration the cider or liquid obtained from the evaporated apple, upon chemical analysis will give results similar to those obtained by chemical analysis of apple cider made from unevaporated apples, except a trace of barium—in other words, an amount too small to be quantitatively measured. No claim is made that this trace of barium render the product injurious or deleterious to health, and, except for this trace of barium, the vinegar made from this cider or liquid obtained from the evaporated apple is similar in taste and composition to the vinegar made from the cider of the unevaporated apples.

It was evidently the purpose and intent of the Government and the claimant, in subscribing to the agreed statement of facts, to eliminate from consideration all unimportant matters and confine the issues to important basic questions affecting the substantial rights of the parties. These issues must be determined solely upon consideration of the facts admitted, regardless of the possibility that facts might have been established by evidence, at variance therewith and more in harmony with a supposed public opinion upon this subject.

The libel charges that this vinegar is adulterated in violation of paragraphs 1 and 2, under Food, of section 7 of the Food and Drug[s] Act of June 30, 1906, which paragraphs read as follows:

> (1) If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.
>
> (2) If any substance has been substituted wholly or in part for the article.

It is clear that this trace of barium, which is admitted to be neither injurious or deleterious, does not constitute adulteration within the meaning of either of the paragraphs of section 7 of the Food and Drug[s] Act above quoted *United States* v. *Lexington Mill and Elevator Co.*, 232 U.S. 399.

The question whether some other substance has been substituted wholly or in part for the article known as "apple cider vinegar,"

in violation of the second paragraph of this section, will be considered and discussed in connection with the charge of misbranding.

It is insisted, however, upon the part of the Government that the barrels are also labeled "Guaranteed to comply with all Pure Food Laws"; that this means not only the Federal Food and Drug[s] Act, but also the pure food laws of the State where this vinegar is intended to be sold at retail, after is passes beyond the jurisdiction of the Federal authorities. The libel, however, is based solely upon the adulteration and misbranding of this vinegar in violation of the Federal Food and Drug[s] Act. While it is alleged that the vinegar was shipped from Fairport, N.Y., to Fisher Brothers, Cleveland, Ohio, there is no allegation that the vinegar is to be sold in the State of Ohio or that it is adulterated or misbranded in violation of the Ohio statutes, nor is there anything in the agreed statement of facts in reference to its final destination and place of sale at retail.

If, however, it were conceded that this libel could be construed as charging that this vinegar is adulterated or misbranded in violation of the terms and provisions of the Ohio law, the same result must follow. Substantially the same questions are presented under the Ohio statute (sec. 5789 G.C.) in reference to misbranding, as are presented under the Federal Food and Drug[s] Act, which questions will be discussed later in this opinion. Upon the question of adulteration under the Ohio law, no claim is made that this vinegar contains less than 4 percent by weight of absolute acetic acid, nor is a mere trace of barium, which is neither deleterious or injurious to health, a "foreign substance" within the contemplation, intent, or purpose of sec. 5786 of the General Code of Ohio. *United States* v. *Lexington Mill and Elevator Co.*, *supra.*

Section 8 of the Food and Drug[s] Act provides, among other things, that, in a case of foods, an article shall be deemed to be misbranded if it be labeled or branded so as to deceive or mislead the purchaser, or it be an imitation of, or offered for sale under the distinctive name of another article.

The important question in each case is whether the product is the identical thing that this brand indicates. If it is the identical thing indicated by the brand, the method of its manufacture, regardless of the information of the general public upon that subject, is wholly unimportant.

It appears from the agreed statement of facts that the cider from which this vinegar was made was manufactured from apples and from nothing else. The process of its manufacture differed from the usual method only insofar as necessary to preserve the fruit. This was accomplished by the evaporation process above described. When a quantity of water equal to the amount evaporated is added to the evaporated apples and pressed therefrom it combines with and carries the solvent properties of the apples just the same as in the original state, or if not exactly and identically the same, so near as to defy the science of chemistry to discover the difference. This is the full scope and effect of the dehydrating process as appears by the agreed statement of fact.

The conservation of our food products is of some concern to the public, and, perhaps, second in importance only to the demand for

pure and unadulterated food. It is perfectly apparent that the apple season is altogether too short for the economical manufacturing of the crop, during the season, into cider vinegar in sufficient quantities for public consumption. Therefore an efficient and harmless method of preserving the fruit until it can be used for this purpose is in the direct interest of the public, and if this method has accomplished that object without change in the product, it should be encouraged rather than condemned.

If, after cider has been pressed from unevaporated apples, a large amount of the water that is a constituent part thereof, is evaporated therefrom and later an equal amount of water is added thereto, the constituent elements of cider yet remains and it would hardly be contended that vinegar made therefrom would not be apple cider vinegar; yet, so far as the agreed statement of facts discloses, there is substantially no difference between the evaporation of water from the cider and evaporating the water from the apple before the cider is pressed therefrom. The water is not all evaporated, leaving only a hard dried fruit, as may approximately result from sun drying; 20 per cent of the water remains and this continues to be the condensed juice of the fruit ready for restoration by pure water dilution to its original volume. This was the underlying idea of the Allen patent, No. 268972, for a dry mince pie compound, in which it appears that the water was evaporated from the apple for the purpose, as stated by the patentee, " so that I have the cider in my compound without useless water, which may be added when the consumer wishes to use it." *Dougherty* v. *Doyle*, 63 Fed. 475.

It must also be assumed that legislation upon any subject has some definite and substantial object in view, and is not in furtherance of technical purposes or barren idealities. It was declared by the Supreme Court in *U.S.* v. *Lexington Mill and Elevator Co.*, 232 U.S. 399, that the primary purpose of Congress in enacting the Food and Drug[s] Act of 1906 was to prevent injury to the public health by the sale and transportation in interstate commerce of misbranded and adulterated food. That case involved the manufacture of flour by a new process, called the "Alsop process ", and while the charge there was adulteration, by adding to articles of food consumption poisonous and deleterious substances, a much more serious matter than misbranding, yet the court held that in order to condemn a food product upon the ground that it is adulterated, it is incumbent upon the Government to establish the fact that the added substances may render the article injurious to health. This conclusion was reached evidently upon the theory that the legislative intent was to accomplish a substantial and beneficial result to the public and not merely for the purpose of exercising an arbitrary control over private business.

It is undoubtedly true that vinegar not made from apple cider, even though chemically equal to cider vinegar, may not be branded as such. On the other hand, vinegar made from apple cider is not misbranded by reason of its failure to meet the chemical test.

Misbranding is included in the statutory prohibition because it bears some relation to the conservation of the public health and not primarily because a purchaser's whims were to be protected; and, though doubtless the test of misbranding a product is whether it is

true to name, there is no occasion for overstrictness in applying this test in a case where the public health cannot possibly be jeopardized.

In the Standard Encyclopedia, under the caption "Cider", it is said:

> Apples commonly used for making cider are by no means tempting to the palate and are, in fact, unfit for eating raw or ordinary cooking. * * * In the United States it is considered that a certain proportion of decay in fruit improves the flavor.

Keeping in mind the underlying purpose to protect the public health and the admissions in this case that the present article is made wholly from "sound and mature apples, free from rot and ferment," it is clear that condemnation should not be made unless the statute imperatively requires it.

Definitions of cider, which include the method or process of its manufacture, written long before public needs required the conservation of our food products, are not helpful to the determination of the question presented in the instant case. Even these definitions call only for the juice of apples, and do not literally exclude the pressing of apples dehydrated and later hydrated in equivalent proportions. The missing and essential element for the Government's case is found only in the supposed judicial knowledge that the popular definitions have reference only to fresh apples. Such knowledge was declared in the court below, and the judgment based thereon. The danger of reliance on judicial knowledge founded on past impressions is well illustrated by the salad oil cases. The very branding which the court, in *Brina* v. *U. S.*, 179 Fed. 373, said it judicially knew was so untrue as to compel the conclusion of misbranding, two years later was shown to the same court in *VonBremen* v. *U.S.*, 192 Fed. 904, to be so true as to require an instructed verdict for the respondent. In the present case it is conceded that this identical product has been sold and accepted by the trade under this name, in great quantities for many years and without challenge until now. While there is nothing in the agreed statement of facts to show how far this acceptance has been with knowledge, yet the court cannot judicially know that this acceptance was so wholly without knowledge of the facts as to be unimportant.

It is not seriously contended on the part of the Government that the fluid obtained from pressing the evaporated apples, after the water taken therefrom has been restored, is not apple cider. It is suggested that possibly there is some constituent element of the apple removed by the dehydrating process that is never restored thereto. There is no proof of that fact, but there is an admission that even if such constituent element is removed it is so immaterial and inconsequential in quantity, that the science of chemistry cannot disclose it. This brings this case clearly within the doctrine announced in *U.S.* v. *Lexington Mill and Elevator Co.*, *supra*, to the effect that the burden is upon the Government to establish by the evidence, not merely a technical, but a substantial, violation of the Federal Food and Drug[s] Act, which may render the article injurious to health or mislead the public to its prejudice or harm or induce the purchase of a different article than the article desired.

Nor should the fact be overlooked that this is a highly penal statute. The Government in this proceeding is asking the condemna-

tion and forfeiture of 95 barrels of vinegar because it is adulterated and misbranded, and the burden is upon the Government to establish one or both of these alleged facts.

While the Government is practically conceding in the agreed statement of facts, that the liquid obtained from evaporated apples by this method is apple cider, identical in taste, substance, and chemical test with apple cider pressed from the unevaporated apples, except that there may, perhaps, be some constituent element lacking, the quantity, if any, being so small that its absence is not shown by chemical test, and further conceding that the same has been sold upon the market for many years as apple cider, and that vinegar made therefrom has been an article of commerce, at least since January 1, 1906, under the name and brand of apple cider vinegar, and sold in quantities by this one manufacturer alone, aggregating 100,000 barrels a year; nevertheless, it is now insisting that the branding of this product as apple cider vinegar is calculated to deceive and mislead the purchaser into buying an article other than the brand implies.

It may be true that a large part of the purchasing public has no knowledge whatever in reference to the manufacture of cider from evaporated apples, and for that reason might have a distinct prejudice against such a method of manufacture. Undoubtedely the Pure Food and Drug[s] Act contemplates the protection of the public in this regard, but only to the extent that the public shall not be deceived or misled by the brand into buying an imitation of the article or a substitute for the article indicated by the brand. If, however, it is, in truth and in fact, buying the identical article indicated by the brand, manufactured from the same basic elements, and none other, the purpose of the statute is accomplished, and the process of manufacture is of no importance.

A substantial, if not an exact analogy, may be found in the manufacture of maple sirup. The water is partially evaporated from the sap of a maple tree in order to produce maple sirup. If the evaporation process is continued until sufficient of the water is evaporated, the product is maple sugar. If to this sugar there is added as much water as was evaporated therefrom in the process of reducing maple sirup to maple sugar, and the sugar is dissolved and held in solution, the product again becomes maple sirup. It has been held by the pure food department (Circular 136) that maple sirup manufactured in this way may be properly branded "Maple Sirup."

Yet, notwithstanding such sirup responds to the chemical tests, a doubt might be suggested that possibly a constituent element was removed from the maple sirup in the process of reducing it to maple sugar that could not be wholly restored thereto. It is also possible that there might be a popular prejudice against maple sirup manufactured in this way, yet it would hardly be contended that Congress is expending its time in the enactment of laws in furtherance of perpetuating prejudices founded upon mistake and misunderstanding and at war with the conceded facts of the case.

Another illustration may test the soundness of the proposition that there is a misbranding of this vinegar. Cream is a substance which, by the unaided process of nature, rises to the top of milk.

A generation or two ago this would have been the popular definition. The process of its development was well known and required, at the least, some hours of time and favorable conditions. Then it was discovered that the butter fat can be separated from the milk in a few minutes by a centrifugal separator, and that the product is really cream; yet it is at least probable that for some time a substantial part of the public would have refused to buy butter fat in this form unless it had been labeled "cream" and without disclosing the substitution of artificial for natural methods. So the catalog of present-day foods and those that may fairly be developed will disclose frequent instances of great change in methods of manufacture, or treatment, without any resulting necessity of changing the name of the product.

We get no controlling direction from the decided cases. The salad oil cases have been mentioned. In the vinegar case (186 Fed. 399), the product, was in fact distilled vinegar with a dash of apple cider. It was labeled as a blend of cider vinegar and distilled vinegar. From the view that the court took of the meaning of the label, the misbranding was obvious.

In the *Tepee Apple Case*, 179 Fed. 185, the label was considered to mean that the apples were grown in Michigan, and this became a geographical misrepresentation expressly forbidden by the act.

We do not overlook that the New York Supreme Court and the United States District Court for the Eastern District of Wisconsin have held that claimant's vinegar is misbranded. In each case the opinion seems to be based in part upon inferences and testimony not presented by this record and in part upon judicial knowledge that nothing is apple cider unless it is pressed from fresh apples—an inference wholly inconsistent with the facts here conceded.

For the reasons above stated a majority of the court is of the opinion that the judgment of the district court is not sustained by the agreed statement of facts. The judgment is reversed and cause remanded for further proceedings in accordance with this opinion.

UNITED STATES v. JOHN DOBRY MANUFACTURING CO.

(District Court, N.D. Iowa, Apr. 4, 1923)

N.J. No. 12873

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The following charge was delivered to the jury:

SCOTT, *District Judge*. Gentlemen of the jury: The defendant, John Dobry Mfg. Co., a corporation of this county and State, has been informed against by the United States Government in conformity with the regular practice in that respect, charging the defendant with a violation of an act of Congress known as the "Food and Drugs Act", and in that respect the Government charges that John Dobry Mfg. Co. within the jurisdiction of this court and on or about the 24th of February, 1921, then and there in violation of the act of Congress of

June 30, 1906, known as the "Food and Drugs Act", as amended by the Act of August 23, 1912, did unlawfully ship and deliver for shipment by the United States mail from the city of Cedar Rapids, State of Iowa, to the city of Maywood in the State of Illinois, and consigned to F. Hackman, certain packages containing an article designed and intended to be used in the cure, prevention, and mitigation of diseases of hogs. That is to say, a certain article of drugs bearing statements, designs, and devices regarding its therapeutic and curative effects, and labeled, marked, and branded on said package as follows: "Dobry's Positive Cure for Hog Diseases. The first positive cure for hog cholera and tuberculosis known to the world. Allays fever, destroys lung and intestinal worms, relieves constipation, purifies blood, cures cholera, tuberculosis, thumps, coughs, and scours in hogs and suckling pigs. Prevents cholera, tuberculosis, and other hog diseases. Manufactured by John Dobry Manufacturing Company, Cedar Rapids, Iowa, U. S. A. Dobry's positive cure for hog cholera, tuberculosis, and other hog diseases. Dobry's Positive Hog Cure, 'Worth Its Weight in Gold.' Manufactured from pure medicinal drugs by John Dobry Manufacturing Company, Cedar Rapids, Iowa, U. S. A." Which said article, shipped and delivered for shipment as aforesaid, was then and there misbranded within the meaning of said act of Congress as amended, in that the statements, designs, and devices regarding the therapeutic and curative effects thereof, appearing on the packages as aforesaid, were false and fraudulent in this, that the same were applied to said articles knowingly and in reckless and wanton disregard of their truth or falsity, so as to represent falsely and fraudulently to purchasers thereof, and create in the minds of purchasers thereof the impression and belief that the article was in whole or in part composed of or contained ingredients or medicinal agents effective, among other things, as a treatment, remedy, and cure for hog cholera, tuberculosis, and other hog diseases, and effective as a treatment, remedy, and cure for coughs and scours in hogs and suckling pigs, and effective to destroy lung and intestinal worms, and effective as a preventive of cholera and tuberculosis in hogs, when, in truth and in fact, said article was not, in whole or in part, composed of, and did not contain ingredients or medicinal agents effective as a treatment, remedy, or cure for hog cholera, tuberculosis, or other hog diseases, or effective as a treatment, remedy, or cure for coughs or scours in hogs and suckling pigs, or effective to destroy lung or intestinal worms, or effective as a preventive of cholera or tuberculosis in hogs; all of which was and is contrary to the form of the statute in such case made and provided.

To this charge the defendant has pleaded not guilty, and you are instructed that this plea puts in issue and is a denial of each and every material allegation of the information, and every ingredient composing the facts charged. It places upon the Government the burden of proving each and every material allegation of the information against the defendant beyond all reasonable doubt, and to exclude from your minds all reasonable doubt of the defendant's innocence.

The defendant is presumed to be innocent until he is proved otherwise throughout the entire trail, and until the Government by evidence so strong and convincing has removed from your minds every reasonable doubt of innocence and established with that degree of evidence the defendant's guilt.

A reasonable doubt is a substantial one and not a captious or fanciful one. It is a doubt that naturally arises upon the evidence or from a lack of evidence, and not one that is forced, not one that arises in your minds merely because of some desire to avoid the discharge of duty, or on the mere desire to acquit the defendant.

The act of Congress under which this charge is brought, in substance, provides that the introduction into any State from any other State of any drugs which are misbranded within the meaning of the act is a misdemeanor. It prohibits such introduction, and it provides that any person who shall ship or deliver for shipment from any State to any other State such articles so misbranded shall be guilty of a misdemeanor and subject to a fine named in the act.

The act of Congress further provides that the term "misbranded" shall apply to drugs, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein, [which] shall be false or misleading in any particular; and in case of drugs if its package or label shall bear or contain any statement regarding the curative or therapeutic effect of such article, or any of the ingredients or substances contained therein, which are false or fraudulent.

Now, it is not necessary that the Government shall prove that each and all of the statements contained on the package or on the label are false or fraudulent. If the Government has established by the degree of evidence which I have explained to you any one material statement or representation upon the package or label of the kind defined as misbranded, and has so established it beyond a reasonable doubt, and that the article was introduced by the defendant from one State into another State knowingly and fraudulently, then you should find the defendant guilty. But if the Government has failed to establish to your satisfaction by that degree of proof and beyond a reasonable doubt any one of the charges of misbranding, then you should acquit the defendant.

You will note that one of the statements contained in the printing on the package is that the commodity referred to was a "Positive Cure For Hog Diseases," that it was "The First Positive Cure for Hog Cholera and Tuberculosis known to the world." In that respect you are to give to the word "positive" and to all other words contained in the information such meaning and purpose as the word generally signifies and the thought which it is generally intended to convey. It is not necessary for the Government in a case of this character to prove or establish or even introduce any evidence tending to prove that any particular person has been defrauded. The act of Congress in question prohibits the introduction into one State from another of the article so misbranded; and it is such introduction under the circumstances with the intent named in the statute that constitutes the crime, and not the fact that some one particular person has been deceived. So, if the evidence in this case convinces you beyond all reasonable doubt that on or about the time named in the information the defendant, John Dobry Manufacturing Company, through the agency of the United States mail, introduced into the State of Illinois from the State of Iowa, the articles or drugs referred to in the testimony, and printed as alleged in the information, and if you further find from the evidence beyond all reasonable doubt that the statements referred to in the information with respect to the curative

quality of the contents of the package and their therapeutic qualities were false and known to be false by the defendant, and fraudulently introduced into the other State, then it is your duty under the law and under your oaths to find the defendant guilty. But if the Government has failed to so prove to your satisfaction and beyond a reasonable doubt, it is equally your duty under the law and under your oaths to acquit the defendant.

You are the sole judges of the weight of the evidence and the credibility of the witnesses who have testified before you. You are not bound to take the testimony of any witness as absolutely true, and you should not do so if, for any reason, you are satisfied that the witness is mistaken or that his testimony is untrue or unreliable. In determining the weight and credibility of the testimony, or any part thereof, you may and should consider the relation of the witness to the case and his interest therein, his temperament, bias, or feeling, if any has been shown upon the witness stand, his apparent intelligence and means of knowledge and information. Witnesses who testify upon matters with respect to which they have little means of knowledge or information, such testimony should be received with caution. You should take into consideration their apparent intelligence, their situation, and ability to know the matters with respect to which they have testified, the reasonableness or unreasonableness of their testimony, and give such weight and credit to the testimony of each witness as under all the facts and circumstances in the case as they appear in evidence on the trial you think it entitled to receive.

The Government has asked me to give a particular instruction to the effect that if you believe from the evidence that any one of the therapeutic statements upon the printed matter set out in the Government's information was partly true, but was so artfully worded as to convey a meaning as to its therapeutic properties which was wholly false, and that the printed matter was so worded for the purpose of deceiving the public, then that statement would be false and fraudulent, and you may find a verdict for the Government.

That is the law as an abstract statement, but in giving it to you I wish to qualify it to the effect that you must still find, from the evidence on the whole case, beyond a reasonable doubt, that any false statement as stated in this instruction, if you find that such false statement was made, must have been knowingly made, and must have been made with the intent to defraud.

The court submits you two forms of verdict:

Form of verdict no. 1: "We, the jury, find the defendant guilty as charged in the information."

If you agree upon such verdict, have your foreman sign and return it into court.

Form of verdict no. 2: "We, the jury, find the defendant not guilty as charged in the information."

If you agree upon such verdict, have your foreman sign it and return it into court.

You will take with you the exhibits that have been introduced in evidence and the forms of verdict, and accompany the officer and begin your deliberations.

When you have agreed upon a verdict, return the same into court. You may pass out with the officer.

Mr. REDMOND: The defendant excepts to such portion of the court's charge as might warrant the jury in finding the words "Positive Cure" a misstatement of the therapeutic or medicinal value of the drugs and medicine included in the package. Otherwise than that, Your Honor, I guess I have no exceptions.

NEWTON TEA & SPICE CO. v. UNITED STATES

(Circuit Court of Appeals, Sixth Circuit, Apr. 5, 1923)

288 Fed. 475; N.J. No. 11711

In error to the District Court for the Southern District of Ohio. Judgment affirmed.[21]

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

KNAPPEN, *Circuit Judge.* Plaintiff in error was proceeded against by information for the violation of the misbranding provisions of the national Food and Drugs Act (Act June 30, 1906, 34 Stat. 768, ch. 3915, secs. 2, 8). The article of food in question is an egg substitute called "Eggno," whose principal ingredients and their relative proportions are commercial (imported) egg albumen and egg yolk, dried and pulverized (aggregating about 15 percent), powdered and evaporated skimmed milk, about 35 percent (as indicated by the Government's proofs, apparently much less by defendant's formula), and tapioca starch, between 40 percent and 50 percent. There were also contained small amounts of powdered sugar, vegetable gum, and salt, with an artificial coal-tar coloring, not alleged to be either injurious or unlawful. The product is not claimed to contain any deleterious ingredients or to be injurious to health. It is sold in packages containing 36 teaspoonfuls. The carton contains the label and statements:

> Newtons Eggno. Artificially Colored To Be Used In Place Of Eggs In Baking And Cooking. 3½ Oz. Net. An Excellent Substitute For Eggs. Eggno is an excellent Substitute for Eggs and is to be used for Baking and Cooking purposes. Splendid for Cookies, Cakes, Muffins, Fried Cakes, Bread Puddings, Gravies. Just the thing for Griddle Cakes, Noodles, etc. Eggno is an article of real merit and is far superior to the usual egg substitutes on the market. Eggno contains the constituents that cause fresh eggs to fill such an important place in every kitchen. Eggno is the result of scientific research, is composed of pure materials, is nutritious and is economical, as one even teaspoonful is to be used in place of each egg called for in recipes requiring eggs. This package contains 36 even teaspoonfuls. Guaranteed to conform to the Pure Food Laws. Directions. Dissolve Eggno in lukewarm water or milk by first making a paste and then adding the balance of the water or milk. Use a teaspoonful for each egg called for in recipes requiring eggs. In baking use a trifle more baking powder than if eggs were used. Eggno does not take the place of baking powder. Prepared and guaranteed by the Newton Tea & Spice Co. 12–14–16–18 East Second St. Cincinnati, Ohio.

The alleged misbranding consists in the following statements concerning the product and the constituents and uses thereof, viz.:

> To Be Used in Place Of Eggs In Baking And Cooking. * * * An Excellent Substitute For Eggs * * * to be used for Baking and Cooking purposes.

---

[21] Affirming *United States* v. *Newton Tea & Spice Co.*, p. 950, *ante*.

* * * Eggno contains the constituents that cause fresh eggs to fill such an important place * * * one even teaspoonful is to be used in place of each egg called for in recipes * * * Use a teaspoonful for each egg called for * * *

which statements are alleged to be false and misleading in that the product was not a substitute for eggs and could not be used in place thereof for baking and cooking; further misbranding being charged in that it was so labeled as to deceive and mislead purchasers into the belief, contrary to the fact, that the product was in truth a substitute for eggs and could be used in place thereof for baking and cooking. A motion to quash the information because indefinite and argumentative, and because the court had no jurisdiction, was overruled (275 Fed. 394), as was a demurrer to the information as not stating facts constituting an offense against the Federal laws. There was trial to a jury. A motion to direct verdict for defendant was overruled, and the case submitted, resulting in verdict and judgment for the Government.

The meritorious controversy arises from the opposing contentions of the Government and defendant, respectively, as to the scope of the comparison of the value of eggs and Eggno. The Government contends that such comparison must take into account their respective food values, and presents undisputed evidence that while eggs contain in marked degree not only proteins or tissue-building elements absolutely necessary to growth, but calorific or energy-supplying elements, Eggno contains neither of those elements to more than about one-seventh the extent as do eggs (which is, in effect, about the proportion in which egg constituents enter into the manufactured product); and thus that Eggno signally fails in food value. The Government also introduced testimony to the effect that Eggno was inferior to eggs, in that the latter produced the better baked product, both as respects consistency and taste. Defendant contended that as Eggno was intended only for use in baking and cooking, the question of comparative food value should be entirely disregarded, and that the comparison should be confined to the qualities of binding or settling, or producing desired fluffiness, texture, flavor, and color, and presented evidence sharply conflicting with that of the Government concerning the effectiveness of Eggno as compared with eggs, with respect to appearance and flavor of baked and cooked products.

In overruling the motion to direct verdict for defendant, the trial judge rejected the proposition that, as matter of law, the comparative nutritive values of Eggno and eggs should not be taken into account, and left it to the jury to find as facts whether the statement on the carton that one even teaspoonful is to be used in place of each egg called for in cooking recipes is equivalent to an assertion that one teaspoonful is equal to an egg in such recipe; whether Eggno contains the constituents which cause fresh eggs to fill such an important place in the kitchen; whether Eggno is a substitute for eggs as that language would be understood by the ordinary purchaser; and whether one teaspoonful of Eggno may properly be used in cooking recipes in place of each egg called for. The jury was instructed that if the product in question is in fact well adapted to be used instead of eggs in baking and cooking, and if it is in truth genuinely fit to be used in place of eggs for those purposes, then the label is not false, but that if Eggno was not well fitted to be used as a substitute for eggs in baking and cooking and if it is not genuinely well adapted to be used

in place of eggs, then the label was false. The jury was further instructed that the question is not, on the one hand, whether the product is absolutely worthless, or, on the other hand, whether it is a complete and perfect substitute for eggs in all respects, but that the true question is whether the language of the label complained of in the information is false and misleading to the ordinary purchaser in the respects charged therein.

In our opinion the motion to quash the information was rightly overruled. The statute provides that an article of food shall be deemed to be misbranded "If the package containing it or its label shall bear any statement * * * regarding the ingredients or the substances * * * therein, which statement * * * shall be false or misleading in any particular." We think the information is not subject to criticism as being indefinite and argumentative. The certainty required in the information is only such as will fairly inform the defendant of the offense intended to be alleged, so as to enable it to prepare its defense and so as to make the judgment a complete defense to a second prosecution for the same offense (*United States* v. *Hess*, 124 U.S. 483; *Tyomies Publishing Co.* v. *United States* (C.C.A. 6), 211 Fed. at p. 389; *Bettman* v. *United States* (C.C.A. 6), 224 Fed. 819, 826–7). We think defendant was by the information in question sufficiently informed of the nature of the accusation and was fully protected thereby. It is the general rule that it is enough to describe a statutory offense in the words of the statute; and if in this case defendant was in doubt whether the Government would claim that the product contained the same food value as eggs, or that it lacked leavening or some health-producing quality, it was open to it to apply for such additional information by way of a bill of particulars. (*Dierkes* v. *United States* (C.C.A. 6), 274 Fed. 75, 77, 79, et seq.) No such request was made.

The asserted lack of jurisdiction of the court is based in part upon the proviso to the section above quoted, that an article of food which does not contain any added poisonous or deleterious ingredients shall not be deemed to be adulterated or misbranded (in the case of mixtures or compounds known as articles of food, under their own distinctive names, and not an imitation of or offered for sale under the distinctive name of another article), if the name be accompanied on the same label or brand with a statement of the place where said article has been manufactured or produced. We think this proviso has no application to a case where, as here, the charge is misbranding, and is directed not against the name, but against the false statements upon the label. (*United States* v. *150 Cases, etc.* (D.C.), 211 Fed. 360; *United States* v. *40 Barrels, etc.* (D.C.), 191 Fed. 431, 440.)

Nor do we see any merit in the proposition that the statement on the label that Eggno is an excellent substitute for eggs and is to be used for baking and cooking purposes is merely one of opinion, and so within the *Johnson Case* (221 U.S. 448, 489), where it was held that a statement on the labels of bottles of medicine that the contents are effective as a cure for cancer is not within the statute, even if misleading, as being false only in its commendatory and prophetic aspect. Such is not the case with the label we are here considering. It not only represents the product as a substitute for eggs—a representation, the effect of which, if it stood by itself, we are not called upon to consider—but it states as facts that the product can be used in place

of eggs for baking and cooking, that it is nutritious, and that it contains the constituents of fresh eggs. Regardless of the claimed literal truth of each one of these assertions, they must be taken in connection with each other and with the further recommendation that one teaspoonful be used in place of one egg, and in connection with the further fact that this label was not intended to be carefully dissected with a dictionary at hand, but rather to produce an impression upon the ordinary purchaser of such an article and, when so taken, it was open to the jury to conclude that these representations were intended to produce the belief that one teaspoonful of the product was substantially equivalent to one egg for all the purposes, including nutrition, involved in the use of eggs in baking and cooking. With that interpretation, of course, these statements pass beyond mere commendation; and in the aspect of the case presented by the contention that verdict for respondent should have been directed, it is not necessary to consider what would have been the effect of the label if any part of it had been omitted.

In our opinion the trial judge did not err in refusing to withdraw from the jury's consideration the question of the comparative nutritive value of Eggno. In view of the statements in the label to which we have just referred, the mere reference to baking and cooking is not, in our opinion, enough to confine the statements of quality to considerations of appearance and flavor. The terms "baking" and "cooking" relate to foods, and eggs are a well-known article of food, not only alone but in combination with other articles of food. Granted that the statement that an article is or may be used as a substitute for another article does not amount to an assertion that it is as good for all purposes as such other article, in our opinion the statements upon the label, considered together, can reasonably mean, and could reasonably have been intended to mean, no less than that in ordinary culinary compounds Eggno would produce the same or similar results as eggs.

It follows from these views that there was no error in the admission of testimony as to the comparative food value of eggs and Eggno. Nor do we think the court erred in refusing defendant's special requests to charge, many of which were expressly based upon the elimination of values from consideration. While each of the rejected requests did not in terms declare such elimination, all, as frankly said by defendant's counsel (we do not use his statements in detail or in his exact words), were designed to convey to the jury defendant's contention that the nutritive value of a whole egg for all purposes was not in issue, and that the evidence already admitted as to the tissue-building and energy-supplying elements of eggs was incompetent.

It is thus not material whether or not in the case of some of the refused requests a sufficient ground of refusal was stated. At least as applied to the facts in this case, we find no error in the instruction that the purpose of the label was to "truthfully advise the purchasers of the contents." We say this in full recognition of the fact that a label may, in the absence of fraud, be entirely void of any statement of content, and be entirely outside the provisions of the act; but in this case defendant undertook to state generally the nature of the contents of the package.

While we have not discussed in detail each argument presented by defendant in favor of its contentions, we have carefully considered them all, with the result that we find no error in the proceedings below.

The judgment of the district court is accordingly affirmed.

UNITED STATES v. SHERER-GILLETT CO.

(District Court, N.D. Illinois, Apr. 9, 1923)

N.J. No. 11450

Information in four counts alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict directed for defendant on two counts. Verdict of guilty on other two counts.

CLIFFE, *District Judge*. Gentlemen of the jury: This is an action brought in which the United States Government is the plaintiff and the Gillett Company here is the defendant and it is brought under the so-called law known as the "Food and Drug [Drugs] Act" of June 30, 1906. This is an act for preventing the manufacture, sale, or transportation of adulterated or misbranded food products, medicines, or liquors and for regulating the traffic therein and for other purposes. It is a law of commerce.

The present prosecution is based on an information which is filed in this court, and this information contains four counts, setting up the offense charged. But I instruct you that you are to disregard counts one and three and are only to consider counts two and four, and counts two and four relate to what is known and designated in the law as misbranding, and it is covered under section 8 of the law that I have referred to. I read to you section 8 which refers to misbranding particularly to that term "misbranding" of section 8 of this law. The term "misbranding" as used herein, as used in this law, shall apply to all drugs or articles of food or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such articles or the ingredients, or the substance contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded. An article shall also be deemed to be misbranded in case of food if it is labeled or branded so as to deceive or mislead the purchaser.

There are several questions that enter into the consideration of this case, and one of which is the question of interstate commerce, that is, that the product in question was shipped from one State to another, and counsel have entered into a stipulation or an agreement, which has been offered in evidence, which admits certain facts in the case.

It is agreed by the respective counsel that these witnesses if placed upon the witness stand would testify to the facts hereinafter set forth; and that this be given the same weight by the court and jury herein as if such witnesses were placed on the witness stand and testified to such facts in open court; and that the facts hereinafter set forth shall by the court and jury and parties hereto be taken to be true and correct; that the Sherer-Gillett Company, a corporation, having a place of business in the city of Chicago, on the 21st day of February in 1919, did knowingly ship and deliver to be shipped by way of the Union Pacific Railroad, being a common carrier, from the city of Chicago to Rawlins, Wyoming, assigned to J. A. Hobbs, an article of food in a package designated and labeled as follows, which you have the samples before you.

Magic Brand Trade Mark Lemon Pie Filling Absolutely Pure and of Good Keeping Qualities * * * contains in concentrated form the same ingredients

used by the housewife in making a Lemon Pie Manufactured By Sherer-Gillett Co. Chicago, Illinois.

The stipulation admits that they did ship and deliver for shipment this article of food in package form as designated, labeled, and branded. And it is before you without rereading the label in regard to orange pie filling; and that it also admits that this product was received at Rawlins, Wyoming, by J. A. Hobbs on or about the 6th day of March, 1919, in the due course of business; and then it also admits that on the 27th day of May, 1919, C. Stanley Greenbaum, a duly and lawfully appointed inspector of the Bureau of Chemistry of the United States Department of Agriculture, purchased from Mr. Hobbs, which he had a right to do, samples of the food aforesaid and, immediately after purchasing, the same was duly sealed and designated with numbers, that have been adduced in evidence here, and delivered by him to the department of chemistry of the said department for analysis, concerning which said witness testified and shall be taken and considered by the court and jury and the parties hereto to be the analysis made by the Bureau. The stipulation is signed by both parties and is admitted in evidence.

As to counts 2 and 4, count 2 charges that on the 21st day of February, 1919, in violation of the act of Congress, June 30, 1906, known as the "Food and Drug [Drugs] Act", this defendant did unlawfully ship and deliver for shipment by way of the Union Pacific Railroad Company, a common carrier, to its assignee in Rawlins, State of Wyoming, a number of packages, each package containing an article designed and intended to be used as an article of food, which said packages were labeled, marked, and branded as already described; that the said articles of food when shipped and delivered for shipment as aforesaid was [were] misbranded in that the statement was made as to the lemon pie filling that it "contains in a concentrated form the same ingredients used by the housewife in making lemon pie"; that the branding on the packages containing the articles, regarding the articles and the ingredients, were false and misleading, and that they represented that the article called lemon pie filling did contain in a concentrated form the same ingredients used by the housewife in making lemon pie, whereas, in truth and in fact, said article was not lemon pie filling which contained in concentrated form, etc., and the same allegation is made as to orange pie filling.

Now in this information, as I said to you, you are to consider counts 2 and 4. I instruct you that the information in this case preferring this charge against the defendant is no evidence whatever of the guilt of the defendant. It is simply an accusation or charge and no juror should suffer himself to be influenced in the slightest degree by the fact that this information has been returned against the defendant.

The court instructs you if you find from the evidence beyond a reasonable doubt that the label is false and misleading in any particular you should find the defendant guilty. It is not necessary for the Government to prove nor for you to find that the label is false or misleading as a whole, it is sufficient for you to find from the evidence that the label is false or misleading in any particular.

You are further instructed that if you find the label is false or misleading in any particular that it is immaterial whether these false statements are placed there consciously or unconsciously, if you find from the evidence that it is there, your verdict should be, guilty.

It is the duty of the jury to receive the law as it is given them by the court. It is the exclusive province of the court to determine what the law is, and the jury have no right to hold the law to be otherwise in any particular than is given to them by the court.

The court instructs you as a matter of law that in considering the case you are not bound to go outside of the evidence to hunt up doubts nor must you entertain a conjectural doubt. The doubt must arise from an impartial investigation of all the evidence in the case, and unless it is such that, were the same experience had in the graver transactions of life, it would cause a reasonable and prudent man to hesitate and pause, it is sufficient for you to return a verdict of not guilty.

The court instructs the jury that the fact that certain bakers used certain materials in making up lemon pie and orange does not oblige others to use the same or similar ingredients. The defendant had the right to use any harmless ingredients it desired in making up the orange or lemon pie in question providing in so doing it did not label the product so as to deceive or mislead the purchaser.

UNITED STATES v. 200 CASES, MORE OR LESS, OF CANNED SALMON

(District Court, S.D. Texas, Apr. 5, 1923)

289 Fed. 157; N.J. No. 11860

Libels under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

HUTCHESON, *District Judge*. These two cases are proceedings under separate numbers against two lots of salmon, one originally libeled in Galveston and proceeded against in Galveston under the Galveston number, D.L. 724, later transferred to Houston; the other libeled against in Houston and proceeded against in Houston under D.L. No. 419.

The Government contends for condemnation and forfeiture on the ground (1) that the articles are misbranded; and (2) that they are adulterated, in that they consist wholly or in part of filthy, decomposed, and putrid animal substance, in violation of paragraphs 6 and 7 of the Food and Drugs Act of 1906 (Comp. St., secs. 8723, 8724).

In each of these cases the Seaboard Company appeared as claimant and filed exceptions and answer, and under orders of the court by agreement between the parties from time to time samples of the seized shipments were taken and examined.

Not until the trial had concluded was any point made as to the right of the claimant to appear and claim, and at that time the Government's counsel made the contention that the interest of the claimant was not shown.

This motion, if it ever was meritorious, comes too late (*United States* v. *46 Packages*, 183 Fed. 644).

Each can had on it a pinkish red label showing a picture in relief of a salmon, under it the words, "Select Pink Salmon", by the side of the picture the following, "Keen-Eye Inspection. Fresh Fish. Clean

Canneries." And this was in white lettering. In black letters, to simulate a stamp, was the word "Inspected."

The evidence on the part of the Government was that this product was not Government inspected, and that if the stamp was intended to make the impression of Government inspection, it was false.

The evidence of the Government was also overwhelming that the fish was not fresh fish in the sense of that term as used in the canning trade, that is, fish canned when they had been on the floor not over 48 hours, which was the time limit fixed by the Government witness, and not contradicted, within which fish could be said to be fresh.

The testimony was also overwhelming that the fish, if not putrid or rotten, was a poor, and therefore not a select, pack of pink salmon, for while pink salmon is according to the testimony one of the inferior brands, it varies in quality according to the freshness and general character of the fish put up.

It is therefore clear to me that the articles seized have offended against the misbranding statute, one purpose of which is to protect purchasers from injury from the sale of inferior for superior articles (*Hall-Baker Grain Co.* v. *U.S.*, 198 Fed. 615; *United States* v. *150 Cases*, 211 Fed. 361), and that deception being present and that ground of forfeiture clearly existing, it would, but for the provisions of section 8726 [Comp. St.] (section 10 of the act), authorizing the court to direct the delivery of the articles to the owner, be unnecessary for the court to pass at all upon the question of whether, as to any part of the shipment, the Government has made a case on its second ground.

Upon the issue of whether the product was filthy, decomposed, or putrid, the evidence was in sharp conflict.

I agree with the Government that it is not essential under this subdivision of section 7 to establish that the articles were unfit for food, or deleterious if eaten. It is sufficient if the Government establishes that the article sought to be condemned was composed in whole or in part of decomposed, filthy, or putrid animal substance. That the contents of some of the cans contained in the shipments under seizure were of the character described in the Government's libel, I have no doubt. That a great many of them were not, the Government's own testimony established, for taking the method of testing by sample which the Government itself claims to be fairly correct, they reached the conclusion that something like 18 percent of the seizure was filthy, putrid, and decomposed, leaving 82 percent not within the terms of the second ground of their libel, while the claimant's witnesses testified to having made chemical tests of some of the samples, finding no evidence of decomposition, and also to having experimented by serving some of the contents of the cans as food without harmful result.

It is the claimant's contention that the test applied by the Government of smelling is insufficiently certain to justify condemnation, and that even the percentage of defectives testified to by the Government has not in fact been shown, but they claim further that conceding as much defective fish as the Government's witnesses contended for, that the Government has not made a case for the condemnation of cans not already tested and proved to be bad. That, in short, it is incumbent upon the Government to either prove that they have examined each can and found it defective or that they have established

such regularity of defects as to support the inference that all the cans are defective.

The Government relies for the contrary of this upon the opinion of the Circuit Court of Appeals of the United States, in *U.S.* v. *A. O. Andersen*, an opinion from the Ninth Circuit (284 Fed. 542), in which the circuit court declared that the "article" referred to in the condemnation statute did not mean the single or individual can of salmon, but was used generically as referring to the entire salmon shipment under seizure as one thing, and that if the Government proved that one-fifth of the entire product was unfit for human consumption, it would be competent for the jury to infer from that that the balance was also.

To these conclusions I am not prepared to lend my adherence. I concede the force of the reasoning that in section 8726 [Comp. St.] (section 10 of the act) the language, "any article of food, drug, or liquor," if standing alone, might well have a generic meaning as relating to the character of the shipment, whether salmon or pork or beans or what not, and that it may well be said to be a case of using the word "article" as a singular plural, or a plural singular. However, in the caption of the act the plural is used, and in the body of the act it is provided that "upon the payment of [the] costs, and the execution and delivery of a good and sufficient bond to the effect that such articles shall not be sold," they may be delivered.

Again, in the discussion of similar words in other places in the statute, the Supreme Court has seemed to take a different view from that expressed in the Anderson case. In *Hippolite Egg Co.* v. *United States* (220 U.S. 52), the court treats the "articles" as the contents of packages designed for food and discusses the question of original packages as applied to the original box in which they come shipped, as distinguished from the can or package containing the food itself, and in the discussion makes it clear that they treat the word "article" as the food itself contained in the package designed for delivery to the consumer.

In *Hoke* v. *United States* (227 U.S. 323) the court said, "In the *Hippolite Egg Co. Case* we denominated adulterated articles as 'outlaws of commerce'."

In *McDermott* v. *United States* (228 U.S. 130), the court showed clearly that it considered that the word "article" referred to the adulterated thing itself, rather than the package or case in which it came in shipment.

Again, if the reasoning in the *Andersen Case* is accepted, and the word "article" is to be taken generically, still the conclusion reached in that opinion does not follow, that proof that of the cans examined one fifth were bad and four fifths were good would authorize the jury to find the whole product bad. It might well be as in the oyster case (Notice of Judgment 4922), opinion by Judge Hand, that where only a part of the shipment was examined, and that part ran uniformly bad, the jury would be authorized to find, if that was a fair sample, that it indicated that the whole shipment was bad; but it would not at all follow, but rather the contrary, that if a shipment was examined, and the examination showed as it proceeded that one fifth was bad and four fifths good, that the court could order the whole product condemned.

The case, in short, is not one where the Government has proven a part of it bad as a basis for the inference that all was bad, but one in

which the very proof of the Government establishes that part of it is not bad within the meaning of the statute, and I am inclined to think that if the Government depended for its condemnation upon subdivision 6 of section 7 of the act, in accordance with the general rule of law that the burden is upon the Government to prove its case, the Government would have to be cast in this suit or would have to take the alternative of examining and testing every can of the shipment.

Since, however, the goods are to be condemned for misbranding, the court now makes it known that it is of the opinion that some part of the shipment is bad, and that the goods will not be released under bond to the owner merely for rebranding but only upon condition that the goods be reexamined and reclassed, the good being separated from the bad.

Since it is not known whether any application for the withdrawal of the goods will be made, it is sufficient now to direct that a judgment of condemnation and forfeiture be entered.

W. B. WOOD MANUFACTURING CO. v. UNITED STATES

(Circuit Court of Appeals, Eighth Circuit, Aug. 3, 1923)

292 Fed. 133; N.J. No. 11710

In error to the District Court for the Eastern District of Missouri. Judgment affirmed.[22]

Before STONE and KENYON, Circuit Judges, and TRIEBER, District Judge.

STONE, *Circuit Judge.* From a conviction for adulteration and misbranding of "Red Color," a coloring powder used in food preparations, this writ of error is sued out.

The adulteration, causing misbranding, consisted of excessive quantities of sodium chloride, sodium sulphate, and some other substances which reduced the quality and strength of the powder.

The errors here urged are: (1) Insufficiency of evidence; (2) five rulings upon evidence; and (3) improper comment by the court.

We have carefully examined the evidence and entertain no doubt of its sufficiency to sustain the verdict and conviction.

The first and second objections to the rulings on evidence are to the admission of certain testimony of the witness Jablonski. He was a fully qualified chemical expert who had specialized in coloring substances and compounds. He had chemically examined the precise cans of powder upon which the information was based. The substance of the criticized testimony was that the presence of the named substances in the quantity, or proportion, found by him in the powder would have the effect of lowering and lessening the quality and strength of the powder as a coloring substance. There was testimony in the record of the proportion of these substances present in properly prepared commercial powders. We think the witness was qualified to and properly did testify to the effect of such presence, in the quantities found, upon the powder.

[22] Affirming *United States* v. *W. B. Wood Manufacturing Co.*, p. 1002, *ante*.

The third challenge as to rulings on evidence is to the exclusion of certain testimony of witness Kendall on cross-examination. The substance of these questions was whether it was customary to dilute a certain substance when using it in the manufacture of food colors. This was properly excluded for two reasons: The standard set by the statute is not what is customarily done by manufacturers but what is properly done by them; and this error was clearly invited by an earlier objection by this plaintiff in error, which was sustained, to the same character of evidence when offered by the Government. Error cannot be inserted in a trial by thus alternately blowing hot and cold.

The fourth objection is to the exclusion of certain testimony of witness Heath who was a manufacturer of such colors. The question was: "What percent of colors sold for food contain 10 to 50 percent of salt?" This was objected to and properly excluded as immaterial.

The fifth objection is to exclusion of certain testimony of witness Wood, a manufacturer and jobber in colors. He was asked whether he had ever had any complaints from his customers concerning a certain coloring powder sold by his company. This evidence was clearly immaterial.

The comment by the court, which is claimed to be objectionable, is not set out in the assignment of errors and only a portion thereof can be at all identified, even in the brief. This portion was not objected to nor any exception thereto preserved.

The judgment is affirmed.

UNITED STATES v. 496 CASES OF CANNED SALMON

(District Court, E.D. Missouri, Jan. 16, 1924)

N.J. No. 12056

Libels under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The United States attorney filed four libels praying the seizure and condemnation of 496 cases of canned salmon, alleging that the article had been shipped and transported from the State of Washington into the State of Missouri, remained in the original unbroken packages, and that the article was adulterated in violation of the Food and Drugs Act, for the reason that it consisted wholly or in part of filthy, decomposed, and putrid animal substance.

The North Pacific Trading & Packing Co., San Francisco, Calif., having appeared as claimant for the property, and the four libels having been consolidated into one action, the case came on for trial before the court and a jury. After the submission of evidence and arguments by counsel the court delivered the following charge to the jury:

FARIS, *District Judge*. Gentlemen of the jury: I shall now endeavor, as best I can, to give you what I deem to be the law of this case. This proceeding is a civil action. It is what is called a libel, that is, the Government, under a statute commonly called, I believe, the Food and Drugs Act, has provided for the seizure of articles of food, and drugs as well, though none of those are in issue here, whenever such

articles of food fail to comply with the provisions of the statute that I have mentioned.

The Government has also made it a criminal offense, a misdemeanor punishable by fine or imprisonment, or both fine and imprisonment, for the transportation across a State line, that is, from one State to another, of articles of food which do not comply with the act that I have mentioned; that, however, is not in this case. There are, as forecast, two methods: One is by prosecuting the shipper and fining him or sending him to jail; the other is by seizing the article which he ships, in a case such as this, called, I repeat, a libel, and of trying out the issues, and should it be determined that the article of food in question by its condition contravenes the law then the Government has the right, by a decree of court, to have that article either condemned or destroyed, or to have it, if I may so express it, rehabilitated under a bond which the claimant in the case is required to give, conditioned that the article be by such rehabilitation put in a condition to conform to the statute.

Now, that is all this case is about. The case may be tried either before the court or by a jury. If it be tried by a jury certain issues are presented to that jury, or a certain issue of fact is presented to that jury. The decree, then, upon the finding of the jury is entered by the court in accordance with the law.

Your duty in this case is simply to pass upon the single question of whether the salmon seized, two different brands, I believe in effect, the Klawack and the Aviation brands, do or do not comply with the provisions of this Pure Food Act in the behalves that I shall presently mention to you.

Questions of the nature of the shipment—that it was shipped by the claimant in the case, that it was shipped in interstate commerce and therefore is brought within the law—are all conceded fairly, honestly, and candidly by the claimant.

The suit, of course, is brought by the United States against the salmon itself. The practice, you will observe, is somewhat peculiar, but the owner of that salmon may come in and become a claimant, that is, a sort of defendant in the case, and ask that it be not condemned, but that it be returned to him, denying any allegations of its unfitness, as alleged by the Government in the libel.

The claimant in this case is the Northern Pacific Trading & Packing Co., a corporation under the laws of California, engaged in business in Prince of Wales Island, in southeastern Alaska.

So, you have the issue here—you have the Government upon the one hand alleging certain things, and the claimant, standing in the shoes of a defendant, having taken the place of the cases of salmon, and becoming, in effect, a defendant.

The statute provides against adulteration, that is, it forbids adulteration of a food; and an article shall be deemed to be adulterated, in the case of food, for a number of reasons, but the pertinent reason here in this case is numbered 6:

> That for the purposes of this Act, an article shall be deemed to be adulterated: * * *. Sixth. If it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal or one that has died otherwise than by slaughter.

Now, that is the statute that is in issue in this case. That statute raises the question that you are called upon to decide, and that question, in its simplest analysis, is whether the salmon in controversy here consists in whole or in part of filthy, decomposed, or putrid animal substance.

You may cut out, of course, the question of filth, except insofar as that word "filthy" throws light upon "decomposed." Bearing in mind that the word "filthy" may modify, or throw light upon the word "decomposed," the question is: What is the meaning of the word "decomposed"? It uses the word "decomposed" as well as the word "putrid." We all know what putrid means. Putrid means absolutely rotten and decayed, but the statute uses also "decomposed." We have to go the dictionary, which is the ordinary source of definition of words used in the English language, in order to find out what "decomposed" means. It is the past participle, I believe, of the verb "decompose." The verb "decompose" means to rot or decay. The past participle, that is, "decomposed," therefore, means in a state of decomposition. "Decomposition," of course, is a noun and means the condition of being decayed, putrid, or rotten. Substantially, that is what it means.

So, if you shall find that the article—and I shall return presently to the word "article" and try, as best I may, to define it for you—was in a filthy, decomposed, or putrid condition, that is, that it was decomposed, that it was in a state of decomposition, you are warranted in finding the issues for the Government and against the claimant.

The great difficulty, gentlemen, as a matter of law, as well as a matter of fact in this case—and this is a difficulty which presents itself to the court as well as to you, gentlemen, as the triers of fact—arises from the situation here presented. In a seizure of four different lots of salmon contained in hundreds of cases, and amounting in all, I believe the evidence shows, to about 72,000 one-pound cans, a part of those cases, mayhap, or a part of the contents of those cases, certainly, is shown by the evidence to be good and a part is shown to be bad, if you find that is the fact. Commenting upon the evidence, there seems to be but little dispute about it, that that was the condition here, since there is but a negligible difference between the experts for the Government upon the one hand and the experts for the claimant upon the other.

You will note that the statute which I read to you contains the word "article" and in that word, and in a correct definition of that word, the trouble in this case, both of law and of fact, lies. I think the meaning of the word "article", that is, as to whether it means a single one-pound can, or whether it means one of these lots of 496 cases or not, must necessarily be found from a construction of the entire statute. I am constrained to conclude, as a matter of law, that the word "article" as used in this statute does have reference to the case or cases seized, and that it does not have reference to a single, individual can. If it had reference to a single, individual can then a man who shipped in interstate commerce 72,000 cans, or a corporation which so shipped them, could, upon conviction, be imprisoned in jail or fined the full amount of the penalties mentioned by the statute, for each single, individual can. There would be great objection, of course, to that. If but 5 percent of 72,000, if 16 percent of 72,000 of

those cases were bad, you would have the peculiar result in the case of having the amount of the penalty multiplied by the number of cans. If you conclude that "article" means "cans" you would have no trouble in the case as to the cans that were actually bad. There is not any doubt that those ought to be thrown out, provided you find that they were decomposed, within the purview of the definition which I have given you.

So, I think, for the purpose of this proceeding, the word "article", as used in the statute, means the lot seized under each of the single counts of this libel. You will recall that there were four separate cases, but these cases have been combined into a single consolidated case, of which the former four separate cases now constitute counts 1, 2, 3, and 4, respectively.

Now, gentlemen, something has been said in the case about there being an issue here as to whether tainted salmon, that is, salmon which was spoiled, or tainted, or decomposed before it was canned, after it has been canned and processed and subjected to heat at 240 degrees Fahrenheit, is hurtful to health. I charge you, as a matter of law, that it does not make any difference in this case. The statute forbids the sale, through interstate commerce, or the transportation in interstate commerce, of an article of food which is decomposed, but it does not say anything about whether that article be hurtful or non-hurtful to health. So, I charge you as a matter of law, that that cuts no figure, even though you should find that it might be perfectly healthful. That is clear, and I went further in reading that statute than is necessary for the point involved here, in order to point that moral, because you will note that that statute forbids the transportation in interstate commerce, for the use of food, of the carcass of an animal that has died otherwise than by slaughter. No one would contend that the death of an animal from a natural cause would make that, when used as food, unhealthful food or food dangerous to health. Going, for the moment, into the realm of literature, we are told by Sir Walter Scott, in a number of his novels, that our Scotch friends, in early times, at least, were addicted to the use of mutton of that sort which they called "braxy" mutton.

So I charge you, as a matter of law, that it makes no difference what your finding shall be as to whether it was healthful or unhealthful. The object of law, as shown by the words used, was to keep away from the consumer things that were filthy, according to our common understanding. Of course, "filthy" and "filth" are relative terms. What might be filth to you might be attar of roses to a Siwash Indian. So the term as used is merely a relative one.

Something has been said here about decomposition. Decomposition begins, of course, in a sense, where life ends, but that is not the sort of decomposition meant in this statute. To a degree, the moment a thing begins to live, in a sense it begins to die, and the moment that life is out, decomposition, to a degree, begins and increases faster and faster to rottenness, decomposition, or decay. It is necessary, therefore, to give a reasonable construction to that word, in order to carry out the intent of this statute.

Now, gentlemen, something has been said in the case about the matter of tolerance. The statute itself provides for no tolerance, and, while the statute provides for the making by the Secretary of Agriculture of certain rules and regulations, these rules and regulations,

the witnesses tell us, have never yet been made by the Secretary of Agriculture. There may be difficulties of a practical nature in the making of them. It might be a matter of unwisdom to make them, because the making of them might invite violation to the full extent of the percent of tolerance permitted, but that is neither here nor there. The statute provides for no tolerance, and none has been provided for by any rule or regulation which the statute seems to give power to the Secretary of Agriculture to make. I think, however, something must be said on that question of tolerance, and I think it is a matter which, when absent statute and when absent regulation—and I have told you that there seems to be none—must be addressed to your sound common sense and idea of justice, in the light of your experience as business men.

I use the word "tolerance", of course, in the sense that it is the usual and ordinary percent of decomposed salmon which would get into a case of salmon, or into a lot of many cases, in the face of the use of ordinary care by those engaged in the business of canning salmon, when such canners are using that degree of care which an ordinarily careful and prudent person would exercise under similar circumstances. I think you ought to be permitted to determine, under the evidence, whether such tolerance, or any tolerance, in this business, ought to be allowed. You ought to do that from the evidence.

The witnesses have gone very broadly here, very minutely here, and at great length here, in many instances, into the matters of catching these fish, bringing them to the canneries, of canning them, and of processing them, and have told you candidly, on both sides, how they are gotten, where they are gotten, how far away they are gotten, and what is the condition of them after 48 hours, after 72 hours, and after 96 hours. So I think it is reasonable to say that occasionally, necessarily a bad salmon, decomposed salmon, salmon forbidden by this law that I have called your attention to here, creeps into these cases and into these shipments, in spite of the canners. I know of no other way by which that percent or degree of tolerance can be figured out except by the use of your sound common sense and ideas of right and justice, in the light of your experience as men and as business men. But one of the witnesses touched upon that question, I say, by way of comment upon the evidence. He said that in his opinion it ought to be about one-half of one percent, as I recall it. Certainly, in my opinion, it would strike a man of ordinary business judgment, common sense, and ideas of justice, that it might be impossible to prevent some bad or decomposed salmon, or forbidden salmon, to get into a lot of many cases. Whether the amount here in these four cases, or four counts of this single case, or in either of those four counts, be greater or less than the percent of tolerance that I have undertaken to define to you, is a question for you, gentlemen. The season, of course, as the evidence shows in the case, is short. It runs from June to September. That, I take it, is due to the fact that the run of salmon is short.

Now, gentlemen, I have undertaken to give you my view of the statute, and I again repeat to you that it is a very difficult statute, because it is a statute that has not up to now been construed very often, and the courts which have seen fit to construe it, unfortunately, have not agreed with each other, and perhaps, in a case or two, have

not agreed with themselves. I have endeavored to give you my views of the law, however, as it strikes me. The duty of doing this is upon me and you are not concerned about it, whether I have given it correctly or not; so long as you follow what I say about it, that ends your duty.

When you come to the evidence, however, you, and not the court, are the sole judges of the credibility of the witnesses and of the weight and value to be given to the testimony of the witnesses. You are warranted in taking into consideration their manner and appearance upon the stand, their manner of testifying, the probability or improbability of the testimony which they gave, and their opportunity to see and observe and profit by, and their ability accurately to relate what they saw, heard, or attempted to relate. You may take into consideration their interest in the case for plaintiff, or for the claimant. Having done this, it is your province to give to their testimony that credibility which you deem it entitled to.

I have commented, in a few places, upon the evidence. You are to accept that comment in the light of the rules that I have given you, that is to say, that you, and not the court, are the sole judges of matters of evidence and of the credibility of witnesses. If you do not agree with what I have said, it is not only your privilege but your duty to follow your own views and cast out of your minds what the court has said, and the opinions given by the court as well, about this evidence.

I have had prepared for you a single form of verdict, because, as I say, there is but one issue to be found by you. Upon that finding by you I am permitted, by the law that I read to you, by the decree I make, either to order the salmon to be condemned or destroyed, or order it to be rehabilitated, if you shall find for the plaintiff. If you find for the claimant upon this single issue then, of course, the salmon seized is to be returned to the claimant. You may, therefore, use this single form of verdict. I have used the words "libelant" and "claimant", so you may strike out either "libelant" or "claimant" and the verdict will be proper.

If your verdict shall be for the plaintiff on the first count (formerly case 6327) you may render this verdict: "We, the jury in the above entitled consolidated cause, find the issues herein joined under count 1 (formerly case 6327) in favor of the libelant." On the other hand, if your finding should be in favor of the claimant, draw your pen through the word "libelant" and it will then be all right. So, also, with the other three counts. There must be a finding upon each of the counts. I have had prepared a verdict accordingly.

Your verdict must be unanimous, gentlemen; each of your number, twelve in all, must concur in any verdict which you shall render.

Now, gentlemen, that is all that occurs to me. If there are any suggestions or objections to the charge I shall be glad to hear them.

Mr. Elvins. I have no suggestions to offer, because I think the court has covered it entirely, but I do, for the purpose of the record, desire to offer an exception to that part of your honor's charge which dealt with tolerance and allowed the jury to determine, from the rule which Your Honor gave them, whether or not that should enter into the case, because the Government is of the opinion that under the statute it would not be a jury question. That is the only exception.

Mr. McPheeters. If the court please, there are just two objections that I would like to make. The first one is to the court's interpretation and ruling on the meaning of the word "article", which the claimant contends means the individual can rather than the case, or the entire lot, and we therefore object to the instruction for that reason. Second: we object to the court's ruling on the question of the fact as to whether or not the salmon was or was not injurious to health. We object on the ground that that question necessarily enters into and is connected with the matter of the reasonableness, or the amount of tolerance. In other words, that things that would be injurious to health should not be tolerated, or the percentage should be very minute, but as to things that are not injurious there might be a wider range of tolerance.

I also think, Your Honor, and I suggest that possibly there may be a little confusion on this question. It occurred to me when the court was dictating the instructions. I got the impression that the jury was authorized to find a seizure of all the salmon if they found that a part, no matter how small, of the salmon was decomposed. I think that was probably cured by the latter part of the charge, but there was some uncertainty in my mind about it.

The Court. Well, if those are objections and exceptions to the charge, you may have them. If they are requests for additional and further charges, they are denied.

UNITED STATES v. 1,600 CASES OF CANNED SALMON

(District Court, Oregon, Feb. 11, 1924)

N.J. No. 12221

Libels under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

Bean, *District Judge* (charge to jury). Gentlemen of the jury: These are actions—there are two of them—brought by the Government to condemn certain lots of canned salmon on the ground that it is adulterated within the meaning of the Pure Food and Drugs Act. It is charged in each of the libels that this salmon was adulterated because it consisted in whole or in part of filthy, decomposed, and putrid animal substances. The respondent or owner of the property has filed an answer denying the allegations of the bill. It has been stipulated by counsel, however, that the salmon in question was in fact shipped in interstate commerce and that the samples taken by agents and representatives of the Government, or used by the representatives of the Government in their tests, were taken from this lot of salmon, so that the question for you to determine in this case and the contested question is whether or not this salmon was adulterated within the meaning of this statute.

As I said to you a moment ago, the statute provides that for the purpose of this act an article shall be deemed adulterated, in the case of food, if it consists in whole or in part of filthy, decomposed, or putrid animal substances. Now the word "filthy" in that connection simply means dirty, nasty, unwholesome; "decay" means decom-

posed, rotten, spoiled; and "putrid" means being in a state of putrefaction, tainted, or in such a state of decomposition that the odor therefrom is offensive to the smell. And if you believe from the preponderance of the evidence in this case that the salmon in question was either filthy, decayed, or putrid, it will be your duty to find in favor of the Government. If, on the other hand, you do not so believe, then it will be your duty to find in favor of the claimant in this case.

Now this is a civil action and a proceeding under the Pure Food and Drugs Act. That law is a wholesome law. It is a law that is designed and intended by Congress to protect the public by prohibiting the shipment in interstate commerce of unwholesome or deleterious food, and it should be enforced by courts and juries with that object in view.

Now the statute does not define what shall be considered filthy, decayed, or putrid within the meaning of the statute, so that each case must depend upon its own facts, and if it appears that this salmon—if you believe that this salmon was of such a character on account of its condition that it was not up to the standard required or ordinarily required in the commercial world—then it would be adulterated within the meaning of the statute.

It is not necessary, however, for the Government to show that the eating of the salmon would be injurious to the health of the individual. That is not the question in the case, but the question is whether unwholesome to such an extent that it would not satisfy the ordinary requirements of the commercial world. If it is, then it ought to be condemned; if it is not, then your findings should be in favor of the defendant.

The word "decomposed" as used throughout this trial does not, of course, mean "beginning to decompose" because decomposition sets in whenever life is extinct, and therefore there must be some state after a fish is taken out of the water and before it is put in the can when it cannot be said that it is decomposed or putrid or filthy or decayed, but if a canner keeps a fish out of the water before canning for such a length of time that it becomes putrid or decayed or filthy, then puts it in cans for the purpose of sale, he is violating the statute under which this proceeding is had.

Now the question in this case is a question of fact: Do you believe from the evidence that this salmon in question is either filthy, decayed, or putrid? If you do, then, as I said, you, of course, must find for the Government; if you do not, then you must find for the defendant. Now, that is a question for you to determine from the testimony in this case. You are the exclusive judges of it, and you are the exclusive judges of the credibility of the witnesses. Every witness is presumed to speak the truth. This, however, may be overcome by the manner in which a witness testifies, by his appearance upon the witness stand, and by contradictory testimony, and in weighing the testimony of any witness you should keep in mind the interest he may have in the result of this trial, if any such interest has been manifest or shown in this case.

Now there have been a good many witnesses testify here as experts, that is, men who have shown from their testimony that they are skilled in the particular business in which they are engaged and about which they testified here. You are to consider their testimony for whatever you may think it worth. They are entitled to testify. The

only way a court or jury oftentimes can arrive at the facts in a case is through the testimony of men skilled in the particular case, and for that reason these gentlemen have testified to their experiments, to their experience and study and other things in that respect, and you should weigh all their testimony and from that determine where you think the truth lies.

Now the burden of proof is on the Government in this case to satisfy you by a preponderance of the evidence that the charge made in the libel is true, and by a preponderance of the evidence I simply mean it must make out the best case upon the evidence. I do not mean that it must prove the charge beyond a reasonable doubt but simply that if the evidence is evenly balanced—you believe the evidence is evenly balanced—then it has not satisfied the law by requiring it to prove its case by a preponderance of the evidence.

Now there has been something said in this case about other salmon having been condemned, other salmon packed on the Columbia River having been condemned in suit filed by the Government. If that is true it, of course, has no bearing upon the merits of this particular case, that is, it would not be evidence either that this salmon was subject to condemnation or was not. It only became important and was developed during the trial as affecting the credibility and reliability of some of the witnesses who testified on the trial.

Now I don't know of any other questions of law involved in the case. It is a question of fact for you to determine. Do you believe from the testimony, from a preponderance of the evidence, that this salmon was filthy, decayed, or putrid? If so, find for the Government. If you do not, find for the defendant. I understand there are two cases consolidated for trial.

GOODWIN ET AL. v. UNITED STATES

(Circuit Court of Appeals, Sixth Circuit, Feb. 12, 1924)

295 Fed. 856

Appeal from the District Court for the Southern District of Ohio. On motion to dismiss. Case transferred to law side.[23]

Before KNAPPEN, DENNISON, and DONAHUE, Circuit Judges.

Per curiam. This was a proceeding brought under the Pure Food and Drugs Law, commenced by filing a libel in the district court against the property sought to be condemned. There was a trial by jury and a judgment of condemnation.

From this judgment the claimants appealed, petitioning for an appeal, procuring an allowance, and filing assignments of error—all as in an equity case. After the expiration of the trial term, and without any order made during that term extending time, the district court approved the paper which is printed in the record under the caption "Bill of Exceptions", but which was filed in connection with an order extending time "to perfect the reducing of the testimony in the above-entitled cause to narrative form." In the stipulation of counsel as to

[23] For case in district court, *United States* v. *22 Bottles of Crab Orchard Concentrated Mineral Water*, see p. 1055, *ante*. Judgment of district court affirmed, *Goodwin et al.* v. *United States*, p. 1130, *post*.

what papers should make up the record, this document was called "statement of evidence." In connection with its signature and approval by the district judge, it was nameless.

It is apparent that, under the rule stated in *Four Hundred and Forty-three Cans, etc.* v. *United States*, 226 U.S. 172, 179, 184, these review proceedings were confused and mistaken. Review should have been by writ of error, and this would necessitate dismissing the appeal, save for the effect of section 4 of the Act of September 6, 1916 (39 Stat. 727), which directs that such a mistake shall be disregarded and the appellate court shall "take the action which would be appropriate if the proper appellate procedure had been followed."

In compliance with this statute it is clear that the appeal should be treated as a writ of error; that, so far as the record may justify, further proceedings in this court should be as upon a writ of error; and that the reviewing jurisdiction and powers of this court will be in all respects the same as upon a review at law. Proper disposition of the so-called "bill of exceptions" is not so plain. If the review proceedings had from the beginning been at law, it would be becessary to strike out the bill of exceptions, because not settled within the trial term, or within any extension made during that term (*Exporters, etc.*, v. *Butterworth Co.*, 258 U.S., 365 368); but it would be of small avail for the appellate court to transfer a case from the equity to the law side, and at the same time leave the record fatally defective, because it had been made up under the wrong theory. We think a compliance with the spirit of this section 1649a requires these conclusions: (1) That the so-called "bill of exceptions" shall be deemed to be a statement of evidence in narrative form under general equity rule 75 (our rule 15), containing the substance of all the evidence (*Westerman* v. *Dispatch Co.*, 233 Fed. 609, 611, 612); (2) that this narrative statement be therefore treated as filed in due time, since the limitation to the trial term does not extend to the settling of such a statement of evidence (*In re General Equity Rule 75*, 222 Fed. 884); (3) that by analogy to the transfer of a case from the equity to the law side of a court, and by applying the "proper appellate procedure", nunc pro tunc, such statement of evidence becomes, and is, the bill of exceptions, as upon a writ of error.

The case will therefore proceed to hearing upon these principles. All the motions of the respective parties, except as herein granted, are denied.

UNITED STATES v. 1,974 CASES OF CANNED SALMON

(District Court, W.D. Washington, Mar. 13, 1924)

N.J. No. 12381

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.[24]

CUSHMAN, *District Judge*. The arguments in the case having been concluded, gentlemen of the jury, it is the court's duty to instruct you regarding the law.

[24] See *United States* v. *1,974 Cases of Canned Salmon*, p. 1037, *ante*, and *A. O. Andersen & Co.* v. *United States*, p. 1053, *ante*.

The plaintiff has filed a libel in this case, seeking to have condemned this parcel of salmon. In that libel it is alleged that this parcel of salmon was shipped in interstate commerce and that it was an adulterated food. It is alleged in the libel that it consisted in whole or in part of filthy, decomposed animal substance. The claimant has denied that it was adulterated or that it consisted in whole or in part of filthy, decomposed, or putrid animal substance. These are the issues that you are to try. There is no dispute here, as I understand, regarding its having been transported in interstate commerce. You understand this case is here because of that allegation. If this had been a shipment wholly within the State of Washington, this court would not have been concerned with it, because no Federal law would have been involved.

This law provides for the condemnation of adulterated foods, and adulteration is defined, in substance, that an article of food is adulterated when it consists, in whole or in part, of filthy, decomposed, or putrid animal substance making it unfit for food.

There has been in this case much said, in argument and in the testimony, regarding decomposition. There has been evidence in this case that decomposition begins when life ends. Fish is not decomposed, within the meaning of this law, at that early stage. To be decomposed within the meaning of this law means more than the beginning of decomposition; it contemplates a state of decomposition making the article unfit for human food. It does not have to be so decomposed that it has disintegrated and passed to its original elements, because the statute says a decomposed animal substance. Well, when it is entirely decomposed and has passed into its original elements, it has ceased to be an animal substance. All works of man and all that lives eventually becomes so decomposed that it is broken up and separated and the atoms which once composed it mingle again with the earth or the air or the sea. It is not in this sense that the word "decomposed" is used in this statute.

The evidence in this case has taken a wide range. Counsel in their arguments have not been at all restricted. You understand that you are to pass upon the questions of fact in this case, including this question of the extent of decomposition and whether these samples and this lot of salmon, this parcel of salmon, is unfit for human food. Those are questions of fact for your sole determination, and if the court in the course of its instructions or in the course of the trial has said anything touching the weight of evidence on these questions of fact, or stated any question of fact that is submitted to you for your determination, you should disregard any such statements of the court, unless they agree with the conclusions reached by yourselves. On the other hand, so far as counsel in their arguments have stated what the law was, if they have stated the law to be different in any respect from what the court instructs you, you will disregard their statements concerning the law and follow the instructions which the court gives you regarding the law. As examples of this, counsel for the plaintiff in his argument stated to you that this Pure Food Law provided that butter should not be shipped in interstate commerce, that contained a greater percentage of water than that prescribed in the law, that that renders it adulterated. That is true, but it is a dangerous argument in this case. The Pure Food Law has two main objects, that is,

the fitness for food and to protect the public from fraud. Now, regarding the water in butter, that does not make butter unfit for food, but by injecting water into the butter a fraud may be worked on the buyer by selling him water and not butter. So far as this section of the law that is involved in this case is concerned, what the law is aiming at is to protect the public from unfit food. The counsel on the other side, in his argument, advised you that he thought the court would instruct you that if there had been no negligence on the part of the packers of this salmon, that you should not condemn the salmon, if care had been used. Well, that is a dangerous argument in this case. You are not trying the men who packed this salmon, you are not trying the officers of the Bureau who are witnesses in this case or had something to do with instituting these proceedings; you are trying this article of food to determine whether it is so filthy, decomposed, or putrid as to make it unfit for human food, and the evidence on that issue has taken, as I have told you, a wide range. The court has permitted evidence to go in here regarding whether or not anyone had ever been made sick from eating tainted salmon and as to the condition of this salmon and this cannery where it was packed and the traps and their proximity to one another—evidence concerning those conditions was admitted; evidence was admitted regarding whether any complaints had come from consumers of this salmon; evidence was admitted regarding the situation in which persons who may have instituted this complaint were, as bearing on the question of whether the original complaint was begun because of unfitness of the food, or the salmon, or for some other reason. Now, all that evidence and other evidence that was admitted in the case was admitted to enable you to determine whether it was in fact fit for human food. You can understand that if taint in salmon—decomposition—rendered it deadly and that it was impossible to detect it except by reason of the fact that a person who ate it died, that you might reasonably conclude, on a smaller percentage, that that article was unfit for food than if the testimony showed that it was wholly innocuous and did not injure and was easily and readily detected when it was decomposed, when the state of decomposition existed.

On the question of whether this salmon was fit for food, you are to understand this provision of the law that it is adulterated when it is filthy, decomposed, or putrid, making it unfit for food; that unfit for food means there just what you would ordinarily understand that expression to mean. When language is used in the statute—and this is a statute of the United States, a statute of Congress—when ordinary language is used in the statute, having no technical meaning, why, then it is to be interpreted by what men ordinarily understand by the expression. Now, "unfit for food" does not mean that no one could be found so fastidious as to complain of it. On the other hand, it does not mean that it has to be so filthy or putrid that no one could be found who under any circumstances would eat it. It means what you would ordinarily understand by the expression "unfit for food."

In this case there is evidence regarding the testing of this product, of this parcel of canned salmon. The court instructs you that, before you can find this parcel of salmon guilty, that there must be a fair preponderance of the evidence showing these disputed allegations in the libel, which I have outlined to you. Where the entire parcel of food—in this case salmon—is not tested, it is nevertheless necessary,

before the verdict can be guilty, that a fair preponderance of the evidence show that the adulteration extends to the whole product. If the evidence on this point—the preponderance of the evidence—is with the claimant, or if it is evenly balanced so that it does no turn one way or the other, your verdict would be not guilty.

There may be such a small percentage of adulteration in such a small number of samples as to fail to show adulteration of the entire product. On the other hand, there may be such a large percentage of adulteration shown as to show that the entire product was adulterated.

I have pointed out to you that the main question for you to decide in the case was this question of adulteration, and I have told you that the evidence regarding the care taken in conditioning and canning this salmon was admitted, not that you were to acquit the salmon if care had been taken but that the taking of care was one of the circumstances from which you would determine whether it was probably fit for human food. If it is adulterated within the meaning of this law, it does not make any difference how it happened, whether care was taken or care was not taken, whether it was caused by sabotage among employees, or in any other way. If it is adulterated, it should be condemned, and your verdict should be guilty if the evidence so shows.

I have told you that the verdict should be guilty unless these allegations of the libel that I have pointed out have been shown to be true by a fair preponderance of the evidence. A preponderance of the evidence means the greater weight of evidence; that evidence preponderates which is of such a character and makes such an appeal to your intelligence and reason and your experience, as to create and induce a belief in your minds, and where there is a dispute in the evidence, that evidence preponderates which is so strong in these particulars as to create and induce a belief in your minds in spite of the opposing evidence and in spite of assaults made upon it by way of argument.

You are in this case, as in every case where questions of fact are tried to a jury, the sole and exclusive judges of every fact in the case and of the weight of the evidence and the credibility of the witnesses. In weighing the evidence and measuring the credit of the witnesses who appeared before you and testified, the law does not undertake to say everything that you should take into account in measuring the credit of these witnesses, but it has been settled that certain things you should consider. You should give consideration to the appearance and conduct and demeanor of each witness who has come upon the stand and testified; whether the appearance and conduct and manner of that witness in giving his testimony was such as to inspire you with confidence and lead you to believe that the witness was trying to tell the exact truth, neither adding to it nor taking from it, or whether some witnesses may have been reluctant or evasive, contradictory, or hesitating in their testimony; whether others may have been too willing, possibly evidencing an inclination to get something into the case that had not been inquired about. You will also take into account the reasonableness of the testimony of each witness, by itself, in view of the circumstances, whether it appears reasonable and probable or whether it appears unlikely and unreasonable; whether the testimony of a witness agrees with his conduct; whether he has acted at the time of the transaction and since consistently

with the testimony he has given; also take into account whether the testimony of a witness has been corroborated where you would expect it be corroborated if it were true, or whether it has been contradicted by other creditable testimony.

Where in the progress of the trial it develops that there are other witnesses or other testimony that could be produced to support the position taken by one side or the other, and the presence of that witness is not obtained or he is not brought here, and no explanation given for his absence, you have a right to conclude that that witness, if summoned, would not support the contention of the party that you would expect to bring that witness. You will also take into account, in measuring the credit of the witness, the situation in which he was placed as enabling you to know exactly what the facts were and exactly what took place, as one witness, by reason of his favorable situation and connection with the matters to which he testified, might have a great advantage in telling you exactly what the facts were, over another witness who was not so happily situated; also take into account the interest that any witness may have been shown to have in the case, an interest either shown by the manner by which the witness gave his testimony or as shown by his relation to the case.

Mr. McCord. There is one other exception that I would like to call Your Honor's attention to, and that is based upon Judge Pollock's decision.

I except to Your Honor's instruction that the claimant was not entitled to have a verdict for the release of these goods upon the showing that the cannery where they were packed was operated with the usual care and skill and judgment that the ordinarily prudent canneryman would exercise in the operation of his canning plant. In other words, as the law cannot be literally construed, must be given a reasonable interpretation, it is our contention that the reasonableness means that if the goods that are sought to be libeled are packed by an ordinarily prudent packer, who has reasonably complied with this law and has been guilty of no negligence, his goods ought not to be condemned, even though there may be a percentage of adulteration contained in them. I base this exception very largely upon Judge Pollock's opinion in St. Louis, who took that view, as I understand it.

The Court. No, it is the court's view that the product should be reasonably fit for food. The jury is so instructed. If it is not reasonably fit for food, then it is unfit for food, and it is not a question of whether reasonable and ordinary care or extraordinary care, for that matter, was taken in putting it up. If it is decomposed within the meaning of this law as I have instructed the jury, in spite of extraordinary care, then the parcel should be condemned.

Mr. McCord. You will allow me an exception, Your Honor?

The Court. Exception allowed.

Mr. Shackleford. If Your Honor please, I am not sure that the jury understands, when you refer to what is to be condemned, that they understand that it is what is still in existence, instead of the samples that were taken.

The Court. The jury will so understand. If there is nothing further, is a sealed verdict agreed to?

Mr. McCord. Yes, sir, as far as we are concerned.

Mr. Hill. It is entirely satisfactory to the Government.

The COURT. This form of verdict, gentlemen of the jury, is just the one form: "We, the jury in the above entitled cause, find the respondent 1,974 cases of canned salmon labeled in part Hypatia Brand pink salmon —— guilty as charged in the libel of information filed herein." If, under the evidence and the instructions as to the law that have been given you, you find the respondent salmon to be guilty, you will write in that blank the word "is." If you find the salmon not guilty, you will write in that blank the word "not," and have your foreman sign it after you have completed it, and seal it up and report with your verdict here in court tomorrow morning at 10 o'clock."

UNITED STATES v. 1,000 CASES OF SARDINES

(District Court, E.D. Virginia, Apr. 11, 1924)

N.J. No. 12656

Libels under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

GRONER, *District Judge* (charge to jury). Gentlemen of the jury: This is a libel *in rem*, that is to say, against the thing sought to be condemned by the United States under the familiar Food and Drugs Act, the purpose of which is to condemn any article of food containing filthy, decomposed, or putrid animal or vegetable substance. The Government some years ago as, of course, you gentlemen all know, in a very commendable effort to prevent the adulteration of food and misbranding of foods and shipment of putrid or decomposed food, passed what is known as the Pure Food and Drugs Act. One of the provisions of the act is that it shall be unlawful to ship in interstate commerce any article which is adulterated, and it is adulterated if it consists, so the statute says, in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, whether manufactured or not. The whole question in this case is whether the shipment in question contains an article of food which is either putrid or decomposed or filthy. The Government to maintain its view of the case has introduced the evidence of a number of witnesses whom you gentlemen have heard testify and whose conclusion is that these sardines, or a considerable portion of the sardines, are adulterated within the meaning of the act in that, according to their opinion, they are decomposed and putrid. That question is a question which is the issue in this case, the question which you gentlemen must determine as a result of the evidence which you have heard from the different witnesses. You are the judges of the credibility of the witnesses and the weight to be given to their testimony. It is within your province to say which evidence you accept as correct. The burden of establishing the case is, of course, a burden which rests upon the Government, and it must be established by a preponderance of evidence. That does not mean any greater number of witnesses, but it must be such to satisfy the minds of the jury that it is the correct view of the case.

Now the cans of sardines have been examined by samples extracted from different packages. The proportion of them in which these

signs, according to witnesses for the Government, of decomposition appear has been testified to, and in the case of one of the Government witnesses, the state or condition, of a large part—or I think approximately 50 percent of the cans examined—was said to be decomposed but not putrid and not filthy, and the reason for the distinction was given to the jury. Now I haven't found nor have I been furnished by counsel with any precise definition of the word "decomposition." The act itself, unlike a great many Federal acts, does not contain any standard or determinative meaning of the word. The dictionary says that "decompose" means to resolve or separate into constituent parts or elements, as by means of chemical agents or by natural decay; especially to cause to decay or to rot; to become separated into elements; hence, to putrefy, rot and to decay. I had my secretary during the period of the argument look in the books which lawyers use very frequently, called "Words and Phrases", which contain judicial definitions of different words used in statutes, without finding any direct or judicial construction or determination of the word. I assume that Congress intended to mean just what the word itself implies to the ordinary mind, that in order to justify a condemnation of a food product there must exist what is the general acceptation of the word "decomposition" in the minds of the ordinary citizens of reasonable intelligence. So that we come back to the starting point, which is that you gentlemen must under the evidence in this case before you, the exhibit of the thing itself and the testimony of the witnesses as to what they ascertained as a result of their expert experience and knowledge, determine the question whether this particular product is sufficiently decomposed to come within the intent of Congress when it said such articles should not be shipped in interstate commerce.

The defendant, through its superintendent, has testified as to the manner in which the canning of sardines is accomplished from the catching of the fish to the final sealing of the can and shipment. It is apparently a big concern—a concern that does a large business—and it is, of course, a matter of serious concern to it that one of its products should be stamped as unfit for human food. On the other hand, it is equally important for the people of the United States that this law, which is intended to preserve the health of the people of the United States, should be carried out without regard to whether it affects the standing, character, or business interests of any individual if he has violated the law.

The whole question, therefore, gentlemen, which I submit to you is whether under the evidence—the testimony of these witnesses as to the condition of this fish and the exhibition of the cans to the jury themselves—you are satisfied that this product is or was in a process of decomposition. Now the act does not say that that process must have continued to any particular point. It does not define what point the decomposition must have arrived at to bring it within the inhibition of the statute. It says whatever is decomposed shall be subject to seizure and condemnation. I don't know a great deal about these matters of chemistry, but nearly everything of an animal character is decomposed to a certain extent on different occasions. As soon as fish is dumped from the pound net into the bottom of the boat and allowed to remain for a little while, the process of decomposition

sets in. Of course, it isn't that kind of decomposition that the act has in mind, because if it were, there wouldn't be anything like the sale or shipment of any animal products, but it is such decomposition as in the minds of the jury, it seems to me, would make them unfit for human food in the ordinary way. It doesn't have to be poisonous; it doesn't have to be so unfit as to make it dangerous to health. That isn't necessary. The act does not make that condition a condition precedent to the seizure and condemnation, but there ought to be, it seems to me, such decomposition as in the minds of an intelligent jury—business men, having due regard to the evidence and to the exhibit of the thing itself—would ordinarily suggest itself to them as an article reasonably unfit for human food. If it does that, then, of course, there ought not to be any question of condemnation. If the thing itself is decomposed only to that inevitable degree that is inherent in the packing of fish products and meat products, then, of course, they ought not to be condemned, because that would practically stifle commerce in these articles altogether. These chemists from the department have testified as to the causes of this particular decomposition which they point out. You gentlemen have had the benefit of their advice and judgment on that subject, and, as I said before, it is up to you to say whether or not it appeals to you as business men sufficiently to justify you in saying the Government has met the burden and has in fact shown this particular product to be one in which there is decomposition and that the process of decomposition has gone to the extent where it is not necessarily dangerous, but such an extent as to make the article itself unfit for human food. It does not have to apply to all of it. If a reasonable percentage is of such a character as to create that opinion in your mind, then the Government has made its case. The verdict of the jury should be: "We, the jury, upon the issues joined, find for the United States" or "find for the respondent."

UNITED STATES v. CHICHESTER CHEMICAL CO. (Two cases)

(Court of Appeals of the District of Columbia, May 5, 1924)

298 Fed. 829

Appeal from the Supreme Court of the District of Columbia. Libels by the United States for condemnation of certain drugs. From an adverse judgment the United States appeals. Reversed, and cases remanded for new trial.

MARTIN, *Acting Associate Justice.* The United States filed two separate libels seeking the condemnation and destruction of certain packages of pills, bearing the name of "Chi-Ches-Ters, Diamond Brand, New Style Pills," which were shipped from the city of Philadelphia into the District of Columbia. The Government averred that they were misbranded in violation of section 8 of the Food and Drugs Act (34 Stat. 771, as amended 37 Stat. 416), in that each package inclosed a booklet with representations that the pills possessed great curative properties in the treatment of divers female diseases therein specified, among them amenorrhea, whereas in fact they

contained no ingredients or combination of ingredients capable of producing the therapeutic effects claimed, and the representations were false and fraudulent.

In the answer the claimant company denied all of the incriminatory allegations of the libel. The two cases were tried together, with a verdict and judgment for the respondent. The Government has appealed. There are virtually but two assignments of error submitted by the appellant—the first relating to the exclusion of certain evidence at the trial; the second to the court's refusal to deliver to the jury a certain instruction which was requested by the appellant.

At the trial the Government called Dr. John Thomas Kelley, Jr., as a witness, for the purpose of examining him as a medical expert, and accordingly began to interrogate him respecting his qualifications as such, whereupon the respondent's counsel interposed the following statement:

> Unless you are concerned about it, you need not go any further in qualifying Dr. Kelley. Everybody knows his qualifications.

The Government accordingly discontinued the voir dire examination, and proceeded with the direct examination in chief. The witness testified that none of the ingredients of the pills in question would be of any aid in the treatment of any of the conditions causing amenorrhea, except sulphate of iron in the case of anemia, if given in doses of a grain or two grains, two times a day, over a period of several months. He was then asked by counsel for the Government if that was the consensus of medical opinion. This question was objected to by counsel for the respondent, as follows:

> He cannot answer that question. He can only testify as to what he knows. * * * He cannot speak of a medical opinion—the consensus of the medical opinion—any more than you can speak of the consensus of the opinion of the bar.

The trial court sustained the objection, and the Government excepted. Other similar exceptions were saved by the Government in the course of the trial. The record justifies the conclusion that these objections were not addressed to the qualification of the witness, nor to the form of the questions, but were intended and understood by both court and counsel as relating only to the character of the proposed evidence, the claim being that the "consensus of medical opinion" was not a competent subject of proof under the issue. These rulings of the trial court are now assigned as errors.

It is true that the Government's counsel did not tender the answers which they expected the witness to give in response to the questions, but we think that the Government nevertheless is entitled to prosecute the assignment upon this appeal. The question whether a tender of the proposed testimony is necessary, in order to obtain a review upon appeal of a refusal to admit it, has been variously decided. But in the Federal courts the rule is established that, when a witness testifies in person at the trial, and is asked a question in proper form, which clearly admits of an answer relevant to the issues and favorable to the party calling him, it is error for the trial court to exclude it, notwithstanding the omission of a tender of the expected answer by the party propounding the question, although of course the court, in its discretion, or on motion, may require the party, in whose behalf the question is put, to state the facts proposed to be proved by the answer. This rule prevails also in many State courts, notably in

Maryland. *Buckstaff* v. *Russell*, 151 U.S. 626, 14 Sup. Ct. 448, 38 L.Ed. 292; *Stanley* v. *Beckham*, 153 Fed. 152, 82 C.C.A. 304; *Harris* v. *Brown*, 187 Fed. 6, 109 C.C.A. 60; *Commissioners* v. *Gantt*, 78 Md. 286, 28 Atl. 101, 29 Atl. 610; *Robinson* v. *Old Colony Ry.*, 189 Mass. 594, 76 N.E. 190; *Londonderry* v. *Fryor*, 84 Vt. 294, 79 Atl. 46.

In the case of *Buckstaff* v. *Russell*, *supra*, Mr. Justice Harlan, speaking for the Supreme Court of the United States, said:

> If the question is in proper form and clearly admits of an answer relevant to the issues and favorable to the party on whose side the witness is called, it will be error to exclude it. Of course, the court, in its discretion, or on motion, may require the party, in whose behalf the question is put, to state the facts proposed to be proved by the answer. But, if that be not done, the rejection of the answer will be deemed error or not, according as the question, upon its face, if proper in form, may or may not clearly admit of an answer favorable to the party in whose behalf it is propounded.

We have not overlooked the opinions in *De Forest* v. *United States*, 11 App.D.C. 458, *Turner* v. *American Security & Trust Co.*, 29 App. D.C. 460, and *McCurley* v. *National Savings & Trust Co.*, 49 App.D.C. 10, 258 Fed. 154; but we regard the foregoing rule of practice as authoritative, and as especially applicable to this case, since the prior testimony of the witness herein made it apparent what answer the interrogating counsel expected from him. 3 Corpus Juris, p. 827, "Appeal and Error."

The only remaining inquiry is whether the excluded question did in fact clearly admit of an answer relevant and material to the issue and favorable to the Government's contention, or in other words whether the "consensus of medical opinion," if there was one, in respect to the therapeutic properties of the ingredients of the pills, was competent evidence in the case. In answer to this we may say that the weight of authority sustains the view that such evidence is competent and material in support of a charge like this, brought under the Food and Drugs Act. This rule doubtless rests in part upon the view that Congress did not intend by the act to condemn honest differences of opinion between different medical schools relative to the therapeutic value of drugs in the practice of medicine. *Seven Cases* v. *United States*, 239 U.S. 510, 517, 36 Sup. Ct. 190, 60 L.Ed. 411, L.R.A. 1916D, 164. In *Eleven Gross Packages* v. *United States*, 233 Fed. 71, 73, 147 C.C.A. 141, 142, which, like this, was a libel under the Food and Drugs Act, the Circuit Court of Appeals, Third Circuit, said:

> In support of its case, the Government called several witnesses, physicians of proven ability, knowledge, and experience, who testified that the pill would not, and why it could not, have any beneficial effects in locomotor ataxia and the other diseases named. They also testified to the fact that medical opinion was unanimous in so saying. * * * It is complained, however, that the testimony of these witnesses was not competent, being a mere expression of their personal opinions or views. But an examination of the proofs shows that the case was wholly different from one where witnesses were testifying to their personal views upon a controverted question of opinion. The testimony here was of fact, namely, that there was a general, uncontroverted consensus of opinion.

In *McLean Medicine Co.* v. *United States*, 253 Fed. 694, 696, 165 C.C.A. 288, 290, an indictment under the same act, the Circuit Court of Appeals, Eighth Circuit, said:

> As a part of the Government's case some well-qualified physicians were called as witnesses, and asked if a drug composed according to the formula used by

defendant in preparing this article would, in their opinions, be effective for the treatment of the diseases for which the defendant's labels and statements claimed it was effective treatment, and, after answering that it would not be effective, they testified that there was no difference of opinion among medical men on that subject. Objections were made to this testimony, and it is urged that it calls for the opinion of the witnesses, for a conclusion that only the jury could properly make, and that no conviction could be based on such matters of opinion. The testimony that there was a general agreement of medical opinion as to the therapeutic effect of such a preparation, and what that general medical opinion was, was properly admitted to show the falsity of the statements made by defendant.

See *Simpson* v. *United States*, 241 Fed. 841, 844, 154 C.C.A. 543; *Kar-Ru Chemical Co.* v. *United States* (C.C.A.) 264 Fed. 921.

We hold, accordingly, that it was error for the trial court to exclude the questions propounded by the Government's counsel.

The other assignment of error is based upon the refusal of the court to deliver the following instruction to the jury:

> The jury are instructed that persons who deal in substances or compositions alleged to be curative are in a position to have superior knowledge, and if the jury find that the statements in the booklet offered in evidence as set forth in the amended libels are false, they may infer that such statements were fraudulently made.

This assignment is overruled, first, because the general charge of the court sufficiently covered the subject dealt with by the instruction and, next, because the instruction seems to invite the jury, should they find the representations to be false, to infer from that fact alone that they were also fraudulent, whereas a finding of fraud by the jury should only be reached after a consideration and comparison of all the facts disclosed by the evidence. It is claimed by the appellant that the instruction is supported by the language of the court in *Seven Cases* v. *United States, supra.* It is true that it paraphrases certain parts of that opinion, but these were not intended to serve literally as instructions to the jury.

The judgments below are reversed, and the cases remanded for a new trial.

UNITED STATES v. 95 BARRELS, MORE OR LESS, ALLEGED APPLE CIDER VINEGAR

(Supreme Court of the United States, June 2, 1924)

265 U.S. 438; N.J. No. 12367

Certiorari to the Circuit Court of Appeals for the Sixth Circuit. Judgment reversed.[25]

Mr. Justice BUTLER delivered the opinion of the court.

This case arises under the Food and Drugs Act of June 30, 1906, c. 3915, 34 Stat. 768. The United States filed information in the District Court for the Northern District of Ohio, Eastern Division, for the condemnation of 95 barrels of vinegar. Every barrel seized was labeled:

> Douglas Packing Company Excelsior Brand Apple Cider Vinegar made from Selected Apples Reduced to 4 Percentum Rochester, N.Y.

[25] Reversing *Ninety-Five Barrels, More or Less, Apple Cider Vinegar* v. *United States*, p. 1079, *ante*. For case in lower court, *United States* v. *95 Barrels, More or Less, Alleged Apple Cider Vinegar*, see p. 1047, *ante*.

The information alleged that the vinegar was adulterated, in violation of section 7 of the act. It also alleged that the vinegar was made from dried or evaporated apples, and was misbranded in violation of section 8, in that the statements on the label were false and misleading, and in that it was an imitation of and offered for sale under the distinctive name of another article, namely apple cider vinegar.

The Douglas Packing Company appeared as claimant, and by its answer admitted that the vinegar was labeled as alleged, and that evaporated apples had been used in its manufacture. It averred that nevertheless it was pure cider vinegar and denied adulteration and misbranding. A jury was waived, and the case was submitted on the pleadings and an agreed statement of facts. The court found that the charge of adulteration was not sustained, but held that the vinegar was misbranded. Claimant appealed, and the Circuit Court of Appeals reversed the judgment (289 Fed. 181). Certiorari was allowed (263 U.S. 695).

The question for decision is whether the vinegar was misbranded.

The substance of the agreed statement of facts may be set forth briefly. Claimant is engaged in the manufacture of food products from evaporated and unevaporated apples. During the apple season, from about September 25 to December 15, it makes apple cider and apple cider vinegar from fresh or unevaporated apples. During the balance of the year, it makes products which it designates as "apple cider" and "apple cider vinegar" from evaporated apples. The most approved process for dehydrating apples is used, and, in applying it, small quantities of sulphur fumes are employed to prevent rot, fermentation, and consequent discoloration. The principal result of dehydration is the removal of about 80 percent of the water. Whether, and to what extent, any other constituents of the apple are removed is not beyond controversy; in the present state of chemical science, no accepted test or method of analysis is provided for the making of such determination. Only mature fruit, free from rot and ferment, can be used economically and advantageously.

In manufacturing, claimant places in a receptacle a quantity of evaporated apples to which an amount of pure water substantially equivalent to that removed in the evaporating process has been added. A heavy weight is placed on top of the apples and a stream of water is introduced at the top of the receptacle through a pipe and is applied until the liquid, released through a vent at the bottom, has carried off in solution such of the constituents of the evaporated apples as are soluble in cold water and useful in the manufacture of vinegar. Such liquid, which is substantially equivalent in quantity to that which would have been obtained had unevaporated apples been used, carries a small and entirely harmless quantity of sulphur dioxide, which is removed during the process of fining and filtration by the addition of barium carbonate or some other proper chemical agent. The liquid is then subjected to alcoholic and subsequent acetic fermentation in the same manner as that followed by the manufacturer of apple cider vinegar made from the liquid content of unevaporated apples. Claimant employs the same receptacles, equipment and process of manufacturing for evaporated as for unevaporated apples, except that in the case of evaporated apples, pure water is added as above described, and in the process of fining and filtration, an additional chemical is

used to precipitate any sulphur compounds present and resulting from dehydration.

The resulting liquid, upon chemical analysis, gives results similar to those obtained from an analysis of apple cider made from unevaporated apples, except that it contains a trace of barium incident to the process of manufacture.

Vinegar so made is similar in taste and in composition to the vinegar made from unevaporated apples, except that the vinegar made from evaporated apples contains a trace of barium incident to the process of manufacture. There is no claim by libelant that this trace of barium renders it deleterious or injurious to health. It was conceded that the vinegar involved in these proceedings was vinegar made from dried or evaporated apples by substantially the process above described. There is no claim by the libelant that the vinegar was inferior to that made from fresh or unevaporated apples.

Since 1906 claimant has sold throughout the United States its product, manufactured from unevaporated as well as from evaporated apples, as "apple cider" and "apple cider vinegar", selling its vinegar under the brand above quoted or under the brand "Sun Bright Brand apple cider vinegar made from selected apples." Its output of vinegar is about 100,000 barrels a year. Before and since the passage of the Food and Drugs Act, vinegar in large quantities, and to a certain extent a beverage, made from evaporated apples, were sold in various parts of the United States as "apple cider vinegar" and "apple cider", respectively, by many manufacturers. Claimant, in manufacturing and selling such products so labeled, acted in good faith. The Department of Agriculture has never sanctioned this labeling, and its attitude with reference thereto is evidenced by the definition of "apple cider vinegar" set forth in Circulars 13, 17, 19, and 136, and Food Inspection Decision 140.[26] It is stipulated that the juice of unevaporated apples when subjected to alcoholic and subsequent acetous fermentation is entitled to the name "apple cider vinegar."

Section 6 of the act provides that,

* * * The term "food", as used herein, shall include all articles used for food, confectionary, or condimen by man or other animals, whether simple, mixed, or compound.

Section 8 provides,

That the term "misbranded", as used herein, shall apply to all * * * articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, * * * That for the purposes of this act an article shall also be deemed to be misbranded: * * * In the case of food: First. If it be an imitation of or offered for sale under the distinctive name of another article. Second. If it be labeled or branded so as to deceive or mislead the purchaser, * * * Fourth. If the package containing it or its label shall bear any statement, design, or device regarding the ingredients or the substances contained therein, which * * * shall be false or misleading in any particular. * * *

The statute is plain and direct. Its comprehensive terms condemn every statement, design, and device which may mislead or deceive. Deception may result from the use of statements not technically false or which may be literally true. The aim of the statute is to prevent that resulting from indirection and ambiguity, as well as from

[26] The definition referred to is: "Vinegar, cider vinegar, apple vinegar, is the product made by the alcoholic and subsequent acetous fermentations of the juice of apples."

statements which are false. It is not difficult to choose statements, designs, and devices which will not deceive. Those which are ambiguous and liable to mislead should be read favorably to the accomplishment of the purpose of the act. The statute applies to food, and the ingredients and substances contained therein. It was enacted to enable purchasers to buy food for what it really is. *United States* v. *Schider*, 246 U.S. 519, 522; *United States* v. *Lexington Mill Co.*, 232 U.S. 399, 409; *United States* v. *Antikamnia Co.*, 231 U.S. 654, 665.

The vinegar made from dried apples was not the same as that which would have been produced from the apples without dehydration. The dehydration took from them about 80 percent of their water content—an amount in excess of two thirds of the total of their constituent elements. The substance removed was a part of their juice from which cider and vinegar would have been made if the apples had been used in their natural state. That element was not replaced. The substance extracted from dried apples is different from the pressed-out juice of apples. Samples of cider fermented and unfermented made from fresh and evaporated apples, and vinegar made from both kinds of cider were submitted to and examined by the District Judge who tried the case. He found that there were slight differences in appearance and taste, but that all had the appearance and taste of cider and vinegar. While the vinegar in question made from dried apples was like or similar to that which would have been produced by the use of fresh apples, it was not the identical product. The added water, constituting an element amounting to more than one half of the total of all ingredients of the vinegar, never was a constituent element or part of the apples. The use of dried apples necessarily results in a different product.

If an article is not the identical thing that the brand indicates it to be, it is misbranded. The vinegar in question was not the identical thing that the statement, "Excelsior Brand Apple Cider Vinegar made from selected apples," indicated it to be. These words are to be considered in view of the admitted facts and others of which the court may take judicial notice. The words "Excelsior Brand," calculated to give the impression of superiority, may be put to one side as not liable to mislead. But the words, "apple cider vinegar made from selected apples," are misleading. Apple cider vinegar is made from apple cider. Cider is the expressed juice of apples and is so popularly and generally known. See *Eureka Vinegar Co.* v. *Gazette Printing Co.*, 35 Fed. 570; *Hildick Apple Juice Co.* v. *Williams*, 269 Fed. 184; *Monroe Cider, Vinegar & Fruit Co.* v. *Riordan*, 280 Fed. 624, 626; *Sterling Cider Co.* v. *Casey*, 285 Fed. 885; affirmed 294 Fed. 426. It was stipulated that the juice of unevaporated apples when subjected to alcoholic and subsequent acetous fermentation is entitled to the name "apple cider vinegar." The vinegar in question was not the same as if made from apples without dehydration. The name "apple cider vinegar" included in the brand did not represent the article to be what it really was; and, in effect, did represent it to be what it was not—vinegar made from fresh or unevaporated apples. The words "made from selected apples," indicate that the apples used were chosen with special regard to their fitness for the purpose of making apple cider vinegar. They give no hint that the vinegar was made from dried apples, or that the larger part of the moisture content of

the apples was eliminated and water substituted therefor. As used on the label, they aid the misrepresentation made by the words "apple cider vinegar."

The misrepresentation was in respect of the vinegar itself, and did not relate to the method of production merely. When considered independently of the product, the method of manufacture is not material. The act requires no disclosure concerning it. And it makes no difference whether vinegar made from dried apples is or is not inferior to apple cider vinegar.

The label was misleading as to the vinegar, its substances, and ingredients. The facts admitted sustain the charge of misbranding.

Judgment reversed.

UNITED STATES v. MARMARELLI ET AL.

(District Court, S.D. New York, June 13, 1924)

N.J. No. 13092

Information in two counts alleging violation of section 2 of the Food and Drugs Act. Jury trial. One count dismissed. Verdict of not guilty on remaining count.

The United States attorney filed an information against Demetrius Marmarelli et al. alleging that said defendants, in violation of the Food and Drugs Act, shipped from the State of New York into the State of Massachusetts a quantity of olive oil; that said article was adulterated in that a substance, cottonseed oil, had been mixed and packed therewith so as to reduce and lower and injuriously affect its quality and strength, and had been substituted in part for olive oil which the article purported to be; and that said article was misbranded for the reason that the statement, to wit, "Pure Olive Oil," borne on a tag attached to the barrel containing the article, was false and misleading in that it represented that the article consisted wholly of pure olive oil, and for the reason that it was so labeled as to deceive and mislead the purchaser into the belief that it consisted wholly of pure olive oil, whereas it did not so consist but did consist in part of cottonseed oil, and for the reason that the article was an imitation of and offered for sale under the distinctive name of another article.

The court delivered the following charge to the jury:

CLAYTON, *District Judge.* Gentlemen of the jury: I call your attention to elementary and familiar rules, which will govern you in your consideration of this case.

Every man is presumed when charged with a crime to be innocent, and that presumption of innocence goes with him and protects him until, or unless, it is overcome by evidence which convinces the jury beyond a reasonable doubt—that is, to a moral certainty—that he is guilty as charged. Then the presumption no longer protects him, because that presumption is overcome by proof that convinces a jury to a moral certainty that he is guilty.

Now, it is for you to judge of the evidence in this case, and, in the light of that presumption, has the evidence satisfied you beyond a

reasonable doubt that the defendants are guilty as charged—satisfied you to a moral certainty that they are guilty as charged in the first count of this information.

Now, you want to know what is the duty of the Government. It is the duty of the Government to prove the charge made against the defendants and to prove it beyond a reasonable doubt, for otherwise they are entitled to an acquittal. They are not required to prove their innocence, but the Government must establish by the evidence, beyond a reasonable doubt, their guilt, or else they are entitled to an acquittal.

Now, you want to know, perhaps, what a reasonable doubt is. Well, a reasonable doubt is what the words imply—that is, a doubt for which you can give a reason, a substantial doubt, a doubt that grows up out of the evidence, or a doubt that arises from a lack of evidence sufficient to convince your minds that the fact has been established as charged. It is not a mere flimsy maybe or perhaps. It is not such a doubt that you might conjure up in any case, but it means a substantial, reasonable doubt.

Now, if it is probable that the defendants are not guilty, that would be a reasonable doubt; and if it is probable that they are innocent, that would be a reasonable doubt.

There is a reasonable doubt which compels an acquittal in every case, unless the evidence is so strong and cogent as to convince the jury that to a moral certainty the defendants are guilty.

In short, gentlemen of the jury, as sensible men I think you will understand that a reasonable doubt is a reasonable doubt. I cannot make it, I think, any plainer to you.

Now, the defendants had a right to testify for themselves, and the law will not permit a man to testify and then say in the next breath that his testimony is not to be believed, because that would be a vain and a foolish thing to say—that a man may testify and yet you must disregard his testimony.

You take the testimony of the defendants in this case and consider it like you do the other evidence in the case, and along with the other evidence, and in the light of all the evidence, and in the light of the fact that they are interested in your verdict in this case. When people make statements to us that they are interested in a personal way or in a financial way, why, ordinarily we weigh that more carefully, what they say, than if we knew they were not interested in what they were saying, not interested in our judgment or our conclusion as to the truth of what they say.

You take the same common sense rule that you practice every day in your practical affairs of life with you into the jury box, and that is why you are put there, because you are possessed supposedly of a large amount of experience and common sense and common knowledge, and that is the reason why jurors are selected, because they have common knowledge, common sense, and common experience, and that is what qualifies you as jurors, together with your good character and standing and your desire to do the right thing as good citizens in the jury box and out of the jury box.

Now, coming, gentlemen, to this case, I have dismissed from the case count 2 of the indictment. Of course, you very readily understand why I did it. There the charge was a misbranding of this barrel of

oil. There was no evidence, in my opinion, that the barrel itself was misbranded. The proof showed that the shipping tag which was in evidence was attached to it, and that it had on it the words "Marmarelli Brothers and Katramados, importers of olive oil, black olives, cheese, figs, and all groceries."

Mr. WOLFF. That is, "Marmarelli Brothers and Katramados, pure olive oil" on the head, and a quite small figure on the barrel, [and] "Marmarelli Brothers and Katramados, pure olive oil" on a small slip, a small head of another barrel. In the middle of the picture on the back, and under [were] those words "Italian, Greek, and Oriental products, 63 Thompson Street, New York."

The COURT. Evidently it was an ordinary shipping tag, with an eyelet of about one inch to it, and that was a product made by hand, or, as in this case, it can be attached to the articles shipped by putting a tack in each corner, as the proof in this case showed, and as the original tag showed, and it was tacked with four tacks to the barrel.

Now, that was not a misbranding in the eyes of the law, and therefore this second count charging the misbranding of it, which is wrong and which is a violation of the law, to misbrand an article and to ship it in interstate commerce, that is a violation of the law, and I did not think that that charge was sustained by the evidence.

Now, there is evidence, in my opinion, in the case which authorized me to submit to you the first count of this information.

This count, of course, will be before you, and you will read it for yourselves, "which said article", it goes on to say, "article of food especially as aforesaid was then and there adulterated, in that a substance, to wit, cottonseed oil, had been mixed and packed with the article so as to lower and reduce its quality and strength, and the said article was further adulterated in that a substance, to wit, cottonseed oil, had been substituted for olive oil, which action purported to be against the peace of the United States and their dignity and contrary to the form of the statute", and so forth.

So you see that charges the defendants with having shipped in interstate commerce an adulterated article.

Now, of course, at once you see that there are involved in this charge several elements. First, the element of adulteration of the article shipped. Now, that is for you to determine. Was this barrel of so-called olive oil adulterated by the addition of cottonseed oil?

Now, it may be that cottonseed oil, and I think it is, is just as wholesome as olive oil, but it is, nevertheless, a violation of the law to mix cottonseed oil with olive oil, when the stuff shipped purports to be pure olive oil.

The law is designed to protect the public against that sort of fraud, and it is a fraud to mix cottonseed oil with olive oil and to ship it as pure olive oil.

Now, this barrel of so-called olive oil with the bill of lading, and which they shipped out according to the evidence in this case shows they shipped it and sold it as pure olive oil, was it adulterated with the addition of, say, 40 percent of oil or any other material amount of cottonseed oil, by putting that, by mixing it with the olive oil in the barrel?

Even if that be so, these defendants can not be convicted unless they had to do with the mixing of the cottonseed oil with the olive oil,

or they knew or had good reason to believe that it had cottonseed oil in it, and with that guilty knowledge that they shipped it and sold it as pure olive oil.

So you see that it is essential, before you can convict the defendants in this case, for you to find beyond a reasonable doubt that the oil was adulterated by the addition of cottonseed oil as charged, and then you must go further and find beyond a reasonable doubt that the defendants did the adulterating or knew that it was adulterated when they sold it and shipped it as pure olive oil.

Now, if the evidence falls short of either one of these things, of convincing you of either one of these facts beyond a reasonable doubt, why, the defendants are entitled to an acquittal.

Now, as to the adulteration of this oil, I express the opinion, which is not binding upon you, that the oil was adulterated by the addition to the olive oil in the barrel, of cottonseed oil.

I think these Government experts and others, the expert from Massachusetts, I think their evidence is sufficient to warrant the conclusion that it was adulterated, but if that be proven beyond a reasonable doubt it is not sufficient to convict these defendants unless the evidence is clear and shows, as I have attempted to say, that they either adulterated it themselves or knew it was adulterated or had good reason to believe it was adulterated when they sold it and shipped it in interstate commerce.

If the oil was adulterated after it passed out of their possession, after it had been received up in Massachusetts, they could not be convicted; or if when they shipped it they had no guilty knowledge, and if there is nothing to charge them with the knowledge or belief that it was adulterated, they could not be convicted.

The evidence must be convincing to a moral certainty on those propositions or they can not be convicted, although you may find that the oil was adulterated at some time, somewhere.

Now, if you believe from all the evidence in this case beyond a reasonable doubt that these defendants are guilty as charged in the first count of this indictment, a part of which I read to you, and you will read it entirely, why, you will find the defendants guilty under that first count, but if, however, under the rules that I have given you and in the light of this evidence all fairly considered, you are not convinced beyond a reasonable doubt or to a moral certainty that their guilt has been shown, to wit, that the article was adulterated with cottonseed, and that they either did it themselves or knew it was done when they shipped it, and that it was not done by somebody else after it got to Massachusetts, and that they knew that, or had reason to know it, that it was adulterated, if they had all that guilty knowledge why, then they could be convicted, but unless they did have that guilty knowledge they can not be convicted.

No man can be convicted of a crime unless he knowingly—as a rule—unless he knowingly and intentionally violated the law. There must be the criminal intent. There must be the guilty knowledge somewhere in most crimes, and I think in a case like this there must be the guilty knowledge, the criminal intent, shown.

Now, the evidence, if it falls short of convincing you of that to a moral certainty, they are entitled to an acquittal. But if, on the other hand, after thoroughly considering all the evidence and in the light of all the facts and circumstances, you are convinced that they

shipped adulterated oil, knowingly and intentionally shipped the oil as pure olive oil, adulterated with cotton-seed oil, if the evidence convinces you of that to moral certainty, then you should convict them, but if there is a reasonable doubt on that proposition, they should be acquitted.

Now, do you want all these charges that you wrote?

Mr. ROMANO. I think Your Honor has covered most of them, and I shall withdraw them.

The COURT. What?

Mr. ROMANO. I withdraw them. I think Your Honor has covered most of the charges.

Mr. WOLFF. I will ask Your Honor to change a portion of your charge in a small respect.

The COURT. Yes.

Mr. WOLFF. The statute in this case nowhere requires——

The COURT. Let me see the statute. What is it? Let me see it. Go ahead. I do not mean to interrupt you.

Mr. WOLFF. The statute in this case nowhere requires that the crime shall have been committed willfully or knowingly. By that meaning to infer that the mere fact that a person transports in interstate commerce adulterated food—the crime has been committed because it is his duty to protect the public and to examine whether or not that food has been adulterated, and I will stand responsible and ask Your Honor to charge to that effect.

The COURT. I do not think there is any difference—any substantial difference—and yet there may be, in my view of the law from yours.

What I meant to say, gentlemen of the jury, and I now tell you as being a part of the law that I gave you in the consideration of this case, is that the general law—under all general law these men, before they can be convicted, must first have shipped in interstate commerce an adulterated article as charged in the indictment.

Now, that must be first shown, and then I think the law requires that they must have known that it was adulterated or they must have had reason to believe that it was adulterated.

I do not think that the law contemplates that a man was violating the law when he had no intention whatever to violate the law. That would be a very hard law, and I do not altogether agree with that view. I think there must be an intention to violate the law somewhere.

Mr. WOLFF. That is exactly where the decisions disagreed. That was my opinion until about a week ago; but the mere effect of my request to change was this, that this law confers upon the dealer a duty to investigate, to learn the substance and quality of what he ships.

The COURT. And to know that it is absolutely pure when he shipped it?

Mr. WOLFF. Yes, sir; that is the purport.

The COURT. I think, if the jury has any reasonable doubt on that proposition, I will put it that way, a reasonable doubt on that proposition, that they could give the defendants the benefit of it, but I am not going to say any more than that. I am not going to say any more to them. I think you can take this case and return your verdict, gentlemen.

UNITED STATES v. McILVAINE BROS.

(District Court, E.D. Pennsylvania, June 20, 1924)

N.J. No. 12919

Information alleging violation of section 2 of the Food and Drugs Act. Trial before the court. Judgment of guilty.

The United States attorney filed an information against McIlvaine Bros., a corporation, Philadelphia, Pa., alleging shipment by said company, from the State of Pennsylvania into the State of New York, of quantities of an article labeled in part "Powdered Colocynth Apple", which was adulterated and misbranded, in violation of the Food and Drugs Act.

It was alleged in the information that the article was adulterated for the reason that it was sold under a name recognized in the United States Pharmacopœia, and differed from the standard of strength, quality, and purity as determined by the test laid down in said Pharmacopœia, in that it contained 25 percent of seeds, and upon extraction with purified petroleum benzine yielded 11.39 percent of fixed oil, whereas said Pharmacopœia provided that colocynth apple should contain not more than 5 percent of seeds, and upon extraction with purified petroleum benzine should yield not more than 2 percent of fixed oil, and the standard of the strength, quality, and purity was not declared on the container thereof.

It was alleged that the article was misbranded for the reason that the statement, "Colocynth Apple", borne on the label attached to the package, was false and misleading in that it represented that the article consisted wholly of colocynth apple, to wit, a product that contained not more than 5 percent of seeds and yielded not more that 2 percent of fixed oil, whereas, in truth and in fact, it did not so consist but did consist of a product which contained 25 percent of seeds and yielded 11.39 percent of fixed oil. Misbranding was alleged for the further reason that the article was an imitation of colocynth apple and was offered for sale under the distinctive name of another article.

The case having come on for trial before the court, the following opinion was delivered by the court:

DICKINSON, *District Judge.* A statement of the cause of action and of the defense out of which the question to be decided arises may begin with the act of Congress directed against adulterations and misbranding of drugs. There is a product known to the trade as powdered colocynth. This has recognition in the United State Pharmacopœia and to it is applied a pharmacopœial standard of strength, quality, and purity. As the trade name indicates, this product is sold to druggists in a powdered form. What may be called the raw product goes to the manufacturer in a form which gives it, because of this form, the name of apple, and makes it known to the trade as "colocynth apples." In the raw product form these apples contain seeds. If these apple seeds and all are reduced to powder it will contain about 25 percent of seed. In the standard powdered

colocynth the percentage of seed ingredient should not exceed 5 percent. The defendants sold the product of which complaint is made, which was branded and invoiced as "powdered colocynth apple." The seed ingredient exceeded the 5 percent limit and reached approximately 25 percent. If this had been branded and sold as powdered colocynth, a finding of misbranding and adulteration would not be opposed. The question raised is whether the addition of the word apple relieves the defendants of the charge of misbranding and of adulteration. The real test is to be found in the effects and consequences. To the general public, such a branding without a doubt would be misleading, and from the same viewpoint would be an adulteration because the significance of the addition of the word apple would be lost upon them. Inasmuch, however, as the dealings of the defendants are with the trade, the purchasers would be expected and presumed to know what difference in the product the difference in the label indicated. An administrative ruling would call for the decision that there was a misbranding because anything should be condemned which might mislead. The defendants themselves accept this view and have changed the descriptive branding so as to make the difference between "powdered colocynth" and "powdered colocynth apple" clear.

The question before us is the narrower question of whether there should be a judical determination that the defendants have incurred the penalty of the act. In view of the fact that the defendants have changed the markings of the product so as to make it clear that there is no pretense that it is the powdered colocynth described in the United States Pharmacopœia, and that it complies with the standard of quality officially established for that product but is something different therefrom, the present ruling is reduced to the more or less formal one of whether the original branding adopted by the defendants was a violation of the statute. The result of most importance is that manufacturers should be enabled to know definitely what is and what is not a compliance with the statute. An administrative ruling, if followed by a manufacturer, protects him from further criticism but does not necessarily give him the protection to which he is entitled, against his trade rivals making use of the branding which he has voluntarily abandoned. Nothing short of a judicial ruling will do this. This defendant thus becomes as much concerned with a ruling condemning the branding first adopted as are those who are concerned with the administration and enforcement of the act. Fortunately, the Supreme Court of the United States in the apple cider vinegar case (265 U.S. 439) has charted the course to be followed. The general rule is that the act of Congress should be so read as to further the accomplishment of its purposes, and that not only any branding which is misleading or liable to mislead but also any which is ambiguous should be visited with the condemnation of the act.

Following the course thus indicated, we encounter the fact finding now made that the branding first given this product has the vice of ambiguity, in that, although it is not expressly stated that the product is what is known to the trade as powdered colocynth and it is stated that it is powdered colocynth apple, yet it is none the less true that the

difference in the product is not so stated as to command attention to the fact that there is a difference but is so stated that the difference may be overlooked and the purchaser be buying one product with the thought in his mind that he is buying another.

As we interpret the spirit and true meaning of the ruling cited, it is that a branding which is misleading because of its ambiguity is as much within the inhibition of the statute as if it was misleading in statement.

This leads to a finding in favor of the plaintiff and against the defendants, with costs. Following the usual rule no formal judgment or decree is now entered, but the parties have leave to submit a form of decree or judgment in accordance with this opinion.

UNITED STATES v. THE MERCHANTS BISCUIT CO.

(District Court, D. Colorado, Oct. 25, 1924)

Information alleging violation of the Food and Drugs Act. On demurrer to information. Overruled.

SYMES, *District Judge*. The demurrer to this information attacks the constitutionality of the third section of the Pure Food and Drugs Act, Comp. Stats., section 8724, and a very interesting argument is made in support of the demurrer. I do not think that *U.S.* v. *Cohen Grocery Co.*, 255 U.S. 81, and similar cases construing the food control act, otherwise known as the Lever Act, are in point. That statute clearly did not fix an ascertainable standard of guilt that in any way informed a defendant accused of violating the act of the charge against him.

The act in question here, however, is very specific that the weight and measure, or numerical count must be plainly stated on the package, in so many words. There can be no doubt as to what the producer or manufacturer must do under that provision, and it is not made uncertain because a "reasonable variation" shall be permitted. That does not mean that persons subject to the act do not have to be accurate in their representations, and that they do not have to ascertain and affix the weight, measure, or numerical count at the time they put up the package, etc. It does mean, that if, due to causes over which they have no control an unavoidable variation occurs after the goods leave their possession, then the law is not violated if the variation is a reasonable one.

That part of the section which is attacked, therefore imports common sense or the rule of reason into the act, and does not require the impossible. But for this provision we might be compelled to hold it unconstitutional under the doctrine of *Burns Baking Co.* v. *Bryan*, 264 U.S. 504, as imposing an intolerable burden, or impossible requirement.

The demurrer is overruled.

GOODWIN ET AL. v. UNITED STATES

(Circuit Court of Appeals, Sixth Circuit, Nov. 5, 1924)

2 Fed. (2d) 200; N.J. No. 12844

Appeal from decree of condemnation entered in the District Court for the Southern District of Ohio. Judgment affirmed.[27]

Before DENISON and DONAHUE, Circuit Judges, and SATER, District Judge.

DONAHUE, *Circuit Judge*. The Food and Drugs Act of 1906 and the amendment of 1912 do not confer and do not purport to confer admiralty jurisdiction upon the United States District Courts, in proceedings to condemn property seized under the provisions of that act and amendment thereto. The provision that a libel shall be filed and the proceedings shall conform as near as may be to the proceedings in admiralty, relate only to procedure and not to jurisdiction. (*443 Cans of Frozen Egg Product* v. *United States*, 226 U.S. 172, and cases there cited.)

This prosecution was based solely on the amendment of 1912 to section 8. The libel quoted from the label a long list of ailments for which the water was said to be beneficial with "healing powers" and a "reliable remedy." It then denied that the water "is capable of producing the therapeutic effects claimed in the statements upon and in said cartons as hereinbefore set forth."

This does not fail to state a case under the statute, and did not make the libel subject to demurrer or motion to quash. It would be sustained by evidence sufficiently showing the false and fraudulent character of any one of the various claims recited. If defendant needed a better specification of the particulars upon which the Government would rely, if it did not rely upon all the statements, a motion for a bill of particulars would doubtless have been granted or an amendment of the libel permitted.

The record in this case does not present the question whether mineral spring water as it comes from the earth is or is not a drug, for the reason that the Crab Orchard concentrated mineral water is not transported and marketed in its original condition. While it appears that the constituent drug elements are not completely extracted therefrom and transported and sold without the admixture of other elements, nevertheless the processes of separation are carried to such an extent that the water can no longer be used as a beverage, but only in small quantities or doses, as a medicine. For this reason Crab Orchard concentrated mineral water can not be classified as "food" but, on the contrary, comes fairly within the meaning of "drug" as used in the Pure Food Act and amendments thereto.

Upon the trial of the issue of fact joined by the libel, charging the misbranding of mineral water, and the answer of the intervenor, expert evidence may be properly admitted. If it appears from the testimony of a witness upon preliminary examination that he is

---

[27] Affirming *United States* v. *22 Bottles of Crab Orchard Concentrated Mineral Water*, p. 1055, *ante*. See also *Goodwin et al.* v. *United States*, p. 1107, *ante*.

learned in the science of chemistry or has been regularly and legally admitted to the practice of medicine, that he has knowledge of the drug elements contained in the article transported in interstate commerce and their efficacy or lack of efficacy as curative agents, used either separately or in combination in the treatment of the diseases specified on the label, his opinion on that subject is competent evidence, regardless of whether he has had actual experience or observation of the effect of the use of such drugs in the exact form in which they are transported in interstate commerce. The weight of his evidence is a question for the jury.

This court has no authority to determine the weight of the evidence or reverse the judgment for the reason that the verdict is against the weight of the evidence where the verdict of the jury is sustained by substantial evidence. (R.S. sec. 1011; Comp. Stat. sec. 1672); *Bullock* v. *United States*, 289 Fed. 29–32; *Atlantic Ice & Coal Co.* v. *Van*, 276 Fed. 646.)

The Government having charged misbranding in general terms and no motion being made to require it to file a bill of particulars, the general verdict must be sustained if there is substantial evidence that any one of the statements made on the label is false or fraudulent, but the verdict and judgment relates to and affects only the particular label on the bottles seized in interstate commerce. This general verdict is sustained by substantial evidence.

For the reasons stated, the judgment of the District Court is affirmed.

UNITED STATES v. 243 CASES OF CANNED SALMON

(District Court, E.D. Texas, Jan. 5, 1925)

N.J. No. 12956

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

Estes, *District Judge*. Gentlemen of the jury: This case, a rather unusual proceeding, has been instituted under the provisions of a Federal statute generally known as the Pure Food and Drugs Act. The act prohibits the introduction into any State or Territory, from any other State or Territory, of any article of food which is adulterated. According to the provisions of the act, food is to be considered adulterated "if it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance." It contemplates that the Secretaries of the Treasury, of Agriculture, of Commerce, and of Labor shall make uniform rules and regulations for carrying out the provisions of it, but such rules, so far as I know, have not yet been made. So the enforcement of the law, under conditions like those obtaining here, involves more or less of an original undertaking.

The evidence, as regards material matters, is uncontroverted. Both parties concede that certain of the cans among the samples taken out of the cases shipped from the State of Washington to Paris, in this State, contained putrid and tainted fish. The samples were gotten

on four different occasions, three on behalf of the Government and one on behalf of the claimant, by taking 48 cans from the 109 cases of Sambo brand chum salmon and 48 cans from the 134 cases of Snowshoe brand salmon. The analyses or tests of these samples disclosed a percentage of putrid or tainted fish, varying as the opinions of the witnesses varied.

Now, the question for you to determine from the production of these samples, taking into consideration the number of them and what the analyses of them disclosed—all the testimony, both for the Government and the claimant, on that point—is whether you find or feel capable of finding that the whole product is adulterated. To illustrate, an examination was made of a shipment of oysters in which some defective oysters were found in every can of the shipment. In that state of affairs, the jury might have no difficulty in determining that the entire shipment was in a state of decomposition or adulterated. On the other hand, if only 2 or 3 cans in a large shipment of oysters were found to contain oysters in a state of decay, there might be some doubt in your minds as to whether the entire shipment was thus affected.

You are therefore to determine, from a preponderance of the evidence, whether this entire shipment of fish contained decomposed or putrid animal matter to the extent that it should be condemned. You should bear in mind, when determining that point, that the law requires nothing impossible of a shipper. The canning industry in this country is one of our largest and most outstanding enterprises. I think there was some testimony that it is impracticable to prevent a fish in a state of decomposition from now and then getting into the cannery and being put into the cans. The theory is that this cannot be avoided. On the other hand, there is testimony that the canneries can be so managed, and the fish so handled and treated, as to prevent decaying fish from being put into the cans. The test to determine that is ordinary care.

If you find and believe, from a preponderance of the evidence, that the parties who canned these fish exercised ordinary care in the handling of their products and found it impracticable to avoid a putrid fish from being canned now and then, and that the percentage of decayed fish found in this shipment represents no more than is inevitable in the canning process, then the claimant would not be responsible here and this shipment would not be condemned, even though the samples disclosed that some of the cans contained putrid or decomposed matter.

So, in determining whether this shipment can properly be condemned, you should take the question of ordinary care into consideration. I, therefore, charge and instruct you that if you find and believe, from a preponderance of the testimony, that these cases of fish—that is, the 109 cases of Sambo brand chum salmon and 134 cases of Snowshoe brand salmon—consisted in whole or in part of decomposed or putrid animal substance, it will be your duty, unless you find for the claimant under the instruction I shall presently give you, to return a verdict in favor of the Government. If, from the samples procured, you do not find that the proof is sufficient to convince you that a percentage of adulteration existed throughout this shipment, or if you find that no more adulteration existed than was inevitable in canning fish when ordinary and proper care is exercised, your verdict should be for the claimant.

UNITED STATES v. 2,205 CASES OF CANNED SALMON

(District Court, W.D. Texas, Jan. 29, 1925)

N.J. No. 13605

Libels under section 10 of the Food and Drugs Act. Jury trial. Verdicts in favor of the United States.

WEST, *District Judge.* Gentlemen of the jury: The issues of fact in six separate suits are submitted to you for determination. The parties have agreed and the court has consented that this may be done. The evidence in general has relevancy to each and every suit. Direct evidence having application to each particular suit is also offered. The issues being practically alike, a single jury may try them, thereby securing six separate trials without calling as many juries.

The Government has seized six certain interstate shipments of canned salmon described in the six several suits, claiming adulteration, in that each shipment consisted in whole or in part of decomposed salmon. An added ground of seizure is alleged as to two of the shipments, claiming that each was misbranded.

Section 7, paragraph 6, of the Food and Drugs Act of 1906, provides:

> That for the purpose of this Act an article shall be deemed to be adulterated: * * * In the case of food: * * * Sixth. If it consists in whole or in part of a decomposed * * * animal substance.

Section 8 provides:

> That the term "misbranded", as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, * * * which shall be false or misleading in any particular.

And in the case of food, paragraph 2—

> If it be labeled or branded so as to deceive or mislead the purchaser.

Section 10 of the act provides that adulterated articles shall be excluded from interstate commerce and be subject to seizure by the Government through the district courts by process of libel for condemnation. It is conceded that the salmon was moving from Seattle, Wash., consigned to Texas points.

The Government as libelant in each of the suits stands as a plaintiff and seeks condemnation and destruction of each shipment. The claimants are owners or consignees, taking the attitude of defendants.

Responsive to the publication of notices of the Government's purpose, the various claimants named in each libel have intervened, asserting ownership of the several shipments seized in each suit, and deny in each suit that the salmon was adulterated or misbranded as charged by the Government and charge that no lawful grounds exist for the seizure, condemnation, or destruction of the property and say that each shipment should be delivered to the respective claimant.

The statute requires you to decide whether the salmon consisted in whole or in part of decomposed animal substance and, in two of the suits, whether those two particular shipments of salmon were misbranded.

The word "decomposed" as used in the statutes, applying its ordinary meaning, is a state of decomposition, and "decomposition"

means a condition of being decayed, putrid, or rotten. If, therefore, you find that the salmon in question was decomposed as defined, you should find for the Government, libelant, and against the claimants.

Section 7 of the act refers to the adulteration of the "article." Each shipment consists of hundreds of cases of salmon, each case containing 48 cans. Does the use of the word "article" in the statute have reference to a single package, such as a can, or does it refer to the separate case, or to the shipment as a whole? You are instructed that the word "article" as used does not refer to the single, separate can, or to the single or separate case, of salmon in each shipment, but refers to each lot or shipment seized under each of the several suits.

The letter of the statute forbids the transportation and sale in interstate commerce of an article of food which is decomposed. The words used are free and clear from ambiguity, and each has a common, ordinary, everyday, well-known meaning. It would, therefore, be improper for you to take into consideration any evidence which tends to show that the salmon is fit or unfit for food, or harmful to health. There is nothing in the statute itself which would make the state of healthfulness or the edibleness of the article relevant to your inquiry. Those considerations, if in your minds, must be disregarded. It makes no difference whether the salmon was fit for food and healthful or was not.

Decompostion begins where life ends, but that is not the sort of decomposition meant by the statute. The moment life commences, in a sense it begins to fade, and the moment that life ceases, in a sense decomposition begins, and increases by degrees to rottenness, decomposition, and decay. The witnesses both for the claimants and the libelant uniformly testify as to salmon that three well-defined degrees of decomposition exists after life has ceased. The first definite or least degree of decomposition was described as "stale", the second or next greater degree was called "tainted", and the third or last degree indicates total decompostion and was called "putrid." If you find and believe that the evidence in these suits has fixed such degrees or states of decomposition, you may consider them in arriving at your judgment as to whether the shipments of salmon were adulterated or not. That is to say, whether or not the salmon was "stale", "tainted", or "putrid", in whole or in part; and if you find that either degree of decomposition existed as shown by a preponderance of the evidence, then your verdict would be for the libelant.

The burden rests upon the Government, libelant, to establish to your satisfaction by a preponderance of evidence that each of the various lots of salmon seized is adulterated as herein defined. If, therefore, you believe that the greater weight or preponderance of the evidence does not satisfy you that the salmon was adulterated, in whole or in part, as defined herein, then the Government has failed to sustain the burden cast upon it, in which event you would find for the claimant or claimants, in the several separate suits submitted.

The statute declares that an article of food which consists in whole or in part of a decomposed animal substance may be condemned. The state of decomposition, in whole or in part, as applied to the various shipments of salmon involved in these suits, requires some elucidation; for instance, what part of the whole of each shipment of salmon is to guide the jury? To what extent would the whole of the

shipment be considered as partly decomposed? Would an infinitesimally small fraction of the whole of a shipment be within the meaning of the law as a "part", and thus require a finding against the claimants and in favor of libelant? On these questions the court instructs you that you will carefully consider the evidence of all the witnesses, both for the Government tending to establish a substantial degree of decomposition as applied to the whole of each shipment on the one hand, and all of the evidence introduced by the claimants in each suit tending to show that decomposition did not exist to any appreciable extent. It is your duty to reconcile conflicting statements of the witnesses, and likewise must you consider the evidence as a whole and thus arrive at a proper verdict in the light of all the evidence. The words of the statute "in whole or in part" should be given a reasonable and common sense application, having reference to the purpose of the act.

Therefore, if you should find that the adulteration or decomposition referred to extended to the whole shipment sought to be condemned in each suit, although you need not find that each and every can of salmon was so decomposed, nevertheless you should find, before warranting condemnation, that the decomposition extended to a substantial degree throughout the whole of each shipment. If such condition does exist you should find for the Government, libelant. If, on the other hand, you should find that decomposition extended to the entire shipment in each of the several suits, but that the degree of decomposition which extended throughout the whole of the shipment was in so small a proportionate degree to the whole as to be insignificant or inconsiderable, then you would find your verdict in favor of the claimant or claimants in the several suits where so small a state or degree of decomposition did so exist.

And again, if you should find that no adulteration and no decomposition existed in any one or in all of the several shipments in the several suits being considered by you, you would find in favor of such claimant, or all of the claimants.

You are instructed as to the allegations and charges of misbranding as set forth in cases nos. 1032 and 1055: The Government, libelant, claims in these two cases that condemnation has been incurred because of the adulteration by decomposition of the canned salmon, and it should also be declared forfeited because of being misbranded. The misbranding in case no. 1032 is charged to consist of a false and misleading statement and design appearing on the labels of the cans containing the food product, having reference to a picture of a salmon with the words on the picture "Select Pink" and words underneath "Alaska Salmon"; that the picture and the words were intended to convey the false representations that the can contained select pink Alaska salmon but the truth is that the contents consisted of a poor pack of pink salmon of inferior and not of a select grade; that it thus was calculated to deceive prospective purchasers. The label in question was submitted to you in evidence. If you believe the greater weight of the evidence is that the cans were so labeled, bearing the picture and statements set out, and that the words and the picture were false and misleading, and that the contents of the cans was not select pink salmon, but was of a poor and inferior grade and not selected, and was thus calculated to deceive prospective purchasers,

then you would be warranted in finding for the Government, libelant. But if, on the other hand, you are not so satisfied and do not find that the cans were so labeled, or that the words and the picture in evidence are not false or misleading, and that the contents of the cans was of select pink Alaska salmon and of a select grade, then you would be authorized to find the words and the representations were not misleading and calculated to deceive as charged, in which event then your verdict would be for the claimant.

The misbranding in case no. 1055 consists of a statement appearing on the labels of the cans of that shipment as follows: "15½ Oz. Net Fresh Salmon Cooked in Can After Sealing," charged in the libel to be false, in that it represented the contents as fresh salmon, the fact being that it was not fresh in the sense as used in the canning trade, wherefore the representation was misleading and calculated to deceive prospective purchasers. The label was submitted to you in evidence; if you believe that the greater weight of the evidence is that the cans were so labeled, bearing the statement set out, and that the representation was to the effect that the salmon canned was fresh salmon, when in fact it was not fresh in the sense the term was used in the canning trade, and that the statement was false or misleading and calculated to deceive prospective purchasers, then you would be warranted in finding for the Government, libelant. But if, on the other hand, you are not so satisfied and do not find from the evidence that the cans were so labeled or that the statement in evidence was not a representation that the salmon was canned while fresh and the contents was fresh in the sense used in the canning trade, and was not false or misleading in the particulars set forth, then your verdict will be for the claimant.

As stated in the beginning, you are to return six separate verdicts representing your finding in each one of the several suits submitted.

The following authorities were consulted and support the instructions given:

United States v. *200 Cases Tomato Catsup* (D.C.), 211 Fed. 780; *United States* v. *Boeckel Co. et al.* (C.C.A.), 221 Fed. 885; *United States* v. *496 Boxes Oranges* (D.C.), 249 Fed. 505; *A. O. Andersen & Co.* v. *United States* (C.C.A.), 284 Fed. 542; *United States* v. *200 Cases Salmon* (D.C.), 289 Fed. 157; *Wood Mfg. Co.* v. *United States* (C.C.A.), 292 Fed. 133.

UNITED STATES v. 2,995 CASES OF CANNED SALMON

(District Court, W.D. Washington, Mar. 13, 1925)

N.J. No. 12535

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

The United States attorney filed a libel for seizure and condemnation of 2,995 cases of canned salmon, alleging that the article had been

shipped and transported from the Territory of Alaska into the State of Washington and remained in the original unbroken packages, and that it was adulterated in that it consisted wholly or in part of a filthy, decomposed, and putrid animal substance, in violation of the Food and Drugs Act.

The case having come on for trial before the court and a jury, after the submission of evidence and arguments by counsel, the court delivered the following charge to the jury.

CUSHMAN, *District Judge.* Gentlemen of the jury: You have heard the evidence in the case, and the arguments. It is the duty of the court now to instruct you regarding the law. The task devolving upon the court has been much lightened by the thorough and exhaustive manner in which the case has been tried and has been argued. You will take out the pleadings in the case with you, when you go to your jury room. These pleadings consist of the libel filed by the United States attorney, and the answer filed by the claimant. You understand this suit is against this particular parcel of salmon. The client of Mr. McCord and Mr. Shackelford interposes a claim to it, and, claiming to be the owner, is allowed to defend the salmon; but what you are trying in this case is this parcel of salmon.

The libel filed by the United States attorney alleges that this salmon was shipped in interstate commerce from Alaska to the State of Washington; alleges that it is adulterated; alleges that it was adulterated at the time that it was shipped in interstate commerce; and prays its condemnation.

The answer of the claimant admits that it was shipped from Alaska to the State of Washington; denies that it was adulterated.

Your verdict in this case will not be "guilty" unless a fair preponderance of the evidence has shown that it was adulterated within the meaning of this law.

"Adulteration" or "adulterated" is about the only word that occurs to me in this law that requires a definition at the hands of the court. The other words used in the statute are words of ordinary meaning and are used in their ordinary sense, but this statute defines an adulterated article of food about as follows, that is, an article of food is adulterated when it consists, in whole or in part, of filthy, decomposed, or putrid animal substance, making it unfit for human food; and before your verdict can be "guilty" in this case, or before it should be "guilty" in this case, you will have to find that there was a fair preponderance of the evidence showing that it was either filthy, decomposed, or putrid to an extent that rendered it unfit for human food.

It may be that decomposition begins as soon as life ends, but a food product, this canned fish product, is not decomposed within the meaning of this law at that early stage. "Decomposed" in this law does not mean the beginning of decomposition; it means the state of decomposition that renders the article of food unfit for human food. "Decomposed" within this law does not mean that it shall have reached such an advanced state of decomposition that it is resolved to its elements, that it has ceased really to be flesh. Regarding this expression "unfit for food," the court does not undertake to enumerate all of the things that you might take into account in determining whether an article is fit or unfit for food.

The evidence in this case has taken a wide range. You are not to understand from that fact that you are trying either the packers or

the Bureau of Chemistry; you are trying this particular parcel of fish to determine whether it is filthy, decomposed, or putrid to an extent rendering it unfit for food. This evidence regarding the manner in which the fish was packed, the conditions under which it was packed, and much of the other testimony in the case was to enable you to determine whether it was reasonably probable that it was a fit food product if it was put up in the manner described. In other parts of the testimony, witnesses have been examined and cross-examined about their experience and what they had done and what they had not done. Now, much of that testimony went into the case so that you might determine the value of their opinions from their experience and their interest, if any, in the case.

Now, coming back again to the question of the fitness or unfitness of this fish for food: in order to be unfit for food, within the meaning of this law, it would not be sufficient if you found some one person with an appetite so pampered and cloyed with delicacies as to become so fastidious that he would turn up his nose at a can of salmon; that would not be sufficient to condemn it. Neither would it be sufficient to sanction and warrant its being carried in interstate commerce, if you found somebody so hungry that he would eat it. "Unfit for food" here in this statute means reasonably unfit for food.

The evidence in the case regarding the fact, if it be a fact, that salmon may be stale, tainted, or decomposed without being an injurious food, you will understand that the fact that it is not injurious does not make it fit for food, if it is so decomposed as to be unfit for food. The fact regarding whether it would injure the person eating it or not was admitted in the case, as you can understand that if an article of food in a certain condition was deadly, as you have heard of mushrooms—I do not undertake to say that they are deadly—but if an article of food was deadly and you could not determine, before eating it, whether it was deadly or not, you would understand that such an article of food would be unfit for human food on a certain percentage of the impurity or conditions that rendered it deadly, when another article of food that was perfectly harmless and could be easily detected would not be unfit for human food, measured by those standards alone. It is a matter of common knowledge that in determining whether an article is fit for food or appropriate for food, that you take into account whether it is harmful or not, you take into account whether it has food value, whether it satisfies your hunger, whether it builds up the wasted tissues that are exhausted because of a lack of food, and to a certain extent you take into account whether it pleases the taste. Now, what value you are going to place upon these different things that will be taken into account in measuring the fitness of this or any article of food, is for you to determine, not the court.

I believe I have instructed you that before you could find a verdict of "guilty", that you must be able to find, from a fair preponderance of the evidence, that this salmon was either filthy, decomposed, or putrid to an extent rendering it unfit for human food. Now, where a parcel of food has been tested, where the tests that have been made do not extend to the entire parcel, it is nevertheless necessary that the preponderance of the evidence should have shown that the adulteration extends to the whole product sought to be condemned before

your verdict would be "guilty." It might be that a small percentage of adulteration in a small percentage of samples taken from such a product would not amount to a fair preponderance of the evidence, where an adulteration of a large percentage of the product would establish that fact.

The thing that is charged is that this was an adulterated article of food when it was shipped in interstate commerce. That is necessary. But there has been no particular contention made here, either under the evidence or the arguments, that the fish is in any different condition now, or at the time it was examined here in Seattle, than it was when it was shipped.

You are in this case, as in every case where questions of fact are tried to the jury, the sole and exclusive judges of every question of fact in the case and the weight of the evidence and the credibility of the witnesses. In weighing the evidence and measuring the credit of the witnesses who have appeared before you and testified, the law does not undertake to point out all of the things that you may take into question in measuring such credit of such witnesses. You are authorized to consider any and everything that as men of experience you have found to be of value in measuring where the truth lies, from human testimony and human transactions. The law does say that you should observe and weigh the appearance and conduct and demeanor of the witnesses who have come before you and testified; whether from their manner of giving their testimony it created a belief in your minds that they were doing their utmost to tell you the exact truth as they understood it, or saw it; whether some of them may have been reluctant and evasive and kept trying to get away from the question, creating the belief in your minds that they were trying to keep from telling you the straight of it, or whether other witnesses may have appeared to you to be willing, trying repeatedly to get something into the case that nobody had asked for—what the law calls a "swift" witness; also take into account the situation in which the witness is placed, as enabling the witness to know the exact facts, as one witness, by reason of his experience and by reason of his situation in regard to the transactions about which he is testifying, might be in a much better position to tell the exact truth than another one who was just as much inclined to tell you the truth as the first; also take into account the reasonableness and probability of the testimony of each witness, in view of the circumstances, whether it appears to be reasonable and probable or whether it appears unreasonable and unlikely; take into account the interest that any witness may have been shown to have in the case, an interest either as shown by the manner in which the witness gave his testimony or as shown by the relation of the witness to the case and the matters therein involved.

The court has, in the course of the instructions, used the expression "preponderance of the evidence." Preponderance of the evidence is the greater weight of the evidence. That evidence preponderates which so appeals to your experience and reason and intelligence as to create and induce a belief in your minds, and, if there is a dispute in the evidence, that evidence preponderates which is so strong in these particulars as to create and induce a belief in your minds, in spite of what is opposed to it in the way of evidence or assaults that have been made upon it in the way of argument.

There was something said, I believe, in argument, regarding the care taken in putting up this fish. For fear that you may not yet understand the rule of law on that matter: if this fish is decomposed to the extent that it is not reasonably fit for food and the fair preponderance of the evidence shows that fact, the verdict should be "guilty", no matter how it came about—its decomposition. If it came about in spite of the care taken in putting it up, or if some malicious person brought it about, that does not make any difference. You are trying this article of food. If it is so decomposed as not to be reasonably fit for food, the verdict should be "guilty." If a fair preponderance of the evidence has not shown that fact, your verdict should be "not guilty."

Is there anything further, gentlemen?

Mr. McCord. We except to that portion of Your Honor's instructions as to the preponderance of the testimony. The burden of proof is on the Government to show, by a fair preponderance of the testimony, Your Honor stated, that the allegations of the libel were supported. This is an action in the nature of forfeiture of property, and I think the instruction should have been that the allegations of the libel must be established, not only by a fair preponderance of the evidence, but that the evidence should be clear and convincing.

The Court. Exception allowed.

Mr. McCord. I also except to Your Honor's failure and refusal to give the first instruction requested by the claimant.

The Court. Exception allowed.

Mr. McCord. The claimant also excepts to Your Honor's refusal to give the second instruction requested.

The Court. Exception allowed.

Mr. McCord. The claimant excepts to Your Honor's refusal to give the third instruction requested by the claimant.

The Court. Exception allowed.

Mr. McCord. The claimant excepts to Your Honor's refusal to give the fourth instruction requested by the claimant.

The Court. Exception allowed.

Mr. McCord. The claimant excepts to the action of the court in refusing to give the fifth instruction requested by the claimant.

The Court. Exception allowed.

Mr. McCord. The claimant excepts to the refusal of the court to give the sixth instruction requested by the claimant.

The Court. Allowed.

Mr. McCord. The claimant excepts to the action of the court in refusing to give the seventh instruction requested by the claimant.

The Court. Allowed.

Mr. McCord. The claimant excepts to the refusal of the court to give the eighth instruction requested by the claimant.

The Court. Exception allowed.

Mr. McCord. The claimant excepts to the refusal of the court to give the ninth instruction requested by the claimant.

The Court. Exception allowed.

Mr. McCord. The claimant excepts to the action of the court in refusing to give the jury the tenth instruction requested by the claimant.

The Court. Exception allowed.

Mr. McCord. The claimant excepts to the action of the court in refusing to give the eleventh instruction requested by the claimant.

The Court. I will allow an exception. I think I covered that.

Mr. McCord. The claimant excepts to the action of the court in refusing to give the twelfth instruction requested.

The Court. I think that has been covered. You are allowed an exception however.

Mr. McCord. The claimant excepts to the failure of the court, in final instructions of the court, to give the thirteenth instruction requested by the claimant.

The Court. I will give that instruction, since something has been said about it in the course of the trial.

In your deliberations, you will not consider the question as to whether or not the salmon involved in this controversy can or cannot be reconditioned. The reconditioning of the salmon is not within the issues in this case.

Are there any exceptions?

Mr. Hill. If the court please, the Government excepts to the courts refusal to give the libelant's first requested instruction.

The Court. Exception allowed.

Mr. Hill. The libelant excepts to the courts refusal to give the second requested instruction.

The Court. Exception allowed.

Mr. Hill. The libelant excepts to Your Honor's refusal to give the libelant's third requested instruction.

The Court. Exception allowed.

Mr. Hill. The libelant excepts to Your Honor's refusal to give the libelant's fourth requested instruction.

The Court. Exception allowed.

Mr. Hill. The libelant excepts to Your Honor's refusal to give the libelant's fifth requested instruction.

The Court. Exception allowed.

Mr. Hill. And the libelant excepts to Your Honor's refusal to give the libelant's sixth requested instruction.

The. Court. Exception allowed.

Mr. Hill. The libelant further excepts to that portion of Your Honor's instructions in which it is stated that the issue is whether or not this salmon consists, in whole or in part, of filthy, decomposed, or putrid animal substance, and stating, in addition to that, "unfit for food."

The Court. "Making it."

Mr. Hill. Making it unfit for food.

The Court. Exception allowed.

Gentlemen, in the progress of the case, the court, as evidence came in, instructed you regarding the purpose for which it was admitted. Many of those instructions I have not repeated to you in the charge I have just given you. It is your duty to bear in mind the instructions the court gives you in the progress of the trial, as well as those that are given at the conclusion.

The form of verdict as prepared reads: "We, the jury in the above-entitled cause, find the respondent 2,995 Cases Canned Salmon Labeled in part 'Hypathia Brand Pink Salmon,' ——— guilty as charged in the libel of information filed herein." If you find this salmon guilty under the evidence and instructions you will write in

the blank the word "is." If you find the salmon not guilty, you will write the word "not" in there and have your foreman sign it.

Is a sealed verdict agreed to if the jury agree after 5 o'clock?

Mr. McCord. Yes.

Mr. Hill. That is satisfactory, Your Honor.

The Court. You understand, gentlemen, the method of returning a sealed verdict. If you agree before 5 o'clock, you will advise the bailiff of the fact that you have agreed and come into court with your verdict. If you agree after 5 o'clock, you will complete your verdict, seal it up, leave it with your foreman, and report here with your verdict at 10 o'clock tomorrow morning.

You may now retire.

UNITED STATES v. SOUTH HERO CREAMERY ASSOCIATION

(District Court, District of Vermont, Mar. 13, 1925)

N.J. No. 13251

Information in two counts alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty on one count, not guilty on one count.

The United States attorney filed an information against the South Hero Creamery Association, a corporation, South Hero, Vt., alleging shipment by said corporation, from the State of Vermont into the State of Massachusetts, of a quantity of butter which was adulterated and misbranded, in violation of the Food and Drugs Act. It was alleged in the information that the article was adulterated for the reason that a product deficient in butterfat had been substituted for butter which the article purported to be, and for the further reason that a product which consisted of less than 80 percent by weight of milk fat had been substituted for butter, a product which should contain not less than 80 percent by weight of milk fat, as prescribed by act of March 4, 1923, which the said article purported to be. It was alleged that the article was misbranded for the reason that it was in package form and the quantity of the contents was not plainly and conspicuously marked on the outside of the package.

The case having come on for trial before the court and jury, after the submission of evidence and arguments by counsel, the court delivered the following instructions to the jury.

Howe, *District Judge.* Gentlemen of the jury: There are just two questions of fact in this case for you to decide; one question of fact on each charge. There are two charges that the Government makes against the South Hero Creamery. First, they say that they shipped in interstate commerce some butter that didn't contain 80 percent of butterfat, that that shipment was made on the 23d day of June; and second, they say that they shipped this butter in interstate commerce without marking on the tubs the weight. It is an offense against the laws of the United States to ship in interstate commerce any butter that contains less than 80 percent of milk fat, or butterfat; those terms

we have been told mean the same thing, and it is equally an offense to ship food, and, among other things, butter, without marking the weight on the tubs, if it goes in tubs. Whatever the packages are [they] must have the weight marked on them. Those are the two questions of fact. You can find the creamery guilty of both of these offenses, you can find it not guilty of either offense, or you can find it guilty of one and not guilty of the other.

Now, this is a criminal case, and the same rules that I have given you here repeatedly apply to this case just as much as to any other criminal case. The creamery is presumed to be innocent, and that presumption is to be weighed in its favor as evidence in the case. If there are two theories in the case, each equally reasonable, it is your duty to adopt the theory leading to innocence, rather than the one leading to guilt. I think you have all been on several trials in which we have gone over this. Is there anyone on this panel who hasn't heard these rules? The reason is, gentlemen, that different lawyers come in, and they don't know how often you have heard these rules. It would be an error on the part of the court to submit a case to the jury without giving these rules. No unfavorable inference can be drawn against the creamery because it has been complained of and charged with this crime. Remember that. The reasonable doubt doctrine, you will remember that. The defendant cannot testify, because it is a corporation. It is an invisible person, so I won't need to say anything about the defendant's testimony. The butter maker has testified, and the inspector and the chemist and the professor. Now, the young man that makes the butter over there testified. You have heard some questions asked him about what he told down in Boston to the chief of the Agricultural Department. You weigh the testimony of all these witnesses and give them just such credit as you think they ought to have. It is for you to say whether you are satisfied that this lot of butter didn't have 80 percent of butterfat while it was in transit.

There is no offense committed here, gentlemen, unless you are satisfied beyond a reasonable doubt that when that butter was taken to the station over there, at the South Hero railroad station, and while it was on those cars to Boston, in transit, it must have contained less than 80 percent of butterfat. The evidence of the Government is that it didn't contain 80 percent, except one of the samples. The evidence of the young man that made it is that he tested it and it tested all right, 80 percent. He says he understood the law required him to put on weights. He understood that when he was before this man down in Boston.

You take the evidence in the case, gentlemen, and all the circumstances and all the inferences to be drawn from the evidence, and, if you are satisfied beyond a reasonable doubt, after giving the creamery the benefit of the presumption of innocence, if you are satisfied beyond a reasonable doubt that when this butter was delivered to the railroad station, and while it was in transit to Boston, it didn't contain 80 percent, you will find the defendant guilty under the first count. If you are not satisfied of those facts beyond a reasonable doubt you will find it not guilty. As to the second count, take into consideration all the evidence in the case. If you are satisfied beyond a reasonable doubt that the weight wasn't marked on these 36 tubs of butter, you will

find the creamery guilty under the second count. If you are not satisfied beyond a reasonable doubt that the tubs were not marked, you will find the defendant not guilty under the second count. You may take the case, gentlemen.

The jury then retired and after due deliberation returned a verdict of guilty on the adulteration charge and of not guilty on the misbranding charge.

UNITED STATES v. MONOTTI-LARIMER

(District Court, N.D. California, Mar. 18, 1925)

N.J. No. 13319

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

The United States attorney filed an information against Monotti-Larimer, a corporation, San Francisco, Calif., alleging shipment by said corporation, from the State of California to the Territory of Hawaii, of a quantity of butter which was misbranded, in violation of the Food and Drugs Act. It was alleged in the information that the article was misbranded for the reason that the statement, "Net Contents 1 Lb.", borne on the packages containing the article, was false and misleading, in that it represented that each of said packages contained 1 pound net of butter, and for the reason that the article was labeled so as to deceive and mislead the purchaser into the belief that each of said packages contained 1 pound net of butter, whereas each of said packages did not contain 1 pound net of butter but did contain a less quantity thereof. Misbranding was alleged for the further reason that it was in package form and the quantity of the contents was not plainly and conspicuously marked on the outside of the package.

The case having come on for trial before the court and jury, after the submission of evidence and arguments by counsel, the court delivered the following instruction to the jury.

ST. SURE, *District Judge.* Gentlemen of the jury: I will try and be as brief as possible in my instructions to you. You have sat upon juries here in several cases and you have heard me from time to time deliver instructions upon various matters of law which it is my duty to give to you. It may be that you are already familiar with most of the principles of law which govern in cases of this kind.

I have pointed out to you, I think, and it becomes my duty to do so again, that you are the exclusive judges of the facts. The court is to pass upon the law in the case and to give to you such rules of law as it deems proper for your guidance. You are to accept the law as given to you by the court. You must not decide this case upon any preconceived notions you may have of the law, or what you think the law should be. It is my duty, as I have said, to give you the law. It is my duty to pass upon questions of law that may arise during the trial of the case. Now, if I make a mistake in ruling upon the law during the trial of the case, or if I make a mistake in giving you in-

structions, those mistakes of mine may be corrected in another tribunal. If you make a mistake, however, in your verdict, by reason of the fact that you go off on some preconceived idea that you have of what the law should be or what it is, why, that mistake cannot be corrected. So you see it is quite important that you observe the rule that you judge only the facts of the case, and that you take the law from the court.

The information in this case, as you have heard, charges the defendant corporation with violating an act of Congress known as the Food and Drugs Act. Briefly, the defendant is charged in the first count with shipping and delivering for shipment a certain lot of butter which was misbranded. The second count charges that in violation of said act an article of food was shipped and delivered and misbranded by the defendant, in that the contents was not plainly and conspicuously marked on the outside of the package. In the information there is also a charge that this defendant has heretofore been convicted of a charge of violating this act.

As to the charges in the indictment or information it is the duty of the Government to prove each and every element of the charges against the defendant beyond and to the exclusion of a reasonable doubt. The fact that it appears from the evidence that the defendant has been heretofore convicted of a violation of this Food and Drugs Act should not be considered by you in determining the innocence or guilt of the defendant. You should bear in mind that the defendant here is charged with a violation of the act by shipment of butter from San Francisco to Honolulu, on February 5, 1924, which was underweight, and on that charge alone you are to determine the innocence or guilt of the defendant in this case. The indictment is a mere formal accusation against the defendant and is no evidence of its guilt.

The burden of proof rests, of course, upon the Government, and, as I have stated, the burden is upon the Government to prove to your satisfaction and beyond or to the exclusion of a reasonable doubt every material element in the case. The defendant is not required to prove his innocence. Every person is presumed to be innocent when charged with a crime. That presumption remains with the defendant throughout the entire trial of the case and goes with the defendant into the jury room with you and remains a part of the case until you arrive at your verdict finding that the defendant is guilty.

The plea of not guilty entered by the defendant in this case puts in issue every allegation of the information. You must not convict upon mere suspicion, no matter how great that suspicion may be in your minds. You must not convict upon mere conjecture, nor mere probability, but only upon the evidence and all of the evidence in the case, and you must find that that evidence makes the defendant guilty beyond and to the exclusion of a reasonable doubt.

Now, I have used the words "reasonable doubt" several times during my charge to you. It is difficult to define just exactly what reasonable doubt means. It is a substantial doubt, that is to say, it is something that is founded upon reason. And I may say to you, as an illustration, that it is a doubt which you are not permitted to base upon mere fancy or mere whim or conjecture or sympathy or because you may not approve of the law or something of that kind. It is something more substantial than that—a doubt which must satisfy a reasonable mind after a full comparison and consideration of all the

evidence; a substantial doubt arising from insufficiency of the evidence, not a mere possibility or probability of innocence.

If two inferences can be drawn from a given act or circumstance, or from a number of given acts or circumstances, one inference being that of guilt and the other that of innocence, it is your duty to draw the inference of innocence and not that of guilt. And I may say that the defendant is clothed with the presumption of good character.

Now, you are the exclusive judges of the evidence in the case, and you may judge the credibility of a witness by the manner in which he testifies, by his means of knowledge, by his interest in the case, taking into consideration any fact or circumstance that may throw any light upon the case, so long as that fact or circumstance has arisen during the trial of the case. You are to try this case upon the evidence adduced here in this court room at the trial, and not from any evidence you may have obtained on the outside or anywhere else.

If you find from all the evidence that the shipment of butter when it left its place of business was full weight and the shortage, if any, was due to the physical condition of the butter and beyond the control of the defendant, you should of course acquit the defendant. If you find from all of the evidence that the statement upon the packages of butter "Net contents One Pound" was not labeled so as to deceive and mislead the purchaser into the belief that each of said packages contained 1 pound net of the article but the shortage, if any, was the result of inaccuracy beyond the control of the defendant, you must acquit the defendant.

Now, your verdict should not be made or should not be based upon any single fact in this case, you must understand. You must arrive at your verdict upon a consideration of all of the facts in the case, all of the facts taken together by you and considered and weighed in a dispassionate manner, and you should bring to the trial of this case and to the consideration of the case the same common sense and good judgment that you use in every day affairs of your business.

Now, gentlemen of the jury, when you are in the jury room you will select one of your number as foreman. When you have agreed upon a verdict the foreman will sign the verdict, and you will be returned into court where you may deliver your verdict. Remember, of course, that your verdict must be unanimous. You may now retire.

UNITED STATES v. SWIFT & CO.

(District Court, District of Oregon, Mar. 25, 1925)

N.J. No. 13711

Information alleging violation of section 2 of the Food and Drugs Act. Demurrer to information sustained.

Bean, *District Judge*. This is a proceeding against the defendant for an alleged violation of the Pure Food and Drugs Act by shipping reworked butter from Portland to San Francisco, consigned to themselves. It is charged that the butter is adulterated, in that a product deficient in milk fat had been substituted in whole or in part, and that it is misbranded for the same reason. It is branded reworked butter, but it is charged that it was adulterated because it is deficient in milk

fat. There is no allegation in the bill as to the proportion of milk fat, or that it was the result of the introduction of any foreign substance.

The Pure Food Law does not define butter. It does define adulterating and misbranding. The adulteration of an article is where another substance has been mixed or packed with it so as to reduce or lower or injuriously affect its quality, or a foreign substance has been substituted in whole or in part, or a valuable constituent has been wholly or partially abstracted, or it has been mixed with coloring matter whereby damage or impurity has been concealed, or where it contains poisons or other deleterious ingredients, or consists wholly or in part of filthy, decomposed, or putrid animal or vegetable matter.

There is no allegation in the bill that this butter comes within any of the definitions. The Pure Food Law defines misbranding as follows: If it be an imitation of or offered for sale under the distinctive name of another article, or if it shall be labeled or branded so as to deceive the purchaser, or if the contents are not plainly and conspicuously marked or pictured, or if the label shall bear any statement or device regarding the ingredients or substance thereof, which statement or device shall be false or misleading.

The Oleomargarine Act defines butter as a food product usually known as butter and which is made exclusively from milk or cream, or both, with or without common salt, and with or without the addition of coloring matter. And that same act defines adulterated butter as a grade of butter produced by mixing or reworking butter, and where any substance is introduced for the purpose or with the effect of deodorizing or removing the rancidity, or if any substance foreign to butter has been introduced with the intent to cheapen the cost, or with intent to cause the absorption of an abnormal quantity of water, milk, or cream.

It is not alleged in this bill that the butter in question comes within the definition of adulterated butter under the Oleomargarine Act. I presume the bill was filed in view of a rule or regulation of the department, in force at that time or which had been formulated prior to the time of the shipment, prescribing the standard for butter, in which it is stated that it shall contain at least 82.5 percent of milk fat. But it was held in *Lynch* v. *Tilden Products Co.* recently that the department has no authority under the law to make such regulations or rule. Subsequent to the shipment in question Congress passed an act prescribing the amount of milk fat, but that was not in force at the time the shipment in question was made.

The demurrer will be sustained.

UNITED STATES v. SOUTH PEACHAM CREAMERY CO.

(District Court, District of Vermont, Apr. 10, 1925)

N.J. No. 13706

Information alleging violations of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

The United States attorney filed an information against the South Peacham Creamery, a corporation, Barnet, Vt., alleging shipment

by said corporation, from the State of Vermont into the State of Massachusetts, of a quantity of butter which was adulterated, in violation of the Food and Drugs Act. It was alleged in the information that the article was adulterated in that a product which contained less than 80 percent by weight of milk fat had been substituted for butter, a product which should contain not less than 80 percent by weight of milk fat, as prescribed by the act of March 4, 1923, which the article purported to be.

The defendant corporation having entered a plea of not guilty and the case having come on for trial before the court and jury, after the submission of evidence, the court delivered the following instructions to the jury.

HOWE, *District Judge* (charge to jury). Gentlemen of the jury: I am going to give you my charge right now. These gentlemen can argue afterwards. We are going to finish this case up. This South Peacham Creamery is complained of for having too little butterfat in their butter. Now, you were all here in that other trial, weren't you, every one of you? Is there anyone on this panel that didn't hear the other trial and my charge in that other case? Now, the question for you to decide is whether you are satisfied beyond a reasonable doubt that when this butter was shipped in interstate commerce it did not have 80 percent butterfat. That's the question for you to decide.

Now, in order to find the defendant guilty you must be satisfied beyond a reasonable doubt. The Government must prove beyond a reasonable doubt that when this butter was shipped it did not contain 80 percent butterfat. You have heard the testimony of this chemist, who operates on one fifteenth of an ounce. Now, as practical, reasonable men you heard him say that a slight error in computation would make a heavy difference when you apply it to a pound or 20 pounds. You have heard these butter makers testify it contained more than 80 percent butterfat. Now, the question for you to decide is how much or how little credit you will give the testimony of the witnesses. You should keep in mind the presumption is that the butter did contain 80 percent when it was shipped. If you return a verdict of guilty here, you must be satisfied beyond a reasonable doubt that when this was shipped it didn't contain 80 percent butterfat. You apply the presumption of innocence, which is very old law, very sound law. If there is more than one theory in the case, both equally reasonable, one leading to innocence, the other leading to guilt, you should adopt the theory leading to innocence, because it is better and safer to believe good of a person rather than to believe evil of him. It is for you to say how much or little credit is to be given to the testimony. If you are satisfied beyond a reasonable doubt this did not have 80 percent of butterfat when it was shipped, you will find the defendant guilty. If you are not satisfied it contained less than 80 percent butterfat, you will find the defendant not guilty.

Well, gentlemen, if you are satisfied beyond a reasonable doubt that it didn't contain 80 percent, find the defendant guilty. If you have a reasonable doubt about that find it not guilty. If you are satisfied that it did contain more than 80 percent, you will find it not guilty.

UNITED STATES v. BARNET CREAMERY ASSOCIATION

(District Court, District of Vermont, Apr. 10, 1925)

N.J. No. 13707

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

The United States attorney filed an information against the Barnet Creamery Association, a corporation, Barnet, Vt., alleging shipment by said corporation, in various consignments, from the State of Vermont into the State of Massachusetts, of quantities of butter, a portion of which was alleged to be adultered and misbranded and the remainder of which was alleged to be misbranded, in violation of the Food and Drugs Act. Adulteration was alleged in the information, with respect to a portion of the article, in that a product deficient in milk fat had been substituted for butter which the said article purported to be, and in that a product which contained less than 80 percent by weight of milk fat had been substituted for butter, a product which should contain not less than 80 percent by weight of milk fat, as prescribed by the act of March 4, 1923. Misbranding was alleged for the reason that the statements, to wit, "40 POUNDS NET" or "40# NET", as the case might be, borne on the labels of the boxes containing the article, were false and misleading, in that said statements represented that the boxes each contained 40 pounds of butter, and for the reason that that the article was so labeled as to deceive and mislead the purchaser into the belief that the said boxes each contained 40 pounds of butter, whereas the said boxes did not each contain 40 pounds of butter but did contain a less amount.

HOWE, *District Judge* (charge to jury). Gentlemen of the jury: You will have three questions to decide in this case. There are seven different charges against the defendant. The court submits only three of them to you. There are four charges in the information that are withdrawn from your consideration. I have made a schedule of the number of the charge, the date of the charge, and what the charge is, that I am going to ask you to consider and decide. A charge in an indictment is called a count. The first column here gives the number. Now, charge, or count, No. 6 charges that the boxes contained less than 40 pounds, shipment of November 30. Count 7 charges that the boxes contained less than 40 pounds, shipment of December 3. Count No. 4 charges that the boxes contained less than 80 percent butterfat, shipment of December 3. I think that will make it more simple and easy for you than it will to give you this long indictment.

Now, you may find the defendant guilty or not guilty upon all of these counts, or charges, or you may find the defendant guilty of any of them, or you may find the defendant guilty of one alone and not guilty of the remainder. It's a simple question of fact for you to decide. In two counts, two different shipments, shipment of November 30 and December 3, the Government charges that those boxes didn't contain 40 pounds of butter, and in count No. 4, shipment of December 3, the Government charges that the butter didn't contain 80 percent of butterfat. Three simple questions of fact.

The Government's evidence shows that in the shipment of November 30, a number of crates containing 40 pounds each, the maximum

shortage was six ounces. One, two, three, four, five, six, seven, eight nine, ten, there were 10 crates supposed to contain 40 pounds each. Some of them had more than 40 pounds, but of the ones they claim were short the largest shortage is six ounces, and the minimum shortage in any of those 40-pound packages was one ounce. That's all there is to that charge. Some of them contained too much. Of course it isn't unlawful for them to contain too much, so the Government has complained against the Barnet Creamery Co. for shipping 10 boxes of butter, containing 40 pounds each, one of which they say lacked 6 ounces of having 40 pounds, and in another of those boxes they say the creamery should have put in another ounce. Now, on the shipment of December 3, one, two, three, four, five, six, seven, eight, I haven't got the date written down here, they say that one of those 40-pound boxes was a pound and six ounces short and another one was three and one half ounces short. There is a greater shortage there, a pound and six ounces, not quite a pound and a half. The minimum shortage in that shipment was three and one half ounces. Some of the boxes they shipped contained more then 40 pounds. Still, as it has been suggested here, the fact that they contained more than 40 pounds isn't material except such bearing as you think it has on whether the Barnet Creamery was short-weighing their butter. It is material on that question. If a concern is selling short weights, they would not be likely to have a considerable number of the packages overrun. The evidence of the Government is that they sent out their inspector, that he got samples and took them to some laboratory and had their chemist analyze them. They weighed up these packages and come up here and tell you how much they weighed and how much butterfat they contained. The defendant tells you that they used a lever scale, that they put a quarter of an ounce more in each pound to take care of evaporation—that is, an eighth of an ounce in each half-pound print—and they weighed that up. Each box of 40 pounds contained 40 pounds. Well, now, the law is, gentlemen, that it must contain 40 pounds when it was shipped. Unless you are satisfied beyond a reasonable doubt that these boxes didn't contain 40 pounds when they were shipped, why, no offense is committed by the creamery association. It is not the law that they must continue to weigh 40 pounds three days, three weeks, or three months after shipment. So the time of materialty is the day it is taken to the express company and shipped. It has been suggested here that these boxes made of spruce, fir, hemlock, pine, and dry lumber absorb the moisture in the butter. Some one said they are permitted to put in 16 percent moisture, got to have 80 percent butterfat, 3 percent salt, 2 or 3 percent—at least 2 or 3 percent—salt. Well if they had 16 percent moisture and 40 pounds of butter, it would be 6.40 pounds of water. Sixteen percent of 40, that's 6.40; that's more than 6 pounds of water starting out in a pine box, spruce box, or fir box. Well, it is important for you to say what bearing, if any, that would have upon what that package would weigh three days later or six days later. Would some of that moisture be likely to go from that butter into the box and from the box into the air? Now, another thing for you to consider is which one of these witnesses, the chemist of Boston, the inspector at Boston, or the butter maker at Barnet, you are inclined to put the greatest faith and confidence in, and which scale you are inclined to have the most confidence in, the spring scale or the lever scale. Now, gentlemen, there are two questions here as to whether the packages weighed 40 pounds, con-

tained 40 pounds of butter when they were shipped, and whether they contained 80 percent of butterfat when they were shipped, not whether they contained 80 percent three days later, three weeks later, or six weeks later. Now, all the rules I gave you yesterday apply to this case. The same rules apply. I see some of you on this case that were on the other case, but I will have to repeat all those rules I gave you yesterday to guide you in determining whether you are going to find this defendant guilty or not guilty. In the first place, the presumption is that the defendant is innocent. The presumption is that these boxes did contain 40 pounds, that the butter did contain 80 percent butterfat. This presumption is to be weighed and considered by you throughout the trial, which means that you must start in the trial of the case with the thought and belief uppermost in your minds that the packages did contain 40 pounds, that the butter did contain 80 percent butterfat, and this presumption should continue with you until the Government has convinced you beyond a reasonable doubt that the packages did not contain 40 pounds and that the butter did not contain 80 per cent butterfat. The fact that the defendant, the creamery company, has been complained of and placed on trial for this charge should not be taken against them in the least. No unfavorable inference can be drawn against the Barnet Creamery Co. because the Government has made this complaint against it. If you can reconcile the evidence in the case on any reasonable basis consistent with the defendant's innocence, you should do so, and, in that case, find the creamery company not guilty. You cannot find the creamery company guilty unless from all the evidence you are satisfied of its guilt beyond a reasonable doubt. A reasonable doubt does not mean beyond all doubt; it does not mean beyond a fancied doubt; it does not mean that you are to examine all the evidence with a view to seeing if you can find something that you can call reasonable doubt; but it means such a doubt as a reasonable man would have after considering all the evidence in the case. If, after an impartial consideration of all the evidence in the case, you can candidly say that you are not satisfied of the defendant's guilt, you have a reasonable doubt, and you should find the company not guilty. But if, after such impartial consideration, you have an abiding conviction of the defendant's guilt, such as you would be willing to act upon in important matters of your own, you have no reasonable doubt, and you should find the company guilty. The weight to be given to the testimony, the credibility of the witnesses, are questions entirely for your consideration and determination. The law is that you are not bound to give the same credit and the same weight to the testimony of each witness, but you should give their testimony just such credit and just such weight as you think it is fairly entitled to receive. Consider their appearance upon the stand, their candor or lack of candor, their feeling or bias, if any, their interest in the result of the trial, if any, and the reasonableness of the testimony which they give, and believe as much or as little as you think you should. Now, applying these rules to the testimony that you have heard, if you are satisfied beyond a reasonable doubt that the shipment made on November 30 didn't contain 40 pounds of butter when it was taken to the express office, you should find the defendant guilty; and, likewise, if you are satisfied beyond a reasonable doubt that the shipment made on December 3 didn't contain 40 pounds of butter when it was taken to the express office, you will find the defendant guilty. If you are satisfied the shipment made on December 3 did not contain 80 percent butterfat, you

will find the defendant guilty; but if, on the other hand, you have a reasonable doubt as to whether there was 40 pounds of butter in the shipment of December 3, you will find the defendant not guilty on those. Likewise, if you have a reasonable doubt as to whether there was 80 percent of butterfat in the shipment of December 3, you will find the defendant not guilty on that charge. That's all there is to the case, gentlemen. Any suggestions by the district attorney or defendant?

Mr. Gardner is appointed foreman. Your verdict will be oral. You will say guilty or not guilty. If you find the defendant guilty, you will say on which count.

Mr. AMEY. If it please Your Honor, there was nothing said about the weight of the wrappers on the butter.

The COURT. You will take into consideration all the evidence as to the wrappers and everything else, gentlemen.

UNITED STATES v. TRINIDAD CREAMERY CO.

(District Court, District of Colorado, Apr. 15, 1925)

N.J. No. 13365

Information in 31 counts, alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict directed for defendant on three counts. Verdict of guilty on 28 counts.

SYMES, *District Judge* (charge to jury). Gentlemen of the jury: You have listened carefully and patiently to this evidence. Counsel for both sides have given you the benefit of all the testimony that can be produced upon the charges made here, and have performed their part of the case in a very creditable manner as is their duty as officers of this court. You are also officers of this court, in that it is your duty now to determine the facts of this case and bring in your verdict accordingly.

The information in this case contains 31 counts. In other words, the defendant is charged with 31 different offenses. The court instructs you, however, to find the defendant not guilty on three of those counts, to wit, the 17th, the 20th, and 25th, because in the opinion of the court there is not evidence enough to substantiate those counts, and if you should find the defendant guilty on those counts, it would be the duty of the court to set them aside in the performance of its function as judge. That leaves for your consideration, then, 28 counts, and you will bear in mind that each count is a separate charge, and that the defendant is entitled to separate consideration in the case on each count and a verdict of guilty or not guilty on each count. It is, therefore, necessary for you to segregate the evidence and apply that evidence to each count which is material and bears upon it, and no other evidence.

The evidence offered by the Government in this case is in part at least that a Government inspector, charged with the enforcement of the Food and Drugs Act, which it is alleged was violated here, went out into the field and found 14 different places, I think, in New Mexico and Texas, where there was butter, the product of the defendant, for sale. It is admitted by the defendant and it stands undisputed that this particular butter referred to in the information was offered and put into and shipped in interstate commerce by the defendant from a point in the State of Colorado to points in other States. Therefore it was an interstate shipment and comes directly under the statute in question. This inspector, according to his evidence, at Dalhart, Tex.,

found a considerable quantity of this butter, took samples of it and weighed it and found that it averaged 2.55 percent short. He then went to Santa Rosa and there found 61 pounds of butter of the defendant, and that, according to his testimony, was 2 percent short in weight. He then went to a place in New Mexico, East Vaughn, N.Mex., and there he found butter of the defendant which averaged 4.56 percent, or better than 4.5 percent, short in weight. The maximum of some of that butter was 12 percent short. He then went to the Piggly Wiggly store at Carlsbad, N.Mex., and found 60 pounds there, 2 boxes, and weighed the samples from that, and they showed net 2.94 percent short. The maximum was 7 percent short, and most of it was under 9 percent, and so on, at all the different places he found butter of the defendant, and in all cases that he has testified to, according to his evidence, the percentage of shortage ran from 2 percent up to, as I have stated, over 4.5 percent. He testified that wherever he went and found any considerable quantity of this butter and weighed it, he found it short without exception, taking an average of each consignment that he found, that is, what was left of it. He then also described the condition of the butter as he found it; that it was at most places being kept in a cool place, and was firm and in good condition. He then testified as to experiments that he had made, and said that, allowing for the necessary shortage due to dry weather and other conditions, the shortage he found exceeded that necessary under such conditions—in his opinion, of course, that is. He then described his visit to the factory of the defendant and what he saw there. We have, then, the testimony of a qualified Government chemist, Mr. Feldstein, who made various tests of this butter which was shipped by this gentleman in the field, and you will recall what he testified to. Another Government chemist testified as to the analyses of samples that he made. That was in the main the testimony offered by the Government.

Then the defendant offered as a witness, among others, Mr. Jacobson, secretary and manager of the defendant, who stated this factory had a daily output of 2,500 pounds. He described in detail the method of manufacture and the various tests that they made, and the precautions that were taken in order to keep the butter from being short weight and to comply fully with the law and the requirements of the Government inspectors. He then described the scales, and there was some testimony in regard to his statements at the hearing the Government afforded the defendant before the department at Denver. Then a man named Fulton, the former butter maker of the defendant, described his work, which was that of butter maker, and the precautions taken. Similar testimony was given by Mr. Fulton, by Miss Flaiz, and by two or three other young ladies, and also by the vice president of the company. His work, according to his testimony, was mostly official. There was some conversation with the weight inspector, who at various times, I believe, found, or in a few instances anyhow found, the scales inaccurate, sometimes overweight and sometimes underweight, as I recall the testimony. Then we had the weight inspector who did not qualify as an expert because he had no experience or qualifications, and I don't think his testimony is very good one way or the other, but that is, of course, for you to judge. We then had Mr. Osburn of the State Agricultural College, a very competent gentleman, well qualified to testify as to what he did testify to. He testified

as to the variations in butterfat and butter content that necessarily take place, and he stated that those ran as high as 3 percent or 4 percent, and that the defendant's methods as far as he knew constituted good practice in that particular trade, and that it was impossible to keep every pound up to 80 percent of butterfat without making an impure product.

The Government then called Mr. McKendrie of the Beatrice Creamery in rebuttal. He disagreed with Mr. Jacobson as to the accuracy of some of his tests. I think that, in substance, is the testimony as I recall it. The court instructs you, however, gentlemen, that you are the sole judges of the facts, and it is for you to say what has been proven and what has not been proven as a matter of fact, and decide the issues of fact accordingly, without being influenced by the court, the remarks of the court on the facts, of course, being given only to aid you if you so desire, but you are the sole judges of the facts, and it is for you to decide the facts and what has been proven and what has not been proven according to your own view of the testimony, and you, of course, had the same opportunity to hear the witness that the court did.

Counts 1, 3, 5, 7, 9, 11, 13, 15, 23, 28, and 30 of this information charge that on the dates mentioned therein certain shipments of food, to wit, butter, were made by the defendant from its plant in Trinidad to the consignee named at points outside of the State; in other words, in interstate commerce. This is not denied by the defendant. These counts further charge that the contents of these shipments were misbranded within the meaning of the law known as the Pure Food Act, in that the labels on each of said separate packages of butter bore this statement, to wit, "One Pound"; that this was false and misleading because it purports to and did represent to the purchaser that each of said packages contained a pound of butter, when, as a matter of fact, they did not contain a pound but a smaller quantity. The statute in question on which this information is based, parts of it which are applicable here, reads as follows:

> That the term "misbranded," as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein whlch shall be false or misleading in any particular.

And then it goes on in regard to packages of food, and says "Third. If in package form"—that is, if the food is in package form such as butter—[it] shall be a violation of the law "if the quantity of the contents be not plainly and conspicuously marked on the outside of the package in terms of weight, measure, or numerical count." In other words, that means so many pounds of butter, so many bushels of apples, or so many pieces of something else, whatever the particular product in question may be.

Congress also gave the Department power to make certain regulations for carrying out this act. These regulations, of course, cannot add to or detract from the statute, but aid in its enforcement and understanding. There is one which is applicable to this case, which reads as follows—or before I refer to that I should go on and say that the statute says this: "Provided, however, that reasonable variations shall be permitted," and tolerances shall be allowed in effect according—as established by rules and regulations made in accordance with

provision three of the act. The regulation in regard to tolerances is that "Discrepancies due exclusively to errors in weighing, measuring, or counting which occur in packing conducted in compliance with good commercial practice." It therefore follows, gentlemen, that if you are convinced beyond a reasonable doubt, after a careful consideration of all the evidence, that at least as to these particular counts or any one or more of them the labels did not represent the true weight of the butter content at the time of shipment, but were false and misleading under the law and regulations I have read to you, then there was a misbranding under the law referred to, and it is your duty to find the defendant guilty on one or more of such counts.

Counts 18, 21, and 26 likewise charge misbranding within the meaning of the act of Congress, in that the statement "Butter One Pound," borne on the label of the package containing the article, was false and misleading, in that it represented the article to be butter, when, according to the Government, it was not butter, because butter, according to the law, must contain 80 percent by weight of milk or cream fat, as prescribed by the act of March 4, 1923. There is evidence both ways on this question; the Government that the butter referred to contained less than 80 percent by weight of milk fat, and the defendant that it contained more. If, after a careful consideration of the evidence on this particular question, or these particular counts, rather, you find beyond a reasonable doubt that the shipments of the defendant referred to in these three counts or any of them at the time of the shipment contained an article which was labeled butter, but which contained less than 80 percent of milk fat, then you should find the defendant guilty on one or more of these counts.

There is a great deal of evidence pro and con in regard to the butter content, and that evidence, of course, applies only to these particular counts, and not the question of short weight. The following counts, to wit, 2, 4, 6, 8, 10, 12, 14, 16, 19, 22, 24, 27, 29, and 31, charge that the contents of certain packages of butter shipped by the defendant in interstate commerce, which shipments are admitted by the defendant, were not plainly and conspicuously marked on the outside of the package in terms of weight, measure, or numerical count. The proof offered by the Government on this is the testimony of their witnesses to the effect that these packages or shipments of butter bore a conspicuous mark or label, which is admitted, I believe, stating that they contained 1 pound net of butter, when, as a matter of fact, according to the Government's evidence, they contained less than a pound of butter at the time of shipment, and therefore were misbranded in that they did not give the correct weight—all in violation of section 8 of the Pure Food Law which I have read to you. Therefore, if you are convinced beyond a reasonable doubt that any of the packages of butter referred to in these particular counts did not contain the amount of butter stated on the label or carton containing them, to wit, 1 pound, when shipped, after allowing for reasonable variation in accordance with the regulation I have read to you, then it is your duty to find the defendant guilty on one or more of said counts, as you may decide.

The court instructs you, gentlemen, that there must be proof in cases of this kind of an intent to violate the law on the part of the defendant. An intent implies knowledge of the violation, but such intent need not be proved separately and apart from the other facts,

necessarily, because intent is a state of mind and the intent of a party may be proved by his acts and conduct under any particular set of facts or circumstances, because everybody is presumed to intend the reasonable and probable consequences that may reasonably be anticipated and follow from his acts. In other words, if, as reasonable men, you can say that the defendant put short weight into these packages, or should have known that it was short weight, and that that was the rule and not the exception in reference to the shipments referred to in the counts, then you may be justified, if you so find that he intended to do that, because short weight would be the reasonable and probable consequences of his act. Further, in this case the defendant is a corporation, and therefore is to be judged by the acts and intents of its officers, agents, and employees when acting within the scope of their duties, and there is no question here, as I recall the evidence, but what these various employees acted within the scope of their duties in matters that have been testified to. They, when acting within the scope of their authority, act and speak for the corporation, and it therefore follows that their acts and conduct are the acts and conduct of the corporation, and that the latter is responsible for any violation of law committed by them in the course of their duties.

The court further instructs you that in determining the weight of each pound package of butter you shall make allowances for any reasonable discrepancies in the weight of each 1-pound package due exclusively to differences in atmospheric conditions at various places, which discrepancies unavoidably result from the ordinary and customary exposure of the butter to evaporation or to the absorption of water by the wrappers and containers; and that a crime or misdemeanor consists in the violation of a public law, in the commission of which there must be a union or joint operation of act and intention. Intention may be manifested by circumstances capable of proof. The object of this statute, gentlemen, of course is to protect the purchaser or consumer of food products that move in interstate commerce, and to that end Congress has enacted that the quantity of the contents of any food products in package form must be plainly and conspicuously marked on the label in terms of weight, measure, or numerical count, so the purchaser thereof may rely upon them and get what he has the right to ask for, and determine for himself what he will buy and receive, and to accomplish this result the law condemns as guilty any person or corporation that introduces into interstate commerce any article that is misbranded within the terms of the statute and the regulation referred to, and misbranding includes a failure to state the weight of the contents of the package correctly. The main question in the case for you to determine is whether the butter in question was misbranded; that is, under the statutes and regulations which I have read, did it fail to come up to the representations or statements made on the label? If so, the defendants are guilty, because the act declares that any person who shall ship or deliver for shipment from one State to another, food in package form that bears a label that is false or misleading in any particular, shall be guilty of a misdemeanor as charged in the information.

The evidence of the Government is that the particular butter referred to in the counts in this information was all underweight, the percentage of underweight varying, as you will no doubt recall from the evidence. This evidence stands uncontradicted, as the defendant

has offered no evidence as to the weight of the particular shipments referred to. They have, however, offered considerable evidence showing their methods of manufacture, methods of weighing, and the care taken by them to comply with the law. This is all competent for you to consider along with the other evidence, but it is not evidence, of course, on the question of what the shipments referred to in the information actually contained and what they actually weighed. No amount of care exercised or precautions taken will excuse defendant, if you find that after making allowances for honest or occasional mistakes and variations or tolerances allowed by the statute and the regulations made pursuant thereto, which I have called to your attention, the butter was underweight when shipped by the defendant. Anyone engaged in this business is conclusively presumed to know what the law is, and they must substantially comply with it at their peril. They must so equip their factories with proper scales and conduct their business that the law will be complied with, and if you find as a matter of fact that that part of their product which was shipped in interstate commerce and referred to in the information did not comply with the law, it is some evidence that they did not take the necessary precautions in the conduct of their business.

It is clear from the evidence that butter varies in its moisture content and that it cannot be absolutely controlled; that it is liable to dry out, and thereby it loses weight after it is manufactured. That fact, however, seems to be well known to the trade, and the defendant, of course, is presumed conclusively to have full knowledge of that fact and the necessary results that follow therefrom, and in manufacturing and shipping their product in interstate commerce they must make reasonable allowance for this variation and see that each package contains, as a usual thing, when shipped, the amount of butter that the label says it does.

You will decide the case, gentlemen, solely upon the law, irrespective of your opinion of the law. It is the province of the legislative branch of the Government to make and repeal laws. The only province the court has—and you are a part of the court—is to enforce the law fairly and fearlessly, irrespective of what your personal opinion may be upon it.

There is some evidence here, and it is admitted, that this defendant has been convicted in this court of a previous violation of this law. The court instructs you, however, that that must not in any way influence your verdict in this case. That simply goes to the question of penalty if the defendant is convicted. It is on trial simply for the offense as charged in this information and nothing else.

The court further instructs you that it is the duty of the Government to find the defendant guilty beyond a reasonable doubt. The Government must prove the defendant's guilt, and the defendant need not prove its innocence, and if you have any reasonable doubt as to any fact necessary to constitute the defendant's guilt on any one of the counts, it is your duty to give the defendant the benefit of that doubt and return a verdict of not guilty. You are prohibited, however, by law and your oath which you have taken, from going beyond the evidence to seek for doubts upon which to acquit the defendant, and you must confine yourselves strictly to a dispassionate and an impartial consideration of the evidence. You must not have recourse to extraneous facts or circumstances. You are the exclusive judges

of the facts, and it is for you to find from the evidence what has been proven and what has not.

A doubt, to justify an acquittal, must be a reasonable doubt, not imaginary or conjectural, and must arise after a candid and impartial consideration of the evidence, and unless it is such a doubt, for instance, as, were it interposed in the graver transactions of your everyday business life, would cause you to hesitate and pause as reasonable men, then it is not a reasonable doubt and would not authorize a verdict of not guilty.

The court further instructs you that you are the sole judges of the credibility of the witnesses and of the weight to be given to the testimony of any particular witness. In judging of their credibility and the weight to be given to their testimony, it is proper, if you so desire, to take into consideration their manner or demeanor upon the witness stand, their bias or interest in the outcome of this case, if any has been shown by them, and any other fact which appeared upon the witness stand which you think affects the weight to be given to their testimony. Of course, if you believe that any witness has testified falsely as to any material fact, you are at liberty to disregard his evidence entirely, except so far, of course, as it is corroborated by other competent evidence.

These, gentlemen, are the instructions which will govern you in deciding this case and you will consider each instruction of equal weight and take and consider them all together, being bound by the instructions on the law as given you by the court. Decide the case solely upon the evidence, because the arguments of counsel, the remarks of the court, and the rulings of the court upon evidence stricken out, and evidence stricken out, will not be considered by you in deciding the case.

Are there any exceptions to the charge of the court?

Mr. Bock. I understood the court to say that they found it short without exception.

The Court. I mean every place he went.

Mr. Bock. The court meant as an average weight. The defendant asks to take exception in regard to the county scale inspector, as to the weight of his evidence. The defendant also desires to save exception as to the instruction that the defendant should have known that his scales were—what weight; if he didn't know, he should have known. We save exception to that part of the instruction. The charge on the ground of misbranding, the court did not put in the element of intent in that particular definition. Nearly all the instructions on intent include the element to deceive and mislead. We except to that. The defendant further excepts to the instruction of the court that the manufacturer must make allowance for the variations, it being the viewpoint of the defendant that the retailer must make the allowance and not the manufacturer. The defendant also desires to save an exception to the court's instruction on the second offense, it being prejudicial, as to being any part whatever of the instruction, because it only relates to sentence and not the question of guilt.

Mr. Ireland. We desire to ask that the regulation under (1) of section 8 be given. I desire to save my exception to the instruction on intention.

The COURT. Gentlemen, the court further instructs you that what I said in reference to the evidence of the county inspector, as I recall the evidence was that he had had no experience or training, and testified that the weights he used in testing he had not weighed. The court wants to emphasize that you are the sole judges of the facts in deciding what the witnesses testified to. You had the same opportunity to hear the evidence that the court did, and you will decide the evidence on the facts uninfluenced by the court. In speaking of intent, that means an intent to violate the law. I further call your attention to the fact that the regulations referred to, part of which I read, also contain this: "Discrepancies"—that means variations—"under classes (1) and (2) of this paragraph"—paragraph (1) being the one I read to you—"shall be as often above as below the marked quantity." Are there any further exceptions?

UNITED STATES v. MYERS

(District Court, District of Colorado, Apr. 15, 1925)

N.J. No. 13539

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Motion by defendant to suppress certain evidence sustained. Verdict directed for defendant.

The COURT. The defendant in this case has made timely motion to suppress the evidence that has been offered, or rather, testified to by the witness Kathe, on the ground that it violates the constitutional rights of the defendant and also is in violation of the post-office regulations or acts pertaining to the post office.

It is stipulated and agreed by both sides that Mr. Kathe, an inspector of the Bureau of Chemistry of the United States Department of Agriculture, who is not connected in any official way with the Post Office Department, without a search warrant entered the post office and opened seven packages of butter which had been deposited in the post office by the defendant for shipment in interstate commerce.

Mr. IRELAND. That stipulation doesn't cover with the consent of the postmaster or superintendent, but that is a part of the stipulation in the record.

The COURT. He did this with the consent of the postmaster. After opening the packages, he took samples therefrom and weighed the contents to determine whether they complied with section 8 of the Pure Food Act, under which the defendant is being prosecuted for misbranding. He further took samples to be shipped to the bureau or branch of the Department of Agriculture in Denver for further test, and in place of the samples he took he substituted another product of the defendant, which he had bought in the open market, and sealed up the packages and put them back in the mail, and they went forward to the consignee.

In order to narrow the question to be decided, it is well to bear in mind all these facts, and also the further fact in addition, that this inspector did not have any authority under any act of Congress for his acts, and, further, had no search warrant. In addition he had no

grounds, so far as it appears here, to suspect that the defendant was violating a law of the United States. In other words, he did not act upon any probable cause or grounds to suspect that a crime was being committed by the defendant, so we must look at his acts from the point of view that he was seeking evidence rather than acting upon any previous information or knowledge that would justify him in believing defendant had or was about to commit a crime.

The Government contends, first, that, granting that the search was illegal and in violation of law, the defendant cannot urge that issue because he had given up possession and parted with the packages in question when he put them in the mail, and therefore the fourth amendment to the Constitution of the United States is no protection, or cannot be availed of under such conditions; secondly, that the Pure Food and Drugs Act gave the Department the power to make regulations for the enforcement of the act, and that under that authority that Department has enacted or promulgated the regulation that the food or drugs within the scope of sections 1, 2, and 10 of the act may be sampled wherever found.

Taking up the last point first, it may be said as a matter of law that a regulation put out by any official or any department cannot add to or detract from the original act. I have not been cited to any section of the act that gives any official of the Department power to sample or seize property wherever found, and it is not necessary to pass upon that at this time. Certainly any mere regulation of the Department would not stand if in conflict with any fundamental right of the defendant, guaranteed him under the Constitution of the United States; it would have no force or effect.

Going back now to the first question, as to whether the fourth amendment of the Constitution was violated, or whether the defendant avail himself of its provisions under the peculiar circumstances of this case, I am clearly of the opinion that the inspector had absolutely no authority to go into the post office and open a sealed package. He was not a post-office inspector or employee. He had no more right to interfere with mail in its transportation and stop its transportation than the merest stranger. The Government officials must act within the scope of their authority. Their authority is always limited, and when they go beyond the limits of the same, their acts must be judged like the acts of any other person not holding a Government position. The permission granted by the postmaster to open this mail was without the scope of his authority, and does not affect the lack of authority of this inspector. In any doubtful case I think the doubt ought to be resolved against the Government official, because it is against public policy for any officer, without proper cause or authority, to interfere in any way with property of other people or to interfere with their papers, and when a man deposits property in the post office he has a right to assume that it will not be interfered with in any way except pursuant to some specific authority granted by Congress for the particular purpose in point. The case of *Ex parte Jackson*, which has been cited, in 96 U.S., holds specifically that the fourth amendment to the Constitution applies to papers or property of a citizen wherever it may be, that case saying that:

> The constitutional guaranty of the right of the people to be secure in their papers against unreasonable searches and seizures extends to their papers, thus closed against inspection, wherever they may be. Whilst in the mail, they can

only be opened and examined under like warrant, issued upon similar oath or affirmation, particularly describing the thing to be seized, as is required when papers are subjected to search in one's own household. No law of Congress can place in the hands of officials connected with the postal service any authority to invade the secrecy of letters and such sealed packages in the mail; and all regulations adopted as to mail matter of this kind must be in subordination to the great principle embodied in the fourth amendment to the Constitution.

We do not say that Congress might not give to an inspector of the Department the power to invade the secrecy of the mails. It is not claimed here that such power was ever given. So we have before us a stronger set of facts than that referred to and covered in the quotation from the Jackson case which I have cited. Further, it is against sound public policy for Government officials without probable cause or proper grounds to suspect a crime is being committed and, without specific authority, to go around on fishing expeditions and interfere with the privacy of the individual or his property. This case of breaking into mail was no more or less than a trespass. I am not holding that this regulation could not empower the inspector to sample or seize the butter when offered for sale, but I don't think it gave him power—it could not give him power under the law laid down in the *Jackson case*—to commit a trespass upon mail matter. The recent decisions of the Supreme Court contain notice that the fourth and fifth amendments are still in full force and effect, and that indirect and partial repeals thereof must be especially guarded against.

So the motion to suppress the evidence will be granted and exception allowed by the Government.

Mr. IRELAND. Now, if Your Honor please, the question that you have taken up I did not think would come up in this case, but at this time the Government offers to submit evidence to the effect that they did have reasonable ground to believe that the law was violated and was being then and there violated. I don't think it will make any difference, but I want it for the record.

The COURT. In order to make a record you may show that you made the offer and the same is rejected. It will not affect the case under the facts, in view of the fact that the inspector has no right to violate the secrecy of mail matter.

Mr. IRELAND. There is one other thing I would like to have the record show: that while the stipulation shows this was sealed, the stipulation does not show it is sealed first class mail; and that the Government offers to prove that the facts in this case are that this was parcel post mail, fourth class, and does not come under what is termed first class sealed matter.

The COURT. The stipulation states that they were sealed packages—in other words, they had to be broken to get into—and that the information that the Government obtained by virtue of the inspection could not have been obtained without breaking the seal or the package.

Mr. IRELAND. No, it could not. It had to be broken, but it is not what is first class sealed mail, but I believe it has labeled on it "Inspection allowed."

The COURT. That disposes of this case.

Mr. PACKARD. I then move the court for an instructed verdict in favor of the defendant on all the counts.

The COURT. The motion will be granted. Gentlemen of the jury, under the ruling of the court the evidence that has been given is not

admissible. Therefore, there being no other evidence, the court instructs you to find the defendant not guilty on each and every count of this information. The first juryman will please sign the verdict, and the defendant will be discharged.

UNITED STATES v. 18 CASES OF TUNA FISH

(District Court, W.D. Virginia, Apr. 20, 1925)

5 Fed. (2d) 979; N.J. No. 15601

Libel under section 10 of the Food and Drugs Act. On issuance of monition and attachment. Libel upheld.

On April 6, 1925, the United States attorney filed a libel praying seizure and condemnation of 18 cases of tuna fish, remaining in the original unbroken packages at Abingdon, Va., alleging that the article had been shipped by the M. De Bruyn Importing Co., from New York, N.Y., in February 1925, and had been transported from the State of New York into the State of Virginia, and charging adulteration and misbranding in violation of the Food and Drugs Act.

On April 20, 1925, the court handed down the following opinion as to the necessity for supporting affidavits other than that of the United States attorney before issuance of monition and attachment:

McDowell, *District Judge.* This is a proceeding for forfeiture under the Food and Drugs Act. The information does not allege previous seizure of the food sought to be condemned, and admits that it is in the possession of its owner, a wholesale dealer in groceries in this district. The information is not verified or supported, otherwise than by an affidavit by an assistant district attorney, which reads: "The foregoing facts are true to the best of affiant's knowledge and belief." The prayer is for the issue of monition attachment. For present purposes I shall assume that the Food and Drugs Act (34 Stat. 768) does not contemplate or require previous seizure (see *United States* v. *Geo. Spraul & Co.*, 185 Fed. 405, 406, 407, 107 C.C.A. 569; *United States* v. *Two Barrels, etc.* (D.C.), 185 Fed. 302; *United States* v. *One Hundred Barrels, etc.* (D.C.), 185 Fed. 471, 475), and on such assumption I shall discuss the question of verification of informations for forfeiture of food and drugs, where a search warrant is not asked for.

If the fourth amendment forbids the issue of the attachment, except on probable cause, supported by oath or affirmation, or if the conformity provision of section 10 of the Food and Drugs Act requires that the information be on oath or affirmation, the affidavit here is, I think, insufficient. See *Rice* v. *Ames*, 180 U.S. 371, 375, 376, 21 S.Ct. 406, 45 L.Ed. 577; *Ex parte Bollman*, 4 Cranch, 75, 130, L.Ed. 554; *Salter* v. *State*, 2 Okl.Cr. 464, 102 P. 719, 25 L.R.A. (N.S.) 60, 139 Am.St.Rep. 935, 939–944; *Mowry* v. *Sanborn*, 65 N.Y. 581, quoted in *Clarke* v. *Neb. Nat. Bank*, 57 Neb. 314, 77 N.W. 805, 73 Am.St.Rep. 512; *Ex parte Lane* (D.C.), 6 Fed. 34–38; *Ex parte Morgan* (D.C.), 20 Fed. 298, 307; *Ex parte Spears*, 88 Cal. 640, 26 P. 608, 22 Am.St.Rep. 341, 342; *Leigh* v. *Green*, 64 Neb. 533, 90 N.W. 255, 101 Am.St.Rep. 592, 595.

However, I know of no sufficient reason or authority for a belief that the fourth amendment was intended to apply to an attachment for the seizure of property. The bald letter of the amendment suggests that it was intended to apply only to warrants which direct both search and seizure. But, at least as to warrants for the arrest of persons charged with crime there seems no room for doubt that the amendment applies. *Ex parte Buford*, 3 Cranch, 448, 451, 453, 2 L.Ed. 495; *West* v. *Cabell*, 153 U.S. 78, 85, 87, 14 S.Ct. 752, 38 L.Ed. 643; *In re Rule of Court*, 3 Woods 502, Fed. Cas. No. 12,126; *United States* v. *Tureaud* (C.C.), 20 Fed. 621; *In re Gourdin* (D.C.), 45 Fed. 842; *In re Dana* (D.C.), 68 Fed. 886, 895; *Johnston* v. *United States*, 87 Fed. 187, 30 C.C.A. 612; *United States* v. *Sapinkow* (C.C.), 90 Fed. 654; *United States* v. *Baumert* (D.C.), 179 Fed. 735; *Weeks* v. *United States*, 216 Fed. 292, 132 C.C.A. 436; L.R.A. 1915B, 651, Ann. Cas. 1917C, 524.

A very satisfactory reason for discriminating attachments from search warrants, and from ordinary warrants for the arrest of persons for crime, is that there is no historical evidence, so far as I know, of abuses in respect to writs of attachment, either in England or in America, prior to the adoption of the fourth amendment, and therefore there was no reason for an intent that the amendment should include attachments.

In *Boyd* v. *United States*, 116 U.S. 616, 624, 6 S.Ct. 524, 529 (29 L.Ed. 746), is said, obiter:

> The entry upon premises, made by a sheriff or other officer of the law, for the purpose of seizing goods and chattels by virtue of a judicial writ, such as an attachment, a sequestration, or an execution, is not within the prohibition of the fourth or fifth amendment, or any other clause of the Constitution.

In *Den ex dem. Murray* v. *Hoboken Land, etc., Co.*, 18 How. 272, 285, 286 (15 L.Ed. 372), in respect to the distress warrant, an extent, authorized by the Act of May 15, 1820, c. 107, § 2 (3 Stat. 592), against delinquent collectors of Federal revenues, it is said:

> The remaining objection to this warrant is that it was issued without the support of an oath or affirmation, and so was forbidden by the fourth article of the Amendments of the Constitution. But this article has no reference to civil proceedings for the recovery of debts, of which a search warrant is not made part. The process in this case is termed, in the act of Congress, a warrant of distress. The name bestowed upon it cannot affect its constitutional validity. In substance, it is an extent authorizing a levy for the satisfaction of a debt; and as no other authority is conferred, to make searches or seizures, than is ordinarily embraced in every execution issued upon a recognizance, or a stipulation in the admiralty, we are of opinion it was not invalid for this cause.

A distress warrant issued by the order of a treasury agent and directing the seizure and sale of goods and chattels, and an attachment issued by order of a court and directing the seizure of goods and chattels, are not identical. But if the fourth amendment does not apply to the distress warrant, I see no reason for saying that it applies to the attachment.

I have discovered only two adjudications relating to the application of the fourth amendment to the issue of attachments in forfeiture proceedings under section 10 of the Food and Drugs Act. In *United States* v. *Eight Casks of Drug Products*, Notice of Judgment 697, 5 Fed. (2d) 971, the District Court for the Southern District of Ohio in 1910 sustained a demurrer to the information because, inter alia, the "libel was not properly verified by any persons having knowledge of the

facts." In *United States* v. *Three Hundred Cases of Mapleine*, Notice of Judgment 163 (no opinion filed), the District Court for the Northern District of Illinois, in 1909, overruled, without discussion, an exception to the information on the ground that it was not under oath. In the first case there is some discussion, but it is quite unconvincing and no authority in point is cited.

The only satisfactory conclusion I can reach is that the fourth amendment does not apply to the issue of the writ of attachment in forfeiture cases under section 10 of the Food and Drugs Act.

Section 10 contains a provision reading:

> The proceedings in such libel cases shall conform, as near as may be, to the proceedings in admiralty * * *.

If it be assumed that the "proceedings in admiralty" intended were not those followed in forfeiture cases based on previous seizure (rule 22 of 1854, 3 How. xiii), but were those in ordinary libels in instance causes (rule 23 of 1854 and rule 22 of 1920); still the use of the expression "as near as may be" authorizes the exercise of some degree of judicial discretion. As was said in *Indianapolis etc. R. Co.* v. *Horst*, 93 U.S. 300, (23 L.Ed. 898):

> The conformity is required to be "as near as may be"—not as near as may be *possible*, or as near as may be *practicable*.

See also *Mexican Central R. Co.* v. *Pinkney*, 149 U.S. 194, 207; 13 S.Ct. 859, 37 L.Ed. 699; *Shepard* v. *Adams*, 168 U.S. 618, 624, 625; 18 S.Ct. 214, 42 L.Ed. 602.

It is quite possible that food may be so "adulterated" within the meaning of the act as to be poisonous. It is also possible that drugs, either because of adulteration or misbranding, may be highly dangerous. And if seizure previous to the drafting of the information is not authorized by the act, it is clear that great rapidity of action on the part of the district attorney will frequently be necessary. Outside of the District of Columbia and of the insular possessions, the (domestic) article to be condemned must be either in transit or still unloaded, unsold, or in original unbroken packages. So far as my experience goes, it is rarely practicable to attach in transit, and it is sometimes necessary to use great expedition to attach before the article has been sold; and where haste is necessary the delay involved in having affidavits by the Government agents who know the facts transmitted to the judge may easily be wholly or in part fatal to the effort to condemn. In view of this fact it seems a reasonable exercise of discretion to hold that the information in such cases need not be verified.

It may be added that the practice in admiralty under old rule 23, new rule 22 (254 U.S. appendix), in instance causes in which the United States is the libelant, is not and seemingly has never been uniform. In some of the district courts such libels are not required to be verified, and in others they are. See Waples Proceedings in Rem. p. 77; 2 Foster Fed. Pr. (5th Ed.) p. 1947; The J. R. Hoyle Fed. Cas. No. 7557; *United States* v. *2 Barrels etc.* (D.C.), 185 Fed. 302, 307. In this circuit the affidavit is required in the District of Maryland and in the Eastern District of Virginia. No affidavit is required in the Eastern District of South Carolina, and such, I believe, is the practice also in the Eastern District of North Carolina.

In section 4 of the Food and Drugs Act is a requirement of verification by the analyst of every analysis of food or drugs found to be

adulterated or misbranded. And this verified analysis is to be certified by the Secretary of Agriculture to the proper district attorney. But, as there is no requirement for an affidavit showing other equally indispensable facts justifying a forfeiture, such, for instance, as an interstate transit, and as the affidavit required by section 4 is not directed to be filed with the information for forfeiture, it seems to me that the provision in question was intended either merely to insure accuracy on the part of analyst or as a basis for a warrant for the arrest of a person to be criminally prosecuted under section 1 or 2 of the act.

Section 10 of the act is of very doubtful meaning in several respects; and which of several practices in admiralty was in the mind of the draftsman, will, I believe, always be in great doubt. It may have been the practice (under old rule 22) in forfeiture cases where previous seizures had been made and in which verification was needless; or it may have been the practice (under old rule 23) in those courts which required that all libels in instance causes be verified; or it may have been the practice in those courts which did not require libels in instance causes in behalf of the United States to be verified. But this doubt need not be solved in respect to informations for forfeiture which seek only the issue of monition and attachment. As has been said, the words "as near as may be" permit the exercise of a reasonable discretion, and as the delays involved in laying before the court affidavits by persons who have first hand knowledge of the facts may frequently be fatal to the efficacy of the proceeding, I believe it permissible and judicious to order the issue of monitions and attachments on informations which are wholly unsupported by oath or affirmation.

UNITED STATES v. 37 ONE-POUND PACKAGES OF COLORS

(District Court, E.D. Pennsylvania, May 8, 1925)

N.J. No. 13970

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict, in part, in favor of the United States; in part, in favor of the claimant.

THOMPSON, *District Judge.* Members of the jury: In this case the United States officials, agents of the Pure Food and Drugs Bureau of the Department of Agriculture, seized certain packages containing dyes for food products which had been sold by the claimant to D. S. Dengler & Son, of this city. They were seized under the provisions of the Pure Food and Drugs Act on the charge of being misbranded and adulterated. That act provides that in case any food products are transported from one State to another in interstate commerce, that are misbranded or adulterated within the meaning of the law, they may be seized and forfeited to the United States. So that is the nature of this proceeding. The proceeding is against the articles themselves, and the claimant, H. Kohnstamm & Co., has come in as claimant for the merchandise, and is defending the action brought by the United States.

The Pure Food and Drugs Act was an act passed by Congress to protect the public from imposition in the sale of food products, among

other things, in order that persons who were dealing in food products in interstate commerce might not impose upon the public by selling them articles which were either deleterious to health, or which were short in weight or quantity, or which were in some other manner being imposed upon the public at that time when the act was passed, without any regulation by Congress.

Under the law there are certain offenses prescribed by Congress, and one of them is misbranding. In this case it is charged that these 1-pound packages which were seized were misbranded, in that the label contained a statement that was false and misleading, which tended to mislead the purchasing public as to the contents of the package. The misleading statement on each of the packages is substantially as follows: "We guarantee the contents of this package to contain no coal-tar color excepting our certified colors." Then comes the name, H. Kohnstamm & Co., Inc., New York-Chicago, and so on, and then the statement that it is a 1-pound package.

The Pure Food and Drugs Act authorized the issuance by the Government authorities of regulations governing the transportation and sale of food being taken from one State to another. You will understand that is how this case got into the United States Court, because the Federal authorities alone have control of commerce between the States.

These regulations are binding on parties who are dealing in food products in interstate commerce.

The regulations here with regard to coloring for food products adopted by the Department, made, no doubt, after a careful examination of the various constituents entering into coloring substances for food products, confectionery and so on, authorized the use of certain coal-tar dyes as not being deleterious to health, but the regulations required that the colors sold by the dealers might be certified, the contents of the composition of the colors certified to the Department of Agriculture, and when so certified a number was assigned to that particular composition, and the seller then had a right to use that number and state that the contents of the package was certified.

The contention in this case on the part of the Government is that the statement on the package, "We guarantee the contents of this package to contain no coal-tar color except our certified colors" was misleading, and tended to deceive and mislead the purchasers, leading them to suppose that these colors which were being sold by the claimant here, H. Kohnstamm & Co., were certified under the regulations and, therefore, the purchaser would be protected in case there were any deleterious or unlawful matters contained in the packages. That as I understand it, is the contention of the Government.

The claimant on the other hand contends that, there being no reference to the fact that when they used the word "certified" they meant that they were certified to the Pure Food and Drugs Bureau of the Department of Agriculture, there being no statement to that effect, it was entirely an innocent statement, and the defendant was entitled to refer to certain colors as its certified colors, whether or not they were in accordance with a certificate filed with the Department of Agriculture.

That is, as I understand it, the substance of the controversy in regard to the use of this guaranty, or this statement on the label,

that there was a guaranty that no coal-tar colors were in the package excepting the Kohnstamm & Company's certified colors.

There is another question arising in the case, and that is the question of adulteration. The Department regulations require where coal-tar colors are used along with other substances that, in order to protect the purchasing public and assure them of getting the strength and quantity of the actual coal-tar colors which they are entitled to have when they buy a package by the pound, if there are other ingredients entering into the composition, that this shall be certified to the Department along with other matters which they may be required to certify, and thereby the public generally, trading in this sort of article, may have this source of information to know just what they are getting when they buy a package alleged to contain food coloring matter.

So that the charges here are first, misbranding, and second, adulteration, in that a foreign substance, a substance not specified on the label, was contained in the package, and that other ingredients had been mixed with the coloring matter.

You have heard the testimony in the case. You have heard the witnesses called, some of whom testified that they read the label and saw it contained the word "certified," that in the trade that conveys the idea that the description of the contents of this package has been certified to the Department, and a serial number issued, and the certification referred to there of the word "certified" refers to such a certification.

It is contended on behalf of the defense, however, and it has been testified to on their behalf, that the word "certified" would not convey any such meaning. So that that is a fact for you to consider.

It appears that these packages as put up were not certified to the Department of Agriculture. As I understand it, there is no dispute about that. But the claimant claims that his company is entitled to use a number on the package and use the word "certified" and to state that such coal-tar colors as are used in the package are only those coal-tar colors which have been certified by the claimant. So that is a question for you to determine as to whether these statements on the packages, by reason of the regulations which I have referred to and the provisions of the law, were false and misleading, so as to mislead the purchaser into thinking he was getting something which he did not get. If you find that that is the case, then, in order to simplify the matter, I will instruct you to return a verdict in favor of the plaintiff, that is to say, for the Government.

If, however, you find that charge is not sustained by the evidence, that there were no false and misleading statements in this guaranty, taking into consideration not only the act of Congress but the Government regulations—it does not make any difference in a case of this sort what the seller intended, but the question is, what would be the effect on the mind of the persons purchasing this article, would they be deceived and misled into thinking they were getting something they did not get—if you do not believe from the evidence that they would by this statement of guaranty be misled or deceived into believing that the contents of the package was something that it was

not, then your verdict should be for the defendant as to the misbranding charge.

As to the question of adulteration, it appears that these coloring matters were put up in some sort of paste, which was harmless in itself, and that it did not contain anything like 100 percent of coloring matter. I do not recall the exact percentages, but it seems to me they ran from about 6½ to 8¾ percent of coloring matter, and that the rest was the substance of which the paste was made up, and this paste was what was used in the confectionery and other manufactures for coloring the articles to be sold.

The pure food and drugs regulation, as I understand it, provides that where any substances are added to coal-tar coloring matters the quality thereof shall be certified to the Department at Washington, and that the statement shall contain the proportion in which the other constituents, besides the coloring matter, stand with relation to the actual coloring matter. If you find that under the regulations there has been no certification of the composition of these various coloring matters to the Department, stating the quantities of the foreign substances which were contained, then that would be an adulteration, because it would be increasing the quantity of the contents of the package so that the actual coloring matter would be only from 6 to 8 or 10 percent, whereas the foreign substances would be the remainder of 90 percent and over of foreign substances.

If you believe from the evidence that that was what the defendant did, and that they were selling these colors with 90 percent or over of an addition of other substances mixed with the coloring matter, without having complied with the regulations of the Department in filing the description of what they were selling under these various labels, then this product was subject to seizure and forfeiture, as adulterated.

If, however, you believe that this coloring matter as sold by the claimant was put on the market either in its pure form in these packages, as contained in these packages, or that the claimant had complied with the law in filing at Washington a description of what he was selling, then your verdict should be for the defendant on that point.

If you find that on either one or both charges the Government has made out its case to your satisfaction, then you will return a general verdict, unless counsel desire to have the verdict separated as to the counts. I suppose you do not desire that. You will return a general verdict for the plaintiff. If, however, the Government has not sustained its contention as to either charge, then your verdict should be for the defendant.

Insofar as I have in my general charge sustained the Government's written requests, I will grant an exception to the defendant. Insofar as I have refused them I will grant an exception to the Government.

The same rule will apply in regard to the defendant's requests. Insofar as I have sustained them in my general charge, the Government will have an exception, and insofar as I have overruled them, the defendant will have an exception.

I do not think it is necessary to charge on all of these points.

Mr. BUTTERWORTH. May I have an exception to that portion of your charge wherein you instructed the jury that under the food-

inspection decisions there is an obligation on the manufacturer and sellers of coal-tar colors to have them certified?

(Exception noted for the intervening defendant, as requested, by direction of the court.)

Mr. BUTTERWORTH. May I also have an exception to that portion of Your Honor's charge referring to adulteration, wherein you say that if any articles have been mixed with the color and the mixture has not been certified, that would constitute an adulteration under the act? As I understand it, the Government's contention is that there would be no adulteration unless these articles were sold as certified colors, because there is no standard for the color content of of a plain color.

The COURT. If I gave the impression you indicate by your request for an exception I will say to the jury now that insofar as the Government regulations containing certificates on mixtures with pure colors are concerned, they have no application to this case unless you find from the evidence that the words endorsed on the package in regard to the guaranty as a certification are such as to indicate that the package contains what is referred to in a certificate which has been filed by the intervening defendant. You may have an exception to that if you like.

(Exception noted for the defendant, by direction of the court.)

Mr. BUTTERWORTH. On considering the matter further, if we could have the verdict separated, if it comes to that point, I think it would be preferable.

The COURT. Members of the jury, insamuch as it has been requested by defendant, and in order that there will be no doubt about your findings in the case, when you return your verdict you will be requested to return your verdict first as to the misbranding, and on that subject you will state whether or not the verdict is for the plaintiff or for the defendant. You will then be asked how you find on the charge of adulteration, and you will then similarly state on that charge whether you find for the plaintiff or for the defendant, in order that the two substantial charges in the information that has been filed may be separated.

Plaintiff's points read as follows:

1. If an article of food shipped in interstate commerce is not the identical thing that the brand indicates it to be, it is misbranded, and if you find that the colors in this case are not the identical things that the brands indicate them to be, then your verdict should be for the Government.

2. Statements on the labels of articles of food shipped in interstate commerce which are ambiguous and liable to mislead the purchaser render the article misbranded, and if you find that the statements on the labels in this case are ambiguous and liable to mislead, then your verdict should be for the Government.

3. The Food and Drugs Act condemns every statement, design, and device which may mislead or deceive, and statements which result in deception or ambiguity, even if they are not technically false, or even though they may be literally true, come within the condemnation of the act. Therefore, if you find that the labeling in this case results in deception or ambiguity, even if it is literally true, the verdict should be for the Government.

4. If as a matter of first impression the labeling of colors in this case tends to convey a false and misleading impression to the purchaser, even though a deliberate reading of the label might correct such an impression, then the verdict should be for the Government.

5. If you find that the package containing the article or its label bears any statement, design, or device regarding the ingredients or substances contained therein, which statement, design, or device is false or misleading in any particular, then the verdict should be for the Government.

6. A statement may be misleading not only by what it says but by what it fails to say, therefore if you determine that the statements on the labels were such that as a whole the labeling indicates that the packages contained food colors of the quality known as certified colors, when they did not contain colors of that quality, or if you determine that the labeling indicates that the packages contained nothing but coal-tar colors and you believe that such was not the fact, then your verdict should be for the Government.

7. Any foreign substance not declared on the label of an article of food and not a normal constituent of the article as described by the label renders that article adulterated, and if from all the facts in evidence you determine that foreign substance has been mixed and packed with the colors the labels purport the packages to contain, so as to reduce, lessen, or weaken the quality or strength of the article, then the verdict should be for the Government.

8. The substitution of any material other than a normal constituent of the article of food offered by its label is adulteration, and if from the evidence in this case you determine that substances other than the normal constituents of color have been in whole or in part substituted for the color the labeling purports the article to be, then the verdict should be for the Government.

9. The substitution of another and different article for the article of food offered by the label constitutes adulteration, and if from the evidence in this case you believe the colors involved were by their label offered as certified colors and were not certified colors, then that state of facts would constitute a substitution of a different article from the article which the label purports the article to be, and the verdict should be for the Govermnent.

10. If from the evidence in this case you determine that the labeling of the colors as set out in the libel indicates to the purchaser that the packages involved are composed entirely of colors, and if from the evidence it is determined that said packages are not so composed but contain in addition to color other substances, then those other substances would render the article adulterated and the verdict should be for the Government.

The defendant's points read as follows:

1. The Food and Drugs Act and the food inspection decisions thereunder did not require the intervening defendant to certify samples of the batches of color mixture, parts of which have been seized in this proceeding, unless the intervening defendant desired to and did sell the mixture as one which had been certified to the Department of Agriculture

2. Unless you find that the labeling on the packages in this suit was so similar to the manner in which the intervening defendant labeled colors which had been certified to the Department of Agriculture and which it sold as certified colors so as to lead the color trade generally familiar with colors manufactured and sold by the intervening defendant to believe that the colors in this suit were certified colors, then you must find that the colors in this suit are neither misbranded nor adulterated under the Food and Drugs Act.

3. If you find that the color content of the articles in this suit have been certified by the intervening defendant to the Department of Agriculture, then you must find that the articles are not misbranded or adulterated within the meaning of the Food and Drugs Act.

4. Under the pleadings and all the evidence you must find that the articles are not misbranded under the Food and Drugs Act.

5. Under the pleadings and all the evidence you must find that the articles are not adulterated within the meaning of the Food and Drugs Act.

6. Under the pleadings and all the evidence you must find that the articles are neither misbranded nor adulterated within the meaning of the Food and Drugs Act.

On May 11, 1925, the jury after due deliberation returned a verdict for the Government on the misbranding charge, and for the defendant on the adulteration charge.

UNITED STATES v. GORMAN & CO.

(District Court, W.D. Washington, Sept. 29, 1925)

N.J. No. 14664

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

The following charge was delivered to the jury:

NETERER, *District Judge.* Members of the jury: The information in this case charges that the defendants did ship in interstate commerce articles of food containing filthy, decomposed, and putrid animal substance, on the 2d day of September 1924 and also on the 15th day of August 1924. On the 15th day of August 1924 a number of cases were sent, and a number of cans out of these cases contained, it is charged, filthy, decomposed, and putrid animal substance. The other shipment was on September 2, 1924, and was made subsequently. The words used in the information simply mean what is ordinarily implied—putrid, tainted, decomposed, or decayed—the process of putrefaction—decay of albuminous or other matter.

You are instructed that the defendant in this case has pleaded not guilty; therefore denies the charge. The burden is upon the Government to show that it is guilty beyond every reasonable doubt. The defendant is presumed innocent until proven guilty by that degree of proof, and this presumption continues throughout the trial and until you are convinced by the testimony that the defendant is guilty.

You are instructed that it is against the law to carry any article of food in interstate commerce containing filthy or decomposed, putrid animal or other substance. The intent with which it was sent bears no relation to the shipment, if the intent is undisclosed. If in fact there is a disclosed intent of which the Bureau is advised, and that before the article would be considered as human food other tests were to be made and the Department so advised, that would take the shipment out of the rule. In this case there are two shipments. One, it is contended, was made as a special consignment of which the Bureau was advised, and that it would not be shipped as food or delivered to the trade until further tests had been made of it.

In this case, as in any criminal case, you are the sole judges of the facts, and you must determine what the facts are from the witnesses who have testified and the circumstances which have been disclosed.

The first question that you will want to determine is whether the food, or the salmon that was shipped, contained filthy or decomposed, putrid matter in its content. If it did not, then you will return a verdict of not guilty upon both counts. If it did, then you will return a verdict of guilty upon such count upon which you are convinced that there was filthy, decomposed, putrid animal or other substance. In determining whether there was putrid animal or other substance in any of these shipments, of course you will take into consideration the shipment that was made, what was found in the shipment, the disposition of it, the construction placed upon these shipments by the Department at the time, with a view of determining

whether it did contain the substance which is contended, and you will determine then what is the right. There is evidence here that after the one shipment—I think the shipment in count 2—that a consignment or shipment was made from a part of that consignment to Seattle with the consent of the Bureau. The testimony discloses that this was shipped, I think, to some place in Virginia, and after the entire consignment was seized here, this shipment was traced to the ultimate destination and was also seized, and after having been seized samples were submitted to the Department at Washington, and this was afterwards released. I think that is a circumstance for you to take into consideration with relation to this shipment in count 2, together with the testimony that has been presented here, and if from all of the testimony you believe that this consignment which was made here, of which the salmon in count 2 in the information was a part, was filthy and contained decomposed, putrid matter and was condemned, beyond a reasonable doubt, then you will return a verdict of guilty upon that count; if you have a reasonable doubt, then you will return a verdict of not guilty. You will likewise do the same with relation to count 1 if you find it did not contain any putrid matter as charged.

There is this further element to be taken into consideration with relation to count 2, the shipment made on the 2d of September, in which the defendant contends that the Government was advised that that shipment would not be made as food until it had been submitted to the department. It is not necessary for me to relate to you the circumstances detailed by the witnesses here with relation to that consignment. You will remember that testimony with relation to the fish brought in from the traps and the nets and the amount of fish—I think 600 or 800 putrid fish that had been brought in and thrown by the fishermen with 4,000 or 5,000 trap fish that were lying on the floor—when this was discovered by the Department agents they called the attention of the defendants to it. They then picked out some 400 or 500 rotten fish from the balance that was on the floor, but a part of these fish were then in retorts, and the defendants testified that it was then they advised the Government officials that those salmon would be set aside, and if found unfit for human food they would not be used for that purpose; that before they would be applied to that purpose they would bring them to the attention of the Department, and then they testified that they laid those cases aside and did not ship them in the general shipment because they did not want to get them mixed up with the other consignment, and brought them down personally, and personally went to the bureau and informed them that this shipment was here. Now what do you think is the fact? Was there a disclosed purpose with relation to that shipment, an understanding that those cases would be brought to Seattle for further test and approval, and which would excuse them from the direct provision of this law? And if you find that to be the fact, or if the question raises a reasonable doubt in your minds with relation to count 1, then you will return a verdict of not guilty.

You will weigh the testimony fairly. Neither you nor I have anything to do with the policy of this law. We have to do only with the enforcement, and your sole duty and purpose is to find what the facts are. A maximum and minimum penalty is fixed, to be determined by the presiding judge. You will therefore give the Govern-

ment a square deal, and give the defendant a square deal. If the defendant has not transgressed the law, then it ought not to be punished; if it has, it should be punished. The question of intent with relation to shipment of the consignment of goods brought down from Alaska with the purpose of labeling here and finally shipping from here would not excuse the defendant if this fish was putrid, unfit for human food, and brought here in interstate commerce. Intent is immaterial and could not excuse the defendant with relation to the filthy or putrid condition of the food. The Government, under such circumstances, could not enforce this law. But when there is a disclosed purpose to the plaintiff, as the defendant contends there was with relation to count 1, then that should have operation in your minds in determining what the fact is here.

A reasonable doubt is just such a doubt as the term implies, a doubt for which you can give a reason, not a speculative, imaginary, or conjectural doubt. It is such a doubt as a man of ordinary prudence, sensibility, and decision, in determining an issue of like concern to himself as that before the jury to the defendant, would make him pause or hesitate in arriving at his conclusion. It may be a doubt which is created by the want of evidence, or may be by the evidence itself. A juror is satisfied beyond a reasonable doubt when he is convinced to a moral certainty of the truth of the charge which is made and the guilt of the defendant.

Are there any exceptions? The verdict is in the usual form. Before the word "guilty" is a blank, and you will write in there "is" or "not", as you find the fact to be. You may retire.

UNITED STATES v. SMITH

(District Court, S.D. Iowa, Oct. 22, 1925)

N.J. No. 14119

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of acquittal.

REEVES, *District Judge* (charge to jury). Gentlemen of the jury: At the conclusion of arguments of counsel in this case and after all the testimony has been introduced it becomes the duty of the court to charge you with the law applicable to the facts in the case. With the law of the case you have nothing to do, and with the facts of the case the court has nothing to do. It is your exclusive function to pass on all controversies of fact, and it is the exclusive function of the court to declare the law, and it is your duty to accept that declaration of the court as to the application of the law to the facts in the case. In your consideration of the facts the court will not attempt to infringe upon your purview of deciding the facts of the case. You should make up your minds as to the facts and return your verdict according to the facts, according to your judgment, and according to your judgment under the guidance of the facts and the extent of the facts and not favor any judgment the court may have in the matter. Anything the court may say is for your guidance in this case.

Gentlemen, Congress has enacted the following statute with reference to interstate shipment of adulterated food:

The introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded, within the meaning of this Act, is hereby prohibited; and any person who shall ship or deliver for shipment from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, or to a foreign country, or who shall receive in any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or foreign country, and having so received, shall deliver, in original unbroken packages, for pay or otherwise, or offer to deliver to any other person, any such article so adulterated or misbranded within the meaning of this Act, or any person who shall sell or offer for sale in the District of Columbia or the Territories of the United States any such adulterated or misbranded foods or drugs, or export or offer to export the same to any foreign country, shall be guilty of a misdemeanor.

Now, gentlemen, the indictment in this case charges that the defendant, on or about the 30th day of July 1923 shipped or offered for shipment a certain number of cases of eggs containing adulterated eggs—that is to say, eggs that contained decomposed matter—that is, a putrid animal substance.

If you should find on the evidence that on or about the 30th day of July 1923 the defendant shipped or delivered for shipment in the city of Lorimor, in the State of Iowa, to the city of Chicago, in the State of Illinois, to Peterson Brothers, a number of cases containing adulterated eggs, that is to say, eggs that were moldy, partly rotten, as described in the evidence as black rot, mixed rot, etc., and most of the eggs contained blood rings, then, in such case, you should find the defendant guilty as charged in the information.

Now, gentlemen, as has been suggested heretofore there is only one little simple question in this case, and that is, whether or not the eggs that, according to the testimony of both the plaintiff and the defendant, were shipped, the eggs shipped from Lorimor, in the State of Iowa, on the 30th day of July 1923 were adulterated when they were offered for shipment, or when they were shipped. That is the one question to determine. If you find they were adulterated when offered for shipment or when they were shipped, then, gentlemen, it will be your duty to render a verdict of guilty in this case.

If, on the other hand, you believe they were not adulterated when offered for shipment, or shipped, and if they afterwards became decomposed, that many of them contained mixed rots, black rots, or blood rings, or became moldy, as the testimony tends to show, then under such circumstances the defendant is not guilty of shipping or offering for shipment.

There is testimony, and the court is briefly referring to that, in effect that when the eggs arrived in Chicago on the 8th day of August 1923 some 8 or 9 days after they were shipped from Lorimor, the tesmony is that they were not then adulterated. On the other hand, there is testimony on the part of the Government that on that day they were adulterated, and there is testimony tending to show that if the eggs had not been adulterated when shipped, because of the refrigeration conditions they would not have become adulterated, they wouldn't have deteriorated in the course of shipment. The defendant on his part says that he made an inspection of this shipment of eggs after they gathered

them up in the country, and, in substance, if they were adulterated when offered for shipment the defendant denies he had any such knowledge. The court, under this status, is constrained to say that it is not a question of whether or not he had knowledge of their adulteration, or it is not a question of whether or not he made reasonable, proper, and careful inspection to determine whether or not they were adulterated. Under this law as the court interprets it, the defendant is responsible if he ships adulterated eggs regardless of what he may have done to ascertain whether or not they were adulterated. So, in this case, if you should determine from the testimony that the defendant shipped or offered for shipment adulterated eggs, on or about the 30th day of July 1923 then, gentlemen, it will be your duty to return a verdict of guilty in this case.

You gentlemen, in retiring to your jury room to deliberate on your verdict, should consider your verdict in this case. You should bear in mind that there will be no question of the effect on the Government or the defendant with reference to your verdict insofar as the effects are concerned. If the defendant is guilty of having offered for shipment or shipped adulterated eggs in violation of this law, then it is your duty to return a verdict of guilty regardless of the effect upon him. If, on the other hand, you find that the defendant did not offer for shipment and did not ship adulterated eggs, then it is your duty to return a verdict of not guilty. The fact that they may have been adulterated when shipped or may have been adulterated somewhere else it is your duty to determine from the testimony in the case, and then return your verdict in the case, expressive of what you concede to be true in the case under your oaths and qualifications of that duty, because your responsibility as men demands that you do that, and without question for or against anybody. When you have done that, it is your full duty.

The court will give you these fundamental rules enabling you to analyze the testimony in the case.

In the first place, you are the sole judges of the witnesses and the weight to be accredited to their testimony, of each and every witness who testified in this case. In determining the weight and credibility you should give the testimony of any witness, you should take into consideration his conduct and demeanor on the witness stand, his willingness or unwillingness to testify to what he is asked about, his knowledge of the facts, and the reasonableness or unreasonableness of his testimony, his interest, if any, in the result of the case, his bias or prejudice for or against any of the parties in the case, and any other facts or circumstances that may tend to throw light on such witnesses' testimony, and if you should find any witness has willfully sworn falsely to any matter or fact in the case you have a right to disregard all or any part of it and you may believe any part.

The defendant testified in his own behalf. He is a competent witness. And you should take into consideration the fact that he is the defendant, and is on trial. The law presumes that he is innocent and not guilty. This presumption protects the defendant throughout the trial, until the Government has proven his guilt to your satisfaction, beyond a reasonable doubt. Now, while reasonable doubt does not mean notions, it means, as the word implies, a substantial doubt; that is, a doubt founded on reason, and one that would

cause a reasonable, prudent man to hesitate before acting, and such a doubt as may arise on the testimony or from the lack of testimony. After all is said and done if it should exist in your mind, that is, a reasonable doubt as to the innocence or guilt of the defendant, it would be your duty to give the defendant the benefit of such doubt and acquit him.

UNITED STATES v. 384 CASES OF CANNED CHERRIES

(District Court, N.D. Ohio. Nov. 12, 1925

N.J. No. 14090

Libel under section 10 of the Food and Drugs Act. Trial before the court. Judgment in favor of the United States.

WESTENHAVER, *District Judge.* This libel is filed under act of Congress, June 30, 1906, known as the Food and Drugs Act, against 384 cases, more or less, of cherries. The Fredonia Preserving Co., of New York, has intervened as claimant and makes defense. It is admitted that these cases of cherries were shipped by the claimant in interstate commerce to the Summit Wholesale Grocery Co., at Akron, Ohio. Condemnation is sought on the ground that these cases of cherries consist in whole or in part of filthy, decomposed, or putrid vegetable or animal substance, contrary to and in violation of section 7, paragraph 6 under "Food" of said Food and Drugs Act. Neither party demanding a jury, the case was tried to the court.

The Government was permitted to withdraw 30 cans at random from the several cases and have tests and examinations made of the contents by chemists. The claimant was permitted to withdraw in like manner a dozen cans and have examinations and tests made thereof by an expert chemist. The claimant's counsel conceded on the hearing that the cans were fairly drawn and were typical of the entire shipment.

The Government's witnesses testified that each contained decomposed and spotted cherries and also worms or larvae. Each can contained between 875 and 980 cherries. In one group of six cans, the average number of larvae or worms in the can was 39.3. The highest number in any one can was 119 worms, and the lowest, 18. In the same lot of six cans the average number of decomposed or spotted cherries was 43. The highest in any one can was 107, and the lowest, 8. The Government witness testified that in another lot of 12 cans the average number of worms to the can was 75. The highest in any one can was 353, and the lowest, 10. In the same group the average number of decomposed and spotted cherries to each can was 22.8. The highest number in any one can was 47, and the lowest, 3. The Government witness testified that in still another group of 12 cans the average number of worms to each can was 25.6. The highest number in any one can was 71, and the lowest, 2. In the same group, he testified, the average number of decomposed and spotted cherries to each can was 32.4. The highest number to any one can was 78, and the lowest, 10. In the group of six cans examined by respondent's

expert he divides the so-called worms into two families, the offspring of the cherry fly and the offspring of the curculio; but for our purposes the totals only of both need be stated. He testified that the average number of worms or larvae found in each was 28. The highest number in any one can was 53, and the lowest, 11. He testified that the average number of cherries in each can showing fungus growth was 53. The highest in any one can, he testified, was 77, and the lowest, 21. He excludes from this classification all cherries showing merely a brown spot or its equivalent on one or both sides, because mere spots, while perhaps evidence of the beginning of decomposition or rot, do not indicate such an advanced state of decomposition as would be the equivalent of rot or decay or disintregration of the substance of the cherry.

Thus it appears that there is little or no difference between the results as given by witnesses for libelant and for claimant. It was conceded that the cans were fairly drawn and were typical. It was found that every can contained worms, averaging in one group of six, 43 to the can; in another group of twelve, 75 to the can; in another group of twelve, 25.6 to the can; and in the group examined by respondent's witnesses, 28 to the can. In one can the number ran as high as 353 and was only rarely below 12. Hence the presence of cherry fly or curculio larvae in substantial numbers in each can cannot be denied. The larvae thus found were preserved in glass vials and produced and exhibited in evidence. The sight of them makes a very disagreeable, not to say repulsive, impression on the trier of facts. Equal certainty is not possible in weighing the evidence as to decomposition or decay. The cherries were seeded before being canned. The mutilation and disintegration incident to manufacturing and subsequent handling make it difficult for a nonexpert witness to distinguish between sound and decomposed or decayed cherries. Even so, the results as testified to by the Government witnesses are substantially the same as given by claimant's expert. The decomposed cherries, as well as some samples of sound cherries, are preserved. The impression made on me is that the Government witnesses were not resolving doubts against claimant.

Upon the basis of the above facts I am of the opinion that these cases of cherries must be condemned as adulterated. Evidence that adulteration is injurious to health is not required. Whether an adulterated product should be condemned is not dependent on the degree of care the manufacturer exercised in producing it. It is still subject to condemnation if shipped in interstate commerce, even though the manufacturer was unable to procure cherries free from worms or free from decomposition. Claimant urges that some margin of tolerance should be allowed because it is impossible to produce a food product 100 percent pure. The Food and Drugs Act has not established a precise standard whereby adulteration can be determined. Because of this fact the courts have uniformly permitted each case to be judged upon its own special facts. It would be unwise, even if practicable, to establish a standard of count whereby a can of cherries should be condemned if that standard were exceeded. It is sufficient in the present case to say that the adulteration, particularly in the number of worms, exceeds any reasonable allowance for accidents or results unavoidable by the exercise of due care.

The authorities need not be reviewed. I am informed by counsel that Hon. John C. Knox, United States district judge, in a recent case involving a shipment of cherries made by the same claimant and presenting facts substantially the same, announced the law as herein set forth, and, when the jury returned a verdict in claimant's favor, set it aside as against the clear weight of the evidence. The principles of law and the application thereof to a situation somewhat analogous will be found set forth in the following cases to which reference is made:

United States v. *200 Cases Catsup* (D.C.), 211 Fed. 780. *United States* v. *462 Boxes Oranges* (D.C.), 249 Fed. 505. *Union Dairy Co.* v. *United States* (7 C.C.A.), 250 Fed. 231. *Andersen & Co.* v. *United States* (9 C.C.A.), 284 Fed. 542.

Judgment of condemnation will be entered, with costs against claimant. An exception may be noted.

UNITED STATES v. GERMACK

(District Court, S.D. New York, Nov. 20, 1925)

N.J. No. 14353

Information alleging violation of section 2 of the Food and Drugs Act. Jury trial. Verdict of guilty.

The United States attorney filed an information against Elias Germack, a member of a copartnership trading as the Armenian Importing Co., New York, N.Y., alleging shipment by said defendant from the State of New York into the State of Pennsylvania, of quantities of olive oil which was misbranded, and from the State of New York into the State of Rhode Island, of a quantity of salad oil which was adulterated and misbranded. The olive oil was labeled in part: (Can) "Pure Olive Oil Sopraffino Italia Brand * * * Net Conts. ⅛ Gall." (or "Net Contents ¼ Gall." or "Net Contents ½ Gall."). The salad oil was labeled in part: (Can) "Superior Quality Oil Greek Patriot Brand Winter Pressed Cotton Salad Oil Flavored With High Grade Olive Oil A Compound Net Contents 1 Gall."

Misbranding of the olive oil was alleged in the information for the reason that the statements "Net Conts. ⅛ Gall.," and "Net Contents ¼ Gall.," and "Net Contents ½ Gall.," borne on the various sized cans containing the article, were false and misleading, in that the said statements represented that each of said cans contained ⅛ gallon, ¼ gallon, or ½ gallon, as the case might be, of olive oil, and for the further reason that it was labeled as aforesaid so as to deceive and mislead the purchaser into the belief that each of said cans contained ⅛ gallon, ¼ gallon, or ½ gallon, as the case might be, of olive oil, whereas the said cans did not each contain the amount represented on the label but did contain a less amount.

Adulteration of the salad oil was alleged for the reason that a product which contained no flavor of olive oil had been substituted for a product flavored with olive oil, which the article purported to be.

Misbranding of the salad oil was alleged for the reason that the statements, to wit, "Flavored With High Grade Olive Oil," and "Net

Contents 1 Gall.," borne on the label, were false and misleading, in that they represented that the article was a product flavored with high-grade olive oil and that each of the cans contained 1 gallon net thereof, and for the further reason that it was labeled as aforesaid so as to deceive and mislead the purchaser into the belief that it was flavored with high-grade olive oil and that each of the said cans contained 1 gallon net thereof, whereas the article was not a product flavored with high-grade olive oil but was a product which contained no flavor of olive oil, and each of the cans did not contain 1 gallon of the article but did contain a less amount.

Misbranding of both the olive oil and the salad oil was alleged for the further reason that they were in package form and the quantity of the contents was not plainly and correctly stated on the outside of the package.

GODDARD, *District Judge* (charge to jury). Gentlemen of the jury: I think you understand that the Government passed this Pure Food and Drugs Act with several purposes in mind. One of them was to protect the citizens of the country from adulterated foods and short weight and so forth. Most of those adulterations are done to only a slight degree. By that I mean they do not take out a large percentage of the can or bottle or container; it is usually one or two or three percent which is taken out. But the Government intends that every container should contain 100 percent, and the Government has made the law quite clear. These people here are charged with three breaches of that law: One, that the container did not state on the outside how much it contained; again, that it should have stated the exact amount, and also that it failed to contain the amount stated on the outside that it did contain. The third charge against these defendants is that there was no olive oil in this container at all, although it was advertised and sold to the public with the representation that it did contain olive oil. You can realize how important it is for such a statute to be held inviolate.

The Government says to you, "We will not concern ourselves with the intention of the people." It is not a defense to this case, gentlemen, to say that they did not intend that there should be a shortage of weight, or that they did not intend that the label should not fully indicate, or they did not intend to leave out the olive oil. If they in fact did give short weight, or did in fact fail to state on the outside; if in fact they did omit to put the olive oil in, and you find that they did, you should find them guilty.

In a criminal case like this, and this was tried in a short time, I shall not attempt, because I think no good purpose would be served, to restate the facts to you. They are all fresh in your mind. You have seen the witnesses called by the Government, various inspectors, and you have seen the Government chemists; you have seen the witnesses that the other side called, that were called by the defendants, two witnesses, both of whom, as I recall, were customers of these defendants, or who did business with them. You will consider in your mind what interest any witness in this case may have had. Of course, if you find any witness has made a material statement of fact with the intention of misleading you, you have the right to disregard all of that witness's testimony if you see fit.

As I remember, the shortages varied from 3.83 to 4.07 percent in some of the containers. It seems that all of the containers are short weight.

You know, having been in this criminal court a few days, that everyone is presumed to be innocent under the law until shown to be guilty beyond a reasonable doubt. You also know from having been in the criminal court that a reasonable doubt means a reasonable doubt or a doubt which a reasonable man has after hearing all the facts and circumstances in the case.

As I stated to you before, gentlemen, the question of intent does not enter into this case at all. It is whether in fact the Government has proved beyond a reasonable doubt this charge against these defendants.

Now there are 9 counts here, gentlemen. The first 6 counts relate to the various sized cans; the last 3 counts relate to the alleged charge; the seventh count was to the effect that it is charged there is no olive oil at all in the containers.

Now, gentlemen, the case is simple. You are a jury of business men and experienced. You have seen these witnesses. You will retire, and by your verdict you will decide whether or not there was a shortage in the containers and whether or not they failed to put any olive oil in as required under the law.

Mr. WHITTINGHAM. If Your Honor please, I would like to offer a slight correction in Your Honor's statement as to the information. It does not charge there was no olive oil; it charges there was no flavor of olive oil.

The COURT. No flavor of olive oil.

Mr. WHITTINGHAM. If Your Honor please, I ask Your Honor to charge the jury that the test in determining the guilt of the defendants is whether the article was at the time of the sale by the defendants the identical thing that the brand indicated it to be.

The COURT. Yes, gentlemen, that is very true, of course.

Mr. WHITTINGHAM. Also, that the condition of the goods at the time of the seizure by the Government is not conclusive evidence as to their condition at the time of the sale by the defendants.

The COURT. Those circumstances, like everything else, gentlemen, you will take into consideration.

Mr. WHITTINGHAM. Also, that unless the jury are convinced beyond a reasonable doubt that there was misbranding as alleged in the indictment, they must find the defendants not guilty.

The COURT. That is correct. If you have reasonable doubt about it you have not the conviction that is required to convict. I think that covers it, doesn't it?

Mr. COUDERT. Except it might be well to state that they can find the defendants guilty on any one or all of the counts?

The COURT. Gentlemen, you are to understand you will decide and in your verdict state whether you find the defendants guilty on any one or all of these nine counts.

Mr. WHITTINGHAM. May I also ask that you instruct the jury they can have the exhibits with them?

The COURT. The jury may have the exhibits.

UNITED STATES v. 24⅞ GALLONS OF SMACK

(District Court, E.D. Wisconsin, Jan. 21, 1926)

N.J. No. 14416

Libel under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of claimant.

GEIGER, *District Judge.* The Government seized an interstate shipment of "Smack," a product with respect to which this preliminary statement may be made. It is manufactured synthetic concentrate, which the Government says is, and is intended to be, a base for a beverage imitative of grape juice. Some time prior to the institution of this proceeding, the product had received attention from the Government because it was shipped under labels bearing the name "Grape Smack" associated on the label with a picture of a cluster of grapes. At that time the product was similarly advertised in trade journals. After the condemnation of that label by the enforcement officials in a proceeding in court, the manufacturer, the claimant here or its predecessor, ceased that practice, and the article is now advertised labeled and shipped as "Smack."

Upon the present hearing the Government offered proof of the foregoing—which offer was received subject to later consideration of competency or the like—and also introduced proof tending to show the following:

That an analysis of the product in question discloses the presence of certain ingredients or constituents, among them water, sugar, tartaric acid, ash, vanillin, and others said to contribute severally to physical properties, flavor, color, or the like. The Government witness, upon his direct examination, also testified to the presence of approximately 5 percent of grape juice; but, I believe, upon his cross-examination failed to sustain that position when he admitted that his conclusion was based wholly upon finding in the product certain ingredients also present in natural grape juice, such as tartaric acid and ash. This infirmity of his testimony seemed to me to be conclusive against the Government when claimant denied the introduction of natural grape juice, but asserted that the ingredients testified to by the Government witness arose not upon the introduction of natural grape juice, but through synthetic introduction as a part of the formula for the entire synthetic product. The Government witness likewise testified that the beverage prepared from this base resembled grape juice in its fluid consistency, color, and taste—indicating the particular synthetic elements capable of producing color and taste, respectively.

It was, and it must be conceded that the term "Smack" is arbitrary and not at all representative of any known product, its consistency, ingredients, its food or other qualities, place of manufacture, or the like. It is distinctive within all the positive and negative tests recognized in the administration of the food law, and in its consideration by the courts. *United States* v. *Coca Cola Co.*, 241 U.S., 265, p. 286.

The name, so the lexicons tell us, has as its synonyms taste, savor, flavor, tang, tincture; also touch, tinge, dash, spice, infusion, sprinkling, little, small quantity.

Therefore, the name at most would indicate that the product contained a "smack" of something. This thought, however, need not be pursued because the Government does not contend that the name or the label, as now constituted, is misrepresentative in having a tendency to deceive or to inculcate the belief that any particular known article of food is comprehended. Nor in the proofs adduced is there any basis to find that the product, since the condemnation of the former label, has been sold or offered for sale as "any other food product, mixture, or compound." In other words, the case is not within the doctrine of *Weeks* v. *United States*, 245 U.S. 618. Therefore, the Government's case, in its most favorable light, is reduced to this: May an article put out, offered, or shipped, under a name arbitrary, not in the slightest degree representative or misrepresentative, be excluded from interstate commerce because in its color, aroma, taste, and fluid consistency, it or the product developed from it, may prove, is, or may be designed to be, imitative of other known products? Clearly, if the Government's position can be maintained, then the name or branding can be eliminated from consideration in every instance where synthetic products having truly arbitrary, nonrepresentative names, may be the subject of shipment. Nonbranding may become misbranding. This strikes me as being true both of food and drugs. The susceptibility of being found to have color, taste, or consistencies like that or those of known food products would not only bar arbitrarily distinctive names as affording protection, but would require, if the articles are to be shipped at all, a statement not only accurately designating the product imitated, but also assurances possibly of the perfection and either the singleness or the scope of imitation. If a synthetic product could disputably be urged to have the flavor, or a smack of more than one known product, fairness to the law should require statement of the justifiably possible range of imitation. The thought was suggested upon the trial of this case when, after hearing the Government's proof, claimant's representative, during recess, purchased several bottles of different kinds of grape juice on sale at drug stores, and in court pointed out a range of colors and other attributes upon comparison with each other and with "Smack" as developed from claimant's concentrate.

It is well known, for example, that different varieties of the same fruit have different flavors, consistencies, and other properties or attributes, either in their natural state or upon being subjected to varying processes in preparation for consumption. It is likewise well known that as between different varieties of fruits, flavors, colors, and the like seem to appear in common. It is difficult at times to distinguish jellies. Juices expressed from grapes vary as widely and as fundamentally in the attributes of color, taste, and aroma as the grapes themselves; and, as is well known, some of them in their natural state approach very closely to and are quite indistinguishable from the natural juices of other fruits. As above indicated, if a distinctive name given to a wholly synthetic product must still have added to it some statement or legend because of the susceptibility of its being mistaken for some natural product, the query arises respecting the reduction of this legal obligation to concrete terms. Counsel for the Government insisted in argument that claimant here would not be satisfying the law if in addition to the word "Smack," it added "A Wholly Synthetic Beverage," and it seemed to think that the law

would be satisfied if the product were marked "Imitation." Manifestly, this could serve no purpose unless a further statement indicating the subject of imitation were added. And if such statement were added, the producer and seller would still be obliged at his peril, against his will, and perhaps, contrary to the fact, to represent what might be said to be the genuineness and the perfection or the scope of his imitation.

In the *Coca Cola case, supra,* the court clearly points out the considerations involved in determining distinctiveness of name, saying:

> Thus, soda water is a familiar trade description of an article which now, as is well known, rarely contains soda in any form. Such a name is not to be deemed either misleading or false, as it is in fact distinctive. But unless the name is truly distinctive, the immunity cannot be enjoyed; but it does not extend to a case where an article is offered for sale "under the distinctive name of another article." Thus, that which is *not* coffee, or is an imitation of coffee, cannot be sold as coffee; and it would not be protected by being called "X's Coffee." Similarly, that which is not lemon extract could not obtain immunity by being sold under the name of "Y's Lemon Extract." The name so used is not "distinctive" as it does not properly distinguish the product; it is an effort to trade *under the name of an article of a different sort.* So, with respect to mixtures or compounds, we think that the term "another article" in the proviso embraces a different compound from the compound in question. The aim of the statute is to prevent deception, and that which appropriately describes a different compound cannot secure protection as a "distinctive name."
>
> *A "distinctive name" may also of course be purely arbitrary or fanciful and thus, being the trade description of the particular thing, may satisfy the statute, provided the name has not already been appropriated for something else so that its use would tend to deceive.*

Therefore the clause of the statute, "If it be an imitation of or offered for sale under the distinctive name of another article," seems to me to deal first with imitations, that is, things patterned after, or a copy of, or made in simulation of another article and, as such, offered or put out as the genuine; second, articles, whatever they may be, whether imitation or not, which are put out under the distinctive name of another article. The statute condemns the use of means which being used arouse the belief that one thing is really another.

It is my judgment that the limitations of the statute are such that the case before us is not comprehended; and this view necessarily excludes from the case the testimony dealing with the former practices of the claimant.

A decree dismissing the libel may be entered.

UNITED STATES v. 897 CASES OF CANNED CHERRIES

(District Court, E.D. Pennsylvania, Feb. 16, 1926)

N.J. No. 14339

Libels under section 10 of the Food and Drugs Act. Trial before the court. Judgment in favor of the United States.

The United States attorney filed libels for the seizure and condemnation of 897 cases of canned cherries, alleging that the article had been shipped and transported from the State of New York into the State of Pennsylvania and remained in the original unbroken packages,

and that it was adulterated and misbranded in violation of the Food and Drugs Act.

Adulteration of the article was alleged in the libel for the reason that it consisted in whole or in part of a filthy, decomposed, and putrid vegetable substance; and for the further reason that cherry pits had been mixed and packed with the article, and had been substituted in part for the article.

Misbranding of the article was alleged for the reason that the statement "Red Sour Pitted Cherries", borne on the label, was false and misleading and deceived and misled the purchaser, as applied to the product containing an excessive quantity of pits.

The Fredonia Salsina Co., Fredonia, N.Y., having appeared as claimant of the goods and filed an answer denying the material allegations of the libels, and the cause having come on for trial before the court, the following opinion was handed down by the court:

DICKINSON, *District Judge*. We frankly confess our utter inability to find any wholly satisfactory ground on which to base a ruling in this cause or any standard by which to judge it.

The libels are based upon the Food and Drugs Act, which provides that any food which enters into interstate commerce may be confiscated if it is adulterated or misbranded. This double charge is made in this case. The act defines "adulteration" in respect to food, and "any animal or vegetable substance" for use as a food which is "filthy, decomposed, or putrid" is adulterated within the meaning of the act. These cherries are not animals, although they are charged to be the abode of animalculae in the form of worms. We are relieved of the task of deciding whether a cherry is a vegetable substance because no point is made of this as it is agreed that it has been ruled that fruits are vegetables within the meaning of this law.

The only fact left to be found is whether they are "filthy, decomposed, or putrid" within the meaning of this act. We could not honestly find that they are either filthy or putrid as we use these words in common speech. They are certainly not decomposed or they would not be in existence as cherries. We assume the fair meaning of this word to be whether they are so far what is called "afflicted with rot" as to be unfit for food. A fair general finding would be, under the weight of the evidence, that some of them are. They are put up in can containers of the no. 10 size, each holding in round numbers 1,000 cherries. How would it be practically possible with the utmost practicable care to get 1,000 cherries together without the presence of some bad ones? The problem then becomes how many bad ones would give such character to the whole as to condemn the lot? This is not a mathematical question and yet numbers and percentages enter into it. Before numbers can be found or percentages figured it must be determined what a bad cherry is. We had a concrete illustration of the difficulty of even this easy part of the general problem. There is a defect in the appearance of a cherry known as a limb bruise. Some crops for obvious reasons, would show more of such cherries than others. No commercial man would call such a cherry bad. All would agree, however, that it would depend upon the depth of the bruise, and that rot would more speedily attack such cherries than it would others. When such a cherry was submitted to the witnesses, as any one would have known beforehand, all those

who are commonly called technical experts pronounced it a bad cherry and all the commercial experts called it a limb-bruised cherry. Numbers and percentages follow the classification adopted.

What we have said about bad cherries applies to wormy cherries, with this difference. You can tell by ocular inspection whether a cherry is rotten. You cannot be sure of the absence of a worm without opening the cherry. In consequence, all that is practicable to do is to select what might be called a fair sample of the lot and assume that what the sample showed the whole lot would show. Here again numbers and percentages enter into the general finding. How many worms would condemn the lot or how many wormless cherries would save it? The only historical guide we know of is that applied by the angel to the cities of Sodom and Gomorrah. We would hesitate to accept this standard because we suspect that the angel knew what the count would disclose before he agreed to abide by it or he would not have been so liberal. If this general question were being submitted to the unerring—because inscrutable—wisdom of a jury, the task of the trial judge would be easy. The task of the jury would likewise be relatively easy because they would not be called upon to give any reasons for their decision. It would be easy to decide this cause and perhaps decide it right, at least to the satisfaction of one of the parties. It is well-nigh impossible to give reasons for the ruling without probable error and giving dissatisfaction to both parties and to everybody else who was interested enough to care. The motive back of the general purpose of this act is to assure the supply of wholesome food to the people. This law and all like laws command the sympathy and support of everyone in their motives. The real situation might as well be faced. Such laws, aside from the beneficent results intended to be reached, touch two important classes. One is the commercial class and the other those who wield what are called the political forces of a self-governing people. The commercial class of necessity have but one test for everything, and that is salability or the money test. With those who deal in food products the sale test is: Will the product sell at a remunerative price? Wholesomeness enters into it only secondarily although importantly. If the dealer can earn a reputation for his product as being what they advertise it to be, "absolutely pure", the product will sell readily and for a good price. Two results follow. One is they will spend money and go to any trouble to have their product good and wholesome to the point of a return in remunerative sales and prices but at this line they will stop, not because they want to stop there but because commercially they must. The other result is that, generally speaking, they will all welcome and abide by a law of this kind, and those of them whose products are wholesome wish, for obvious reasons, to have the law rigorously enforced. One reason is that they by this law add to their own advertising claim of purity the "guarantee", as it is termed, of the United States Government that the food has been inspected and found to be pure. Just here caution should enter into the establishment of any standard. As was pointed out by the exceptionally intelligent inspectors who testified in this case, there must in the practical workings of this law be allowed a zone of tolerance. This must of necessity be more liberal than the general commercial standard. The moment, however,

it becomes known to the dealers it is inevitable that some of them will "edge up" to the more liberal standard, and the moment some do all must or be undersold. The political consequences seem to receive little attention from anyone but they are very grave. We are speaking of it, of course, in a wholly impersonal sense. Subject anyone, as nearly every trade and all business is now subjected, to the control of officials appointed by an executive and what becomes of our boasted self-government? The only haven of refuge is to give to business people the assurance that they are subject to the personal control of no one but to the rule of law alone. We have spoken in no spirit of criticism of either the commercial class or of the politicians. They both run true to form, and great numbers of each are as much better than their customers and constituents permit them to be as they find they dare be. All these considerations bear upon the duty of the courts in construing these laws, but it makes that duty an especially delicate one. The courts must protect the dealer from any unjust, undue, or arbitrary exercise of power or our Government ceases to be one of law. The officials must be supported in the performance of their lawful duty or these laws become a mockery.

We put on record our finding that the officials charged with the execution of this law have exhibited a spirit of fairness and of consideration of the interests of everyone affected, and have acted through out with a good sense in the discharge of their difficult duties which is highly commendable.

To bring this long discussion to a close, with one further comment before announcing the conclusions reached. The comment is that this case as a case has already cost more in its investigation than the product concerned is worth, and we have no wish to prolong it or to add to the expense, but we do wish to accord to both parties all their rights, and among these the right to decide for themselves how far to push the litigation.

As our conclusions are both of findings which we cannot make and of those which we do make, we will state the former first. We are unable to find that these cherries are "filthy or putrid" in the ordinary meaning and acceptation of those words in common speech, and refuse to so find. We further refuse to find that the cherries were misbranded.

The conclusions reached are as follows:

1. As the act of Congress gives to the claimant the right to a jury trial, we accord to the claimants here that right, and if exercised within 15 days from the filing of this opinion the entry of any judgment hereon is to be withheld.

2. We find the condition and state of these cherries to have justified their stoppage and seizure, and that they were and are adulterated within the meaning of this act of Congress.

3. A formal order or judgment sustaining the libels may be submitted if no jury trial is asked for within the time above limited.

4. We retain jurisdiction of the cause for the purpose of making formal and, so far as concerns this court, final disposition of it.

UNITED STATES v. 100 BOXES OF BOWMAN'S ABORTION REMEDY

(District Court, N.D. Ohio, May 5, 1926)

N.J. No. 14373

Libel under section 10 of the Food and Drugs Act. Trial before the court. Decree in favor of the United States.

JONES, *District Judge.* The libel in this case is filed under act of Congress of June 30, 1906, known as the Food and Drugs Act, against 100 boxes of Bowman's abortion remedy. The Erick Bowman Remedy Company, Inc., of Owatonna, Minn., has intervened as claimant and makes defense. Condemnation is sought on the ground that these boxes of Bowman's abortion remedy are misbranded, contrary to and in violation of section 8, paragraph 3 under drugs, of said Food and Drugs Act. The jury being waived by written stipulation of the parties, the case was tried to the court.

A motion for continuance of this case was filed by claimant on the day of trial. This motion was overruled. Further motion was made by the claimant for leave to withdraw the intervening petition, and to permit a default decree to be entered. On representation of the United States attorney that the Government was ready for trial and had procured a number of witnesses from different parts of the country at considerable expense, and that the Department of Agriculture was particularly desirous of having this case heard on its merits, this motion was also overruled. The claimant raised two principal questions during the trial and at the close of the Government's case. First, that there was no misbranding within the meaning of the act; second, that the so-called Bowman's abortion remedy, sought to be condemned, was not a false and fraudulent substance, under section 3 in the case of drugs.

The portion of the act which defines misbranding is as follows:

> The term "misbranded", as used herein, shall apply to all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement, design, or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is falsely branded as to the State, Territory, or country in which it is manufactured or produced.
>
> That for the purposes of this act an article shall also be deemed to be misbranded:
>
> In case of drugs:
>
> Third. If its package or label shall bear or contain any statement, design, or device regarding the curative or therapeutic effect of such article or any of the ingredients or substances contained therein, which is false and fraudulent.

Claimant admitted the allegation as to interstate shipment at the outset of the case, and no evidence was adduced on this point.

The Government introduced a number of exhibits taken from the shipment in question. The boxes or cartons containing the Bowman's abortion remedy contained two individual pasteboard packages each. These individual pasteboard packages were wrapped in light yellow paper. Three sides were pasted to the package, and the fourth side was not pasted. Under this side, which would of necessity be torn

open by the consumer, appear the directions for the use of the so-called Bowman's abortion remedy. Under the flap at the top appeared the printed statement "Bowmans Abortion Remedy. This package contains one 9½ pounds treatment of Bowman's Abortion Remedy. Read the directions carefully before administering." A copy of a pamphlet sent out by the Bowman Company to the dealer in this case, was also introduced. This pamphlet was designated as "Bowman's Bulletin", and was a form of collateral advertising matter sent interstate to agents or customers by the Bowman Remedy Company. In this pamphlet the statement was made that the directions for use of the remedy would be found inside the package. On this evidence the court finds that the printing and labeling are a branding within the meaning of the act, which reads "If the package or label shall bear or contain any statement, etc." The effort to conceal the label by wrapping in light yellow paper is clearly and patently an effort to circumvent the law. It is in the opinion of the court a subterfuge. If anything, it is evidence to be considered in connection with the latter portion of paragraph 3, section 8 of the act, to wit, that it is "false and fraudulent."

Any product of this nature, which is in truth a remedy for contagious abortion in cattle, would not have to be concealed and shipped in secret.

The remedy itself has to do with what is known as contagious abortion in cattle. This is a serious disease, one which live stock dealers and veterinarians have been contending with for a long period of time. The disease is caused by infection in cattle by micro-organisms. It is highly contagious, and may be transmitted in a number of ways. The germ apparently attacks the uterus at a point where nourishment passes to the fetus, with the result that this portion of the anatomy is destroyed. When the passage of food to the unborn calf is stopped, the fetus dies, and is thereupon expulsed, as a natural process of nature. Specimens and exhibits clearly indicating this process were exhibited by the Government. It was shown that no remedy, medicine or drug taken by the cow in the ordinary manner into the stomach could in any possible way reach the source of the trouble, or have any effect upon the germ. This fact was testified to by any number of specialists and veterinarians.

The analysis of the so-called abortion remedy indicates that it is composed of 85 percent brown sugar and 15 percent wheat. No trace of any chemical or drugs was found in the remedy. No evidence was introduced by the claimant controverting this testimony. The Government experts were of the unanimous opinion that no possible combination of these two substances would have any effect upon the disease. It must therefore be concluded that the remedy is false and fraudulent, and is a pure deception upon the farmer. Expert testimony was introduced by the Government to the effect that a number of tests had been made on Government owned cattle. All indicate clearly and conclusively that Bowman's abortion remedy neither prevented the disease, cured it after inception, or in any manner retarded its effect. Germs of the disease placed in a strong solution of Bowman's abortion remedy, thrived, prospered, and multiplied without any check whatsoever.

The subject of misbranding is treated by the following authorities: *United States* v. *95 Barrels Apple Cider Vinegar*, 265 U.S. 438; *United*

States v. *Oil of Wintergreen*, 268 Fed. 866; *United States* v. *Hog Food*, 276 Fed. 34; *United States* v. *Tea & Spice Co.*, 286 Fed. 475 (6 C.C.A.), *Goodwin* v. *United States*, (6 C.C.A.) 2 Fed. (2d) 200.

Judgment of condemnation will be entered with costs against claimant.

UNITED STATES v. 200 SACKS OF WHEAT MIDDLINGS

(District Court, E.D. Michigan, May 20, 1926)

N.J. No. 14371

Libel under section 10 of the Food and Drugs Act. Case submitted to court on agreed statement of facts. Judgment in favor of claimant.

SIMONS, *District Judge.* This is a libel filed by the Government against 200 sacks of middlings in statutory proceedings pursuant to section 10 of the Food and Drugs Act (act of Congress of June 30, 1906, ch. 3915, 34 Stat. 771), for the seizure and confiscation of such middlings on the ground that they are adulterated within the meaning of section 7 of said act. The libel as originally filed alleged that said middlings, which were there referred to as "alleged middlings", were also misbranded within the meaning of section 8 of the act, but by amendment that charge was later withdrawn, and it is now conceded by the Government that the articles in question are in fact as they were labeled, middlings, as hereinafter more fully described. The sole statutory basis for the claim of adulteration advanced by the Government is that said middlings were mixed and powdered in a manner whereby * * * inferiority is concealed.

After seizure of these middlings on the libel, the Ismert-Hincke Milling Co., a Kansas corporation, filed its intervening petition herein as claimant and its answer denying both the misbranding and the adulteration alleged. The case is now before the court for final decree upon the pleadings, an agreed statement of facts, and depositions taken in accordance therewith. The jurisdictional allegations of the libel, including that concerning the requisite interstate shipment of the products involved, are not disputed and have been proved. The Food and Drugs Act, already cited, prohibits, by fine or imprisonment or both, the interstate shipment of any article used for food by man or other animals, which is adulterated within the meaning of the act. Section 10 authorizes confiscation of such adulterated food. Section 7 of the statute provides in part as follows:

> For the purposes of this Act an article shall be deemed to be adulterated:
> In the case of food:
> First. If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.
> Second. If any substance has been substituted wholly or in part for the article.
> Third. If any valuable constituent of the article has been wholly or in part abstracted.
> Fourth. If it be mixed, colored, powdered, coated, or stained in a manner whereby damage or inferiority is concealed.
> Fifth. If it contain any added poisonous or other added deleterious ingredient which may render such article injurious to health: *Provided*, That when in the preparation of food products for shipment they are preserved by any external application applied in such manner that the preservative is necessarily removed

mechanically, or by maceration in water, or otherwise, and directions for the removal of said preservative shall be printed on the covering or the package, the provisions of the Act shall be construed as applying only when said products are ready for consumption.

Sixth. If it consist in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal, or one that has died otherwise than by slaughter.

As already stated, the only charge made by the Government with respect to the middlings in question is that they are mixed and powdered in a manner whereby * * * inferiority is concealed. The agreed statement of facts is, in full, as follows:

The United States of America by United States attorney for the Eastern District of Michigan, and Glen A. Wisdom, Kansas City, Mo., attorney for Ismert-Hincke Milling Company, claimant, hereby stipulate that the foregoing action be submitted to this honorable court on the following agreed statement of facts together with depositions to prove issues agreed upon herein:

1. That "Wheat middlings with mill-run ground screenings not exceeding 8 percent has been generally known as any one of the by-products of the milling of wheat flour, exclusive of bran, which resulted after the major flour-recovering processes and consisted of wheat offal which would pass through a screen having 18 or more meshes per linear inch, to which was added ground mill-run screenings not exceeding 8 percent. An 18-mesh screen will allow larger particles to go through than a 22-mesh. Middlings being ordinarily used as a hog feed, the quality and market value thereof is usually judged by its fineness of texture and lightness of color, which to the feeder are indicative of low fiber content and high feeding value. Therefore, the quality of middlings produced as above described was for all practical purposes dependent upon the fineness of mesh employed, since a finer mesh excluded more of the undesirable fibrous bran particles, and thus the remaining material contained a greater proportion of the desirable particles of the wheat berry known to be of high feeding value.

2. That the aforesaid 200 sacks of alleged middlings seized in this action is one of the by-products of the milling of flour which results after the major flour-recovering processes and consists of wheat offal which was passed through a screen having 18 meshes per linear inch, to which was added mill-run screenings not exceeding 8 percent. It is agreed that this product is wheat middlings with mill-run ground screenings not exceeding 8 percent. This mixture is then passed through a grinder wherein it is pulverized. The composition, color, and texture of the resulting product is practically identical with a product manufactured by a process not including a grinder and wherein a screen of sufficiently finer mesh had been employed, except that it contains that additional amount of bran coat which would have passed through a screen having 18 meshes per linear inch, and which would not have passed through a screen of finer mesh, the entire product having been reduced to fine particles by the grinder. Running the product through the grinder does not change the composition except to evaporate the moisture from 1 to 2 percent; but does improve the color and texture.

3. The libel contains the charge that the product seized in the foregoing action is mixed and powdered in a manner whereby inferiority is concealed. Therefore, the issue in this case is, whether the use of the grinder mixes and powders the product in a manner whereby inferiority is concealed or whether it increases the feeding value to such an extent that the product is not inferior to a product of like appearance manufactured by a process without the grinder.

As already observed, the single, decisive question here involved is the question of fact as to whether the process described in the stipulation of facts conceals any inferiority in the middlings thereby produced. After careful examination and consideration of the depositions and of the entire record, I am fully satisfied, and I find, that the question just stated must be answered in the negative. There is no necessity nor occasion for here reciting or reviewing the testimony in detail. It is sufficient to state that not only does such testimony

fail to sustain the burden of the proof resting upon the Government in this regard but that the record is affirmatively clear and convincing to the effect that the middlings produced by the process in question are, in appearance, texture, composition, digestibility, and in all other respects equal, if not superior, to middlings produced by any other known process; that said process reduces the moisture in such middlings and thereby increases their feeding value for the purposes for which they are intended; that said process produces a more finely ground product and thereby increases its digestible quality; and, in general, that the process complained of by the Government does not conceal, and is not in any way connected with or related to any inferiority in, or in respect to, such middlings.

In accordance with the request of the Government, the foregoing views and conclusions may be treated as formal findings of fact and of law, respectively. No applicable decisions have been cited by either party nor discovered by the court in its independent search of the authorities. It is admitted by the Government that there are no such decisions. The single case cited by the claimant (*Lexington Mill & Elevator Co.* v. *United States*, 232 U.S. 399), while not fully in point, is at least more helpful to the claimant than to the Government.

For the reasons stated the claimant is entitled to a decree dismissing the libel and such a decree will be entered.

UNITED STATES v. 4½ CASES OF CREME DE MENTHE

(District Court, E.D. Missouri, Nov. 9, 1926)

N.J. No. 14767

Libel under section 10 of the Food and Drugs Act. Jury trial. Verdict for the claimant.

The United States attorney filed a libel praying seizure and condemnation of 4½ cases of creme de menthe, remaining unsold in the original unbroken packages at St. Louis, Mo., alleging that the article had been shipped by the L. E. Jung & Wulff Co., Inc., New Orleans, La., on or about January 23, 1926, and transported from the State of Louisiana into the State of Missouri, and charging adulteration and misbranding in violation of the Food and Drugs Act. The article was labeled in part: "Creme De Menthe Flavor. Non-Alcoholic Cordial L. E. Jung & Wulff Co. Incorporated New Orleans, La."

It was alleged in the libel that the article was adulterated, in that a substance, creme de menthe flavor nonalcoholic cordial containing added caffeine, had been substituted wholly or in part for the said article.

It was further alleged in the libel that the article was misbranded, in that the statements "Creme De Menthe Flavor Non-Alcoholic Cordial", borne on the label, were false and misleading and deceived and misled the purchaser when applied to creme de menthe flavor nonalcoholic cordial containing added caffeine, a drug recognized in the U.S. Pharmacopœia, and in that the article was offered for sale under the distinctive name of another article.

The court delivered the following charge to the jury:

FARIS, *District Judge.* Gentlemen of the jury: Now it falls to the lot of the court to give you in charge the law that will govern you in your deliberations in your verdict in this case. This, gentlemen, is a civil suit, not a criminal suit but a civil suit; it is to be tried by you, decided by you, just as is done in any other civil suit.

The United States, under the statute to which I shall presently call your attention, has brought this action, known in the practice as a libel, against 4½ cases, more or less, of a liquid compound called creme de menthe. The Government seeks by this suit to condemn and cause to be destroyed by the marshal the 4½ cases of creme de menthe in dispute here. If you shall find for the Government, then the court will be warranted in entering a judgment of destruction and order thereupon the marshal to destroy all of these 4½ cases creme de menthe. That is all this suit is about. You have nothing to do with the sentimental reasons or as to what may hereafter be the policy of the Government or the policy of the defendant, should your verdict be this way; in other words, for the claimant.

You are to decide, of course, upon the law and upon the facts as shown by the evidence * * * it makes no difference whether you believe it to be the law or not, whether you think it ought to be the law or not; it is enough to believe, under your oath of office, that it is the law, and if it is you have nothing further to do with it. If I misstate the law, that is my fault, and not yours. The burden or blame of such misstatement falls upon me, and not upon you. I shall endeavor, as best I can, to state what the law is in this sort of a case. I am frank to say there are not many cases of this sort; this is the fourth one that it has fallen to my lot to try since I have been on this bench, now more than seven years. They are always difficult; they are always troublesome to the court; they are always troublesome to the jury; but I think I shall be able, before I get through with it, to iron out some of the apparently troublesome questions in the charge touching the law which I shall make. Now, I may as well say, in order to get it off my hands, that while I am the sole judge of the law and you are absolutely to be bound by what I tell you the law is, whether you believe it or not, you, and not the court, are the sole judges of the credibility of the witnesses and of the weight and value to be given their testimony, and you are warranted in reaching a conclusion as to what weight you should attach to the testimony of any given witness, the manner and appearance of the witness on the stand, his manner of testifying, the probability or improbability of the testimony which he gives, his situation to see and observe, his experience and his capacity to relate truthfully and accurately those things which he saw and observed. You are warranted in taking into consideration the relations to or feelings for the Government upon the one hand, and the claimant on the other, in reaching a conclusion as to the weight you should give to the witnesses for the Government or the witnesses for the claimant, respectively.

Taking these matters into consideration, it is within your province, and yours alone, to give to the testimony of each and every witness such weight as you think it is entitled to. Now some gentlemen have been called before you, some two or three perhaps, who fall into the category of opinion witnesses or expert witnesses. I mean by that,

men perhaps who had no interest or took no part in dealing with the matter taken in controversy in a commercial way, but merely what they know about it, as experts having knowledge of a particular branch or science—in this one, the science of chemistry, more particularly, food chemistry, because I believe there is now a special branch known as food chemistry. The testimony of witnesses known as expert witnesses who give what is called "opinion evidence" is of course entitled to consideration by you; you ought to listen to it and give it weight and, generally speaking, you should weigh the testimony of the expert witnesses by the same general rules by which you weigh the testimony of other witnesses, but since these witnesses are expert witnesses, since they do not * * * in some cases, at least in this particular hearing, but testify from their expert knowledge of a particular science, that is to say, chemistry, you are warranted in bringing to your consideration all the weight and value that you ought to give to them from your own ordinary experiences and the experiences of men in the common walks of life. You are not bound absolutely by what they say; you may consider what they say, you ought to consider it, but you are not absolutely bound by it; should you [it] run contraband [contrary] by [to] your own experiences then you are not absolutely bound; they are merely for the purpose of assisting you in reaching a conclusion and not necessarily for the purpose of binding * * * this applies, of course, to witnesses on both sides of this case. Now there are, or may have been more gentlemen who fall into this category of witnesses, but there are at least one on each side—Mr. Sale for the Government, and Mr. Leipsner for the defendant.

Now, the burden of proof in this case is upon the Government. This burden the Government must meet by bringing forward evidence which satisfies you of the truth of the Government's contention; you are to be satisfied, not beyond a reasonable doubt because while the Government is the plaintiff, this is not a criminal case and the rule of reasonable doubt does not apply. The extent to which you are required to be satisfied with the testimony of the Government is simply by a preponderance or greater weight of the evidence, and not necessarily by a greater number of the witnesses but by weight of the credible evidence in the case. You are not to say that the Government had six or eight witnesses upon a given point, and the defendant had three or four, therefore, the Government must be right about it. You can apply the number, of course, if it becomes necessary but that should not outweigh the evidence. Then, the question of mere numbers cuts no figure in the case.

This suit may seem to you a peculiar one on another ground—you will see that this is a case of the United States, libelant, against 4½ cases creme de menthe—that is the style of the case. Now that style of the case has been modified by there coming into it as the claimant for the 4½ cases creme de menthe, or what I may call the actual defendant in the case, L. E. Jung & Wulff Co., Inc.—they are here as claimants, and of course, the controversy is now between the Government on the one hand and L. E. Jung & Wulff Company, as the defendant, on the other.

This suit is brought under the act of Congress passed on the 30th day of June, 1906, and amended several times, and the last time

amended on July 24, 1919. Congress saw fit to pass what is called the Pure Food and Drugs Act. So far as the issuances here are concerned and so far as you and the court are concerned, the act is a good and valid one. No attack on the constitutionality is before you nor before the court, and until its constitutionality is attacked you nor I shall consider whether it is good or bad; we are bound by the text, so you needn't bother yourselves in this case whether the Government had a right to pass it or not; it has passed it and no attack is made on it, and that settles that point for you and for me. The point in which we are interested here is a part of section 2 and a part of section 7 of this act. So much of section 2, with which we are interested, is contained in this, I quote it,

> That the introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded, within the meaning of this Act, is hereby prohibited.

I merely repeat that having forbidden and having prohibited it, the Government went further by other provisions, and in case it was found, either by trial before a jury or trial before a court, that a misbranding of food did exist the Government had a right to have that food condemned and destroyed, and that is what we have before us here. You will see that that section forbids what I may call "interstate traffic" of any misbranded food; that is about all the section says, that the introduction, that is, the carrying from one State to another, or the shipment from one State to another of any food which is adulterated or misbranded within the meaning of this act is hereby prohibited. Now, so much for that; that is very simple—it means, I take it, what it says—there is no question before you because it is frankly admitted that this creme de menthe was shipped from New Orleans, Louisiana, to St. Louis, Missouri; therefore, the shipment constituted an interstate shipment. If, then, you shall find * * * that it was misbranded, you needn't trouble yourselves whether it is an interstate shipment or not; it is frankly admitted it is an interstate shipment, so that settles that question—you needn't trouble yourselves about that, that is admitted.

Now, further, the section provides, touching the question of adulteration, that a food is deemed to be adulterated if any substance has been substituted wholly or in part for the article. Now that is very plain, that means, of course, if there has been put in it some substance that did not belong in it as the article of food is commonly known, and commonly sold, and commonly used, then it is adulterated. There are many other provisions, some six or more, touching the adulteration of foods, contained in this act, but with those others you have nothing to do. Some of them forbid the introduction into articles used as food of deleterious or poisonous substances. With these you have nothing to do because that is not the point in this case, that is not the ground upon which the Government attempts to libel, condemn, and have destroyed these 4½ cases creme de menthe.

Now, there is another provision here which the district attorney or assistant district attorney insists is involved, and which perhaps is involved under the plaintiff's libel—under the plaintiff's written libel, I mean. The counsel for the claimant seems to admit that, and without passing upon it we will accept the contention of the Govern-

ment, as made by the assistant United States district attorney, and the contention as made by counsel for the defendant. Another provision of this law provides that food shall be deemed misbranded if it be labeled or branded so as to deceive or mislead the purchaser. Now we can get rid of that provision, so far as it is in this case, very easily and very simply. That charge depends, of course, upon the one which I have just mentioned to you and depends upon your finding under the law upon the other one, and not upon this one, and we will get rid of it right now.

I repeat, the Government insists through the assistant district attorney that if this creme de menthe—one bottle, a true type as it is admitted of the 4½ cases, which has been offered in evidence, had contained on the label thereon the statement, in fit terms—it matters not what sort of terms or what sort of language—that this creme de menthe contains caffeine, there would then have been no misbranding. Of course you saw the exhibit, and you heard read what is contained on it. It contains no statement or intimation that there was, or is, any caffeine in this particular creme de menthe. Of course we all know what creme de menthe is; it is a French term, all three words are French, as spelled, and simply means "creme of mint"; that is all, but we will call it creme de menthe, as the French would perhaps call it, and let it go at that. Now, you will see, gentlemen, that the question of whether it was labeled or branded so as to deceive or mislead the purchaser is scarcely in the case because it is conceded it was not branded so that the public who desired to consume it, or desired to buy it, could tell by looking at the label that it did contain caffeine—and because it did not contain that, the purchaser wouldn't know that caffeine was in there, but, yet, if caffeine had the right to be there then it was not misbranded because the label did not show it was there, so you see that clause depends upon the other one.

The troublesome question in this case then arises from that one sentence that I have read you from the act, and which I read again, "if any substance has been substituted wholly or in part for the article." Now, if there has been no substance substituted wholly or in part, then of course it wasn't necessary to indicate by the label anything about caffeine on it. The word "substitute" there of course means "put in" or "added to" it; it does not necessarily mean you had to take out something else, but you had to put something in there that did not belong there—and now how are we to test what belongs there. If you shall find and believe there existed a standard form for the making of creme de menthe, and that that form consisted of a standard formula, qualitative, and not necessarily quantitative, because counsel for the defendant or claimant, Mr. Nelson, stated to you frankly that he was making no point on the question of quantitative contents. Of course we all know what qualitative means; shortly speaking, qualitative means what, quantitative means how much. What I mean to say is, the question here is not one touching quantitative formula; it is simply one touching qualitative—*what* was in it, not *how much* was in it. * * * So if you shall find there was, and has been since the prohibition act was passed, a well-known standard formula of the articles that ought to go into the making of standard creme de menthe, and that something else has been put in there by the claimant in this case that did not belong to that formula, ther there has been a substitution of some substance,

in part at least, for the article, and that substitution is forbidden by this statute.

We might say, for the sake of argument, that the Government might have raised the question of whether caffeine is a deleterious substance, or whether it is a poisonous substance, when put in food; it is enough to say that question is not raised and that question is not in this case so you need not consider that at all.

The whole question is whether there has been some substance substituted in part for creme de menthe, which substance now substituted does not belong there and ought not to be in there under a standard formula for making creme de menthe. If there is a standard formula as to the nature of the things that should go into creme de menthe, that is, qualitative, and if caffeine is not one of those things, then there has been a substitution here in part of a thing that does not belong there.

Now of course this is a peculiar case. It may seem to you that, since the well-known formulæ for creme de menthe, as those formulæ existed before the passage of the National Prohibition Act, completely differentiates creme de menthe as known 7 years ago from creme de menthe that is now known, nobody ought to be permitted to sell it at all, because it is misbranded or there has been a substitution of water and sugar for alcohol, which was a settled and well-known constituent of the product before the act took effect, but that is not the case. The Government here contends, and it bottoms its right to the judgment on the ground that creme de menthe may now and yet be sold since the Volstead Act took effect, notwithstanding its chief constituent has been eliminated by the passage of that act. So we are to consider it, then, not as it existed before the Volstead Act passed, because if we did we would say it is not creme de menthe because it has no alcohol. It seems it is still being made and sold, and largely sold * * * it seems to be a little sweetened water with peppermint and some other flavors in it, but we have to take the case as we get it; we cannot take it otherwise.

So the question is, assuming that it can still be legally sold, and we must assume that because there is no contention made against the sale of it and we know it is sold and still being sold although we know when we buy it that we are not getting much of anything, we must consider it upon the hypothesis of whether it is a standard recognized formula, and whether that recognized formula carries with it the putting in it of caffeine; if it does, you ought to find for the defendant; if it does not, then you ought to find for the Government. That is all there is in this case. First, if there is a standard formula without regard to color—color cuts no figure in the case, none whatever, so you needn't consider color at all; everybody believes it has all sorts of color, and has no color * * *. You needn't consider the amount of sugar—everybody agrees it had some sugar in it—everybody agrees it had some water in it—everybody agrees it had some flavor in it—everybody agrees it had some oil of peppermint in it; so, I repeat, you must find, is there a standard formula for its manufacture since the Volstead Act took effect. Having found that, then the next question is, does the liquid in question here, the contents of the 4½ cases, of which the bottle offered in evidence is a type, conform to that standard, or has there been an addition of

something in there that ought not under the standard formula be put in it? It is not a question of what Tom, Dick, or Harry put in there, because Tom, Dick, or Harry may be violating the law themselves, but the question is, whether it is a standard formula and whether this conforms to it. It very often happens in many things that things that do not hurt a food are added to it, and yet those things are forbidden; for example, if you were to buy flour, deeming it to be an ordinary wheat flour, for the purpose of making light bread or biscuits in your home, and it should turn out that dried Irish potatoes which had been grated were added to it, then that flour would be deemed to be misbranded because we all know what flour is and what potatoes are, and we should not be given potato meal or potato flour for wheat flour, and we are not supposed to know we are getting dried potatoes when we are buying flour.

I think I stated to you the relative amounts of water, of sugar, of peppermint, and of color, cut no figure in the case. There is simply a question here whether there is a standard, and whether this standard was met by the shipper in this case.

You won't be troubled, of course, by the question whether there was caffeine in this, or not. That is admitted; the testimony shows, and the chemist found that there was in the sample examined by him, which is admitted to be part of this shipment and type of all the other bottles in the shipment, twenty-five one-hundredths of a grain in each fluid ounce; that equals, of course, one-fourth grain in each ounce; it equals 4 grains of caffeine in each pint; and in the bottle which is shown to you and which is offered as evidence, wh ch s stated to be a pint, there were 4 grains of caffeine. i

I shall not at this hour go over the evidence; you heard it as well as I. You are to determine from it but two questions, and I repeated those 2 or 3 times. One is, whether there was a standard of manufacture, and whether there is now a standard for the manufacture of creme de menthe, leaving out, of course, any question as to the different quantities because it will not do to require that standard of manufacture to go so far as to prescribe the number of ounces of water, the number of ounces of sugar, the number of grains or spoonfuls of peppermint, or the number or kind of flavor; those things are not in the case, of course, because we all know that some whisky has more water in it than other whisky. That does not keep it from being whisky, because someone sees fit to put a little more water or color in it. It may have more or less of alcohol, it may have more or less of color, but it is whisky. That illustration I think will make clear the point I have in mind. When you have decided that question in this case I think you have decided the case. I think that is all.

Assistant District Attorney (Mr. Claude Crooks). I suggest, Your Honor, the jury be instructed that the amount of caffeine contained in each bottle is immaterial. It won't make any difference whether 4 grains, 100 grains, or 1 grain, is contained in it.

Judge Faris. Yes, I think you need not go into that. The evidence did not go into that except to the extent to show what was in it, and that question is akin to whether it is poisonous or deleterious, and that question of whether it is poisonous or deleterious is not in the case, so I don't think the question of the quantity is in this case. If you should find caffeine is a flavor—because the evidence shows some 10 or 15 flavors are used, and if it was put in there as a flavor,

the question is whether one is entitled to use a different flavor from the standard flavors.

Mr. NELSON (attorney for claimant). Your Honor, please, I would like to request that you charge the jury that the article referred to in the libel and testimony is a nonalcoholic cordial with a predominant flavor of peppermint—that is the article which is charged to be adulterated and misbranded. I also request, Your Honor, you charge the jury that the mere fact that the witnesses have never heard of caffeine being used in the production of a nonalcoholic creme de menthe cordial is not of itself sufficient evidence upon which to find either adulteration or misbranding in this case.

Judge FARIS. I refuse so to charge.

Mr. NELSON. On both grounds. We except to the court's refusal to charge the jury on the two matters mentioned.

Judge FARIS. The article here is creme de menthe, and if creme de menthe, as known, is what you say, then it is creme de menthe.

Mr. NELSON. I object and except to the charge of the court in identifying the article creme de menthe; it is our theory it is an imitation cordial, the qualifying words "creme de menthe" as the flavor, and I think the court, unintentionally, of course, has confused the jury throughout the case in identifying it as creme de menthe. I think it gives a little erroneous impression.

Judge FARIS. Creme de menthe is a word to express, I take it—in the dictionary it is the name for a well-known cordial, just as Shipman whisky is a name for a well-known whisky, so I don't think the jury will be troubled about that.

Mr. NELSON. I want to except. The article is a cordial, nonalcoholic cordial, but the court charged that creme de menthe is of itself an article.

Judge FARIS. Yes, I repeat that creme de menthe is the name of a well-known cordial * * *.

Mr. NELSON. There is no evidence in the case that caffeine is deleterious * * *.

Judge FARIS. I have charged that 2 or 3 times and considered that was not an issue in the case; it cuts no figure in this case because this libel is not brought on that clause of this act. * * * I took the view earlier in the case that this case was not that kind of a case.

Mr. NELSON. I object also to the issue in the case that something has been put into the product that does not belong there. My theory is that it is a substitute of one article for another, and I have fought all the way through that the mere introduction of caffeine is not an issue in this case. The court disagrees with me, but I want to make that point an exception. I request the court to charge there was no evidence to show there is any standard formula for a nonalcoholic cordial or even a creme de menthe flavor * * *.

Judge FARIS. You have asked me twice, and I refuse to charge. I leave that to the jury as one of the decisive questions in the case.

Mr. NELSON. We object and except to that part of the court's charge that one question of the case is, does the liquid conform to the standard, or has there been an addition of something that should not be in there. We don't think that charge is correct. We think if the court is going to refer at all to that issue it ought to tell the jury and charge the jury, does the standard formula provide an introduction of that added substance. That is the way we think it should be charged.

Judge FARIS. I think, gentlemen, that I shall not let the case go to you tonight because we are now within a very few minutes of the hour to adjourn. It would entail unnecessary labor on you. I shall finish the formal part of the charge however, so all that will be necessary in the morning is to take the papers and retire to your room.

I have caused to be prepared for you a blank form of verdict * * *. It requires a concurrence of your entire number. Each of you, 12 in all, must concur in any verdict you may render. I mention this to you because in a State court in a civil case 9 jurors may find a verdict; of course, 10, 11, or 12 may find it, but as few as 9 may find a verdict in a civil suit in a State court. Your verdict must be unanimous, 12 in all must concur. When you have agreed in a verdict one of your number will sign as foreman * * *. I shall now let you go until morning, and in the morning I shall have the clerk hand you the papers and you may consider the verdict.

In the meantime, I caution you, as heretofore, that you are not to discuss this case with anybody * * *.

UNITED STATES v. 3,192 BOXES OF APPLES AND 532 BOXES OF PEARS

(District Court, N.D. Illinois, Nov. 20, 1926)

N.J. No. 15350

Libels under section 10 of the Food and Drugs Act. Jury trial. Verdict in favor of the United States.

CLIFFE, *District Judge* (charge to jury). Gentlemen of the jury: I shall now endeavor to give you what I deem the law to be in these cases. You understand, it has been explained by counsel that there are three cases in the files of the Government before me, one case of 798 boxes more or less of apples, one of 2,394 boxes more or less of apples, and one of 532 boxes more or less of pears. These cases, the same evidence is adduced in each case. The cases have all been tried together and consolidated, but separate verdicts will be returned in each case.
